You may live in isolation from the church and may attend a conference in a distant State where all are strangers to you, but if you go away from that meeting without scores of new acquaintances and some very dear friends, it will be your own fault. Indeed, you will have to take special pains to hedge yourself about if you are able to turn aside the streams of friendliness and good fellowship that flow in all directions at such a place. But while this attitude of friendliness toward those of our own faith leaves little to be desired, there is room for improvement in many of our congregations in our attitude toward "the stranger within our gates." Would that they, too, in every instance might have nothing to be desired in the way of a feeling of comfort and ease while among us.

A very encouraging growth toward effective work is the increasing number of meetings at our conferences devoted to the interest of some particular line of effort. This phase of the meeting contributes in some degree also to the large attendance. These general meetings are in many ways a great benefit to these special lines of work. In the first place they give a work a central organization which keeps the various branches of it in touch with each other. With this means of communication efforts will also be more concerted; there will be a thorough understanding of the ends to be reached and the best means to use. Then the inspiration, coming from the association of those engaged in the same work, is a consideration of no little importance. Altogether, a mighty impetus is given to the various lines of practical work by these general meetings. An account of the particular work of the Annual Conference has been fully written up in the *Gospel Messenger* and we will not repeat it here. The full report of the business sessions, together with that of several meetings preceding the business sessions, has been published and can be secured at this office at twenty-five cents per copy, postpaid.

It is good to have money, and the things that money can buy, but it's good, too, to check up once in a while, and make sure you haven't lost the things that money can't buy.—George Horace Lorimer.

"INTELLECTUAL HOBOISM."

"I HAVE taught the 'barefoot boy with cheek of tan' and the college boy with cheek of brass."

Dean J. O. Reed of the University of Michigan with this statement opened his address recently before the North Central Association of Colleges and Secondary Schools in Chicago. He was discussing "Intellectual Hoboism," exponents of which, he said, are to be found in large numbers in high schools and colleges.

"In the high school," he continued, "intellectual hoboism finds its expression in numberless ways, chiefly in aping the worst features of college and university life without the appreciation of any of its redeeming qualities.

"Such a student is at the bottom of every surprising outbreak of disorder. He may be an athlete or a fop, or both combined; he usually excels in dancing and other social functions, and maintains toward the principal an attitude of armed neutrality, or of open insurrection, according as he feels himself safe in assuming the one or the other. He chews gum or tobacco as his social standing dictates, and is usually addicted to the cigarette.

"Such a student does the school untold injury and receives no benefit from its teachings. If he be compelled to work or leave, he promptly leaves, and betakes himself to some prominent eastern private school or military academy, from which he graduates with great eclat in a surprisingly short time.

"In many cases he may be a girl, in which event devotion to society, to theater parties, to bridge whist, to late suppers, to balls, to pink teas and to similar intellectual pursuits leaves the poor dear in such a nervous and overwrought state that the dreadful mathematics, the horrid Latin or the detestable French is quite impossible, really, while the duty of reaching the high school on time is more than should be expected of one so frail and so sensitive in spirit.

"This amiable creature is not likely to know anything or to learn anything useful in the high school, and is soon ready for the girls' finishing school, from which she returns highly educated in a few months.

"These intellectual vagrants are in a large degree the children of parents in good circumstances in life."
—*Interstate Schoolman*.

To touch a languid spring, to break the rust off a tight or hindered bolt, to free a doubt with an inspired word, to kindle a long life of energy with one flash of fire, to make a fellow-man see God—there can be no privileges like that. The men who do that are the men whom the world remembers; or, if it forgets their names, it lives by their illumination long after they are dead.—Phillips Brooks.

THE HOME WORLD

THE HOUSEWIFE AND THE MARKET BASKET

CLARA NORTH RULEY

THIS redoubtable combination has in this twentieth century degenerated into "The housewife and the delivery wagon with a telephone connection." This sad state of affairs should not be, dear housemothers. Delivery wagons are all very well to carry home our supplies for us, but no one, absolutely no one, can buy for us as successfully and economically as we ourselves. For example, we conclude to have parsnips for dinner. So we call up the groceryman who tells us he has parsnips—and we order them sent down. Now what the groceryman does not tell us is that though he has this vegetable it is very poor in quality. Without going deeply into the subject of the grocer's honesty we can safely conclude that if we had our own welfare at heart we would have gone down to the store, personally inspected the supplies and used our own judgment as to whether we purchased wilted parsnips or fine turnips.

Perhaps on another occasion we ask the merchant whether he has any eggs and if he has to send them up. When they come, we look at them. They *are* eggs, there is no doubt of it, but those we boil for a salad garnish have the hall-mark of the cold-storage product and our sponge cake made from them is a failure.

Before one begins to fill the market basket, one must of necessity inspect the contents of one's pocket-book. There is a saying, "The best is the cheapest in the long run." This is not true in buying household supplies if one is to consider that the *best* means the *highest priced*. All food products should be fresh and in perfect condition, but there are many cuts of meat and many varieties of vegetables that afford the human system the maximum amount of nourishment that do not depreciate the amount of one's exchequer to any great extent.

After all, it depends upon the use to which one intends to put the material as to the grade that is pur-

chased. For instance, take rice. If you wish to serve a dish of stewed rice with mutton, perhaps, each grain separate and beautifully symmetrical and perfect in itself, why, the high-priced sort must be purchased, but if one wishes a pudding, or fritters, croquettes, pancakes, or a thickening for soups, a good broken rice may be had for less than half the cost of the better quality. The meals should be planned as far as possible beforehand, and the proper things cooked together; for example, apple sauce, tomatoes and sweet potatoes with roast pork, and rice and peas with mutton and lamb. Any meal is infinitely more satisfactory if perfect in this way instead of being put together in a haphazard manner.

As far as possible *feature* your *food* and don't let anything become common if you can help it. One reads nowadays of many strange kitchen utensils that appear to be most mystifying. Take for instance the number of recipes for dishes cooked "en casserole." Many a young housekeeper passes by many most excellent and nourishing "entrees" just because she has no "casserole." My dear young housewife, any old pan or dish will do, so long as it will not be harmed by oven heat. One of the best cooks I ever knew was a very poor woman at the time of her marriage—so poor indeed that she had no skillet whatever but one with a piece broken out of the side. She managed, however, to concoct many delicious dishes in that self-same skillet.

It is rather discouraging at the last of the week to see how one's allowance has dwindled, and to think of the meals that have to be furnished out of the fraction of money that remains. This is the time to put one's ingenuity to work. It is well on such occasions to be an optimist like a colored maid I knew. Her mistress inquired into the contents of the larder near the close of the week and the little maid replied

thus: "Suah, miss, we done got a plenty. They's lots of buttah, an—an—watah." It is needless to say that there was some marketing done *that* morning. But even though finances are low, there are always codfish and liver to fall back on. In the smaller towns, at least, liver may be had for five cents a pound and even if twice that must be paid for it it is still a cheap article of food, for one buys no bones with it. As for codfish it is a host in itself.

The most important thing for the housewife to learn, indeed to my mind it ranks far above ability in buying, is the use of odds and ends and in such a manner that they do not cry aloud that they *are* leftovers. If your family are the good-natured, experimental kind, this is not so difficult a matter, but if the "good man" has eaten in grooves for years, why then you have your work cut out for you. A bit of cold or mashed potatoes will help to eke out an insufficient amount of dry bread for dressing and will not spoil the flavor. A tablespoonful of cream, sweet or sour, will make one egg go as far as two in noodles with satisfactory results, and sour cream, if very rich, answers for mashed potatoes as well as sweet. Little

odds and ends of jellies and jams may go in the mince meat, or be used in pudding sauces with delightful results.

These are *little* things, but in the course of years the amount saved thus is not inconsiderable. It is quite possible to save much in fuel with proper management. One housekeeper of my acquaintance says that on ironing day she wishes for sixteen hands so she might have the oven full of things baking while she uses the irons from the top of the stove. And indeed with the two that she does possess she gets an incredible amount done. The evening before beans are looked over and put to soak to be baked with the ironing fire. While the irons are heating in the morning a rice pudding is put together, or a pie is made, and if at any time during the forenoon this clever manager is compelled to wait on the irons to heat, she stirs up a quick cake or a gingerbread, while invariably there is a piece of meat stewing slowly on the back of the stove. It is in the little things that the housewife saves and thus keeps herself from throwing out with a spoon what her husband and provider brings in with a shovel.

THE CARLTONS' VISITORS

ELIZABETH D. ROSENBERGER

"WE haven't been alone for three months," said Mary Carlton. She and her husband were seated at the dinner table and I her neighbor had just "run in."

"That accounts for your lingering so long at the table," I remarked.

"Well, I should say," responded Mr. Carlton with considerable emphasis. "I dare not lose another minute if I am to keep my appointment with Scott." And he left the table hurriedly and went down town.

But his wife remained at the table, and I could not help saying, "I am glad your visitors are all gone, you look sadly in need of rest."

She smiled and said. "I have only been tired this last month; I enjoyed having Mrs. Wade here during August; she and Lillian were so cheerful and companionable, we hated to see them go home. But the old copy book heading is true, there are many men of many minds and women of many moods and fancies; and I want to be quiet a while before I entertain any more visitors."

I reminded Mrs. Carlton of one morning when they had a late breakfast and I found Aunt Amelia sitting bolt upright and dignified in her chair with a resigned expression that was peculiarly aggravating. I afterward learned that the fried potatoes had been fried in

butter and lard; as Aunt Amelia was a strict vegetarian she could not tolerate lard in any food, so this was her grievance.

"Aunt Amelia was a little trying," said Mary. In the joy of being alone she could not withhold some of her experiences from me, her dearest friend. "She used to look so mournful when George was eating his broiled steak, he confessed to me that under her condemning gaze he had all the sensations of a murderer."

"I suppose you have all the latest things in breakfast foods and know how to live hygienically after being so long under her instruction?" I inquired.

"You heard her talk on the value of cold baths, so let us forget her lectures and think of something else. Aunt Amelia is a good woman but she has always been given to fads, and she pursues the health fad with a singleness of purpose which leaves her but little time to talk about anything else." I could very readily believe this. Aunt Amelia had impressed me as being a tiresome visitor, to say the least.

"All my silver needs cleaning," said Mary. "And, oh, let me warn you against one thing, never put your guest room to rights until your guest has been gone many hours. When Mr. and Mrs. Sidney had spent a week with us, they left on Friday morning. I went to

at once changing sheets and pillow slips, when to my astonishment they suddenly reappeared, saying they had missed their train. They must stay with us another night and Mrs. Sidney said I could lay aside my clean linens until next morning."

I laughed and said that was thoughtful of her, then for a moment we were both silent. My thoughts were back in the old farmhouse where there was always room for the stranger within the gates. How different it is now. We were not burdened in the old days. Modern living is more complex, there are more responsibilities, more things to take our time. And I said to Mary, "We do not take to hospitality naturally, joyously, and inevitably as our mothers used to do. There are so many things to be done in order to have company in these days that sometimes it makes visiting a complicated, perplexing arrangement."

"Then there was Olive Murry. She came right after the Sidneys had gone home and she was pure delight; when we had any difficulties, Olive helped us to solve them; she had so many resources within herself and was interested in so many things that she enlivened us when we were all together. She was never a weight on our minds; when she was alone, we knew she was happy, for she always spoke of something which had amused or interested her when she joined us in the sitting room. I should like to welcome her back tomorrow, but there are not many like her," said this well-worn hostess, regretfully.

"Long ago our guests were members of the family, sharing our joys and sorrows. But that is passing away with hand-sewing and letter writing," said I. And then I left her to enjoy her home in peace and quietness, undisturbed by the thought of a guest who must be entertained. On a visitor in any kind of a home rests the invariable task of making herself agreeable, and many a one prefers the independence of a hotel to trying to make everybody happy in the home she might visit. Now all this going a visiting whether it be in the summer or winter, whether it be among relatives or friends, should be regulated by some custom that would keep it from being a bore and a bother to either host or hostess.

Many are the crimes committed in the name of hospitality. Take as an instance the visitor who must be constantly entertained. She should go to a large hotel at the seashore with its miles of piazza gossipers, its beach and its general excitement. It is an ideal place for the person who has no resources within herself. The guest who must be constantly entertained has no right to inflict herself on a busy hostess and expect constant attention. In this matter of visiting the golden rule, "Do unto others as you would that they should do to you," should be well observed by the visitor and the host and hostess.

TWO HOME-COMINGS.

THURSDAY; the maid already gone, having left a simple meal for two ready to serve; Mrs. Ashley intent on saving every possible minute for helping the little seamstress, who was working at high tension on a gown which Mrs. Ashley needed to wear that evening; the telephone bell; a message to say that three friends would drop in to luncheon—and then Daughter Dulcie, slender, sixteen and competent, walking quietly in, home for her vacation twenty-four hours earlier than expected.

"What luck that I came!" was the first thing she said on learning the situation. "Things to tell you? Well, rather! But they'll keep till this crisis is past. You sit down, mother, and sew, just as if they weren't coming. I'll make omelet and whole-wheat muffins and cocoa—don't you give it a thought. Isn't it good that I saved a clean shirt-waist and brought it in my bag? And now I know why I lugged that bunch of asters home—to have on the table at our luncheon. Oh, but I'm glad I'm here!"

That evening, while Mrs. Ashley was paying the seamstress, Dulcie, close by, was exulting over the prettiness of the finished gown.

"Pretty? Yes, child," said Mrs. Ashley, with a look at Dulcie that made the little seamstress suddenly homesick for her own mother, "but it's thanks to you that I have it ready for tonight, isn't it, Miss Brown? What would we have done if Dulcie hadn't come today?"

Before that week was over the little seamstress, in another home, found herself realizing, as the morning slipped away, that there was still two days' work to be done before finishing her engagement at Mrs. Brewster's that night.

"If I could have a few hours of help this afternoon, Mrs. Brewster—" she had begun, when a cab rolled up to the door, and the sentence was never finished. Ethel Brewster, pretty and high-keyed, had come back from a summer jaunt.

"Completely strapped, momsie!" she announced gaily, at the threshold. "Didn't have car fare. That's why I took the cab, counting on your pocket-book at this end. Yes, I'm later than I said, but we found there was a faster train with a chair-car, so we waited. The laundress? O momsie, I utterly forgot what you wrote about having engaged her to do up my things today! Been here all the morning? Such a shame—for every dud I have needs washing. I could have brought those things in my suit case instead of my trunk, just as well. And that isn't the worst. See this frightful trapdoor right in front of the only good skirt I have left—and school beginning tomorrow!"

By this time there was a veil on one chair, a pair of gloves on another, a hat on the table and a coat on the couch. For the rest of the day, while the little

seamstress remodeled the torn skirt and Ethel pervaded the house, pouring out continuous tales of the good times she had been having, her mother was following her about, picking up and putting away.

When Mrs. Brewster paid the little seamstress that night, she said, with a weary kindness, "It's not your fault in the least, Miss Brown, that you couldn't finish my dress. If it hadn't been for Ethel's coming home today—"

There she stopped, and the little seamstress went away, thinking. She was going home to visit her own mother the following week.—*Youth's Companion*.

WHY HE LOST HIS FRIENDS.

HE was always wounding their feelings, making sarcastic or funny remarks at their expense.

He was cold and reserved in his manner, gloomy, pessimistic.

He was suspicious of everybody.

He never threw the doors of his heart wide open to people, or took them into his confidence.

He was always ready to receive assistance from his friends, but was always too busy or too stingy to assist them in their time of need.

He regarded friendship to be enjoyed, instead of an opportunity for service.

He never learned that implicit, generous trust is the very foundation of friendship.

He never thought it worth while to spend time in keeping up his friendships.

He did not realize that friendships will not thrive on sentiment alone; that there must be service to nourish it.

He did not know the value of thoughtfulness in little things.

He borrowed money from them.

He never hesitated to sacrifice their reputation for his advantage.

He was always saying mean things about them in their absence.—*Success Magazine*.

SUNSTROKES AND HEAT PROSTRATIONS.

I ASKED a doctor one day why there were so many more deadly prostrations from heat in our northern towns and cities than in the South, where the temperature marked often a higher degree in the middle of the day than at the North. He replied: "Southerners understand the art of being at leisure better than the more hustling northern people do, and they also dress with a better notion of what is appropriate on a day of sizzling heat. They wear white linen clothing and dress the neck loosely; they do their work in the cooler morning or evening hours and take a midday rest. They are not above carrying an umbrella to ward off the rays of the noonday sun. At the North business men dress too warmly and rush about pre-

cisely as if it were mid-winter, making no difference between January and July. In consequence they almost invite sunstroke. They take life at too exciting a pace." The good doctor might have added that one prolific source of peril from heat prostration is cooling the temperature of the body too rapidly by copious drinks of iced fluids either from the soda water fountain or from the home refrigerator. Some years ago a noted prima donna died suddenly in Paris from the effects of a drink of ice cold milk. Many sunstrokes, so called, might be averted if people avoided cooling the temperature of the body too suddenly, and if they were careful to guard against intemperance of every kind, not forgetting that to lose one's temper on a piping hot day or to become agitated in any unusual manner is to invite danger and perhaps death.—*Selected*.

CUCUMBER parings laid around in cupboards will drive away roaches and sometimes water bugs.

The Children's Corner

AWAY WITH THE BUBBLES.

"I'm tired of everything, mama. Do tell me what to do!" said Beth Lincoln, coming into the room where her mother was sitting. "I am tired of everything and everybody. Please tell me what I can do."

"Is my daughter tired of herself?" asked Mrs. Lincoln, with a slight emphasis on "herself."

"Why, yes. Didn't I say so, mama?"

"How would it do to stop trying to please self, of which you are so very tired?"

"Mama, what do you mean?"

Just then dear little Madge came toddling into the room and wistfully said: "I haven't any one to play with."

"How would it do for my big girl to get away from herself and amuse my little girl?" the mother suggested.

Mrs. Lincoln was called from the room, and she found two happy children when she returned half an hour later. What were they doing? Beth was blowing soap bubbles, and Madge was trying to catch them. Mrs. Lincoln stood for a moment in silence, thinking: "What a beautiful picture!"

Beth looked up and saw her mother, and said: "Aren't the bubbles beautiful, mama, and isn't Madge a dear?"

"I have two dears now. But what has become of that tired self?"

"Blown away, mama, with the bubbles," laughed Beth.—*Exchange*.

THE QUIET HOUR

CHRIST'S TEACHING CONCERNING PRAYER.

S. S. BLOUGH.

THE conviction of a Supreme Being was implanted in man from the beginning. To him the sincere soul has always yielded itself as it had ability and understanding. This Supreme Being has been adored and appealed to in various ways. Prayer is one means of man's devotion to God. A proper understanding of prayer is very important in this church age. Prayer is all-important. It is the very essence of religion. It begins the Christian life. In true prayer, the soul of the creature goes out to the Creator in adoration, praise, thanksgiving and petition. Every step of growth is accomplished through prayer. By it we are enabled to withstand temptation and accomplish work.

Earnest search for a teacher in prayer invariably leads to Christ, for he lived preëminently the prayer life. The disciples, anxious to learn to pray, came to him, who in turn anxious to teach gave them invaluable instruction. His teachings are final and important to all who would pray to the Father. Constant association with Christ taught the disciples not only something of his prayer life but they saw the connection between his praying and his marvelous works. Desiring to be like him, they said, "Teach us to pray" (Luke 11: 1). All who will may have his teaching which is open to all.

Christ's Teaching.

1. All worship, hence all prayer must be "in spirit and in truth" (John 4: 20-26). God desires such prayer. Not alone in prayer, but continually the suppliant is controlled by the Spirit. The one praying and the prayer must be inside the realm of truth, the Word. Place in prayer is not essential. It aids us in coming into the spirit, but we can anywhere worship him in spirit and in truth.

2. Acceptable prayer can only be offered when reconciliation with man has first been effected. There must be a thoroughly forgiving spirit (Matt. 5: 23-24). It is utterly impossible to hate our fellow-men and obey God, for God is love.

3. Pray in all sincerity and not by a vain show in hypocrisy. Prayer shall be in secret rather than in public (Matt. 6: 5-15). Every Christian should by all means have a place and time for secret prayer daily. This period should be long or short as indicated

by the Spirit. "Our father who seeth in secret will reward us openly."

4. From the model prayer of Christ we learn that our prayers shall be definite, to the Father, for all things we need, from a forgiving heart, and with a wish for the final triumph of God's Kingdom. Praying is not informing God of our needs, but asking for the things which the Spirit lays on our heart. The Lord's prayer is general while our needs are specific, hence our prayers necessarily will consist of more than the Lord's model prayer.

5. In Matt. 7: 7-12, we have perfect assurance of answered prayer. Ask, seek, knock, it shall be done. God knows how our hearts have doubts and distrusts and so he emphasizes this promise. If then we ask and do not receive, the fault lies with us and not with God.

6. God has so planned that, through the prayers of his children, workers shall be raised up to publish the Good Tidings and bring to him those who should be saved.

The world-wide harvest is indeed large and ripe for the gathering. He commands us not to cease praying for laborers. Luke 10: 1-3. The faithful disciple will be much concerned in this matter.

7. Christ again has promised his presence to even two or three who agree in prayer. Matt. 18: 19, 20. In this spiritual harmony their prayer power is multiplied. They must be gathered in his name, agree and ask. Then Christ will be in their midst by his Spirit and will second their petition and see that it is done.

8. In Luke 11: 1-13, Christ teaches us that sometimes great importunity is necessary and that God will hear such prayer. As a father will not give an evil gift when a good one is required, so God will give us the best. He will give the Holy Spirit to whomsoever asks aright. There must, however, be a real need back of the petition. The father must be our friend, then we may be have absolute certainty if we have sought to know God's will. In the case of the poor widow and the judge there was utter helplessness but a just cause. Luke 18: 1-8. If an unjust judge will be moved by such an insistent plea, surely God will hear when we call upon him.

9. Matt. 21; Mark 11. Christ teaches the necessity of uncompromising faith. Faith in the Promiser as

well as in the promise. There must be full and absolute assurance without any possibility of doubt.

10. John 14, 15 and 16 teach us a great deal concerning prayer. The conditions here given are: Believing in Christ, chosen and appointed by him, we abide in him and his words in us. We must will, then ask. Christ will pray the Father, we shall receive from the Father. It will then be ours from the Father to do greater works and have great joy. There is here a strong teaching that our asking much be in Christ's name. We shall ask by his authority which is only given to those who advance his cause and are very truly his own.

With all this teaching there is no reason why any should excuse himself from prayer. There is but one thing to do. Serve the Lord wholly, ask him for what you need and receive the answer with joy.

Batavia, Ill.

"LIKE OTHER LITERATURE."

LAST night I heard a studied address by a distinguished writer who was formerly a Presbyterian minister and later accepted the doctrines of the destructive critics. His lecture had been announced in a most attractive and cultured way, and the lecturer himself had a winning personality that attracted favor from the very beginning. He came from a place where criticism lurks under every rose on the bushes about the front door, and culture is seen in every cobweb on the vines in the side yard. Every sentence the speaker uttered was in harmony with the refinement of his personal manners; and the logic of his lecture was set before us with a symmetry and smoothness that might have been expected from the accurate wording of any selected sentence.

Aside, however, from this impression of finish and cultivation, his address was based on the assumption that the believers in the Bible were out of touch with modern investigation, that they believed because passively under authority, and that intellectual men were not believers in that which they did not prove for themselves.

But this was old stuff, hundreds of years old; in fact as old as the time when Peter and John (Acts 4: 13) were considered "unlearned and ignorant" by the priests, and the captain of the temple, and the Sadducees, and the rulers and elders and scribes, and Annas and Caiaphas and Alexander, and the kindred of the high priest, and other intellectual men of Jerusalem.

But did you ever notice that of all that assembly that day in Jerusalem there was no man whose writings we care for in our time, except Peter and John, whom the highly educated men there called "unlearned and ignorant"? Have you noticed that, even of the cultivated and polished Caiaphas, about the only thing presumably worthy of record that he ever said has been preserved from oblivion by the writing of John (11:

49, 50), whom that day he considered "unlearned and ignorant"?

But how our lecturer could have asserted that we should not accept belief under the influence of authority I could not understand; for all men believe under authority. No man has lived long enough to investigate for himself every truth he accepts. No man discovers for himself the larger part of what he believes, unless we except the mere physical or unconscious discoveries of the child; such as length, breadth, distance, form, color, weight, etc. Sir Isaac Newton did not. Copernicus did not. Columbus did not. He is a fool who will learn only by experience. The accumulated knowledge of the past thousands of years, and of all classes and civilizations, is at the command of him who is willing to accept suitable authority.

Probably the speaker's most elaborate ostentation was in his adroit insistence on the theory that the sacred books ought to be treated "like other literature"; that they ought not to be accepted as authority until their statements were proved. But this doctrine is a "begging of the question." For the Bible has been "treated like other literature," until it has fought its way to the confidence of Christendom. No writer of any Bible book ever got it accepted in the canon of Scripture because he had any earthly power to put it there.

We might well say, The Bible did not gain its power because it had authority, but gained its authority because it had power. It fought its way to the mastery of Christendom.

Just as Jesus in his life had to fight against a skeptical, cultured age, the writings of Matthew, Mark, Luke and John had to fight. The pages of their histories were stained by the blood of the writers who testified to things which the critics of that day considered ridiculous and contrary to the knowledge of cultivated men; but they have created an interest in the hearts of millions and millions of men.

Again, the prophets of the Old Testament had no special advantages in putting their productions before the world. Most of them were persecuted. Sometimes their acquaintances asked them to prophesy "smooth things," and they would not. Some of them were martyred. The writings of some of them lacked polish. They had the opposition of kings, of literary fellows, of destructive critics of the time, some of whom even with "penknife" cut the distasteful parchments in pieces and burnt them (Jer. 36: 23), and, in fact treated them like any other literature. But these lived, while most of the writings of their day are now uncared for, except as matters of archæological curiosity. —J. J. Summerbell, in *Christian Sun*.

"PREACHING and practice are twins that often get separated."

ECHOES FROM EVERYWHERE

By a vote of 40 to 34 the Senate placed crude petroleum on the free list. This was the first defeat Senator Aldrich has suffered since the tariff bill was laid before the Senate.

The California Legislature has passed a law prohibiting a saloon within one and one-half miles of a college or university having 1,000 students.

Almost identical in construction with the great Roman Coliseum will be the new convention hall which is to be built in Chicago at a cost of over \$3,000,000. It will have a seating capacity of about 50,000, and 200,000 square feet of floor space for exhibits.

Secretary of the Treasury MacVeagh recommends to the Senate finance committee that the tax on colored and uncolored oleomargarine be made 2 cents a pound straight. At present the tax on uncolored oleo is $\frac{1}{4}$ -cent a pound and on the colored product 10 cents a pound.

Within two months State Receiver Eckhardt at Taylor will offer for sale all of the property of the Waters-Pierce Oil Company located in Texas, worth about \$2,000,000. Whoever buys the property must operate it as a new concern and no bid by the Standard Oil Company will be received.

The Oklahoma State board of affairs has practically adopted a rule which will require all products purchased by the State which have to be sacked or wrapped, to be wrapped in cotton bagging instead of jute, in order to favor home-grown products. The same sort of a rule is under consideration in Texas.

In excavating for a dry dock at Taranto, Italy, some interesting archaeological relics were discovered. Among them were a sarcophagus of the fourth century A. D. containing two intact bodies, many valuable Ionic and Corinthian vases, sepulchral furniture, and a curious terra-cotta group representing Cupid kneeling on the shoulder of Venus.

That the British government has raised entirely its embargo on American beef is indicated by the recent announcement by Armour & Co. that it had received another order for 1,000,000 pounds of corned beef to be delivered to the British government in October. This is the second big order the company has received since the beef "scandal" four years ago.

A report just made shows that the postal savings-bank as established in the Philippines is a success, the deposits having more than doubled in the last year. Some people say we are ill-treating the Filipinos; it is now up to them to explain why it is that Uncle Sam has given them the postal savings-bank, when he refuses to let us enjoy this splendid institution for encouraging popular thrift.

Out of 3,600 checks paid out in wages by one manufacturer in Joliet, Ill., on a recent pay day, all but one were returned with the indorsement of some saloon. The single one had been indorsed by a man running both a saloon and a grocery store. Nine-tenths of the mill pay checks of Joliet come back to the banks indorsed by saloon keepers, declares one of that city's leading bankers.

According to William Kilpatrick, secretary of the Illinois railroad commission, the figures given out by the bureau of railway news and statistics are false and misleading. He says that instead of the railroads losing \$15,609,900 through the operation of the 2-cent law in Illinois, their earnings for the years 1907 and 1908 increased \$3,079,232. Secretary Kilpatrick says his figures are correct beyond denial.

The postmaster-general has instructed the chemists of the agricultural department to work out a formula whereby it will be possible to secure a much better paper for postal cards than is being acquired by the present contract. He points out that our postal cards are inferior to those of almost every other country. Improvements in the general style of the arrangement of the type and printing will be made.

The contract has been awarded by the Navy Department to the San Francisco Bridge Company for the construction at Pearl Harbor, Hawaii, of what will be the largest drydock in the world. The masonry and cement portion of the dock alone will cost \$1,670,000. Plans have been drawn for a complete system of defense for the harbor, and the construction of these defenses and of the dock will proceed simultaneously.

That the Chinese government intends to inaugurate a sweeping reform was reported June 21 in cables from Peking which stated that the constitution of the empire will soon be amended to permit subjects residing in the United States or other foreign countries to retain their ballot upon Chinese affairs. Chinese who renounce their Chinese citizenship will not have this privilege, of course. The purpose of the government, it is supposed, is to offer inducements to Chinese abroad to retain their citizenship privileges.

The National Bankers' Insurance Company has served notice on Governor Stubbs, of Kansas, that the national banks of the State will not be dictated to by the State as to interest rates. The nationals say they will run their business in their own way. The big fight is on between State and national banks, and Stubbs threatens to call a special session of Legislature to give State banks all that will enable them to meet interest rates fixed by the nationals. The State banks are limited to 3 per cent on deposits. Some national bankers are advertising to pay 4, and a few will pay 5 per cent on time deposits.

The American line steamer New York won the ocean race between the nine liners which started from New York on June 19, arriving at Plymouth four hours ahead of the Hamburg-American steamer Amerika. An exciting contest took place between the Lapland and the Amerika, which were within sight of each other throughout the entire voyage. They passed Eddystone within ninety minutes of each other. The other steamers were the Baltic, Minnehaha, Barbarossa, Konig Albert, Carmania and Furnessia.

Emperor William has contributed \$7,500 to the German Labor Exchange Association, an organization the object of which is to find work for the unemployed. The society has arranged for energetic support in the German states, and the Prussian cabinet has decided to include a liberal appropriation for it in the next budget. The association proposes to grasp the problem of lack of employment in the most thorough manner, so that men without work can be brought into immediate contact with vacancies in any part of the empire.

The American Institute of Homeopathy, in its annual convention at Detroit, June 25, adopted an amendment to its code of ethics releasing physicians from professional secrecy regarding the private affairs of patients or their families where such secrecy or silence may result in the injury or infection of innocent persons. The institute also went on record as advocating the formation of an independent national association of clinical research, which shall invite and receive into membership without disturbance of present affiliations the American Homeopathic Institute, American Medical Society, Eclectic Medical Association, state medical societies, college faculties and the hospital staffs of the army, navy and marine service.

The Austrian war on the Standard Oil Company will be aided by the government. The Galician Society of Oil Producers and the refiners' syndicate have agreed to take over and assume the management of the Austrian government's factory for the purpose of providing oil fuel, which is being used on the government's railroads. The oil producers and the refiners further declare they will not buy any more oil from the Standard if the government will build adequate oil tanks and pipe lines to store the various local supplies. The ministers of the government have signified their intention of complying with these conditions. Such a move will, in effect, practically bar the Standard from further business in Austria and Hungary.

No doubt the building of the Panama canal is the biggest undertaking of all time thus far, but because it is of such stupendous proportions other countries are not content to sit idle and make no attempt at canal-building because the United States is unrivalled in its work on the southern isthmus. Canada, therefore, is laying plans for a ship canal which will be nearly 450 miles long, extending from Montreal to Georgian Bay. Of course, a great deal of the route will not have to be cut, as it will extend through lakes and rivers, but it will not be the less cost, and the Canadian government is counting upon disbursing at least \$100,000,000 on the project. When the work is completed it will be possible for a cargo to be shipped without change from London to Lake Superior, following a route that will be 800 miles shorter than the one now in use.

It is generally understood that James Wilson will resign as Secretary of Agriculture shortly after the regular session of Congress begins in December. He has already attained his ambition to serve a longer continuous term in the cabinet than any other man. Representative Charles F. Scott, of Kansas, chairman of the House committee on agriculture, is said to have been agreed upon as Secretary Wilson's successor. Congressman Scott edits and publishes a paper at Iola, Kans.

Plans are under way for the electrification of the more important state railroads of Sweden. It is expected that the line running from Kiruna, in the iron ore fields of Lapland, to the Norway boundary will be the first to change from steam to electricity. The change is made necessary by the increase of traffic over the line, which can be handled only by doubling the tracks if steam propulsion be still adhered to. It is believed that electrification would be much more economical than the construction of double tracks.

Though the official figures of June 24 place the number of cholera cases in St. Petersburg at 313, careful estimates made by those in a position to know are to the effect that there are fully 1,000 cases. The conditions have grown steadily worse until now there is an increase of nearly 100 cases a day and within a few days the situation will be as grave as it was at its worst last year. About one-third of the cases are proving fatal. Within the last few days many persons have been stricken in the streets and other public places and the entire city is rapidly becoming panic-stricken.

Now that an international candle has been fixed upon, it is unfortunate that Germany clings to its Hefner candle, particularly as the value of this candle is less than that of the new unit. It is believed that the public, not understanding the difference in the value of the candles, will be apt to buy the German lamps because they will bear a higher candle figure for the same value. Eleven Hefner candles are equivalent to ten international candles. The international candle is to be adopted in this country on the 1st of April next. Our standard candle will have to be reduced 1.6 per cent. That would make a 16-candle-power lamp of the present rating equal to 15¾ according to the new standard.

Prince von Buelow has authorized the announcement that he intends to retire from the chancellorship of the German Empire, in any event, as soon as the pending finance measure is disposed of in one way or another. The Prince remains in office only temporarily in an endeavor to pass the bill. Emperor William has not yet given consideration to the question of a successor to Chancellor von Buelow. The most probable choice, however, is Dr. von Bethmann-Hollweg, imperial secretary of state for the interior and vice chancellor. Prince von Buelow, who came from the German embassy at Rome twelve years ago without title to be foreign secretary, will go back to Rome and live in the villa recently purchased by him there at a cost of \$500,000. Twelve years ago he was a poor man. He retires with a large private fortune and the rank of count and prince. On the day his majesty gave him the latter title Von Buelow was notified that his share of the estate of Herr Godfrey, the wealthy sugar merchant of Hamburg, amounted to \$1,375,000. Herr Godfrey had never met Prince von Buelow, but had become interested in his public career and left him his fortune.

Among the Magazines

WHAT THE POPE THINKS OF WOMAN-SUFFRAGE.

Roman Catholic journals are correcting the impression created by the daily press that Pius X has publicly condemned the woman-suffrage movement. But it is made equally clear that he does not encourage it. The Catholic News (New York) says that the occasion of his recent utterance was the reception in audience of a large number of distinguished women of Italy and France, members of the well-known organizations, "Union fra le Donne Catholique d'Italia," "Ligue Patriotique Francaise," and "Association des Dames Francaises." Rome, a weekly Catholic journal printed in English in the Eternal City, informs us that the president of the Italian organization "read an address promising His Holiness the coöperation of these bodies in his great work for the restoration of all things in Christ and that Pius X in replying "touched upon some of the vital questions connected with the woman's movement of the day." He is said to have pointed out that it is "an error to suppose that woman has the same rights and the same social functions as man. She is not his slave or his servant, but his companion and helpmate." "Their functions are different, but both equally noble and harmonizing in the scope of forming the family and educating the offspring." But woman's functions are not confined within the home, he said. She has also a social mission. The Pope thus continued:

"I would suggest also that you give serious attention to the study of pedagogy, so that you may learn the rules for the instruction of the young and become better equipped for the difficult work of education. Today there is a tendency to spoil the child by sparing the rod and to act on the belief that children will grow up good Christians and good citizens when nurtured on kisses and caresses. Then again, if you are to be good housewives you must learn something of the principles of domestic economy, which will enable you to regulate your households with thrift and order. But above all else, be assiduous in your religious duties, remembering that while the truly pious woman is the mistress of the house and of the heart of her husband, she becomes the bane of both when she is without faith."

"It will be observed," remarks Rome, commenting upon the Pope's address, "that the Holy Father gives due prominence to the work of woman in the social movement." It adds:

"He has not, of course, made any formal pronouncement on the political movement among women, but in more than one private or semi-private conversation he has let it be clearly seen that he has no sympathy with the female demagog—or, indeed, for that matter, with the male demagog of the hour. He does not wish to see women become members of Parliament or of Congress, but he does wish them to take an active and even a public part in questions connected intimately with the

sanctity of family life, the religious education of the young, the betterment of the condition, moral and material, of working women, and so on."—Literary Digest.

ATHLETICS IN COLLEGE.

The new president of Harvard University has asked the public to gauge the work of colleges and universities less by the victories of the athletes who represent them in sporting competitions and more by the scholarship attainments of their graduates. This is both a reasonable and a timely request. It is made at a period when the demand for "regulation" of school athletics is almost invariably met by the cry that to interfere with athletics would be "to kill the school," or by the charge that any change in policy in any one university would make that institution a "girls' school." Nor are the objections without foundation in fact. Not many years ago a well known university of the middle West did put the ban on intercollegiate sports and the result was that it lost a large proportion of its young men students. The school authorities did not attempt to discriminate against athletics, but merely to prevent the organization of school football, baseball and track teams for the purpose of competing with similar teams representing other schools. In fact, the faculty attitude toward the sorts of athletics in which every student could participate was rather more favorable than it had been previous to the promulgation of the anti-intercollegiate contest edict. The faculty recognized the value of physical exercise for the student body, but it took the position that competitive athletics tended to benefit only a limited number and that the benefit to these few was questionable. However reasonable this position may seem to the ordinary man and woman, it must have appeared utterly unreasonable to the young men who were then and have since been preparing to enter universities, for this particular school has never since been popular with the masculine element. Perhaps one reason for such a result is that parents generally do not advise with their children as they should regarding the selection of the institutions where those children shall be educated. Very often the selection is left entirely with the young men or the young women, and they are quite as likely to be influenced by immaterial as by material considerations in making their choices. One of the first considerations with the boy will be the condition of athletics at the school. He does not desire to attend a college or university that never has a team that can win a baseball or football game or a track or field contest. He may not be an athlete himself, but if he is a normal, healthy youth it is quite likely that he is greatly interested in athletics. So the boys, being permitted to follow their own inclinations, have rushed to those schools that have had winning athletic teams. And the school faculties, noting this, have encouraged athletics for the advertising value thereof. The remedy for the condition, however, does not rest entirely with the parents of young men

who are sent to college. The schools themselves are in a large part to blame. If a few of the strongest of them would reach some agreement that would place school sports on a safe, sane basis, present conditions would not be of long duration.—Woman's National Daily.

**RESOLUTIONS ADOPTED BY THE SECOND
NATIONAL PEACE CONGRESS HELD
AT CHICAGO MAY 3-5, 1909.**

Whereas, Civilization has now reached a point where conscience, reason and the sense of brotherhood are increasingly controlling men in their relations to each other; when private war and the duel have wholly or largely disappeared, and the different nations have created for themselves systems of law and courts by which differences between their citizens are peacefully adjusted; and

Whereas, The two Hague Conferences have created a permanent international court of arbitration to which all the nations are now parties, approved unanimously the principle of obligatory arbitration for the settlement of international controversies; have sanctioned, without a dissenting voice, the creation of a permanent international court of justice, with judges always in service and holding regular sessions, and have urged the governments to find a satisfactory formula for the selection of the judges; and have laid the foundations of a regular congress of nations by unanimously voting for periodic meetings of the Hague Conference hereafter—which great measures are the most decisive steps yet taken toward that organization and systematic coöperation of the nations which shall eventually substitute law for war; therefore be it

Resolved, By this second United States National Peace Congress, that public war is now out of date, a relic of barbarism unworthy of our time, and that the nations of the world by joint agreement, by a league of peace among themselves, ought to make its occurrence hereafter impossible.

Resolved, That no dispute between nations, except such as may involve the national life and independence, should be reserved from arbitration, and that a general treaty of obligatory arbitration should be concluded at the earliest possible date. Pending such a general treaty, we urge upon our government and the other leading powers such broadening of the scope of their arbitration treaties as shall provide, after the example of the Danish-Netherlands treaty, for the reference to the Hague Court of all differences whatever not settled otherwise by peaceful means.

Resolved, That the prevailing rivalry in armaments, both on land and sea, which imposes such exhausting burdens of taxation on the people and is the fruitful source of suspicion, bitter feeling and war alarms, is wholly unworthy of enlightened modern nations, is a lamentable failure as a basis of enduring peace, and ought to be arrested by agreement of the powers without delay.

Resolved, That this Peace Congress expresses its high appreciation of the action of our government in the recent conclusion of twenty-four arbitration treaties and in the promotion of friendly relations between the various American republics. It recognizes with special satisfaction what was done by our government and representatives at the second Hague Conference in behalf of a general treaty of obligatory arbitration, a court of arbitral justice, the immunity of private property at sea from capture in time of war, and the establishment of a periodic congress of the nations, and in support of the proposition of the British government for limitation of armaments. It respectfully and

urgently requests the President and the Congress of the United States to take the initiative, as far as practicable, in an endeavor to complete the work of the second Hague Conference in these various directions; and especially to secure an agreement among the military and naval powers for a speedy arrest of the ruinous competition in armaments now prevailing. As an immediate step to this end, we urge our government in obedience to the charge of the second Hague Conference, as well as the first, that all nations should earnestly address themselves to this problem to create a special commission of the highest character for its consideration, whose report shall serve as a basis for the action of our delegates at the third Hague Conference.

Resolved, That this Congress earnestly endorses the movement so auspiciously begun by the governments of Denmark and Great Britain to provide at public cost for constructive measures to promote international good understanding, hospitality and friendship, and appeals to our government for broad and generous action upon these lines.

Resolved, That this Congress, representing all sections of our great country, appeals to our churches, schools and press, our workingmen's and commercial organizations and to all men of goodwill, for increased devotion to this commanding cause and such large support of its active agencies as shall strongly advance the great measures which are to come before the next Hague Conference, and shall maintain our nation in high and influential leadership in behalf of international justice and order.—The Advocate of Peace.

**THE FLY THE MOST DANGEROUS ANIMAL
ON EARTH.**

THE New York Merchants' Association has recently been making an exhaustive study of the fly, and has summed up its findings in a most instructive pamphlet, entitled, "The House Fly at the Bar. Guilty or Not Guilty?" From this we quote as follows:

"Hitherto the fly has been regarded complacently as simply a nuisance, but regarded in the light of knowledge the fly is more dangerous than the tiger or the cobra and may be classed the world over as the most dangerous animal on earth."

They sent out a corps of investigators along the water front of New York City. During the hot weeks in summer along the shore line was an abundance of filth and even human excreta which were swarming with flies, and these identical flies were found by careful observation to be making trips forth and back to near-by restaurants and homes.

Microscopic examination of these flies showed that they were carrying on their feet thousands of disease germs which they left on the food that they came in contact with. It was also found that most of the seven thousand deaths from diarrheal diseases during the summer were within three blocks of the shore line which corresponded to the visits of these flies.

The number of bacteria on a single fly may range all the way from five hundred to six million. It is now known that the fly is one of the chief agencies in the spread of Asiatic cholera, and it is believed to have

been directly responsible for more than four thousand deaths from diarrheal diseases last year in New York City.

During the Spanish-American war more than twenty-two thousand of our soldiers had typhoid fever. The United States government appointed a commission to study the cause. They found the water supply was excellent, but they did find that the flies swarmed in the laterines and then visited and fed upon the food prepared in the dining tents. In some instances where the lime had recently been sprinkled over the contents of the pits the flies with their feet white with the lime were seen walking over the soldiers' food.

Dr. L. O. Howard, one of the United States government experts, suggests that it would be more appropriate to speak of the house fly as the "typhoid fly."

The health officer of Providence, R. I., has issued the following instruction, which is also recommended by the Massachusetts Association of Health Boards:

"Flies are filthy insects. They drink from the cess-pools and dine in the privy vaults. They eat the sputum on the sidewalk, and revel in the garbage pail. They swarm on the baby's diaper, and are greedy for the dressings from a discharging wound.

"Perhaps you think it is disgusting to read about such things, and so it is. But is it not more disgusting to have these same flies, after their repast of filth, drown in the milk pitcher, drop their specks on the frosted cake, or clean their feet on the bread? Is it pleasant to see the flies that very likely have just come from a neighboring privy crawl over the lips of the sleeping baby, or gather on the nipple of its nursing bottle?

"Suppose the fly that was fished out of the milk pitcher had just been eating the excrement of a typhoid fever patient, would you like to drink the milk? Perhaps the flies that are walking on the fruit which you purchased at the street corner had just been feeding on the sputum of a consumptive.

"Perhaps hereafter you will screen the house and protect the food from flies. Do you want to raise these filthy insects, these germ-carriers, these indicators of untidiness, to be a pest in your own house, and perhaps carry disease to your neighbors?"

Flies that have been fed on tubercular sputum were found to contain three thousand tubercular bacilli for each fly speck, and thirty of these flies made two thousand fly specks in three days.

Dr. Dickinson says that a housekeeper will spend a day rummaging over a bed for a bedbug and give little notice to her kitchen full of flies. Yet the fly is a pestilential fellow.

The Board of Health in Philadelphia has instructed the owners of all butcher shops, grocery and candy

stores that they must protect food materials from the flies.

Attention is called to the fact that common netting can be purchased for a few cents a square yard, which is certainly a very cheap investment compared to the human lives that may suffer.

We are just entering the fly season. We would suggest to all of our readers to remove as far as possible from their premises those things in which flies breed, such as horse manure and other filth, to screen their windows, to cover over with netting exposed food. Do not treat this matter as a joke; this is a serious and earnest matter and by giving heed to this instruction you will cut down sickness and possibly funeral expenses in your home.—*The Lifeboat*.

Between Whiles

Fruitless Fame.—"What is your member of Congress noted for?"

"Well," answered Farmer Cornloss, "around here he's mostly noted for arguments that won't go down and seeds that won't come up."—*Washington Star*.

A woman in a town lying east of the Rockies was much distressed at hearing a small clique in her town refer to themselves as the "smart set." She appealed to an ex-United States senator, and asked him what he understood by the term "smart set." He replied: "I think I can give you an inkling. In the eastern part of Colorado and in the western part of Nebraska there is a large tract of land known as 'the rain belt.' It never rains there."—*Ohio Educational Monthly*.

"Many statesmen refuse to depend on the judgment of the common people." "Well," answered a farmer, "after the poor judgment shown by us common people in putting them up for office, I don't know that I blame them."

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED—1,000 Sisters to send for sample of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Illinois.

WANTED—Janitor and cook at college. Large school. Good church and social advantages. Give references. School opens Sept. 1.—Mt. Morris College, Mt. Morris, Ill.

THREE TIMELY BOOKS for the FLORIST AND GARDENER

MY TEN-ROD FARM, or How I Became a Florist. By Chas. Barnard.

An interesting story of the successes and failures of a florist. Through an accident at the mill Mrs. Maria Gilman became a widow with two children to provide for. This she did by converting her small flower garden into a commercial asset which now furnishes an annual income of two thousand dollars. Attractively bound in cloth. 118 pages. Postpaid, 45 cents.

THE STRAWBERRY GARDEN. By Charles Barnard.

A very practical story concerning the Wellson family and their strawberry garden. How it was planted, what it cost and what came of it financially and sentimentally. The writer is a close student of human nature as well as a practical market gardener. A book of 104 pages, bound in cloth. Postpaid, 45 cents.

A SIMPLE FLOWER GARDEN for Country Homes. By Charles Barnard.

A practical guide. Aunt Louisa assists Frank and Gertrude in beautifying their rural home. How to start a flower garden, what it will cost and how have flowers all the year round. This little volume tells you just what you should do in each month of the year. 76 pages. Bound uniform with "My Ten-rod Farm" and "The Strawberry Garden." Postpaid, 45 cents.

BRETHREN PUBLISHING HOUSE, Elgin, Ill.

Buckeye Pure Home Made APPLE BUTTER

Is pronounced by hundreds of our customers, the best they ever ate. It is the product of apples, apple cider and granulated sugar; very appetizing and wholesome. Our Motto: Highest class of goods and a square deal guaranteed to all. Write for circular and special prices.

C. J. MILLER & CO., Smithville, Ohio.

Arnold's Chart of Paul's Journeyings

A useful teacher's tool that you should have close at hand while teaching the life of Paul. Prepared by Bro. C. E. Arnold. Clear outline journey maps; and the principle events and places arranged in easily read columns; all on one sheet of paper, 12 inches by 19 inches. Folds within stiff covers small enough to slip into one's pocket. Twenty cents.

NEFF'S CORNER

Contracts are now all let for the 176 miles of new railroad that will complete the connection between Galveston, Texas, and Clovis, which will put us on a short, through line from the Gulf to the Pacific. Through traffic from Chicago and from the Gulf will meet here on its way to the Pacific and Clovis will be a division point for both lines. That means that the capacity of the car shops, round house and railroad yards here will be doubled, and that Clovis will soon be a city of 10,000 people. Property values have doubled during the last few months and we expect them to double again in the next few months. Beauty about investments here, if a man buys he can sell again. Evidence that people are satisfied with their investments here is to be found in the fact that after they have put in some money and tried it awhile, they invest again and again. If you would like to correspond with some of these people, drop me a line and ask for their addresses. If interested, don't hesitate to ask for any information you desire. We are having fine rains, prospect of good crops, and our farmers as well as our business men are happy and prosperous.

JAMES M. NEFF,
Clovis, New Mexico.

CLASS COLLECTION ENVELOPE.

A tough manilla envelope, on which may be recorded the amount of class offering for entire year, with totals for each quarter. Price, each, 2 cents. Price, per dozen, 15 cents.

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

Teacher's Class Book.

A neat folder with blanks for one year. Can be carried in Bible. Very complete yet simple and compact. Price, per dozen, 35 cents.

BRETHREN PUB. HOUSE, Elgin, Ill.

The International Sunday-School Lessons FOR 1909

Are on the Acts of the Apostles

Every Sunday-school Teacher will need the helpful assistance of some first-class teachers' help. The lessons deal with the persecutions of the early church and the spreading of the Gospel which attended the dispersion of the saints. Lesson writers of splendid ability have been engaged for this year and we confidently hope to make the **Brethren Teachers' Monthly** the best teachers' assistant on the market. If you have never used the Monthly, ask for a sample copy. We will gladly send a copy to each of your fellow teachers if you will send us their names and addresses. Subscription price, 50 cents per year.

Webster's Imperial Dictionary

New and Up-to-Date. Reset from New Type. Thousands of New Words. This is the Only New and Complete Webster Dictionary issued since 1890. For it is the Only "Webster" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the Best and Most Practical, as well as the Latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations.

Full Sheep Binding with Patent Index.

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

Price, each, postpaid, only

25 cts.

LITERARY ACTIVITY OF THE BRETHREN IN THE EIGHTEENTH CENTURY

Prof. John S. Flory, Ph D.

Every one who has read this book is ready to speak a word of commendation.

"I have read with much interest Prof. Flory's book, 'Literary Activity of the

Brethren in the Eighteenth Century.' It is, no doubt, one of the very best contributions to our historical literature that has yet appeared. The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every state-

ment. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author, —A Great Book."—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

"I wish to express my appreciation of 'Literary Activity of the Brethren in the Eighteenth Century,' by Prof. John S. Flory, Ph. D. I consider it a very valuable contribution to our church literature. The author is to be congratulated for the thorough treatment of his subject. His style is easy and attractive. It is a readable book and ought to find its way into many homes."—Prof. T. T. Myers, Juniata College, Huntingdon, Pa.

Bound in cloth, 335 pages,\$1.25

Brethren Publishing House
Elgin, Illinois

Two Centuries of the Church of the Brethren

This book contains the twenty addresses delivered at the Bicentennial Conference, Des Moines, Iowa, June 1908. The first large edition was soon exhausted and we have not been able to fill orders

for some time. The second edition is now ready and will be in demand, as several thousand of our readers neglected to purchase during the life of the first edition.

This new edition is printed on thin paper, making a volume about two-thirds the size of the former edition. Typographical errors have been corrected and the binding improved. Large, clear type, 400 pages.

The book is embellished with Twenty-five Full-page Photogravure Effect Portraits. These illustrations consist for the most part of portraits of the speakers who delivered the Bicentennial Addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

The book is a fitting souvenir of the Bicentennial year and should be found in every Brethren Home.

Send your order by return mail.

Price, in artistic cloth,\$1.50

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

Ho! for Canada

It is not the purpose of the CO-OPERATIVE COLONIZATION COMPANY to slacken interest in its Colony at EMPIRE, California. This colony is now well under way; colonists are moving in and are well pleased and the work is moving along satisfactorily. But as the policy of this company is,—“CHURCH EXTENSION BY COLONIZATION,” steps are being taken to locate a colony in the Northwest.

After considering the various sections offered for settlement, the Directors at a recent meeting decided to locate

Colony Number Two Near Portage la Prairie, Manitoba, Canada

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its nearness to good markets,—only 56 miles from Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Manitoba.
6. The Low price of land, when quality and location is considered. These lands are now ready for settlement, are low in price and will soon be taken.

Join our Colony Number Two, secure a good farm in a prosperous section with good, near-by markets, excellent transportation facilities, where School and Church privileges are assured, and among people with whom you are acquainted. For fuller information, dates of Land Seekers' Excursions, etc., address:

Co-operative Colonization Company
North Manchester, Indiana

RECLAMATION PROJECTS

State	Name	Total Allotments	Acreage	Ownership
Arizona	Salt River	\$ 7,050,000	240,000	Mainly private
Arizona-California	Yuma	3,455,000	79,000	25% public
California	Orland	585,000	14,000	Private
California-Oregon	Klamath	2,109,000	181,000	25% public
Idaho	Minidoka	2,491,000	134,000	90% public
Idaho	Payette-Boise	2,500,000	372,000	75% public
Nebraska-Wyoming	North Platte	4,230,000	97,000	75% public
		4,115,000	200,000	70% public
New Mexico	Rio Grande	75,000	155,000	Private
Oregon	Central Oregon	75,000		Preliminary examination
Oregon	Umatilla	1,186,000	20,440	20% public
Utah	Strawberry	810,000	60,000	Private
		\$28,647,000	1,552,540	

To December 31, 1908, the Federal Government has already expended over 28 millions in preparing homes for probably 20,000 families, possibly more, and must spend millions more before these projects are finished. With the Government the railroads that serve this territory are vitally interested in seeing that these acres are successfully settled by prosperous farmers. Whether these farmers are on government lands or on private lands irrigated by the government, is of minor importance; the main proposition is to supply as many homes for as many people as possible on these government projects.

Parties wishing information about any of these projects with the view of securing Government land or private lands for future homes should write to the undersigned for printed matter descriptive of the section of the country they wish to locate in.

GEO. L. McDONAUGH,
Colonization Agent, U. P. R. R.,
Omaha, Nebr.

Fallon, Nev., June 18, 1909.

*TRUCKEE-CARSON PROJECT

Mr. J. C. Waite,
777 Federal Bldg., Chicago, Ill.

Dear sir:—

I have, of course, been extremely busy since coming here. Nobody can appreciate what has to be done, until they get into it.

All of my crops are looking fine. They say my alfalfa can not be beat. It is cut and cocked up now. It will stand me in \$20.00 an acre this one cutting and I will get two more cuttings this season besides pasturage this early spring and late fall.

I figure it will net me \$50.00 an acre this year at least, after paying expenses of labor, etc. This alfalfa stand is only 1 year old.

Well, I must ring off. Trusting that I may hear from you soon,

I am yours truly,

(Signed) A. O. Foskett, Sec.

Tell the folks in Chicago they can never locate cheaper here than at the present time.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

BRETHREN PUB. HOUSE, Elgin, Ill.

NEFF'S CORNER

Contracts are now all let for the 176 miles of new railroad that will complete the connection between Galveston, Texas, and Clovis, which will put us on a short, through line from the Gulf to the Pacific. Through traffic from Chicago and from the Gulf will meet here on its way to the Pacific and Clovis will be a division point for both lines. That means that the capacity of the car shops, round house and railroad yards here will be doubled, and that Clovis will soon be a city of 10,000 people. Property values have doubled during the last few months and we expect them to double again in the next few months. Beauty about investments here, if a man buys he can sell again. Evidence that people are satisfied with their investments here is to be found in the fact that after they have put in some money and tried it awhile, they invest again and again. If you would like to correspond with some of these people, drop me a line and ask for their addresses. If interested, don't hesitate to ask for any information you desire. We are having fine rains, prospect of good crops, and our farmers as well as our business men are happy and prosperous.

JAMES M. NEFF,

Clovis,

New Mexico.

Old Germantown Church

Post Card No. 26

A beautiful souvenir card of the church at Germantown (Philadelphia), Pa. This was the first church in America built by the Brethren, and has a very interesting history. The card is finished by the "Photo Chrome" process, in colors. We have just received from the importer a new lot of these popular cards and can fill orders promptly.

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

CRADLE ROLL BIRTHDAY POST CARDS

The phenomenal growth of the Cradle Roll Department of the Sunday School calls for constant activity on the part of the publisher to supply novelties and helps that will suit this peculiar field. Among the most useful helps are the birthday cards of which a new and beautiful line is just issued which may be mailed as post cards. The cards bear appropriate photographic reproductions embellished with exquisite floral designs and having greetings and verses in colored lettering; on the address side of the card is space that may be used for a personal message or invitation.

Form P. First Birthday—Boys.—A beautiful madonna with dainty decoration of trumpet border and lily of the valley.

Form Q. First Birthday—Girls.—Photograph of girl baby with border of snowdrops and colored leaves. One candle burns at top of card.

Form R. Second Birthday—Boys.—A bright boy's face with decoration of apple blossoms and golden bells.

Form S. Second Birthday—Girls.—A chubby two-year-old girl with pretty

background of violets and dainty lace.

Form T. Third Birthday—Boys.—A stalwart boy's figure in panel embellished with beautiful floral designs.

Form U. Third Birthday—Girls.—The girl's picture on this card is bordered with delicate grasses and pansies; three candles are burning on shelf.

The cards sell at the rate of 2 for 5 cents or 25 cents per dozen, postpaid. Order any one form or assorted.

Ask about our "One Dollar Cradle Roll Outfit."

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

No. 28.

THE KING OF THE SILVER STATE

FRED V. KINZIE

"HERE we are at last, and what a sight! A right good view, too."

"Yes, indeed, this is splendid. What's the name of this mesa?"

"'Franklin'," was the brief reply, and the speaker, a middle-aged man of small stature and hair tinged with gray, put spurs to his large, bay saddle horse, the steed darting forward, anxious to be on the road. Closely following rode the second speaker, a youth of slight build though sunburned and dirt-begrimed by long and hard riding. An honest and trustworthy face was visible, and a piercing, black eye told of an inward sight seldom so noticeable. The weary travelers made their way down the steep, stony trail with the beauty of the morning's dawn unnoticed. The sun was about an hour high above "Saw Tooth" and as the red disk gleamed through the peaks to the south, and glistened on the summit of snow-capped Mt. Sniffles and her surrounding sisters, Carl Rendson, the younger of the travelers, could not resist the mesmeric power these mountain scenes hold so often over the beholder.

There at their feet lay the valley clothed in its garb of varied vegetation. Fields of unthreshed grain, yellow in the golden sunlight, large orchards of apples, peaches, pears, plums, prunes, apricots, and many smaller fruits, all loaded to such capacity that they seemed to groan under their tremendous weight. The distant buzz of the threshing machine, the chatter of an impudent prairie dog and the occasional whisk of a coyote through a nearby thicket added a charm to the scene indescribable.

Carl, or "Ren," as his associates chose to call him, was so unconsciously absorbed in his own reflections that when he came to himself their steeds had carried them to the road and the leader bounded off at great speed, the smaller following, doing his best to keep up. As they came out more in the open and a clearer view could be had, the first thing that struck the quick

eye of the youth was the outlines of Grand Mesa to the north; but the purple haze which distance lent was greatly dispelled by the bright sunlight.

On they rode to the east until, after the habitations had become more numerous and the roads showed more travel, "Ren," and his traveling companion, Alfred Keel, entered a good-sized town and went to the office of the man who would determine their next few months' occupation..

Approaching the desk of J. H. Farl, the elder of the riders was at once recognized.

"Well, 'Alf', how come you? Where've you been, and what're you doing here?" Thus the reception the range-rider received as he took an offered chair and began his mission.

"My young 'pal' and I rode over from—Here, 'Ren'! Mr. Farl, meet Mr. Rendson." And "Ren" joined the two in the talk. "Yes," continued "Alf" after the interruption, "we rode over from the Creek Country this morning in hope of getting work in the orchards. As you know, our line is not very brisk at present."

"Talk about luck!" ejaculated Farl, the proprietor of a very large fruit ranch. "Just what I was wishing for this morning. Help is a little scarcer round here than I like to acknowledge. Do you want to go to work at once? If so, go out to the place and I'll call up Ross and tell him to put you and your friend to work and we'll call this a day even if it is after nine o'clock."

"That suits me. How about you, 'Ren'?"

"Just as good as we can expect, so here goes."

The two left the office and were soon retracing their steps towards "Spring Creek" Mesa, and in the smaller part of an hour they rode into the farmyard designated by the proprietor.

"Where'll I find Mr. Ross?" inquired "Alf."

"Old Ross's in the orchard, I reckon. He's afraid to leave the men two minutes for fear they'll say

somethin' that he won't hear. If you're going to stay and work you can turn your broncs in that corral." So saying the speaker, Owen Cristlinger, a tall, gaunt-looking young man, who had been hauling the apples in from the orchard to the packing shed, turned on his heel and with a gesture of his hand toward the corral mentioned he jumped on his wagon and the team went at a galloping pace toward the orchard.

Alfred Keel and Carl Rendson freed their horses and before leaving the corral turned to take another look as if it was a curiosity to see them without saddle and bridle. They made their way through the large orchard laden with fruit to a portion that seemed

is another scene of much brisker activity, and instead of men employés they are mostly women and girls. Under a temporary, rudely-built shed are placed four tables with canvas tops and fixed to accommodate four packers each. Each woman stands beside the table facing the corner nearest her and before her are placed two boxes lined with smooth, white paper, and into these she packs the apples in two grades—"fancy" and "choice." The fancy are packed stem down and two layers are put thus, after which the rest are laid in any way convenient (called "throw-in"). The choice are packed one layer and the rest "thrown-in." The boxes they are packed in are made where used

Spraying Fruit Trees Near Montrose, Colo.

infested with human bees. They soon came upon the scene of activity and it was worth a few moments' notice by the newcomers. The foreman, Mr. A. A. Ross, was found and soon there were two more pickers busily engaged in plucking the rosy-cheeked apples, as a couple dozen others were doing on every side.

A sack with both ends open was fastened by straps over the shoulders and the top was held open by a stiff wire. Before beginning to pick the bottom was doubled up and hooked so when it came to emptying it was unhooked and the apples slipped out in the boxes, set under the trees for that purpose, with no danger of bruising,—a very important matter. Ladders were used by several of the pickers, though the limbs bent so near the ground beneath their weight that on medium-sized trees half the fruit could be picked while standing on the ground. Thus each man picks on an average of about fifty bushels per day.

Presently along came "Crist" and amid much laughter and many jests he loaded his load of filled boxes and with about seventy-five of these bushel boxes constituting a load he drove to the packing shed. Here

and just as needed. Two men, each making five hundred per day of eight hours, just about keep twelve or fifteen packers busy. The boxmaker puts the top on the box instead of the bottom and in packing the apples they are packed top first. The boxes are filled very full and then put under pressure to force the bottom to a nailable position. Although fancy and choice are the principal grades, a few, classed as perfect apples, may demand a better price by marking them "extra fancy." Packers receive four cents a box for their work. The swiftest can pack from seventy-five to one hundred per day while almost any person can pack as many as fifty.

At one side of the shed is a big pile of apples on the ground, of which a distant view does not explain the reason for their being there. These are culls. After the main rush of picking and packing is over they will be sacked and hauled to town and loaded in cars bound for the Denver cider mills. People from an appleless country would throw up their hands in horror at this terrible "waste." And it seems as such when upon examining one of them you can find nothing but

a slight blemish or a worm hole on an apple almost as large as a cocoanut.

Thus after the thousands of bushels of fruit have been loaded in the refrigerator cars, the hundreds of carloads have made their way over mountain and plain and rivers and seas, the busy rush of harvest has passed once more, and the morning's chill penetrates farther into the day, and darkness creeps onto the fleeting daylight sooner at evening, this harvest has hardly made good its disappearance when the ranchers' eyes are turned to the crop of the coming year. The Christmastide has hardly entered the mind and thoughts of the housewife; Thanksgiving puddings have hardly been digested by the schoolboy; much less has the farmer taken time to notice or consider the loss of one or two of his largest, fattest turkeys, when pruning shears are taken from their hook in the shed, saws are sharpened and a brigade of men are set to work in the orchards "slaughtering" the trees. Great piles of brush are left under the trees and after twenty or twenty-five men have worked like beavers the greater part of the winter on an orchard of three hundred and fifty acres and the brush is being hauled from the orchard it looks more like making hay than picking brush. And it is carried on in a similar manner. Several low-down wagons are used on which to load the brush and several men stay in the orchard and throw the brush on with a fork as fast as the wagons drive around. Between two and three weeks are required to clean the orchard.

Along about the first of May another department of the work is begun. Tools, implements and apparatus are brought on the scene and looked over and repaired, which to the novice would remind one of a rural fire department. And its meaning is not entirely solved until seen in the orchards at work. It proves to be nothing more nor less than a wagon with a gasoline engine and tank and pumps mounted thereon drawn by a team. Four long hose run from the apparatus, a man at each nozzle spraying the trees with a solution compounded to kill the insects which prey on the trees. In large orchards two or three wagons are in use.

Next come irrigation and cultivation of the orchard land and ere the rancher is aware another crop has budded and bloomed, and the young fruit is quickly nearing maturity, when it will be picked and sent out of this semi-appropriately named "Garden of Eden" where the sin of Eve and the temptation of the serpent are not strangers. Here is the home of the "King of the Silver State"—the apple.

THE SUNNY SIDE OF LOUISIANA.

JAMES E. LEWIS.

LOUISIANA is a very productive State and is adapted to various crops. First, its natural resources are great and unsurpassed in many ways. The State has some of the finest timber lands east of the Rockies;

long leafed, yellow pine, cypress, cottonwood, white oak, hickory, ash, etc. There is also much fine pasture land and stock lives out the whole winter without extra food and in many parts keeps fat.

The great sugar belt surpasses everything in the States. Louisiana also has a good cotton and corn belt, the best sulphur mine in the world and the best salt beds in the States.

Rice is a great industry and a very expensive crop to grow, owing to the fact that it must have lots of water and that is sometimes hard to get. I am at this writing running an engine of forty horsepower, pumping two wells, each throwing a ten-inch stream, one sixteen inches high and the other nineteen inches. Many wells throw streams three to four and five feet high. This water is carried by means of small levees over the entire farm and from one to six inches deep on the rice.

The rice is sown like rye or oats in dry ground. When it is four to six inches high it is flooded and the water is kept on until grain is all made, then let off to be cut in from ten to fifteen days. It is let stand in the shock ten to fifteen days, then it is ready to thresh as fast as machines can be gotten, but sometimes it is months before a machine can be secured.

When threshed it is ready for the market or the buyer for the mill. Then it goes through a great many different processes before it is ready for the retailer. We have mills at most all our towns that are of any note.

With all the expense in saving and caring for a good crop and putting it on the market the cost will run up to about fifteen or twenty dollars per acre, but the rice will bring from twenty to ninety dollars. One of our neighbors with twenty-four mule teams sold \$9,000 worth of rice and cleared \$6,000, so you can see about how it goes. If you don't get water you don't get rice, that's all.

Roanoke, La.

THE INDESTRUCTIBLE AND UNRECALLABLE MESSAGE.

NANNIE BLAIN UNDERHILL.

Only a little thought
 Wrapped in a little word;
 A tiny message brought—
 How far away 't is heard.

So, when we ope our lips,
 A messenger is gone,
 Ne'er to return to us,
 But travels on and on.

Eternity alone
 Reveals what we have said;
 Then shall we care to own
 The words so swiftly sped?

Let every thought be dressed
 In language pure and kind;
 That none may be distressed
 His message there to find.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXVI. On the Mediterranean to Joppa.

THE sea ride from Smyrna in Asia Minor to Joppa or Jaffa in the Holy Land is one of the most thrilling excursions on the globe. Going for the first time to the Lord's country, this fact alone intoxicates with holy emotion the believer in the Cross. Then here is the Mediterranean, with its warm breezes, its gentle evening zephyrs, its morning freshness. Here are its many islands that rise, like grim but fascinating spectres out of the quiet level of blue water, with dangerous bays jagging into savage mountains thrusting their horny backs out upon the shore line.

I am not exaggerating when I say that the magnificent sweep of mountain landscape along Asia Minor to Tarsus is one that enchants and delights the passenger into heights of ecstasy that cannot be measured. We were constantly guiding our ship around and between little islands, one of them the famed Isle of Patmos, where John saw sights that were to come.

In scarlet splash of orange
That paints the calm, blue sea
With magic sweep of brush,
I see the sun go down,
Itself a ball of yellow gold,
The standard unit of daylight skies.

And yonder glinted peaks that rise
From out their sea-girt, purple thrones,
Waved to the sun their fondest "au revoir"
When it from us had gone.

So may some soaring angel o'er our earth,
When others turn away into their darksome night
By human axis governed,
Still wave to me a "bon voyage"
When from me rolls
This dense, dark globe of night.

The sea was just as blue as writers say it is blue. It was calm almost the entire journey. Mornings and evenings were like two golden covers to bind together the recurring series of pleasant events of the fleeting, romantic day. There was no wind as there is always upon the Atlantic. No hats were blowing off. Our ears were not rustling. The sweet-scented breath of the mountains came down, kissing the sea and us and caressing our upturned cheek with hand of softest affection. Every night I slept on deck, sometimes

making a bed out of the big rolls of thick rope and folds of canvas.

A lot of Russian Jews were in the steerage. These usually spent all day on the foredeck, where they were nearly always praying in spectacular fashion, inviting attention, bowing, swinging to and fro, bending in humble curves, gesturing with hands and arms and uttering a plaintive sound as if they would all burst out crying the next moment. They were all poor, I suppose, for their dress and manners were rough. In their faces, however, intelligent and wise, was the reflection of all Jewish history. In their strong faces was also something that was not in the faces of others of similar station in life. It was goodness,—a certain holy look, a prayerful attitude to be and to do the right. I made friends with all of them, including two rather silly-acting fellows with quizzical look that made you laugh when you saw them. Two of the older men were quite rude in their manners and were too ready to share something not exactly their own. Two of the girls were quite pretty and one of them by her dress would have easily passed for a sweet little "Dunkard." I am finding out that in all countries and among all peoples there are always some who can throw the snare of charm in the way of a fancy-free bachelor.

I was the "whole show" on board, at first a mere curiosity to these pilgrims to the Holy Land and afterwards an interesting study for them. They had never been out of Russia before and they wondered what a free country like the United States would look like. So they looked at me, as if perchance in my face they might see the heights of our mountains, the courses of our rivers and the occupations of our people. Usually when I read a book or was taking my meals from my basket, or sewed on buttons, a group of these gingham-robed elders gathered about me, pressing so close as to deprive me at times of fresh air. For while water was all about us, none of them could take a bath. From appearances and odors, few of them had ever taken a decided bath, and on their garments I discovered vermin, head lice and graybacks. The one who was traveling with the graybacks had to be pushed away from me several times before he understood that I was determined not to cross breeds with him. While

trying to talk to a group of these holy men, he would forget and get too close to my resting place, when I would give him the far-away wink. Too persistent in rubbing against my belongings, I called out to him so that his neighbors could hear and showed him one of the graybacks wending his stiff-legged way across his phylacteries. After that he acted like a lost sheep, for he knew that he "had them" all right but did not want everybody else on board to know it.

At my meals several of the Jews shared with me my food of figs and raisins, for the reader will remember that I was given about fifty pounds of them back at Smyrna. Their food was extremely plain and so they enjoyed the fine figs and raisins.

We arrived at Mersina in the morning, anchoring

would be worth hundreds of dollars to me in sight-seeing value.

This is why I run so much. I like to. It is even more interesting to steal a few lightning glimpses of certain historic spots off the beaten path of travel and not included in my itinerary than it is to settle down for a week or more in some more noted place, and as I trotted along over the novel streets that wound up and unravelled at pleasure just like they do everywhere in these countries, kicking the ankle-deep dust, I enjoyed my visit more than if I had been riding in an auto of the mayor. Fifteen minutes go quickly at times and so I kept my ears alert for the rumble of the wheels and the queer toot of the whistle. I knew I could "make it," for my feet were wild for hitting the dirt in Tarsus.

I soon reached the market-place where some sleepy Bedouins were trying to sell some horses to listless buyers. In the stalls near by were fruits and wares for sale, the proprietors half asleep. The sun was burning hot. The air was stagnant. The dust was white and stifling. It was easy to see that there was no life that day in Tarsus. One of the natives tried to tell me where Paul's home was, and I hurried away to find the house and to get a sight of the mission school. I found the school, running into the court or yard on one side and out at the other, noticing the dormitory and buildings that were of better material than the other buildings in the town. In another spot I was told that Paul once lived in a certain house

"We were constantly guiding our ship around little islands."

far out in the ocean. From the little city I could see the locality of Tarsus, about an hour's ride by rail up along the coast. Once rowed ashore I found the U. S. consul as manager of the little railroad, who promptly wrote me out a free pass to Tarsus. I was soon seated in a first-class coach with several other passengers on their way to Tarsus and another station farther up the line. The mayor of Tarsus was in the same coach and could speak French with me. At my request he gave me his signature on my Turkish passport. Going to Paul's birthplace! Think of it.

The mountains in the distance, stretching for many miles across a dreary waste of level country, rose higher and higher as we neared Tarsus. From these mountains, looked upon every day by the boy Paul, he drew his inspiration and ambition.

I left the train immediately when it came to a stop, ignored the hackmen, ran from the little shrub-set yard and hurried in the direction of the town that lay a half mile to the right. The next train down would be due in *fifteen minutes*. A few seconds spent in Tarsus

now falling into decrepit age.

Though I stayed longer than I anticipated the train evidently had not yet come, but as there was such a painful monotony in the place I started back towards the depot, hearing the down-coming train enter the yards when about half way back.

Breathing through my mouth I sprinted back, cutting off corners in the curving road and leaping stone walls to get out again,—grabbing at lemon and fig trees for souvenirs of Tarsus.

The train was fifteen minutes late. I was exulting that I had seen so much of Tarsus, but as the captain of the *Lazareff* told me he would positively sail at twelve noon, I faced the danger of losing my passage. I would have fifteen minutes to reach the wharf at Mersina from the station and thirty minutes to get a boat and be taken out to the vessel that lay at anchor *two miles* away! I was so glad to have seen the birthplace of Paul that I didn't care very much if I missed the boat from no fault of my own, but still I pushed

on the seats in my impatience to hurry the train to Mersina.

Arriving, I leaped from the car while yet running and in doing so dropped my fountain pen in the cinders. When I had found it again the train was at a standstill so that I got nothing for breaking a rule of railroad propriety. At once I took the road on a run, for as the train had made up none of its lost time, the success of the forenoon now hung in the balance of my ability to run a mile to the beach, bargain for a boat and be rowed out to my old friends.

People here are not used to such world tourist enthusiasts and my rapid movements were puzzling to every one I met. Many of them made no effort to get out of my way. Others tried to make a way for me but only blocked the way more completely by their donkeys turning across the road in fright. Some of these were all but knocked down, and at some corners the confusion I had caused was so great as to congest the oriental traffic. But I kept on.

Out of breath at last I rushed upon the quay only to find that the boatmen were all at dinner. Far out at sea lay the *Lazareff*. On it was all of my property. I had just thirty minutes to reach her. A good oarsman could easily get me there. By the landing stood the policeman to whom I had given my passport on entering, as is the custom, who at once handed me the paper that had been issued after some trouble, in Constantinople. After looking and calling nervously for a few minutes a long, lank Arab about thirty years of age came down from an eating house. He would take me, he said, for the regulation price. I engaged him at once and was down in his boat while he was loosening it and getting the oars into play. The smoke was now rolling from the big stacks on the steamer, lazily ascending, but showing that the furnaces were fired up for immediate setting out.

"Hurry!" I called to him, "my ship will soon go. I must not miss it."

Just at that moment the policeman stepped down and laid his olive hand upon my shoulder, ordered the Arab to tie up his boat and commanded me to follow him, taking from me at the same time the passport he had just delivered to me.

He started to walk back into the town. I knew we did not have any time to lose in this way so I got in front of him. I talked to him in several languages. I gestured in all of them. I did everything but jump up and down. I almost cried, so bitter was the trial. I pointed to the *Lazareff*. I pointed straight up to the noonday sun. I told him the boat out there on the sea would start in a few minutes,—that I had no money to live on until the next boat would come along. He listened to my pleadings with as much concern as if I had been a croaking frog. I pressed his arm. I gestured again most beseechingly. Then I stepped from him a short distance. But as he had my passport

and kept right on, I ran up to him again. But he knew that he controlled the situation and I knew that no pleading on my part would change his determination to take me farther back from the landing. He had seen my furious dash down the street and I suppose he suspected me of being a government plotter who had just committed some terrible deed and was hurrying away to avoid arrest and prosecution. All the while he shrugged his shoulders and screwed his neck about most contemptuously, making fun of my unbearable predicament. To hasten matters I then walked ahead of him, asking him to walk more rapidly so that we could reach the spot of his intentions and get back again with a possible chance of making the vessel before she sailed. But he walked on just as he had been walking, slowly and stubbornly. Now and then, to increase my suffering, he motioned to me to "take my time" and to "keep cool." How could I keep cool? I had been running, was excited, of course, and my blood was boiling. Added to these was the indignation he caused me.

At last we entered a sort of police office. Like a prisoner I stood there while he told the officer what I had done or had not done. The chief threw up his Moslem hands with a flourishing gesture that pointed to another department of injustice in another part of the town. Farther and farther he led me, down crooked, dirty passages and through narrow gates that looked as if they would shut behind me,—then across open courts filled with Arabs and Turks lying about in abject indolence.

We were now out of sight of the sea and I lost hope of being able ever again to go aboard the vessel and regain my wheel and baggage.

THE LITERARY STYLE OF WASHINGTON IRVING.

ARTHUR CABLE.

ALONGSIDE the "father of his country," though distinguished by a different calling and exalted in the minds of his countrymen for the result of efforts entirely estranged from that of the other, ranks Washington Irving, the "father of American literature." And to this comparison might be added the fact that he was named in honor of President Washington. Thackeray says: "Irving was the first ambassador whom the New World of letters sent to the Old."

The great author's literary productions testify to the talent and ability which he possessed. With a passion for reading, backed up by financial means, yet he had no desire to pursue student life, but rather, with shouldered gun, to explore the regions of the Hudson and Mohawk valleys; and as an alternative to worry away the time among the law books, in the office of Josiah Hoffman. Nevertheless his ability began to

make itself manifest, just as it will in any person peculiarly fitted for some life work.

The author was naturally humorous. Jollity and liveliness were major factors in his make-up. His first book, "Knickerbocker's History of New York," and the periodical which he edited, "Salmagundi," strongly corroborates this view. But the humor and satire found therein is of the most pleasing and kindly type. Bryant says of this native trait: "The author makes us laugh because he can no more help it than we can help laughing." And G. P. Putman, voicing the sentiment of thousands, leaves the following comment: "Irving was the earliest of American satirists, but there is no sting in the laughter that he moves."

But even before the completion of the Knickerbocker History, other qualities were painfully developed in the character of this man of such pleasing humor. While spending his time in the law office of Mr. Hoffman, he had made the acquaintance of the latter's daughter. They came to know each other perfectly, and to possess a fond attachment for each other. But shortly before they were to have been married, the young lady was called away by death. The loss to Irving was irreparable. The joy of his life, the pride of his heart, the happiness of his future years, was forever taken from him. The intensity of his devotion is shown by the fact that he remained true to her memory throughout his life. In a private notebook was found the following: "She died in the beauty of her youth, and in my memory she will ever be young and beautiful." Then it is not surprising, but rather do we expect, that this circumstance casts a sadness and melancholy over the remainder of his life. Yet the same sad occurrence made more a man of him, and fitted him all the better for the work which lay before him.

And who can doubt that such was the intention of the Power that rules the lives of men? How much more the tenderness, the sympathy, the pathos thus gained adds to the beauty of his writings. Contemplation is also a charm from this source, for he dwelt upon the magic of the days gone by.

The happy extreme of picturesqueness is found in "Bracebridge Hall" a book written while Irving was in Paris. What more picturesque lines can be found than those describing the eagle expelled from his resting place? In "Forest Trees" is also a comparison between the gigantic oak in the fatal clutches of the grapevine and "Laocoon struggling ineffectually in the hideous coils of the monster Python," which is told in such grand style that it cannot fail to attract attention. Indeed "Bracebridge Hall" is the perfection of ease and finish.

"The Alhambra," produced in Spain, narrates its story and describes its scenes with such gently flowing and well connected sentences; such an indescribable sublimity, that the reader is unconsciously carried into a mystified state of dreaminess.

His writings, as a whole, possess almost unequalled merit for their smoothness, elegance, and finish.

Washington Irving has been described as follows: He was thoroughly a gentleman, not merely in external manners, but to the innermost fibres and core of his heart; sweet-tempered, gentle, fastidious, sensitive, and gifted with the warmest affections; the most delightful and invariably interesting companion; gay and full of humor, even in spite of occasional fits of melancholy, which he was, however, seldom subject to when with those he liked; a gift of conversation that flowed like a full river of sunshine,—bright, easy, and abundant.

Scottville, Michigan.

AS A MAN THINKETH

RICHARD BRAUNSTEIN

AFTER the evidence is all in, and the final word has been spoken on the subject, the gulf between man and beast, and between man and man, is some way connected with the *thinking power*. In physical appearance they may be very similar,—one may not show any physical qualities that are uncommon to every member of his genus; and yet, the one lives in a world apart—unexplored and unknown to millions of his brothers.

Since that far-off beginning, "thought has always been at a premium." The quotation on other commodities may vary, but there has always been a rising market for thought, and today the demand far exceeds the supply. It is the one thing needed by every individ-

ual, and it is the one thing that Wall Street hasn't yet cornered! Everybody must invest in it each moment of his working hours, but it is amazing to consider the shoddy article most current. It is one thing which forces itself on man, but he may choose the *quality*. It is the one immaterial force in the universe, and yet it is supreme.

According to Grecian mythology, Atlas bore the world upon his shoulders. Literary critics have developed the fact that Atlas was a learned astronomer who carried locked up in the secret chamber of his mind a knowledge of the heavens and the earth, and in this sense he bore the world on his shoulders.

Borrowing this strange metaphor and making the

application universal, we may say that *every man* bears a world upon his shoulders! The most erect of all animals, man is crowned with the wonderful dome of thought, and within that dome a world of which he is the architect and builder!

Man is born not as a finality, but as a mere possibility. His infant mind is not a ready-made affair, but a world to be created. Every man, in a sense, has two creators—his *God* and *himself*. His first Creator furnishes him the rough materials of life and the laws in conformity with which he can make that life what he will. His second creator—himself—has marvelous powers he rarely realizes. It is what a man makes of himself that counts!

What a startling thought when we reflect that every man creates the "world" in which he lives! Would you have your world a "vale of tears," a "wilderness of woe," or would you have it a land of perennial sunshine? You may have either if you wish. Send forth your creative fiat, and the work is done!

Man cannot think except in terms of his past experiences. These experiences come to him in raw form through his five senses. His mind interprets for itself the sensations of heat, hardness, sound, color, etc. And until these sensations are interpreted they are no more knowledge than the block of marble, before the sculptor, is an angel. Mark Twain humorously illustrates the ignorance of spatial relations in his autobiography of Mother Eve, when she cries and begs Adam for the beautiful stars, and he tries in vain to knock them out of the heavens with a long pole!

Were it possible for a child to be born without any of the five senses, and were it possible for that child to live to the mature years of threescore and ten, it would leave this world without ever having experienced a single thought. I am trying to say that the mind, though immaterial, is wholly dependent upon the five senses for its thought material, and these senses are dependent wholly upon the *nervous system* for the reception and transmission of this material. There is a dual relationship whereby the body affects the mind and the mind the body. Instances of both kinds are too well known to require examples here. For who has not heard of the "snakes" in the debauchee's boots? or who has not been frightened until his "heart was in his throat," and his limbs palsied with fear? Since the above is true, isn't it suicidal and sinful for one through negligence or carelessness to allow himself to become a nervous wreck? We may gather from this some suggestion that would be well for us all to incorporate into our individual religious creeds.

The horizon of one's mental "world" is bound by his own experiences, either actual or imaginative, and the latter are only a reconstruction of the first. For instance: No one was ever frightened in his dream at

sight of the Indian's scalping knife, before America was discovered; nor did Julius Cæsar in his fairest dream of fancy ever conceive of an automobile or a trolley car. No man can know another's mental "world" until he has had experiences similar to those of his brother. What wonder then that this has been called a cold and unsympathetic world, when each of us lives in a little world apart to himself?

Or again: What wonder that the Message of Truth is so often disregarded when we tell it in terms of our own experiences and forget the experiences of our brothers? We may here, as always, learn from the great Teacher who gave the parables of the shepherd, the vine-dresser, the sower, the steward, the prodigal, of Dives and Lazarus, to illustrate the truth to different minds.

Let us consider for a moment the physical organ of the mind. The brain is composed of many millions of brain cells, and psychologists tell us each is capable of holding the "record" of an experience. Somehow that experience so impresses itself upon the brain cell that when subsequently that particular cell is stimulated, the former experience once more occupies our attention and we "remember." With our "mind's eye" we once more see things just as they were, formerly. Certain classes of experiences are even registered in a definite brain area. So that, when we recall one of these, it suggests others similar to itself.

The receptive side of education consists in gathering and classifying these experiences. It is not enough to have known things, but we should be able to recall them at will, and with them all their kindred that are pertinent to our purpose. Pope speaks of men who have "loads of learned lumber"—a chaotic and tangled mass of facts! But Napoleon gives us a beautiful figure of his mind, which, he says, was arranged like the pigeon-holes in his desk, where every paper is in its right place, so he could instantly lay his hand on any document he wished. While this material view is more or less hypothetical, yet it serves us well as an apt illustration of the conservative of psychic experiences. Prof. Romanes thus beautifully expresses this truth in verse:

"No change in childhood's early day,
No storm that raged, no thought that ran,
But left its mark upon the clay
Which slowly hardened into man."

It is true that I am a part of all men I ever met, and try, as I will, I cannot wholly change it. As heretical as the doctrine may be, when carried to the extreme, there is a very important sense in which man is punished by his sins, as well as *for* his sins. Man commits a sin and this act of transgression becomes a fact. He may subsequently be forgiven for this sin, but no power in heaven or earth can blot that act out

of the category of facts. His attitude toward that fact may be changed by his penitence or by a deserved punishment, and justice may be satisfied. Yet the fact was, and will always remain. And although the "bird with a broken pinion" may "soar as high again," it will never soar as high as it might have done.

"How careful then ought I to live,
With what religious fear;
Who such a strict account must give
For my behavior here."

To leave the material view and turn to speculative philosophy, and revelation, we are persuaded that the time will come when the mind will lay aside this timent of clay, and will no longer have to work with material tools. Just how it will be, neither you nor I understand. But our longing souls, our most reasonable philosophy, and the sacred words of revelation tell us that it will be; and our faith says, "*Even so.*" But the foundation of our faith is sure. Our bodies are subject to the physical laws of change and decay. But thank God for the metaphysical in man which defies the ravages of the growing tooth of time!

"The stars shall fade away,
The sun himself grow dim with age,
And nature sink in years;
But the mind shall flourish in immortal youth,
Unhurt amidst the war of elements,
The wreck of matter and the crash of worlds!"

NOT AS OTHERS SEE US.

SEEING the old woman going in and about the little, tumble-down house by the roadside, as she took her daily drive past the place, she determined to stop and speak to her, and perhaps offer her aid. So she bade her coachman check the horses as they approached the gateway, and call to the bent form that was standing beside the doorstep.

"My good woman," she said, as the old lady responded to the summons and hurried out to the carriage, "do you live here all alone?"

"Yes," was the answer.

"Are you provided with fuel and food?"

"Yes, ma'am. You see I gather enough sticks from the woods to last me through the day and I go to bed early at night, and as for food, I have enough, always."

"But are you not afraid that some one will disturb you at night?"

The old lady laughed outright. "Now, who would try to rob a poor body like me?" she asked.

"Do you not feel lonely here?"

"Lonely! no indeed, ma'am. I have enough work to keep me busy, and when one is employed all the time, one is not apt to get lonesome. I sew patchwork for quilts and rags for carpets, which I can always sell to the farmers' wives, and then when some poor body is sick and can not afford to have a nurse, I am ready to take my turn at that. No, there's too much to be done in this world to get lonesome."

"Are you well supplied with comfortable clothing?" she ventured further. "Comfortable clothes? Why I have more than enough to last a lifetime. I nursed an old lady in her last sickness and she left me a large chest packed full."

The lady made one more effort. "Your house is in a dreadful condition, it does not appear fit to live in."

"Yes, ma'am, you're right. It is a bit out of repair, but the owner doesn't charge me rent for it; and there is one room that does not leak when it rains, and I have that fixed up real cozy."

The lady looked past the old woman to the miserable looking abode and could see one window that had whole panes of glass in it, where a muslin curtain showed above a single potted plant upon the window-sill; then she looked back at the smiling, homely face, lined and furrowed by its threescore years of useful life.

She could read suffering and toil in the network of tracery, but there were no marks of evil passion or despair in the frank countenance lifted to her gaze. Trustfulness and purity of heart gleamed in the honest eyes, and contentment seemed to glorify every feature.

She, in her velvet and furs, reclining amid the cushions of her elegant carriage, had intended to offer her meager words of pity and dole out a handful of paltry coin to this (in her imagination) forlorn creature by the wayside, when lo! she found her in possession of the wealth that is most worth having in this world—contentment.—*Farm Journal*.

PURPOSE.

The uses of sorrow I comprehend
Better and better at each year's end.

Deeper and deeper I seem to see
Why and wherefore it has to be.

Only after the dark wet days
Do we fully rejoice in the sun's bright rays.

Sweeter the crust tastes after the fast
Than the sated gourmand's finest repast.

The faintest cheer sounds never amiss
To the actor who once has heard a hiss.

And one who has dwelt with his grief alone
Hears all the music in friendship's tone.

So better and better I comprehend
How sorrow ever would be our friend.

—Ella Wheeler Wilcox.

THE great thing in life is not in realizing a purpose, but in fighting for it. We have nothing to do with results; they do not belong to us, anyway. It is our duty to do our best bravely and then to rest in the comfort of this fact alone.—*The Circle*.

NATURE STUDIES

TRUST.

Once more the song birds set the air athrill
 With symphonies of praise,
 And birds and blossoms grow to music's trill
 In warm and sheltered ways.

How fair the earth in tender green arrayed,
 How sweet the wild notes sung
 When tufted branches weave a web of shade
 And new-made nests are swung.

How know the wild birds when to take the wing
 From southern grove or clime?
 What voices tell the dreaming earth that spring
 Has brought the waking time?

Nay, question not nor doubt but birds can tell
 The time to come and go,—
 The earth to wake the sweet flowers in the dell,
 Doth God not always know?

—Benjamin F. Leggett.

SAGE.

T. H. FERNALD.

ALTHOUGH the sage is a very common herb, few people really know its history and real value.

It is of the genus *Salvia*, specially *Salvia officinalis* and *Salvia grandiflora*. The *Salvia* is of the *mondarea* family, of the tribe of *labiatae*.

The first is the common garden sage and is a native of Southern Europe, being brought to this country in its early history. The flower is blue, and runs into many varieties. Formerly it had a high reputation as causing sweating, was aromatic, astringent, and antiseptic, but is not now very often used. The Chinese use it as a tonic for debility of the stomach and nerves. It is employed in cooking for sauces and stuffing for juicy meats.

Sage is a common and excellent domestic remedy for worms. An infusion is made of it with senna leaves; and drunk freely until it acts as a cathartic. A warm infusion drunk freely is a valuable domestic remedy to increase or promote perspiration.

Salvia has the calyx two-lipped, two-forked stamens; underbrush or herb widely distributed. There are about four hundred known species, many of which are very showy, flowering plants, cultivated in gardens or in greenhouses.

The *Salvia officinalis*, of which there are many varieties, is the common sage, a well-known culinary herb. It is a feeble tonic and astringent and an

efficient aromatic. The *grandiflora* is also culinary. The galls of another variety are eaten in Candia as are the stalks of another in the Himalayas. The root is used in coughs, the seed as an emetic, the leaves as a medicine in Guinea for worms and itch, or as a poultice to wounds, etc.

THE FOOLISH HENS.

J. O. BARNHART.

SOME time ago we gave the readers of the Nook a story of a goose. We have another this time about some hens who were not so wise even as was Goosey in the story above mentioned.

Near my old home lived a lady all alone except for the feathered companions which she always kept about her. First were a number of canaries which she reared, not so much for the sweet songs with which they rewarded her care as for the purpose of supplying others with the gay little warblers in yellow.

But the chief sharers of her many bounties were the Buff Cochins of which each season she reared several hundred. These were her constant delight and while caring for them and bringing them to that stage where they began to repay her watchfulness and love (for no one who saw her feeding them could doubt that she loved them), days and weeks and months slipped away and she forgot through all the year that she was entirely alone as far as human companionship was concerned. But if she sometimes did remember she cared not, and why should she? To see her at feeding time surrounded by dozens and tens of dozens of fowls, not only of the same size and color but the same shade of color, all one mass of living yellow, was worth taking a long walk to see.

But for the story.

Among the dozens of hens which she reared last season were some who decided, though very dilatorily, for it was late in the season, that they wanted to sit.

Now a hen is a creature that has not very much mind to make up but when she makes up what she has, she sticks to her decision with a persistence worthy to be emulated by individuals of the highest intelligence, and the readers of the Nook need not to be told that when an old hen has a will she is going to find a way. But as I said, it was very late in the season and my friend had a preference always for spring chickens

and had no desire for any autumn waifs to be laid at her henhouse door, so she discouraged the ambitions of these stubborn Cochins in every way possible, but 'twas no use. To them a nest full of brickbats was always a nest, and a box though emptied and turned upside down was still a box. So their mistress had to remove every vestige and semblance of a nest and shut fast the henhouse door and it seemed now that those hens could not sit and "there was an end on 't." But alas for human intellect! How often it finds a match and sometimes more than an equal in the tiny brains of creatures much smaller than hens, and small wonder that it should be outwitted here.

My friend had closed and barred the entrance to the nesting place but the nesting place had been in an orchard and when the hens came and found the entrance closed they were not daunted. Not one jot or tittle of their courage had been blotted out by all their disasters. They found themselves houseless but there was still the ground to stand on and sit on, too, if necessary, and mother earth was not to be despised even by a hen, and what hen ever did despise our common mother? So these hens said, "If we may not enter the new poultry house and climb to a box to make our nest in the latest style we will make it in the old-fashioned way upon the ground. But we must have something to sit upon and we will."

So in casting about for something that looked round enough to be the home of a future fowl in embryo, they espied, oh, joy! dozens of—eggs? no, but apples half hidden in the grass. There they lay just as if they had been shipped to order and counted out for the express purpose of these determined hens, so each one lost no time in rolling together as many as she could well cover and upon them sat in triumph. Do you ask if they enjoyed their victory? What is joy but the gaining of the thing we most earnestly desire? Joy always sits upon the thing we covet and when we gain the thing joy comes with it, but whether she remains depends upon the use to which we put the things for which we prayed and strove.

So the hens had joy in sitting upon the apples, and what matter if their mistress came and several times a day scattered the apples from under them, as many times would each hen still collect her nest full and there out in the open with the August sun pouring down upon them, when I took my departure, the hens were still sitting upon apples.

Do you wish a moral for this story? It can be seen illustrated every day all around us. Do you see a man toiling day after day in an occupation for which he is not suited and wondering why he does not succeed? He is sitting upon apples.

See that man in the pulpit striving with stentorian tone and bombastic delivery to make his speech impressive. But his words, uttered in the spirit of self-exaltation instead of love for God and his fellow-man,

have no vitality and consequently no fruit, because he is as it were only sitting upon apples. See that teacher, with a capacious mind full of the wisdom gained at second hand from the university, but with no knowledge of child nature and with no taste for study of child nature, trying to pour into the child instead of trying to bring out what is in the child? He is sitting upon apples. See that young man listlessly standing behind the counter watching his comrades wait upon customers and waiting for the clock to set him free? He has no interest in his occupation, because it has brought no results. He should perhaps be following the plow, while now he is only sitting upon apples.

Thus we might multiply examples without number, for there are many people who are sincere, striving without hypocrisy or self-seeking to benefit their fellow-men, but their zeal accomplishes nothing and they wonder why they do not bring the world to their feet, not knowing that they are like the hens, only sitting upon apples.

The hens were honest and sincere and full of perseverance, but it amounted to nothing because they did not consider the material with which they were working. The apples possessed vitality and in the hands of the cook would have produced healthful food resulting in brawn and sinew and healthful intellect. In the hands of the horticulturist they would have produced other trees and other apples and thus gone on blessing and continuing to bless future generations, but in the care of the hen they could produce nothing but rottenness and decay.

Young man, just entering a profession, choose well the trade and the tools with which you are to work, lest after choosing wrongly and toiling for years with tools for which your hands were never made you will at last come to realize that you have made a mistake and are only as it were sitting upon apples.

A DEVOTED PARENT.

FOR several summers, a pair of Baltimore Orioles had nested in an apple tree near my study window.

Last summer, when the nest was full of young ones, the mother bird was killed, and the father bird had a broken wing. When I discovered this tragedy, the father was carrying food to his family.

There was a grapevine growing under the tree, untrimmed and lawless. Some wayward branches had caught hold of the lowest apple boughs, and a pole, leaning against the trellis, formed a continuous roadway from nest to ground. Down this road the poor bird would hop, and forage for food. He never went far from the grapevine and kept a sharp lookout for enemies. After filling his mouth with food he would commence his tedious journey up the grapevine, one hop at a time,—and thus cared for his family until they reached the flying age and were able to care for themselves.—*Jean Martin, in Bird-Lore.*

THE INGLENOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

WE only begin to live in this world when from actual experience we have caught the full meaning of service and fellowship.

IN the remaining chapters of Mr. Spickler's trip around the world he will cover much ground and give his readers glimpses of some very interesting places.

WHERE is the man who has been complaining about the change of the seasons, and saying that we never have any good, old-fashioned summer weather any more? Possibly he has had a sunstroke. If he recovers he will have to have some new words set to his calamity tune.

THE prosperity that has been waiting for tariff revision has doubtless contracted a severe case of cramps in its pedal extremities from long inactivity and will make a sorry spectacle when once it endeavors to travel over the road especially constructed for it. In the meantime real prosperity has made the up grade and passed beyond view.

WE have arrived at that season when nature has apparently reached a climax in her efforts in one direction and seemingly halts for a short period before completing her summer's work. It is a good time for man to draw rein also and contemplate the work which he has accomplished, as well as the marvelous accomplishments of nature, the master-worker.

REPORTS from a town in West Virginia state that a judge in that place has caused consternation among the church people by directing the grand jury to indict all societies and church workers that obtain money by means of raffles. The judge said that those guilty of this practice should be treated the same as ordinary gamblers. This is an instance of calling a thing by its

right name no matter where it is found. If the principle were strictly carried out everywhere doubtless the number of law-breakers would be greatly decreased. Commenting on this judge's stand, the *New York Witness* calls his reasoning "sound sense"; and adds that "churches which encourage gambling or permit gambling in their interest are more to blame than the keepers of gambling establishments."

THE number of graduates from the high schools of Chicago this year was about thirteen hundred, "by far the largest number in the history of the schools and a big increase over last year's figures." C. P. Megan, the assistant superintendent of schools, believes the large increase is due to the attractiveness of the courses of study; in other words to the fact that courses in the manual arts and domestic science have been extended. "The boys and girls like these courses, for they feel that they are getting something out of them that will help them directly in life." And no wonder they like them, with such a good reason. Boys and girls are not as thoughtless of the future as we often think they are. Many of them know they must learn to work some time and if they cannot learn this while they are learning other things, why, they will have to let the "other things" go. But they prefer to have the combination if possible and educate head and hand at the same time.

IMPRESSIONS. No. 3.

IMMEDIATELY after the close of the Conference a number of us, in deed if not in word, took up the cry of "On to Washington!" and proceeded to take possession of the city which "belongs to us as much as it does to any one."

We left Old Virginia June 3, the Memorial Day of the South. Here and there along the route we saw the stars and bars displayed—a sight that struck the Northerner at first as rather incongruous with citizenship in our beloved Union. Whether they floated merely as emblems of a lost cause or whether they expressed a thought traitorous to the country whose blessings the people enjoy, we do not know, and neither do we care to know. We do know that the war is over, and those whose loved ones bravely fought and died for a cause that was lost may keep their memories green unhindered. If they do more than this, they themselves must pay more dearly for the thought than any one else.

Throughout much of the section through which we traveled there were many landmarks reminding us of the terrible struggle of the '60s. We cannot describe the emotions that welled up as the soldier's child tried to imagine some of the actual experiences of the soldier himself as he wearily toiled over the rough country, his body a mark for the enemy's gun as well

as for the diseases incident to a soldier's life. But one dare not dwell on such thoughts for long, with the call to service in the work of today ringing loudly in the ears. Though we have no use for carnal weapons we have battles to fight still and we need all our strength and courage to meet the wily foe to whom we are opposed.

It was late in the evening when we reached Washington, but as the Senate was having night sessions, as was shown by the light in the dome of the Capitol, we began "doing" the city by watching our law-makers grind out the tariff bill. The experience was somewhat in the nature of a revelation, bearing little relation to our previous knowledge of deliberative bodies or to that which our imagination had pictured.

Perhaps it is not necessary to state even at this early stage that as to many details connected with legislative business and government affairs in general the writer is extremely verdant and the opinions expressed here must be interpreted with that thought in mind. We looked in on the Senate and wandered about through the government buildings with much of the frank rusticity characteristic of "Uncle Sam" himself, as represented by the cartoonist. Whether this will altogether depreciate what we have to say will depend largely on what, in the reader's mind, constitutes a good judge in such matters.

Several things impressed us as we listened to "the Senator from Rhode Island," or "the Senator from Iowa," or from some other division of our commonwealth. One was, that if this is the more decorous and orderly division of Congress, we wondered what the other is like. Another was, that some people have a wonderfully easy way of carrying a great responsibility,—and we had thought making laws for eighty millions of people *was* a responsible matter. We concluded that our law-makers have the easiest part of the job—that law-making is easier than law-keeping. But perhaps the keeping part is hard because the making part has been made easy. Perhaps if more wisdom and downright hard work were put into the making of the laws there would be more reason shown for keeping them and consequently more respect shown them. Who knows?

The secretary read off some item of the tariff bill, such as, "Dolls: china dolls, bisque dolls, dolls without heads," etc., etc., "duty so and so." Then perhaps Father Aldrich arose and explained or covered up (we did not belong to the initiated and so cannot say which) the reason why the duty should be so and so. Then Vice President Sherman repeated the item in part in shortly chopped off words, called for the ayes and nays and passed on to the next item. Sometimes no voice was heard for or against, but the decision was given that "the ayes have it." It was remarkable with what apparent ease the Vice President kept

track of the business in spite of the confusion, a part of which is, perhaps, unavoidable.

Washington is a beautiful city,—the most beautiful we have ever seen. Its streets are clean, its buildings new and substantially built, or in a good state of repair, and the city is adorned with many beautiful, well-kept parks. One can get only a very meager idea of what may be seen and learned in the government and other institutions located there in the time we had for sight-seeing, but we are sure that several weeks might be spent in them with profit.

Unless one desires to get around to as many places as possible simply for the sake of saying that he has been here or there, we would advise him to steer clear of the patent-applied-for Washington guides. They will get you around all right, but in the end you will have only a blurred vision of strange sights which you are unable to identify. The fact that time is an important consideration with you is simply an additional reason why you should make your way from one building to another without the help of these officious personages and trust to the kindness of officials to help you see what there is to see. And you can count much on the kindness and help of officials as well as citizens. We were never in a city where information was so graciously given. Many of our readers are familiar with that stony stare and scornful voice with which their inquiries in a strange town have been met because they did not know where "*our*" postoffice or "*our*" railroad station was located. The idea of any man or woman growing up in this free Ameriky and not knowing all the twists and turns of the streets of Smithville! But no such scorn met us in Washington. The people knew the place was new to us. Doubtless we told them this in several different ways, but in their eyes such ignorance was no crime. Perhaps they still remembered their own first experiences. Anyhow they were kind and helpful and we got around without loss of time or temper.

It would be sheer presumption for us to attempt to describe any of the places visited because of the shortness of our stay. We visited the Congressional Library at night which is considered the best for seeing it. It is a wonderful work of art. Bro. D. L. Miller, who has twice circled the globe and visited many of its finest structures, says it is the most magnificent building he has ever seen.

Some time when our ship comes in or goes out or runs aground or something else breaks in on the present even tenor of our way with its insistent demands on our time, we may be able to visit the Capital and take as much time as we would want to see the things of interest. But you who have never been there, do not wait for such a time if the opportunity comes for a flying visit. The latter is better than none at all; it gives one much to think and dream about.

THE HOME WORLD

THE FLEDGELING

HATTIE PRESTON RIDER

ALLAN lay quite still on his neat, white bed close to the wide-open window, his cheek almost touching the ledge. Outside, the spring airs carried soft odors of distant, wooded hills and fresh, thickly-growing grass. From some low patch of ground beyond the near line of houses, came a faint croaking chorus of frogs. He had undressed in the dusk, and he did not even turn his head when his mother, coming in a few minutes later for the good-night kiss her fourteen-year-old was not yet big enough to do without, caught a fair glimpse of the boyish profile in the clear starlight. She did not speak; but a dull, half-defined pain shot through her heart. It was no ordinary look of dreaming, on the young face, and instinctively she knew its meaning, for it held the far-away, mysterious yearning of all seekers-out of new things, the hunger for a sight of the unknown world and all it might hold. She told herself that she had been aware from the first it must come to surface some time in her boy's stirring, ambitious nature, which she understood so well; months ago she had begun to see it slowly awakening, the world-old passion of primitive man, in whom the God idea of achievement and accomplishment is strongest when he has been naturally trained, as she had endeavored to train this child of her heart,—the *Wanderlust*.

Allan had always loved the little journeys and small explorations, which he and his parents had from his wee boyhood been in the habit of making. A long trip was tiresome and confusing to a child, his mother contended. It left a jumbled-up picture in his memory, oftentimes with only disagreeable features standing out most distinctly. A day's visit to a park or museum in the near-by city resulted in infinitely more pleasure and profit than a tedious and expensive journey, even without counting the additional satisfaction of being fresh to take up one's play or work next morning. As he grew older, of course, the trips were lengthened; but, until lately, he had apparently never entertained a thought of any companions other than

his tried and trusty guides. Now—a great lump rose in his mother's throat as she recalled the fact—several times he had asked outright to be allowed to go with younger friends instead of his parents, showing a decided preference for the former.

"Perhaps his father and I are getting too old for him," she had told herself, between a laugh and a tear. Yet the lurking fear of her boy growing apart from them stayed, and it returned again to her heart with chilling force, as from the rocker where she had seated herself she glanced once more at the rapt face on the pillow so near the window. A vision flashed across her mind, of Allan a man grown and developed, content in a far country with work and interests widely apart from her own and his father's, and amid unknown dangers and temptations. Her sensitive soul felt as a reality the imagined yet possible burden of long months passed without sight of his face, and perhaps in silence and doubt. It gave her so keen a heart-ache that she grew white even to her lips in the dusk, the heartache only a mother can know;—that mother-heart which is born, not made, and lies deep in the being of every true woman.

A light breeze stirred the draperies at the window, before those wide, unwinking, darkened eyes. An electric car whizzed past along the avenue a block away, and a momentary flash of its light discovered the place of a dimple in hiding at the corner of the firm lips, a babyish curl above the broad forehead. The sight choked her. Oh! She *did* love him, so tenderly, so truly, so unselfishly,—ah! *Was* it unselfishly, after all, when she was so fearful, so jealous of grown-up aims and purposes which, though they might take him from her physical sight, yet also might hold for him untold good to both body and soul? Suddenly, out of the dusk, or her own heart, or the great sweet silence of the Eternal Presence, there rose the fragment of an old poem:

"They are not parted, though their feet
Have wandered far in different ways,"

—she could not quite recall the next; then:

“They are not parted; only those
Are parted, whom no love unites—”

Ah! That was it! God’s beautiful great universe is his *gift* to his children, to her as well as to her growing, developing, hungering, aspiring boy. There was no spot hidden away in all its vastness where her love and faith and sympathy could not go with him, no nook or cranny where God’s own unfailing care could not reach. Wonderful sights it held for his eager eyes, good and noble work for his hands. Nothing but foolish fears could make it a place of terrors for either of them, nothing but her own—yes, *jealousy* was its proper name!—could shut the door between their two hearts.

In the starlight by the open window, Allan’s lids had gone slowly closed, and his fine young chest was rising and falling evenly in peaceful slumber. His mother got up, and crossing the floor quietly, dropped a soft kiss on the wayward curl, and the rumpled white sleeve just above the brown wrist.

“It is my fledgeling; God be the strength of his wings,” she whispered to herself; and there was peace in her soul, for she had destroyed her enemy, by making it her friend.

Next morning Allan came down to breakfast with something of the *Wanderlust* still in his eyes.

“Can’t we all take a trip around the lakes this vacation?” he asked his father, eagerly. “It wouldn’t cost any more, would it, than for me to go camping with the fellows as we were talking about? We could use the money that way instead and it would be lots more fun. Couldn’t we, father?”

NO RIGHT TO SPOIL A CHILD.

HE was a beautiful curly-headed little boy and as bright and quick as a flash, but all too frequently the mother’s commands were met with opposition often with stubborn resistance.

After one of these outbreaks over which the mother’s victory was doubtful, she turned to the kindly sympathetic minister (who was trying to find a few weeks of much needed rest within their quiet country home) with the old excuse, “I’m afraid we’re spoiling Tommie. He is our only one, you know,” and her eyes had the far-away look that told of thoughts of those two other little ones, that God had taken so early.

It was not an easy thing to do, but it was just the opportunity for which this godly man had been waiting, and most earnestly he replied, “My dear woman, did you ever think that when you have spoiled a child you have spoiled a man? And when you have spoiled a man you have spoiled an immortal life?”

“No one has a right to spoil a child. God loans them to us to train not only for this life but for eternity. He expects parents to use their mature judgment,

gained from years of experience, to direct the child which he has given and to attend to it that the child does right, even against its will, until the time when that child shall arrive at years of discretion. God holds parents responsible for the training of their children, and no one has a right to spoil a child.”

Pretty strong words? Yes they are, but they are none the less true, and there is another and more worldly side to the same thought. Parents will receive just the amount of respect which they demand.

Though perhaps the child may at times rebel, and think papa and mama too careful and too particular, in after years those same boys and girls will look back with thankfulness to the loving care which, while depriving them of no good, wholesome pleasure, not only frowned upon, but rigidly forbade all questionable amusements or company.

The children spoiled in babyhood are much harder to manage as growing boys and girls, when sometimes, realizing full well the power to gain their own way which they possess, they will break all restraints and pursue their own sweet will in spite of opposition.

The result is always the same. In after years when the fruit of reckless spending of their early youth begins to be borne, the blame is laid at the parents’ door.

“Mother should have insisted upon obedience.” “Father should have been more strict.” Excuses, of course, but mostly truth.

God holds parents responsible, not for the after life of the boy or girl (weigh that well, my friend), *not for the after life*, but for their childhood training.

No man or woman has any right to spoil a child.
—*Evangelical Visitor*.

USE MORE RICE.

FOR many years our army, both officers and men, have made a large use of rice. It can be obtained of the commissary when potatoes and other vegetables are not accessible, and when properly cooked, is a good substitute for potatoes.

There is a quantity of starch in rice, and unless thoroughly cooked, starch is hard to digest; but after the little starch-cells are broken up by intense heat, they can be reached by the gastric juices, and then there is no objection to the starch, even for a weak stomach.

An article in the *New York Medical Journal* says plainly that the American people, in order to appreciate boiled rice, must have it cooked either by a “southern darkey,” or a Chinese, Japanese, or East Indian. When properly cooked, each kernel stands up separate and distinct; and, although thoroughly soft, yet it is in this form a food to be masticated.

A lady who is an expert, gives the following directions:

“Wash the rice thoroughly, and drop into rapidly

boiling water to which have been added salt and a few drops of lemon juice. The usual proportion given is three cupfuls of boiling water to one cupful of rice; but for plain boiled rice it is well to allow five cupfuls of water to one of rice. Let it boil rapidly for twenty minutes. Do not stir. Test by taking out a kernel in a spoon; if sufficiently cooked it can be crushed between the fingers. Line a colander with cheesecloth, and turn the rice into it, placing underneath a clean bowl to catch the rice-water. Set the colander before the oven door, where the rice will dry; each grain will stand up quite distinct. Rice thus cooked may be served instead of potatoes, with chicken, lamb, or other meats. The rice-water left over can be used in making soup."

An argument in favor of rice is its easy digestibility. One authority says:

"The main reason for the superiority of the rice over other forms of foods is its ready digestibility, plain boiled rice being assimilated in one hour, while the other cereals, legumes and meats, and most vegetables, require from three and a half to five hours. Rice thus enables a man to economize fully seventy-five per cent of the time and energy expended in the digestion of ordinary food, setting it free to be used in his daily vocation, in the pursuit of study or social duties, and in the case of invalids and people of enfeebled vitality, adding it to the reserve force of the system."

It is evident, therefore, that as a nutritious and economical food, easily digested and in convenient form, rice deserves a larger place on our bill of fare. Every year we hear complaints of the dry rot which affects our white potatoes, and the waste which it necessitates. Why not use more rice?—*Congregation-alist*.

WHEN MOTHER PRAYS.

A calm, sweet peace steals o'er my heart;
Life's cares and sorrows all depart
As if by some mysterious art,
When mother prays.

Angelic sweetness falls around;
With glory bright her brow seems crowned:
It makes my heart with gladness bound,
When mother prays.

She points to Jesus' side that's riven;
Tells how his life for all was given;
I seem to see the gates of heaven,
When mother prays.
—C. Benjamin Hopkins.

HOUSEHOLD HINTS.

WHEN vegetables cook dry or are scorched, place the vessel at once in cold water, and it will scarcely taste of the scorching.

Dust a little dry flour over a cake before icing it, and it will prevent the icing from running off.

To remove iron rust, soak the stain thoroughly with lemon juice; sprinkle with salt and bleach for several hours in the sun.

A grease spot which cannot be removed with hot water and soap, can be removed by the use of chloroform or naphtha; but these must be used away from the fire or artificial light.

Hands which have been swollen with rheumatism have been healed by binding the hands in woolen cloths saturated with witch hazel. Keep up this treatment for two weeks. Wear at night.

For frost-bitten feet, bathe the feet several times a week in salt and water in which has been dissolved a piece of alum, the size of a pigeon's egg. Dissolve the alum and salt while the water is hot. It must be cool before the feet are soaked in it.

Boil a new-laid egg about a half-minute longer than one which has been kept some time.

In boiling meat for soup, use cold water to extract the juices.

A lump of camphor placed in a drawer where silver is kept, will keep it from tarnishing.—*The People*.

If the half of a bottle of olives has been used, and you wish to keep the remaining ones, add a pinch of salt to the brine, pour a teaspoonful of olive oil on the liquid and replace the cork in the bottle. They can be kept in water and olive oil, if the brine be poured off.—*Woman's National Daily*.

For a Dutch potato salad such as many women serve often for Sunday night supper, fry a few pieces of bacon crisp, drain off the fat and cut them into tiny pieces. Slice cold boiled potatoes, cut them into quarters, mix them with the bacon and a small onion minced fine and arrange the mixture on lettuce leaves. Make a dressing by using three tablespoonfuls of the bacon fat in place of the oil, beating it with a tablespoonful of vinegar. Turn the dressing over the salad.—*Selected*.

The Children's Corner

CRACKED NUTS.

T. H. FERNALD.

IN the INGLENOOK of May 18 I gave the children—and older ones if they wished them—some nuts to crack, and as some may not have gotten them all cracked, I think they need a little help, so here they are in the order they were given. See if you can make them come right.

Hazel—Pecan—Shellbark—Beech—Almond—Hickory—Acorn—Butternut (should have been Tuntruetb)

—Filbert—Chestnut—Walnut—Cocoanut—Peanut—
Nutmeg—Castana.

Isn't it easy when you know how?

THE BIRD'S NEST.

ONE fair spring morning two bonny brown birds sat on a lilac bush.

"Chee, chee, cheeree. Where shall we make our little nest?"

"Make it here in my branches," said the maple tree that grew by the garden gate. "Many a nest I have held in my arms."

The maple tree was strong and green and beautiful. Its wide-spreading branches reached from the garden path far over the road beyond the gate, and they rocked like a cradle in the wind that fair spring morning. Oh, it was the very place to make a nest.

"Chee, chee, cheeree," they sang.

"We'll make our nest in the maple tree,
O! we are so happy, chee, chee, cheeree."

They twittered and chirped and trilled and sang till a cow, that was eating her breakfast of hay in the barnyard near by, put her head over the fence to ask the news. When the brown birds told her what they were going to do, she did not wonder at their singing.

"If you need any hay," said she, "fly over the fence and help yourself to some of mine. There is plenty here for you and me, and I have heard my friend the speckled hen say that there is nothing better for a nest than hay."

"Very true," said the maple tree. "Every bird must suit himself, but I agree with the speckled hen."

The brown birds looked at each other wisely.

"We'll weave our little nest of hay;
And we'll begin this very day
To make it in the maple tree.
O! we are so happy, chee, chee, cheeree,"

they sang as they hurried into the barnyard.

They could take only a little hay at a time in their bills, but they chose the nicest, longest pieces they could find, and were just ready to fly away with them, when a horse came galloping up.

"This is no way to carry hay," he cried. "Tell me where you live, and I will bring it to your barn in a wagon."

Then the two birds laughed till they dropped the hay from their bills; the cow laughed till her bell tinkled; the maple tree laughed till its leaves shook; and the horse laughed, too, though he did not know what the joke was till the cow told him.

"Well, well," he said to the birds, "if I cannot haul your hay for you, perhaps I may give you some hairs from my mane for your nest. I am sure I can't see what use they can be, but a bird in the pasture begged

for some, and she said she was building a nest in the hedge."

"Chee, chee, cheeree. 'Tis nice to line
A nest of hay with horsehair fine.
We're building in the maple tree,
And we are so happy, chee, chee, cheeree,"

chirped the birds.

By this time everybody in the barnyard knew that the two brown birds were making a nest in the maple tree by the garden gate, and everybody wanted to help them.

"Take this with my love," called the pigeon; and she dropped a feather from her soft white breast.

"We, too, have feathers to spare," cried the hen and the goose.

"Every nest is the better for a bit of down," said the duck.

The two birds were pleased with everything.

"Chee, chee, chee, chee, cheeree," sang they,

"With feathers soft, and hair, and hay,
How fine our little nest will be
Up in the dear old maple tree.
O! we are so happy, chee, chee, cheeree."

They were busy all the fair spring morning carrying the gifts to the maple tree; and, as they flew back and forth, a little girl spied them and called to her mother:

"O mother, come and see these little birds with feathers and hay in their bills. What are they doing?"

"I know," said her mother. "They are building a nest in our maple tree. Would you like to give them a piece of cloth like your new pink dress for their nest?"

"Oh, yes, yes," said the child; and she ran and got the cloth from the scrap bag, and hung it on the lilac bush. It had not been there longer than a minute when by flew a brown bird to get it.

"Chee, chee," he sang, "what do you think?
I've found a lovely bit of pink
To trim our nest up in the tree.
O! I am so happy, chee, chee, cheeree."

"Just what we needed," said the other brown bird; and she made haste to weave it into the nest.

Over and under, in and out, twisting and pulling, they wove the cloth and the hay together, with a lining of hair and downy feathers.

The nest was finished by the time the little girl's papa came home to dinner, and he held her up in his arms to see it.

"I'm glad I gave them a piece like my new dress," she said.

"Chee, chee, so are we," sang the brown birds in the treetop.

"We're glad we made our nest of hay.
We're glad we finished it today.
We're glad we built in the maple tree.
O! we are so happy, chee, chee, cheeree."

—Maud Lindsay, in *Kindergarten Review*.

THE QUIET HOUR

GOD HOLDS THE KEY.

God holds the key of all unknown,
 And I am glad;
 If other hands should hold the key,
 Or if he trusted it to me,
 I might be sad.

What if tomorrow's cares were here,
 Without its rest?
 I'd rather he unlock the door,
 And as the hour swing open, say,
 "My will is best."

The very dimness of my sight
 Makes me secure;
 For groping in my misty way,
 I feel his hand—I hear him say,
 "My help is sure."

I cannot read his future plan,
 But this I know,
 I have the smiling of his face,
 And all the refuge of his grace,
 While here below.

Enough, this covers all my want,
 And so I rest;
 For what I cannot, he can see,
 And in his care I sure shall be
 Forever blest.

—John Parker.

CHRIST'S REMARKABLE PRAYER LIFE.

S. S. BLOUGH.

CHRIST not only gave us a perfect teaching on prayer, but he became a perfect example in the prayer life. From his baptism in the Jordan to his ascension on the mount, very often and under varied circumstances he exercised in prayer, even though he was the Son of God.

In connection with his prayer, the Holy Spirit descended upon him at baptism. From his baptism he was led by the Spirit into the wilderness where he fasted and undoubtedly prayed much.

The record gives us many instances where Christ prayed. He never left a great crisis pass nor solved a great problem without praying until the matter was clear. Often he prayed alone, by day and by night, thus emphasizing his teaching on secret prayer.

These prayers were offered in the wilderness (Luke 5: 16), in the mountain (Luke 9: 28), in the garden (Mark 14: 32-42), as the opportunity would present itself. This would seem to throw some light on his wilderness experience. Christ simply felt that he

must be alone for communion with God. If the opportunity did not present itself he would make one. He rose very early before day or he went into the mountain in the evening, continuing all night.

Christ asked a blessing upon the food alike at the little table at Emmaus and when feeding the five thousand.

When little children were brought to him he blessed them. When about to separate from his spiritual children he prayed for them.

When a miracle was to be performed, whether opening the ears of the deaf (Mark 7: 30), or raising Lazarus from the tomb (John 11: 41-43), prayer was always the first move. When the Father had granted the request, then the miracle was performed. When an exceptionally stubborn devil was to be cast out, fasting accompanied the prayer.

Before the reception of the Holy Spirit, the choosing of the twelve or his transfiguration, earnest prayer was the method of preparation.

And last but not least, in the preparation for his atoning death, while instituting his ordinances, with bloody sweat in Gethsemane, and, on the cross, he communed with the Father, his loving heart went out to his friends and enemies. He prayed most earnestly for all who should ever become his disciples. From the cross he prayed for the Father's forgiveness of those who slew him. What a noble example of the prayer life his was, and yet he was willing that the Father's will should be done.

Oh, that men would willingly obey the precept and follow the example of their blessed Christ! May all who read these words resolve to study harder the lessons he has given and follow more closely his steps in the prayer life! Blessed is prayer. Thrice blessed he who prays aright.

Batavia, Ill.

FAMILY PRAYER.

THE first church founded on earth was the church in the house. The first worship was the worship of the family; and family religion still lies at the foundation of all church life, and of all true worship. But there are families, professedly Christian, which have no family worship, and do not at all realize the idea of the church in the house. This is an evil to be deplored, reprovèd and corrected.

It is the business of every Christian man, not only to train his household in the fear of God, but to collect his family for purposes of worship, and thus publicly acknowledge the Most High. He who fails to do this deprives himself of a blessing, and also trains his children in an evil way. A little Swedish girl who went to live with a family in the State of Maine, after a few days declined to remain longer, and went home. They inquired her reasons for leaving her place.

"Were not the people kind?"

"Yes."

"Did they not treat you well?"

"Yes."

"Why, then, did you not stay?"

"I was afraid to stay in a house where they *did not pray*."

If children are brought up in homes where God is feared and worshiped and honored, they will not be likely to feel entirely at home in dwellings where there is no fear of God; and their own houses, if they come to have them, will most likely be houses of prayer. A man and woman of the present day who were brought up where prayer was offered usually wish their children to have as good opportunities as they had; but in neglecting this great privilege of prayer, they in so far neglect the welfare of those they most love. Let us rear the family altar, and worship and honor God, lest we be included in that solemn word of the prophet, "Pour out thy fury upon the heathen, and upon the families that call not upon thy name" (Jer. 10: 25).—*The Common People*.

A MISSION ROMANCE.

"Is it worth our while to hold the meeting tonight, do you think?" asked a Londoner of his friend, one raw December night in 1856.

"Perhaps not," answered the other; "but I do not like to shirk my work, and as it was announced, some one might come."

"Come on, then," said the first speaker. "I suppose we can stand it."

That night was as black as ink, and the rain poured in torrents, but the meeting of the English Missionary Society for the Propagation of the Gospel was held, in spite of the elements, in a brightly-lighted chapel in Covent Garden. A gentleman passing by took refuge from the storm, and made up half the audience that listened to a powerful plea for the North American Indians in British Columbia.

"Work thrown away!" grumbled the Londoner, as they made their way back to Regent Square.

"Who knows?" replied the missionary. "It was God's Word, and we are told that it shall not fall on the ground unheeded."

Was it work thrown away?

The passer-by, who stopped in by accident, tossed on his couch all night, thinking of the horrors of heathenism, all of which he had heard that night for the first time. In a month he had sold out his business, and was on his way to mission work among the British Columbian Indians, under the auspices of the Church Missionary Society.

About thirty-five years afterward we found him, surrounded by "his children," as he loves to call them, the center and head of the model mission station of the northwest coast, an Acadian village of civilized Indians. It is the romance of missions.

The missionary referred to is William Duncan, missionary to the Metlakhatta Indians.—*Selected*.

THE MELODY OF LIFE.

THE desire of happiness, beyond all doubt, is a natural desire. It is the law of life itself that every being seeks and strives toward the perfection of its kind, the realization of its own specific ideal in form and function, and a true harmony with its environment. Every drop of sap in the tree flows toward foliage and fruit. Every drop of blood in the bird beats toward flight and song. In a conscious being this movement toward perfection must take a conscious form. This conscious form is happiness—the satisfaction of the vital impulse, the rhythm of the inward life, the melody of a heart that has found its keynote. To say that all men long for this is simply to confess that all men are human, and that their thoughts and feelings are an essential part of their life. Virtue means a completed manhood. The joyful welfare of the soul belongs to the fullness of that ideal. Holiness is wholesome. In striving to realize the true aim of our being, we find the wish for happiness implanted in the very heart of our effort.—*Henry van Dyke*.

REMEMBER OUR SUCCESSES.

"My hay crop is a failure," moaned a farmer to his neighbor.

"But how about the potatoes?" asked the neighbor.

"They are all right."

"And your corn?"

"A fine crop."

"And your oats?"

"An excellent yield."

Then the neighbor said, "Why don't you mention your successes first, and put that one failure in a parenthesis at the end?"

The farmer raised four crops of produce and moaned because one was a failure. We can moan over one poor crop or rejoice over three good ones. Which are we doing?

This is a good illustration for workers in the Lord's field. Let us thank God and take courage.—*Selected*.

ECHOES FROM EVERYWHERE

On September 1 President Taft will leave his summer home in Massachusetts for a trip to the Pacific coast. He will return via the southern route and on the international bridge at El Paso, Texas, will meet President Diaz of Mexico.

Republican members of the Senate finance committee have agreed to a general advance of about 20 per cent over the House rates on the tobacco schedule. They will also urge that the use of coupons on tobacco and snuff packages be prohibited.

Realizing the income tax amendment to the tariff bill was doomed to defeat, Democratic Senators joined with the Republicans and voted for the corporation tax. The amendment carried—59 to 11. Two Democrats, Senator Hughes of Colorado and Shively of Indiana, voted against it.

Severe earthquake shocks following the earthquake in Messina on July 1 were felt in all the countries on the eastern Mediterranean. Reports from Italy, southern Spain, Portugal, Tunis and Algiers say that the quake was of great extent and severity. It is feared that more detailed reports will show heavy damage.

After Sept. 1 there will be no more child criminals in the State of New York, at least they will not be called such. According to a new law which goes into effect Sept. 1, all persons under sixteen years of age who commit what in adults would be called crime will be put down as juvenile delinquents, thus sparing the youthful lawbreakers the stigma of criminal.

During the fiscal year which ended on June 30 importations of hides show a larger total than in any previous year, amounting to \$75,000,000. The census of 1905 shows the value of leather tanned, curried and finished in 1904 to be \$252,000,000. The exportation of leather and its manufactures from the United States has grown from \$7,000,000 in 1880 to \$40,500,000 in 1908.

Business men are looking on with a good deal of interest as the digging of the canal across Cape Cod which will connect Buzzards Bay with Cape Cod Bay, progresses, work having been begun a week or so ago. The immediate purpose of this canal is to shorten by about 150 miles the distance by water from Boston to New York and to other points to the south on the Atlantic coast. It will also furnish an important link in the inland waterway from Massachusetts to the Carolinas. As is well known, there are many perils attending the sea route through Vineyard sound and around Cape Cod, and the new canal will completely obviate these dangers. The saving in time and inconvenience which the canal will afford ought to make it a highly profitable undertaking.

The work of constructing the Cape to Cairo Railway is to be started again in the near future. The present end of the line is 370 miles north of Victoria Falls, and it is expected to carry a line into the Congo copper district during the present season. The new line will not be an all-rail route. A considerable part of the distance will be covered by steamers on the great interior lakes of Africa.

The Turkish chamber recently discussed the law on strikes, and the minister of the interior opposed the formation of trade unions, declaring that they formed an institution hostile to capital. The representative of minister of public works made a violent speech along the same line. Many deputies opposed it. The chamber finally accepted in principle the rejection of trade unions. The grand vizier was present during the discussion.

The steamer Carolina sailed from San Juan for New York July 1, having on board all the American school-teachers who taught in Porto Rico last year under contract. The failure of the United States Senate to pass the Olmstead bill, which was designed to remedy the deadlock existing between the executive council and the House of Delegates, leaves the island without money to begin the fiscal year, since the Legislature has made no appropriation.

Recently Dr. Eliot, former president of Harvard University, in a public address gave advice as to what books should be read, his list being dubbed, "Eliot's five-foot library." The Bible and Shakespeare were not in the list. In an interview Dr. Eliot says the list was selected by a publishing house as a business proposition. He says he was remunerated for compiling the list, but does not think he has done wrong in lending the prestige of his name to an advertising scheme.

At a conference President Taft authorized Representative Tawney to announce that he was opposed to the change in the tax on oleomargarine, as proposed by Secretary MacVeagh. The President wants it understood the administration will not lend its support to any bill which seeks to change the present oleo tax of $\frac{1}{4}$ -cent a pound on uncolored and 10 cents a pound on the colored product. Secretary MacVeagh advocated a 2-cent flat tax on all oleo, colored or uncolored.

Determined to stamp out the smugglers who have systematically defrauded the government for years, William Loeb Jr., collector of the port of New York, has organized a new police of 300 men to patrol the harbor and shipping points along the river front. Officially the members of the new department are to be known as "customs watchmen." They will have the power of seizure and arrest and are to be armed with revolvers and short clubs, such as are used by the New York police department.

Fifteen hundred girls and women of Chicago devoted at least a part of last year to the study of scientific home-making, according to a report just made by the School of Domestic Arts and Sciences, 39 State Street. The course included sewing, dressmaking, millinery, cooking and buying. Young society women, engaged girls, mothers of families and professional cooks were among the students. The June term had the largest classes. A summer term which will last six weeks is now in progress. Special work can be arranged, and cooks left in care of city houses are among those in attendance. The School of Domestic Arts and Sciences employs no solicitors or canvassers either for students or money.

Universities and colleges which permit students to smoke cigarettes may expect no endowment funds from Dr. D. K. Pearsons, the multi-millionaire Chicago philanthropist. This was the announcement by Lucy Page Gaston, head of the Anti-Cigarette League, following a conference with the philanthropist. Dr. Pearsons has given many millions to educational institutions within the last ten years. Miss Gaston asked him for financial assistance for the league, but he replied: "While I cannot give you financial assistance at this time I am going to make you a promise which may tend to aid the cause. In future I shall contribute no money nor make a bequest of any kind to a university which permits cigarette smoking on the part of its students."

A school for cooks and general hotel service, to cost \$250,000, is to be added to the Winona Technical Institute of Indianapolis. Ground for the building will be broken on one of the three days of the International Stewards' Association convention, to be held in Indianapolis Aug. 18, 19 and 20. Adolph Meyer, former chef to the Czar of Russia, and now steward of the Knickerbocker Club, New York, will be superintendent of the school. The school will be inaugurated as a model hotel. The guests will be the four hundred or more students of the technical institute. They will live higher than the undergraduates of any college or university in the world, for the daily menu will be of the widest variety, from the simplest biscuit to the most complex sauces and pastries. A banquet hall capable of seating four hundred persons will be available for public use. Here the senior class of waiters will be instructed.

A good many of the steamships still employ the old method of hoisting the ashes from the boilers to the decks above and dumping them overboard; others mix the ashes with water and pump them up; but both methods are objectionable to passengers, especially when the wind is blowing in the wrong direction. The newest of the liners get rid of their ashes by forcing them through the bottom of the hull by means of compressed air. The ashes are received into a hopper along with the clinkers and are passed along to a crusher, which grinds them up together. In a watertight casing below is a revolving drum, open as it turns first to the crusher chamber and then to the discharging pipe below. Of course, ordinarily the water pressure would force the ashes back through the discharge pipe and would flood the ship, but compressed air, about 70 pounds to the square inch, is applied to the drum just before its opening comes over the discharge pipe, and the ashes are sent into the sea with such a force that they sweep clear of the vessel's hull. This expeller can get rid of eight or ten tons of ashes, drawn from 48 furnaces, in an hour.

The last round of shots in the east heading of the Gunnison irrigation tunnel, near Montrose, Colo., was fired at 5:30 o'clock July 6. A few minutes later when the debris had been cleared away the workmen from the two headings shook hands through the opening. The tunnel is six miles long and has been four and a half years under construction.

With the beginning of the present fiscal year the Republic of Cuba established a Bureau of Information, President Gomez appointing Leon J. Canova, an American newspaper man, who has resided in Cuba eleven years and has a wide acquaintance with the island, as its director. Parties wishing information of any nature concerning Cuba can obtain same, free of charge, by writing to Leon J. Canova, U. and I. Bureau (Utility and Information Bureau), Department of Agriculture, Commerce and Labor, Havana, Cuba.

Both Canada and Australia have followed the lead of New Zealand in the decision to contribute to the naval defense of the empire. The federal government of Australia has voted to build one "Dreadnought" for the British navy. The Canadian government will build and man a navy of its own, to act as an auxiliary force to the fleet of Great Britain. The plans call for the construction of eight first-class cruisers of the "Cornwall" type, of 10,000 tons displacement, ten torpedo-boat destroyers, and ten torpedo boats. The fleet will be built in Great Britain, and the time and cost of construction are to cover the next five years.

More than \$2,000,000 in money, jewelry, and precious stones and bonds recovered from the ruins at Messina is being kept there by the military authorities. The valuables are tied up in bags and heaped in boxes and stored in various places, causing the utmost confusion. A treasury official with clerks has now been entrusted with the custody of the valuables. Theoretically, the treasures of Messina, as they are called, are at the disposal of their rightful owners, the procedure being for a claimant to obtain authority to make a claim from the tribunals, which takes two months, then to identify his property after finding it, and to prove that it belongs to him. This, in many cases, is impossible, and an attempt to regain property is fruitless.

Dispatches from Teheran by way of St. Petersburg say foreign legations have been notified by the rebels, who are approaching from Kasvin, that the latter can no longer guarantee the safety of foreigners in Persia. Saradar-asad, the rebel leader, in a message to the legations, declares that Russian intervention is responsible for the danger of the foreign residents. The situation in Teheran is grave. The Persian Cossacks now in the city number only about 700, the brigade of 1,200 having been depleted by detachments for service in other parts of the country, and it is quite plain that this force would be unable to make any serious resistance to the liberal army which is within striking distance of the city. Gen. Snarsky, with a Russian force, is hurrying from Tabriz, but his arrival, it is thought, will be too late to forestall the attack of rebels. A strong Russian force is massed on the Caspian shores in transport ships, but they are deterred from landing by the fear that their advance will precipitate a terrible massacre of all the foreign inhabitants of Teheran before they are able to reach the city.

Among the Magazines

OUTRAGES OF THE TELEPHONE.

The Drunken Sailor's fate having been satisfactorily settled, what shall be done with the telephone fiend? This distressing problem is agitating more than one long-suffering soul. The Fiend is petticoated, rarely trousered, who holds you up until you are ready to hurl anathemas upon the very Inventor. Where is the specialist who will conquer this disease of the wire—disease that is working such wholesale havoc, rifling husbandly purses, stealing time bodily, breaking the needed rest of invalids without a qualm, and robbing the "party" at the other end of all surety of peace? For all else seem we to have found a quietus, but for the "caller up" at any old time or place, no remedy seems forthcoming.

That the telephone has blessed many a man, saved many lives, and helped pile up fortunes, is true; but has it not cursed some women, ruined more lives, and hastened domestic misfortune? It has. Has it not become the favorite pastime of the woman with nothing to do? It has. Does it not accelerate gossip? Aid the flirt and the wayward, constantly? It does. Self-indulgent women waste their husband's money by ordering food "over the too handy telephone, rather than bother to dress for the street," thereby losing both their wholesome morning exercise and their chance thriftily to secure the best there is for the price at market or at stores from which the family larder is supplied. The time wasted by women in foolish 'phoning can never be offset by time gained by forehanded men in business, for what shall it profit a man if he gain the whole world if his "world" is lost through folly?

Telephoning from a habit finally becomes a vice, and a menace to the courtesies. It has destroyed the fine art of social correspondence. It has crowned Haste with Courtesy's laurel.

Another phase of the telephone madness, and one of its most audacious, is the impertinences it makes possible against the party "called up." Impulsive women say things to men and to each other over the telephone that they would never say face to face. To be rude to an acquaintance is at all times shocking to the gentle, therefore to have to answer the long-drawn-out "call" of an idler, who wishes to kill time at your expense, is outrageous. Nevertheless, seemingly it must be done and very graciously, with "thank you" added, or—you become a target for ire. Sometimes you pay the price of discomfort to your entire family. If you protest verbally, forthwith you are a "crank," disagreeable, unfeeling, and what not. Again, if you fail to "call up" in turn, you are "queer." If you do, it is a signal for renewed mortgages upon your time, patience, and quiet. Busy men whose women-folks, friends or sweethearts call them up inopportunely are beginning to lie diligently, in order to save their day.

A telephone in a residence should be for the convenience of the user, for imperative needs, for exceptional

social emergencies, where writing, sending, or going is quite impossible,—for sudden illness, for bad weather, for unavoidable delays, for trains, or service of any sort. For these things it is indispensable, but for the exchange of twaddle between foolish women, communications between the prowling wolf and the unsuspecting lamb, it has become an unmitigated domestic curse.

The remedy lies with the Man of the House. In his wife's good taste and judgment one man may safely put his trust; he needs no remedy. The other man, whose wife's stability of purpose, and dignity, are of a dubious quality, does well to look to it that he affords madam neither an unlimited service nor opportunity to decorate him metaphorically with a Fool's Cap and a (telephone) bell.—July Lippincott's.

CHICAGO'S VACANT LOT GARDENING.

The cultivation of vacant city lots as a remedy for unemployment is now tolerably familiar in this country, though in the days of the "Pingree potato patch" it was a startling novelty. Chicago has on record two limited experiments in that line, but neither was very successful. This year, however, we are assured that "the movement for city gardens in Chicago is on a safe and permanent basis."

It will be remembered that the International Harvester Company placed several months ago a twenty-acre tract at the disposal of the board of managers that was chosen at a meeting in February to consider the question of utilization of vacant lots by families in need of relief. An account of the progress of that "lot" under intelligent management is given in the current issue of *The Survey* by Mrs. Pelham, the president of the board. The tract has been divided into four sections, with twenty-five lots in each. Every inch is now occupied, and about 100 families are busily engaged in "gardening." Most of the cultivators were recommended by charity organizations, Hull House and other settlements, but it is instructive to note that the immediate neighborhood of the tract—Marshall Boulevard, opposite the house of correction—has furnished some of the farmers and gardeners. The Tuberculosis Institute has placed some of its patients on the tract, and they are doing well.

Several races are represented on the improvised farm, and intensive cultivation is resorted to where the previous experience of the gardeners renders it possible. Among the vegetables raised are onions, potatoes, parsnips, lettuce, carrots, cabbage, pumpkins, beets, radishes, peas, parsley, spinach, peppers, squash, sweet corn, etc. Plenty of variety, truly, and a chance for everybody who has tilled the soil "in the old country" under any known system.

Many of the gardeners have already made application for lots for next year, and the waiting list is long. The difficulty will be in finding suitable tracts in sufficient quantity. Financial support of the enterprise has not

been lacking; generous men and women, appreciating the value, moral and physical, of such forms of relief, supplied the funds for tiles and drains, tools, seeds and salaries. Expert superintendence has been secured, and the result will be not only a profitable crop but a "pleasing display." The tract is constantly visited by persons interested in enlightened beneficence and in rational solutions of the problem of unemployment. Their personal observations will stimulate sympathy and make next year's planning and work even easier than it has been this season.—Chicago Record-Herald.

GOBLETS OF ICE.

It would be well for inventors to study the advantages of reversing or inverting well-established customs or methods of procedure with a view to developing new and valuable inventions. For example, a native of Holland recently conceived the idea that instead of putting ice in a beverage it would be a good plan to pour the beverage into ice. This led to the invention of the ice goblet. For such a novel vessel there existed no precedent, and in the building of a machine for making it, many physical and technical difficulties had to be overcome. The apparatus has now been reduced to a commercial form and the inventor, Mr. H. D. P. Huizer, has installed a plant at one of the summer resorts near the Hague (Netherlands). The apparatus was also exhibited in Paris, last October, before the First International Refrigerating Congress.

The ice goblet as shown in one of the engravings is a conical drinking vessel like a tumbler made entirely of ice which is placed in a smaller paper shell for convenience in handling and for protection against surrounding heat and direct contact with warm bodies such as the hand, table, etc. It weighs $3\frac{1}{2}$ ounces and is 5 inches high. The walls, which are slightly tapered, are about $\frac{1}{8}$ of an inch thick and terminate in an arched bottom of $\frac{3}{8}$ inch thickness. It has a capacity of $\frac{1}{4}$ liter (about $\frac{1}{2}$ pint). By a special process the ice may be made in all degrees of transparency or opacity, and even with a flowery structure. It can also be colored to give it a pleasing aspect. A drink out of one of these goblets is said to be delightfully refreshing and not as cold as one would think.

The refrigerating capacity is quite sufficient to hold the beverage about half an hour in summer; but it collapses instantly at a second refilling. As it thus can be used only once, the sanitary properties are ideal. Everyone has his own goblet, which is thrown away after use. In its manufacture it is not touched by the hand, and by using pure or distilled water an absolutely clean goblet is obtained. The paper shell is thrown away after being used a single time, because when wet it loses its shape and it does not pay to dry and reform it.

One would imagine that ice was entirely unsuitable for such a purpose, but as is well known a great

deal of heat is absorbed in melting ice. In the goblet the ice is insulated by the paper incasing it and itself insulates the liquid within, while the difference of temperature between the two diminishes rapidly, thus arresting the melting of the inner side. Owing to these very favorable conditions the goblet has an astonishingly long existence. The same ice goblet thrown in water would melt away in a few minutes.

One of the illustrations shows in section the apparatus for making the goblet. It consists of a mold *a* and a core *c*. A measured quantity of water is first poured into the mold, then the core is inserted, which presses

The ice goblet complete.

Forming the ice goblet.

Selling beverages in goblets of ice.

Courtesy Scientific American.

the water upward in the space *b* between the two. The device is submerged in refrigerating brine *m*. If the temperature of the brine is kept at -10 deg. C. (14 deg. F.) the ice goblet is ready in a quarter of an hour, at -20 deg. C. (-4 deg. F.) in but 6 minutes. The core has a chamber *d* at the bottom, constituting a kind of diving bell, in which the water rises only as far as the hydrostatic pressure and the contracting of the confined air by cooling will allow it. The freezing takes place in regular layers from without inward; the ice at first closes the top of the space and then the solidification gradually proceeds downward and ends in the chamber, where because of the expansion an arched bottom *n* will be formed and around this a peculiar shaped inner gripping edge. In the same way the air confined in the water is

forced to escape therein. The ice goblet is not removed in the ordinary way of thawing it out—such would obviously be its ruin. The mold is made of a material expanding more rapidly than ice (viz., a special metal) and the core is made of a material expanding more slowly than ice (viz., a special porcelain), so that the dilatations by heat are: $a-b-c$.

The apparatus is sunk for a while in a special heater, giving off just enough heat to the mold without transmitting any perceptible heat to the ice goblet; now this latter is instantly drawn out with the core, to which it adheres chiefly because of the gripping edge within the chamber d . The latter is in reality a structural part of the bell-shaped piston e , that is carried by a rod f ending in a handle g outside the core. On pressing the handle downward the piston expels the ice goblet, which is then caught in a paper shell. The whole operation takes but a few seconds.

About 100 ice goblets per hour can be made with one-horsepower, so that only very small refrigerating machines are needed for producing considerable quantities.—*Scientific American*.

FOXY GERMAN EMPEROR.

The Kaiser, finding himself isolated as the result of French and British diplomacy, debarred on every hand from territorial expansion in Europe, had dreamed of a commercial empire in Asia. But Wilhelm is the kind of a man who prefers to see things with his own eyes, and that is why, in the spring of 1897, he set out on his spectacular tour of the Near East. He rode through Palestine in a theatrical uniform made for the occasion, with a great cavalcade behind him. At Jerusalem he laid the cornerstone of a German church; at Haifa he addressed a great assemblage of German colonists; from Damascus he carried away with him the priceless furnishings of the palace which he occupied, loaned, for the occasion, by the neighboring pashas; at Ba'albek a peculiarly hideous tablet was placed in the Temple of Venus to mark his visit, and so he came to Stamboul, where Abdul-Hamid, his friend and brother, awaited him.

Imagine, if you can, a more queerly assorted pair. The Sultan, crafty, cautious, timid, patient; the Kaiser, bombastic, blatant, hot-headed, domineering. This meeting of the monarchs was as curious as any in modern history—the one a ruler in spite of his physical cowardice, and the shrewdest diplomat in Europe; the other a sort of footlight king. Humble, patient, and furtive, the Master of Turkey listened, while the War Lord thundered. Always he dilated on his great idea, the Drang nach Osten—that on-sweep to the East of German imperialism. This strangely mated pair, these masters of East and West, made a compact that the one would abstain from intervening in Crete and would use his influence to obtain the withdrawal of the international soldiery from the island, and that the other would give him, in payment, a right-of-way for his railroad across Turkey-in-Asia. And so they arranged it between them, the billious, sallow-faced, silent little man with his eternal cigarette, and the stoutish, aggressive, domineering Teuton who puffed inter-

mittently at a black cigar. And this is what Abdul-Hamid gave to his German brother:

A concession to build a railway line from Haidar Pasha, a territorial port on the Asiatic side of the Bosphorus, across from Constantinople, through the heart of Anatolia, over the Taurus Mountains to Adana and Aleppo; thence passing through southern Kurdistan, to Nineveh on the head waters of the Tigris, thence paralleling the river to Bagdad, where, crossing over to the Euphrates, the line is to continue southward, via Babylon, Kerbela, and Basra to its proposed terminus at Koweit, on the Persian Gulf. It looks simple enough on the face of it, does it not?

But when the European chancellories came to examine its provisions, they stood aghast, for they soon found that it constituted one of the most gigantic commercial concessions in all history. Not only was the concession granted under an Ottoman mileage guarantee of close on five millions of dollars per annum, but the concessionnaires were given in perpetuity a tract of land 12.4 miles wide along the entire length of the line, or, in other words, 6.2 miles on either side of the railway for a distance of fifteen hundred miles. The Sultan had, indeed, bartered a kingdom for the Kaiser's friendship. To the German concessionnaires was given the exclusive right to cultivate the land within this railway zone—18,600 square miles in all, and every foot of it, to all intents and purposes, German soil—to work the mines and the forests within this radius; to grow wheat, tobacco, and cotton; to colonize, and to navigate the streams, not to mention various subsidiary rights. The concession admits, moreover, of the concessionnaires' utilizing all waters along the route for electric purposes; and such power will eventually be used, it is planned, for lighting their towns and running their factories.

The grant likewise includes navigation rights on the Tigris, the Euphrates, and the Shat-el-Arab, and permission has been granted for building quays at Bagdad, at Basra, and on the Persian Gulf. On both sides of the railway line in Mesopotamia lie bituminous and petroleum yielding lands of inestimable value, while it is calculated that Anatolia, Syria, Mesopotamia, and the Irak can produce more grain than the whole of Russia. To this are added the vast possibilities of the cotton supply in western Asia Minor. Is it any wonder that the frock-coated gentlemen in the foreign offices of London and Paris and St. Petersburg, reading the terms of the grant, threw up their hands in horror?—From "The Fight for the Highway of Nature," by E. Alexander Powell, in July Everybody's.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED—1,000 Sisters to send for samples of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Illinois.

WANTED—Married brother of good executive ability to manage 200-acre Michigan dairy and truck farm. May invest in farm if you would like. Splendid opportunity for right man. Address, Farmer, care Inglenook.

WANTED—A few young men and women to work for part expense while in college. A will to work will supply many a dollar. Drop card. We'll do the rest.—MT. MORRIS COLLEGE, Mt. Morris, Illinois.

"On the Sweet Grass"

Sweetgrass County, Montana Irrigated Lands

This space has been reserved for Glass Brothers Land Company, who are offering for sale 28,000 acres of choice irrigated fruit and farm land, in the famous Sweet Grass district of the Yellowstone Valley, Montana.

Elder L. H. Dickey of Fostoria, Ohio, who was present at and conducted the simple ceremony, at the opening of this great irrigation system, says:—"I believe this to be a good place to live and that the settler will prosper to a very high degree."

Elder J. F. Appleman of Plymouth, Indiana, who has also inspected these lands says:—"The land and irrigation system are far better than you told me."

Look for this space next week.

GLASS BROTHERS LAND COMPANY
Big Timber, Montana

Bubbles and Other Stories

Edited by Edna A. Newcomer. A collection of 108 poems and stories for little folks. Illustrated with 83 halftones and pen sketches. Printed in blue on fine quality of calendered paper. A few of the many subjects are "Bubbles," "The Little Soldier," "Butterflies," "Her Letters," "The Runaway Goose," "Bedtime," "A Catnip Tea," "The Goose That Grew," "Ten Little Smiles," "Visiting Grandmother," "Who Is She?" "Building Pebble City," "The Doll Hospital," "Philip's Pet," "If," "When Lettie Reads," "Why the Photographer Waited," "The Honest Old Toad," "The Baby's First Steps," "The Misfortunes of Bill," "Jimmy the News Boy," "Ten Little Pumpkins," "Jimmy Fishhook," "A Young Canadian" and "How Mabel Helped."

A beautiful cover design printed in blue and photo-brown inks. Substantial board cover.

Sixty-four large pages.

Sunflower Stories and Lullabies

By Olive A. Smith.

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real

Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Low Boat." One hundred pages of the most delightful reading. The book is printed from large clear type, on a good quality of paper. The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

Ho! for Canada

It is the purpose of the CO-OPERATIVE COLONIZATION COMPANY to develop land in the Colony at PORTAGE, CANADA. This colony is most well suited for settlement. The land is rich and well watered and the road to Winnipeg is very good. But as the policy of this company is—“CHURCH EXTENSION BY COLONIZATION,” we are being taken to locate a colony in the Northwest.

After considering the various reasons offered for settlement, the Directors of the company have decided to locate

Colony Number Two Near Portage la Prairie, Manitoba, Canada

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its location in good market—close to the city of Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Winnipeg.
6. The Low price of land, when quality and location is considered. These lands are very cheap for settlement, are low in price and will soon be taken.

Join our Colony Number Two, locate a good farm in a prosperous section with good communications, excellent transportation facilities, where School and Church privileges are assured, and among people with whom you are acquainted. For further information, details of Land Sales, Excursions, etc., address:

Co-operative Colonization Company North Manchester, Indiana

or

W. Scott Garrioch,
Portage la Prairie, Manitoba, Canada

		\$28,647,000	1,552,540	

To December 31, 1908, the Federal Government has already expended over 28 millions in preparing homes for probably 20,000 families, possibly more, and must spend millions more before these projects are finished. With the Government the railroads that serve this territory are vitally interested in seeing that these acres are successfully settled by prosperous farmers. Whether these farmers are on government lands or on private lands irrigated by the government, is of minor importance; the main proposition is to supply as many homes for as many people as possible on these government projects.

Parties wishing information about any of these projects with the view of securing Government land or private lands for future homes should write to the undersigned for printed matter descriptive of the section of the country they wish to locate in.

GEO. L. McDONAUGH,
Colonization Agent, U. P. R. R.,
Omaha, Nebr.

Fallon, Nev., June 18, 1909.

*TRUCKEE-CARSON PROJECT

Mr. J. C. Waite,
777 Federal Bldg., Chicago, Ill.

Dear sir:—

I have, of course, been extremely busy since coming here. Nobody can appreciate what has to be done, until they get into it.

All of my crops are looking fine. They say my alfalfa can not be beat. It is cut and cocked up now. It will stand me in \$20.00 an acre this one cutting and I will get two more cuttings this season besides pasturage this early spring and late fall.

I figure it will net me \$50.00 an acre this year at least, after paying expenses of labor, etc. This alfalfa stand is only 1 year old.

Well, I must ring off. Trusting that I may hear from you soon,

I am yours truly,

(Signed) A. O. Foskett, Sec.

Let One Billion Gallons of Water Protect Your Crops

The above illustration is a reproduction from a photograph of Miami Ranch Reservoir No. 2.

Although the average annual rainfall at Miami Ranch is 13.92 inches, the owners have constructed ditches and storage reservoirs which give such an abundant supply of water as to **insure the biggest crops possible for any soil to raise.**

This one reservoir alone has a capacity of one billion gallons of water and an unlimited supply keeps it always filled. Instructions for raising big crops are furnished free by an expert who lives right on the ranch.

—MIAMI RANCH—

Consists of 18,000 acres of rich valley land in Colfax County—the county which won the \$400 prize cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October, in competition with the entire irrigated West for the best general agricultural, horticultural, educational, mineral and live stock exhibit.

Colfax County apples won the Gold Medal at the Chicago World's Fair and New Mexico wheat took first prize at this same fair.

Excellent church privileges, good school, nice homes,

good cultured neighborly inhabitants, beautiful scenery, clear skies, pure air, ideal weather, big crops and everything that combines to make health, happiness and prosperity, are all to be found at Miami Ranch.

The elks, deer, bears and other large game which inhabit the surrounding mountains, together with our thousands of wild ducks and geese, furnish plenty of sport for the farmer who likes to hunt, while the Rayodo River, famous throughout the central west for its trout fishing, keeps the angler happy.

Read What Others Think of Miami Ranch

Farmers Development Company, Miami, N. M.
Gentlemen:

Miami, New Mexico.

A year ago my wife and I made a western trip through Texas, Colorado, Utah and New Mexico with a view to finding a desirable place to locate for my health and for investment, having been in the hardware business in Bellefontaine, Ohio, for 13 years in the firm of Osborn & Churchill.

I had heard of the Miami Valley located in Colfax County, New Mexico, which was opened up less than a year prior to my visit, by the Farmers Development Company. I was very much impressed with the present and future prospects of this beautiful valley. I made another visit last August and purchased 40 acres, several others purchasing like amounts at that time.

This community is composed of an intelligent and industrious class of people from the Middle States, largely from Ohio. I disposed of my business interests in Ohio and arrived here the 19th day of February, 1909, to make this my home. I find, as I become better acquainted with this community, that it is the most perfect country I have ever had the pleasure of visiting. The health-giving properties in the pure air and sunshine is acknowledged by the most prominent physicians to be the best in the United States.

I find for investment that one cannot make an error, as climatic conditions and location for fruit are ideal, and for general crops most excellent. Land is advancing because people are looking for improved farms as well as unimproved, which creates a demand for both.

I find my health already improving, having only been here two months.

There is an abundance of water to irrigate, having the best and most substantial reservoir in New Mexico, this company has spared no time or money to make it perfect. People are happy and contented. I can recommend this Valley to my friends feeling that I have done a good deed. Respectfully,

(Signed) W. W. Osborn.

Our Free Booklet, "Westward Ho" tells all about Miami Ranch. It tells also how and when you can get a round trip ticket from Chicago for \$30 and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. We are making special bargain offers on both large and small farms, for a short time only. Write for booklet today and learn how payments can be arranged to suit your convenience.

FARMERS DEVELOPMENT CO., Springer, New Mexico

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

Price, each, postpaid, only

25 cts.

Set of eight designs, postpaid,

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

THE BOOK OF SILVER SONG

RICHARD BRAUNSTEIN

DIM, rainy days I used most of all to delight in, for such times my elders gave me little heed and I was left much upon my own devices. Then it was I used to slip away up the attic stairs to my little den of books beneath the eaves. There, with the gentle patter of the rain upon the roof above me and the noises of the house coming only faintly to my ears, I would lose myself in the fairyland of books until the light from my little dormer window only dimly traced the printed page and forced me to abandon it reluctantly. I remember that I was ever a shy and quiet lad, silent for the most part when others were about, but voluble enough when alone. Of real playmates I had few—games and races gave me little pleasure—but I seldom lacked for company. I could easily garrison a fort or hold a tourney with the children of my mind and long afternoons I would play with them, quite content that their fancies ran with my desires and that we never quarreled, as children often do.

There was no end to our adventures, battles, sieges and encounters single-handed—and the favored one we played more often than the others, "The Romance of the Purple Knight and the Beautiful Lady." Of this we never seemed to tire, for there was always the glamour of martial trappings and the lure of chivalry to make it a delight. How often did we clatter along the King's highway, my companions and I, on charging steeds, faring forth to rescue the princess from her castle by the sea. And how the swords would clash and the helmets ring and the moat turn crimson when we stormed the drawbridge and fought our way within the stronghold. Then, too, there was ever the spice of the homeward ride, with the princess in my arms, pursuit behind, and the long white road before us.

Strange play fancies for a boy were those, but as I look back upon them now, I think it must have been "The Book of Silver Song" that made me so much

the dreamer. It was the most cherished volume of my goodly store, and rainy days—as I have noted of the opportunity—found me most often lost in the charm of its pages. I had carpeted my under-roof domain with a soft rug of some old Persian weave, long banished from the living rooms, and in this I used to snuggle up, the book propped against the window at an angle for the light and my eyes noting nothing save the quaint characters of the text before me.

And what a book it was, to be sure! Broad and generous pages of a parchment strange to modern volumes, flecked with the saffron touch of Time and hand-lettered quaintly in a style long forgotten. The leather of the binding was well worn in the places that fit best to the hand, as though the book had been a close companion and a friend; but no careless hands had been those placed upon it, for, with all the traces of long use, there was yet a soundness to every page that evidenced the care of maker and of owner.

Here and there an odd leaf bore a quaint embellishment, traced and colored in a genius' certain hand. I liked to fancy when I came upon them that he who wrought the volume found mere words too feeble for expression of his thought and so gave to them a broader meaning. A picture to every song—curious figures of another age, garbed in fashions long abandoned. Stately dames and brave esquires, and pages, knights and castles in profusion. What a world of romance they revealed to boy eyes and what a land of charm.

"The Book of Silver Song" I have called it—a whimsical title of my own invention, for I was ever giving in those days odd and most fantastic names to all things in my treasure trove of dreams. A "Ballad Book" it was, if we must be precise. Old folk songs sung and told from Scottish loch to English lowland: a golden currency of thought in days when hall and hovel had but a baser metal for their daily speech. A

crude and homely story form, but rich with a people's struggling powers of expression and forerunner to the lyric of today. Brave old song-poems of a rough and ready race, loved in equality by baron and peasant, passed along from lip to lip and sung a-down the corridors of Time by those old wandering bards whose music, sweet and crude, had powers to 'rouse the battle lust or soothe the heart to peace. In imagination I can see them pass, each

"With harp across his shoulders slung,
And murmuring round his tongue."

I chanced upon the book most strangely, I remember. We had an old sea chest in one corner of our storeroom, filled with trophies of a roving ancestor. A "black sheep" he had been called in days when people little understood the "wanderlust" and thought illy of one who found no pleasure or content in the close restraints of home. My mother often told the tale to me, of how he quarreled with those who loved him yet misunderstood, and how he went away one day with silent lips and a glowing anger in his heart. Years afterward this chest had come to them from the friendly captain of a ship, who sent with it the message of his death by fever in a foreign land, but it had remained unopened through the years till a later generation forgot the bitterness within the hearts of the old and revealed its treasures—this book among the others.

I know today a stern Puritan creed misjudged the man, for no one of vicious nature and a blackened heart ever chose a volume such as this for his book of dreams, strange as may have been the manner of selection. I used to fancy I could see him as he must have been—proud and courtly in demeanor, yet passionate and loving underneath, with the restless blood of vikings in his veins and the spirit of a rover; misunderstood and suffering as only those rare souls can suffer who live alone in the shadow of their dreams without the touch of human sympathy.

I think it must have pleased him that the book came to me, for there were times when I felt a strange comradeship and days when my eyes used to visage scenes that were new and vibrant with the charm of unknown lands. Visions of the desert, stretching white and dazzling to the distant lines of sky, conjured from the mists of everywhere, pyramids and palms and sluggish streams that laved strange tropic lands I never knew. Voices spoke to me in varied tongues and soft breezes whispered lures of pleasant isles in most enchanted seas. Hand in hand, I would wander through the world with him, unheeding Time's swift passage, till my mother's voice broke rudely such adventuring and brought me back again.

So, in these later years, would I give credit to that which played so true a part in forming childish fancies and the themes of play. There are those

who will tell you that the maturer mind may essay the longer flights in the lands of charm, but I would say them nay, for the child world has no boundary save the limits of imagination and there is in the quick and eager mind of youth a range of imagery which can never be compassed when once the golden early days are gone. The dream ships that sail out of your ports today are barges of splendor that seldom return, for, as the old ballad goes in the book:

"The masts that were like the beaten gold,
Bent not on the heaving seas;
The sails that were of the taffetie
Fill'd not in the east land breeze."

And if ever the time shall come to me, through a son, when the bars of the child world shall be let down again and I enter therein, I would that "The Book of Silver Song" be of like inspiration to him. That I might again, in some measure at least, share with him and through him, those splendid dreams of the boyhood days, wander old places among, fight old battles and win old loves over again.

THE COMMON PEOPLE.

NANCY D. UNDERHILL.

ABRAHAM LINCOLN is said to have remarked that "God must have loved the common people since he made so many of them." That is true. He *does* love them. Orchids are not as common as grass. But if we had to choose between the two, which would we rather have? Roses are lovely indeed, but the modest little grassblades in great numbers are of more value and comfort to humanity. Yet we tread upon them without a thought of their beauty and loveliness.

So, in God's garden of humanity, there are a few intellects that shine as leaders of men, writers of song or inventors of useful things. They are worthy of honor and praise from their fellow-men. They stand before the world as great examples of worth. But the *common* people, like blades of grass, are all around us. Do we treat them like blades of grass, I wonder? The tender little grass requires the same kind of nourishment and heavenly care that the roses and lilies do. God sends the same bright sunshine and refreshing rain to give life to the grass, as to the rare flowers. So, the common people, have the same requirements as do those who seem to be great. They need food, shelter, happiness and love, just the same as do others.

It is common to shower praise and good things upon great and notable people; but how many of us let the dear common people all around us hunger for kind words of appreciation, for little acts which betoken sympathy and love. When we need a little real help, we look to the common people for it. If a great deal of work is to be done, the common people

do it. They build the houses we live in, and keep them clean after they are built. They construct the roads over which we travel, and the cars or vehicles in which we ride. They plant, tend and harvest the crops which furnish us food; they also furnish us clothing to wear. If we are sick, it is the common people who attend to our wants, and they carefully bury our dead.

Dear multitudes of common people! We couldn't live without them. Then let us have as sweet smiles for them as we have for others. Let us treat them with as much courtesy as we would show the President, the King, Queen, or other great person. The man who hoes our potatoes and the woman who cooks them need and deserve sympathy and kind-

ness just as much as do the great preacher, singer, actor, inventor, orator and statesman. The grocer-boy, the shoe-mender, the laundress, the seamstress the working man or woman, wherever they are, need and deserve just the same kindly consideration and encouragement as do other people.

There is no respect of persons with God. He loves them *all* and cares for them all. So his children should emulate his example in being courteous to *all*. God made more of the common people than of the great ones, because more common people are needed. They are the salt of the earth. Honor them, love them.

Collbran, Colo.

SOCIALISM AND INTERNATIONAL PEACE

JOHN WOODARD

It is remarkable that the organization which is probably accomplishing the most for international peace is not a religious society but a political party known as the Socialist party. Only a few religious societies, as a whole, are opposed to war and their influence is mainly confined to the neighborhoods where they have congregations. They have not reached out and made the world feel their influence as they should. The other denominations, and they contain a large majority of the professing Christians, allow their members to go to war and many of their ministers consider war as a necessary evil that Christians are sometimes compelled to engage in. There are, however, others, in these denominations, that are wielding considerable influence for peace. But, in spite of this work by all the churches, it has been Socialism that has spread abroad that feeling of the Brotherhood of Man that will, in time, make war impossible.

Some people will be surprised to learn that the Socialists are a peace people. The word Socialist brings to them the picture of a man about to hurl a bomb. To them, Socialists and Anarchists are synonyms. This is a great mistake. The Anarchist says the state should do nothing to control the individual. The philosophical Anarchists who originated this theory were harmless political theorists but their false teaching has incited the ignorant to an attempt to overthrow all government. The Socialist is different from either of these classes. His theory is that the state should have almost complete control over the individual. He does not believe in using violence.

The ballot is his "big stick" and with this he expects to usher in his regime.

Socialism is founded on the theories of Karl Marx. Marx said the laborer produces all the wealth and only gets a small part of it. The capitalists control the means of production so they are able to take the "lion's share" and give the laborer a bare subsistence. The many create the wealth, the few take possession of it. As a result many people are in distress. The Socialist party attempts to remedy this. They say let the government own all means of production including factories, means of transportation, and even the farms. Then everybody will be a wage earner, the majority will control the government, so each laborer will be well paid, and all misery and want will be relieved. There will be no community of goods. Each person or family will be independent in the matter of spending his money. The only thing is that all have to work for the government and get paid by the government. The Socialists think that everyone will be able to make a comfortable living and yet have time for study and pleasure but there will be no multimillionaires.

This in brief is the change the Socialists expect to bring about. They intend to do this by getting control of the State and national governments. This will require a large majority of the voters so they are constantly conducting a campaign of education to gain voters. They keep at this with an energy and persistence that the churches might do well to follow.

The Socialist party is not confined to the United States. It is an international movement. Every

important civilized nation has a Socialist party and their platform is the same in all except in a few details.

Socialism is an economic movement and herein lies its power. When you touch a man's pocketbook you are getting pretty close to him. The Prohibition movement is a good illustration of this. People have talked prohibition for years with little effect, but, as soon as people began to see that the liquor traffic was an economic evil, they began to wipe out the saloon. It is the same with war. Tell people that war is a moral evil and but few will oppose it, but get them to see that they reap no benefits from war and that it is a great burden that they will have to help carry, and they will oppose war every time. That is just what the Socialists are doing. They work among the laborers, the mass of common people. They teach that the rich stay at home and reap the benefits of war while the poor do the fighting. They say that the poor man has to pay the bill in blood and taxes and gets nothing for it. They believe that the poor laboring class have less to fear from foreign powers than from the wealthy in their own land. The Socialists in one country keep in close touch with those in other countries. During a great war scare between Germany and France, the Socialists of those two countries were constantly sending each other messages of friendship. The Socialists say that, whether Americans or English, German or French, Italian or Japanese, we are brothers and have no occasion to fight.

It is quite evident that, with even a large minority of the people in each of the leading nations opposed to war, there is very little danger of war. The Socialists are a minor party in all the nations but, in Germany, they control one-fifth of the members of the Reichstag and in France, one-fourteenth of the Deputies. In other nations they have few or no representatives in the governing body but the popular vote is increasing rapidly in all nations, mainly due to their persistent educational work. Even in the United States the popular vote nearly doubled in the last four years.

Will the Socialists gain control of the governments in the United States and other countries? The writer thinks not. They base their argument on three conclusions that they cannot prove. They assume that poverty is the result of one cause, insufficient wage. That is a mistake. There are other causes, so Socialism will not remove all poverty. They assume that their government could be conducted without graft, which is very doubtful. They expect the individual to work as hard for society as he would for himself, but we haven't reached that altruistic stage yet and it is doubtful if we will very soon. The Socialists will never gain complete power. They are very radical, too radical for the majority of men, but

they are exposing evils. They are so persistent that people cannot help but pay attention to them and recognize the evils. As a result a public opinion will be developed that will drive out these evils. But the reform measures adopted will not be as radical as the Socialists propose. The present social, industrial, and political systems have serious faults but it would not be safe to go to the other extreme, so the middle ground is sure to be taken.

There are some things about Socialism with which we cannot agree but we must admit they are doing considerable good, especially in behalf of international peace. And while we cannot join with them in their political work, we can do a great deal towards spreading the idea of the Brotherhood of Man. The churches should wake up and do more active work in behalf of peace. They ought to be ashamed of themselves for letting a political party outdo them in this work.

Lowry Hall, Columbia, Mo.

THE WORK-AT-HOME SWINDLES.

ANYONE who scans the "*Wanted—Female Help*" columns of almost any great daily or Sunday newspaper is sure to see such advertisements as the following:

"*Wanted—Ladies of refinement to do light, profitable work at home. No experience necessary.*"

"*Ladies wanted to do fascinating work in their own homes. No talent or experience required. Big pay.*"

"*Ladies can make \$10 to \$20 a week easily by giving a few hours daily to light, pleasant employment in their own homes. No experience necessary. Talent not essential.*"

"*Ladies can make from \$3 to \$5 a day by devoting spare time to pleasant, healthful employment. No experience required.*"

A little reflection should convince any sane person that such advertisements are either dishonest or utterly absurd. They would quickly disappear from our journals if the unsophisticated women who are so easily beguiled by them could be induced to use a little common sense and to realize how inexpressibly foolish it is to believe that any employer will give "big pay" to inexperienced persons for a few hours spent in "pleasant, healthful employment."

If it were possible, it would certainly be interesting to discover by what train of logical—or rather illogical—reasoning the untrained woman arrives at the flattering conclusion that she can earn from \$3 to \$5 a day easily by devoting merely spare time to light, pleasant work in her own home, while she is all the time fully cognizant of the fact that thousands of women with practical training and years of experience are glad to work in shops and factories all day for \$1.

The best newspapers occasionally sound a note of

warning on this subject, but evidently without avail, for, no sooner does a glittering advertisement appear, though unmistakably stamped with fraud and impossibility, than the offices of the advertiser are thronged to the doors with women of all ages who apparently vie with one another in their eagerness to be duped. These women may be divided into two classes—those who appeal to our sympathies and those to whom contempt, rather than pity, is due.

To the former class belong the self-supporting woman who is temporarily out of regular employment, and the woman who, through untoward circumstances, is thrown upon her own resources without practical training in any particular line of business. While our hearts go out sympathetically to both of these women, our lips can hardly refrain from censuring, as well as deploring, the short-sightedness which permits them to be beguiled by patently fraudulent advertisements.

Once in the office of the wily advertiser and under the spell of misleading oratory, the woman in desperate straits for the wherewithal to pay her room rent and to buy bread is likely to emulate in folly the drowning man who clutches at a straw.

The proverbial drowning man knows that the straw will not bear him up, and the half-starved woman, when she is wheedled out of a much-needed dollar for materials to work with, knows in her heart that she is being imposed upon; but, prompted by the undying spark of hope inherent in human nature, she rashly takes the one chance in ten thousand, hoping that where others have failed, she may succeed. Or, she reasons that if \$20 a week is promised, she may be able to earn at least one-fourth of that amount.

To the second class belongs the married woman in fairly comfortable circumstances, who selfishly neglects her home and her husband for the possible chance of gaining money for the purchase of theater tickets, candy and unnecessary finery. This woman—and her name, also, is legion—who is ever on the alert to seize upon whatever may be had in the line of light employment, with a heartless indifference to the fact that she is depriving her self-supporting sister of the means of procuring daily bread, is not deserving of one iota of pity when she becomes the dupe of a crafty advertiser; on the contrary, she only meets with something closely resembling retributive justice.

For the benefit of those who many have any lingering doubt concerning the dishonesty of the numerous companies that flourish upon the gullibility of these two classes of women, the writer recently armed herself with a small sheaf of "work at home" advertisements and set out upon a tour of investigation in one of our large cities.

Although none of the advertisements alluded to

painting, four of them led into offices where that art was offered as remunerative employment.

One company wanted ladies to transfer photographs onto glass and to paint them in oil-colors. The work was simple enough to persons experienced in the handling of paints, but presented unlooked-for difficulties to the amateur. A deposit of from \$5 to \$18 was required, according to the amount of materials taken out. Anyone who already possessed a full box of colors might begin the work by making "the small deposit of \$5" for other necessary supplies. Would-be workers were suavely informed that the work required no talent and was *very profitable*. No doubt it *was* profitable—that is, to the company.

Two companies exhibited a tempting array of fancy articles made of cheap white velvet that was beautified with hand painting. One of these companies professed to have its headquarters in Chicago and to have branch offices in numerous cities and towns throughout the United States. The class of work offered by both companies was identical and the methods of each similar, except that one charged \$35 for tiny phials of paint and required the purchase of an instrument for tracing and enlarging studies, while the other sold its paints for \$20 a phial and offered the work already outlined. The latter company, however, required that each worker should keep her first two pieces of work—for the materials of which she had been obliged to make exorbitant deposits—as it was an inflexible rule that the early studies should not be accepted. The ventured suggestion that a person of experience and artistic ability might do the first pieces well, elicited the snappishly given information that "all are treated alike, whether beginners or experienced."

When urged to make a deposit and give the work a trial, the writer asked for time to think it over and was promptly told that when ladies came to the office and could not make up their minds they were asked to deposit \$50 and to pay the remaining amount when they came again, because they took up time and did not always return to take up the work.

Not caring to pay \$50 for the privilege of making up her mind, the writer approached the elevator while the representative of the company called after her in disgusted tones, "Well, I never expect to see *you* again!"

The other company that offered painting on velvet as remunerative employment was more fully investigated and the work was practically experimented with. The company advertised extensively for ladies to do "copying," with the result that its offices were crowded with women and girls who thought their services were in demand for plain writing.

Once in the office, the more credulous ones were easily ensnared. They were eloquently harangued

concerning the beauty and value of the articles on exhibition; they were told the company furnished the materials and gave free instruction; that the work was mechanical and required no talent, and that anybody who worked at it could easily make from \$10 to \$20 a week.

What weak-minded woman could look upon so many pretty things and listen to such plausible oratory without being persuaded against her better judgment to "just give the work a trial"?

To give the work a trial necessitated the purchase of paints at an exorbitant price and the deposit of many times the value of the scrap of velvet entrusted to the victim.

Incomprehensible as it may seem, the writer saw many apparently sane women, who, according to their own account, did not possess even the most rudimentary knowledge of painting, much less the skill necessary for the proper shading and blending of colors, easily convinced by the company's demonstrators that they could do the work. If it were not so pathetic, it would be ludicrous to picture these poor dupes, who had received a few minutes' instruction and seen a leaf and a petal painted by the few deft strokes of an expert,—leaving the offices, smiling and confident, with a supply of materials which included a study to "copy."

A few days later, when the writer again visited the office, the inevitable had already happened. Crest-fallen women were presenting unsatisfactory work, receiving criticism and being advised to invest in more materials and to try again. A third visit revealed a number of despairing women, vehemently declaring that they could not do the work and vainly clamoring for the return of their misspent money. Each of these complaints was greeted by the erstwhile suave instructress with the exclamation, "Here comes another kicker!"

It is possible that a few of the shrewdest, and, therefore, the most dangerous, of these "kickers" may have been able to get a small part of their ill-made investment returned, in exchange for their unused materials, by paying \$1 for each lesson received—a "lesson" being a few minutes' instruction regarding the work, but the majority were obliged to abide by their bad bargain.

It is plainly the policy of this company that the work shall not be satisfactory. One palpable stumbling block put in the way of its victims is dark blue paint, which is sold to them with instructions to make light blue backgrounds. As this paint cannot be diluted by ordinary means, the required backgrounds are an impossibility. The finished work is, therefore, adversely criticised, and from forty to fifty per cent is deducted from the small amount promised for it. The discouraged worker is then advised to invest in

a phial of the company's special fluid for lightening dark paints and removing the blots and smudges which usually characterize the work of the novice. Another purchase is, therefore, found to be necessary if the work is to be continued. And so it goes on: the company's victim ruefully discovering that, instead of making from \$10 to 20 a week easily, she is constantly confronted with unforeseen expense. Then the truth begins to dawn upon her and she realizes that, should she continue the work and master it, there would be no market for her wares, for by the time she could produce salable work the company would have sought "pastures new" and fresh victims.

That this particular company reaps a rich harvest from the sale of materials is amply proved by a conversation which was overheard in the manager's office. The conversation took place between the manager and a man who was evidently negotiating about the establishment of a branch office in a neighboring town. The office was to be managed by a woman who was promised, through her proxy, a clear profit of ninety per cent on all paints sold and an enormous profit by the sale of velvet.

To the profits, according to the company, from the sale of materials must be added the gains realized through the sale of work; for work that is salable, and for which the workers received little more than the cost of the materials, is offered for sale at high prices. Sofa pillows are marked at \$7.50 each, and smaller articles are charged for proportionately.

To go into details concerning the numerous companies visited or written to would be tedious and unnecessary. In one respect they presented a striking similarity; they all want the *money*, not the work of the victims for whom they advertise so seductively.

A parting word to the two classes of women usually victimized may not be amiss. If you have a home, be devoutly thankful for that inestimable blessing. Gladly, ungrudgingly devote your time and energies to your home—where they rightly belong. If you are conscious of a hankering after pretty, hand-painted articles and have time and talent to give to the beautifying of your home, hire a competent teacher and buy your materials from a regular dealer; it will be to your advantage to do this rather than to fill the coffers of some swindling company.

If you are dependent upon your own efforts for a livelihood, diligently prepare yourself to do some one thing *well*—if it be but to darn stockings, or to fry doughnuts. Well accomplished work of any description will pay you better and be fraught with fewer heartaches and disappointments than will the futile pursuit of "light, pleasant employment" at fabulous rates of remuneration.—*Home Herald*.

THE BOYHOOD OF THOMAS A. EDISON.

THE successes of boys who have become rich and famous in the years of their manhood are always matters of interest, and the interest is greater when poor boys achieve successes that add to the public good or advance the cause of medicine, of science, of education, or of anything that the whole world may share and be helped by. Of living men it is doubtful if we have any whose life history is more interesting than that of Thomas Alva Edison, and the new book in which his life story is told, by Francis Arthur Jones, is one of the books that rank with Booker Washington's "Up From Slavery," or Jacob Riis' "The Making of an American" in point of interest, when it comes to a record of a poor boy overcoming all the obstacles poverty has set before him and at last conquering success. The "Life of Edison" is a book that all boys should read and find absorbing interest in. When a boy can rise from the position of a newsboy, selling papers on a train, to the position Edison occupies in the world today, it is well worth while to find out just how this success has been achieved.

Thomas Alva Edison was born in Ohio, a State that has given to the world as many men of character and distinction as any State in the Union. It was in the little town of Milan that Edison first saw the light of day, in February of the year 1847. His father was Samuel Edison and his mother was of Scotch descent and a woman to whom her famous son has paid many tributes of love and respect. Speaking of her, Edison says:

"I was always a careless boy, and with a mother of different mental caliber I should probably have turned out badly. But her firmness, her sweetness, her goodness, were potent powers to keep me in the right path. I remember I used never to be able to get along at school. I don't know why it was, but I was always at the foot of the class. I used to feel that the teacher never sympathized with me, and that my father thought I was stupid, and at last I almost decided that I must really be a dunce. My mother was always kind, always sympathetic, and she never misunderstood or misjudged me. One day I overheard the teacher tell the inspector that I was 'addled,' and that it would not be worth while keeping me in school any longer. I was so hurt by this last straw that I went home crying and told my mother about it. Then I found out what a good thing a good mother is. She came out as my strong defender. Mother love was aroused, mother pride wounded to the quick. She took me back to the school and angrily told the teacher that he did not know what he was talking about. In fact, she was the most enthusiastic champion a boy ever had, and I determined right then and there that I would be worthy of her and show her that her confidence was not misplaced. My mother was the making of me. She was so true, so sure of me, and I felt

that I had some one to live for, some one I must not disappoint. The memory of her will always be a blessing to me."

When "Al" Edison, as he was always called, was seven years old, his father moved from Milan, Ohio, to Port Huron, and we are told that the boy at this time was a "cheerful, good-natured lad, fond of fun and as sharp as a needle." He was as passionately devoted to his mother as in the Milan days, and there was also a link of affection forging between him and his father which no years of separation were ever able to sever.

The boy received most of his early instruction from his mother, and at the age of nine years he had read, or his good mother had read to him, Hume's "History of England," Gibbon's "Rome," Sears' "History of the World," and "The Penny Encyclopedia"—pretty solid reading for a boy of nine. At the age of ten years young Edison, eager to increase the rather limited family income, became a newsboy and seller of fruit and candy on a train running between Port Huron and Detroit, and while doing this the boy gave evidence of his hustling ability by buying some old type and beginning to print the *Grand Trunk Herald*, the first newspaper ever printed on a railway train. He had one or two assistants to help him get out this paper, and one of these assistants says of the publication:

"It was a little bit of a thing about the size of a lady's handkerchief. Of course he did not set it up altogether on the train, because you cannot set type and have it stand up on a train; but it was printed there. Sometimes the station master at Mount Clemens, who was also a telegraph operator, would catch some country news on the wires, and he would write it down and hand it to Al when the train came in. This news, of course, would be later than that contained in the daily papers. He would immediately retire to his caboose, set it up, put it in the little form, and before the train reached Ridgeway, he would have it printed off. I sold lots of these papers for three cents each."

The story of how Edison learned telegraphy is interesting, because there is a bit of boyish heroism in it. At the imminent risk of his own life young Edison saved the station master's little child from being run over by an advancing train. In gratitude for this brave deed the station master offered to teach the boy telegraphy, an offer that was gladly accepted, and the youthful operator's inventive ingenuity soon began to manifest itself. One time there was an interruption on the line to Detroit, and the operator asked young Edison to look it up and try to find where the trouble was. The boy at once laid a wire from his father's house and strung it along the railway fence. Thence he tumbled down the bank by a swing bridge

and fastened a wire to one end of the cable, which, as he suspected, had been parted by a passing vessel. Then he went back and was telling the operator what he had done when a line repairer came along, and, overhearing the conversation dropped his kit and proposed to trounce the boy for interfering with his work. The operator stood up for the boy, who was not a bit afraid to stand up for himself, and there would no doubt have been trouble had it not been for the interference of the operator.

One of the prized possessions of the wife of Mr. Edison is the only copy known to be in existence of the *Weekly Herald*, the little paper her husband printed on the railroad train. Mrs. Edison has the crude little paper in a neat frame. The date of this paper is February 3, 1862. The boy, not yet fifteen years of age, worked up a regular list of five hundred subscribers, in addition to a train sale of several hundred copies of this paper, and for a time he made a clear profit of forty-five dollars a month with his paper. The paper attracted a great deal of attention, and a copy of it fell into the hands of Stephenson, the English engineer, who complimented the young editor and publisher on the appearance of his paper and on his energy in getting it out. The *London Times* once quoted from the paper, and it was predicted that the boy editor had a real future as a journalist before him. At this time young Edison was engaged in all sorts of experiments, and it was the sad result of one of these experiments that caused him to come to grief and ruin as an editor. While on the train of a pretty "touchy" Scotch conductor named Stevenson, Edison let a bottle of phosphorus fall on the floor of the car in which he had a sort of a laboratory and his newspaper outfit. The phosphorus burst into flame and set fire to the car. The quick-tempered Stevenson became so indignant that he threw the dazed and indignant young editor and his printing and telegraphic outfit, as well as his chemicals, out of the car at the next station. Young Edison then set up a laboratory in his father's house, and soon had another supply of telegraphic instruments, chemicals and tools, and was more absorbed than ever in his studies and experiments. He continued his paper, but it was published in his workshop with type that a friend connected with a Detroit paper gave him.

Mr. Edison's first salaried position was that of night operator in the telegraph office at Port Huron at a salary of twenty-five dollars per month. He was then but sixteen years old, but he was as good an operator as many men of years of experience in telegraphy. For a number of years Edison served as a telegraph operator in different places and was constantly making experiments. He had some sort of a workshop in every place in which he lived, and he lived in a good many different places in five or six years. In

fact, his inventions and experiments were so absorbing that they sometimes caused him to neglect his work, and that is why he lost so many positions. To be a successful inventor was the one great desire of his heart, and all of his hopes were based on new inventions with electricity as their basis. He went to Boston to live, and most of his time was spent in the public library or in old bookstores, hunting up books about electricity.

From Boston Mr. Edison went to New York, where his cleverness in an office in which there were some electrical devices secured for him a position at three hundred dollars a month, and for the first time in his life he had a good deal of money to spend in his experiments. He cared nothing at all for the allurements of the great city, so fascinating to most young men, but kept right to his experiments, steadily perfecting his inventions and making new discoveries, until people began to talk of him as a veritable wizard, and today he is known over all the world as one of the greatest inventors of the age. Of course he is a very rich man, and those who know him best feel that his success has been deserved, for he has worked long and faithfully for it. It is pleasant to record that in the days of his high prosperity and his greatness he has never forgotten those who were true to him in the days of his poverty. His life story is one of splendid achievement, and it is a tale that should have in it much of encouragement and inspiration for other poor boys with high aspirations, but apparently limited opportunities. Edison made good again and again the old truism that where there is a will there is a way.—*J. L. Harbour, in Boys' World.*

LITTLE THINGS.

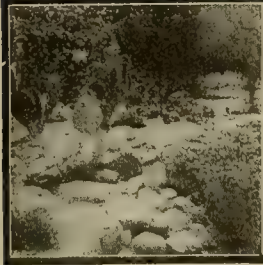

"A cup of water timely brought,
An offered easy chair,
A turning of the window blind,
That all may feel the air;
An early flower bestowed unasked,
A light and cautious tread,
A voice to softest whispers hushed
To spare an aching head—
Oh, things like these, though little things,
The purest love disclose,
As fragrant atoms in the air
Reveal the hidden rose."

THERE is something better than public sentiment and public opinion—namely, public reason. It is public reason for which the educated classes ought, above all others, to stand. By checking popular frenzies they can help the cause of peace.—*Felix Adler.*

"LITTLE things are the tools upon which the foundations of great things are laid."

NATURE STUDIES

THE POND LILY AND ITS WATERSIDE COMPANIONS.

M. E. S. CHARLES.

THE midsummer sunshine resting on still waters woos the water lily from the watery depths below into the brightness above. To a seeker after parables, the upward striving of the bud suggests the efforts of a soul reaching out of darkness and the mire of sin, groping towards God's light, growing whiter and whiter, and at last attaining to purity and gladness. One wishes the flower had a longer term of joy and beauty, and that it did not so soon withdraw into the depths again, having looked its last upon the sun. But in this, as in most water plants, the stem of the fertilized flower-heads shortens, and thus the baby seeds are drawn down to ripen in the dark.

The water lily breathes forth fragrance and wears her fresh lovely dress to attract the water beetles, which, it is believed, act as messengers, carrying the pollen from flower to flower. The floating leaves are smooth and lustrous, as are those of most aquatic plants. To an artist's eye, the flashing of their polished surfaces seems to repeat the flashing of the waters around them. Push them below the water with an oar, and they will "bob up" serenely, as shiny, and, seemingly, as dry as ever. Drops roll off the bright surfaces of such leaves as they roll off waxed wood, and in fact the skin which covers them is actually waxed.

Every leaf consists, in the first place, of a fine network of branching fibers. Then in between these branches lies leaf-tissue, which consists of countless cells set closely together. Over the whole is stretched a fine skin, quite transparent, very thin, and yet very tough. This, in water plants, contains a little wax, and so sheds water easily; for though washing is good for foliage, soaking disagrees with it sadly.

This skin or epidermis is full of holes invisible to the naked eye, and almost innumerable. Through these the plants breathe out moisture; and if they get stopped up with dust they cannot thrive. This is why house plants need an occasional sponging with clear water.

Submerged leaves of water plants scarcely transpire at all, and they live, as fishes do, on the air which is in the water. They are often delicately cut and

fringed. This is partly in order that they may not be torn by the currents, as broader leaves might be, and partly because the long green fringes, washing this way and that way, are able to gather up every floating bubble and find out every glint of light within a wide circle. Perhaps such foliage suggested the fabled sea-green hair of the mermaids.

A little nearer the shore than the floating water lilies, a circle of cat-tails, stiff and tall, stands like sentinels around the edges of the pond. Their thick heads are, little as one would think it, dense masses of small flowers. The top part, which grows fluffy in later summer, consists of countless tiny stamens, which, when they have fulfilled their mission and shed their pollen, blow away.

The cat-tail is a mass of innumerable pistils, or rather little ovaries, each surrounded by a ring of silky hairs, and so extremely small that one cannot distinguish them separately without the aid of a microscope; if you cut the spike across, the only thing you can see is a thick mass of brownish hairs, black at the tips, and paler inside toward the central stalk. How many hundreds of thousands of flowers are thus crowded on a single stem, nobody has ever had the patience to count.

A little bare stalk sticks up at the top of the cat-tail. This is to support the stamens which have all ungratefully gone off and left it naked in the cold world. The minute seeds when they are ripe will go off also; and if we cut our cat-tails for decorations too late in the season, when the seeds are nearly mature they will soon come to pieces in the warm house. In that case we shall certainly be duly impressed with the numbers of the tiny seeds, and with their enterprise as travelers.

Of all the flowers that grow by the water or beneath it, the most wonderful are those produced by the vallisneria. This plant, better known as "tape grass" or "eel grass," is common in sluggish streams and shallow lakes, and excites the indignation of rowers by twisting its long, tough, grass-like leaves around the oar blades and impeding progress, but its peculiar organization fills the botanist with delight.

The white, pistillate flower is borne on a very long stalk, which rises through the water, corkscrew fashion, in a beautiful, symmetrical spiral.

The stamen-bearing flowers grow crowded together

in a cone-shaped head, which is borne on a very short stalk and grows under water, close to the bottom of the pond.

When the staminate flower buds are ready to burst, the cone-shaped cluster breaks from its moorings and rises to the surface.

Here in the sunshine the flowers expand, the anthers open, and the pollen is shed upon the surface of the water. About the same time the stalk of the pistilate flower grows much longer and straightens itself. The flower is now, as it were, tethered by a very long line, and sways over a large circuit moved by the wind or waves. Soon it is in among the scattered pollen, and some of the golden grains adhere to the stigma. Now the purpose for which the blossom rose into the air and sunlight is accomplished. The long stem coils itself up once more, drawing its spirals closer and closer, as a watch-spring does when the watch is wound. The fertilized flower-head is thus drawn down into the cool depths of the pond, where the fruit is matured.

Thus there is still room for field naturalists to enlarge the sum of knowledge, even with regard to our commonest plants.

SEEDS OF VIOLETS.

MAUD HAWKINS.

In the spring of the year, when violets are so profusely scattered through pastures, meadows, lawns, shady wood and roadside, do you ever look for the seed or wonder how the modest little plant is propagated? You will be disappointed in seldom finding any seeds, but nature has provided a way by which this little harbinger of spring is to replenish itself and not become extinct.

Late in the fall if you examine the plant very closely you will find that it is then preparing its seeds for the next year, quietly and secretly.

A second crop of flowers, so very small that you will have to look very closely to see them, is produced. These are very close to the ground and are the flowers which prepare the seed.

The seed receptacles are very small and seldom seen. When they are ripe the pods break open, scattering the seeds far and near. The spring flowers are merely to gladden our hearts and make the day seem brighter for us. The hidden flowers are for use. This is a good illustration of the apparent forethought of nature in preserving a species. The number of seeds in a pod may be estimated from the amount of violets which spring up every year.

Towanda, Pa.

THROUGH FIELD AND THICKET.

As we tread in midsummer the fields and woodland paths, it is best to select the early hours of the morning to hunt with lens and sensitized plate; for during

the fierce heat of noontide the vine-shaded porch or the cool country parlor is vastly preferable and decidedly more comfortable.

Those delicate flowers which we looked for so eagerly in May have now given way to coarser and more robust than dainty forms. The flaunting yellow heads of the wild sunflowers, the flat-topped clusters of the iron-weed, the pale blue stars of chicory, the feathery crimson spikes of Joe Pye weed and the purple brushes of the thistles constitute the stock of our midsummer wild bouquets.

In the low lying meadows you will find the brilliant bills of the Turk's cap or wild tiger lily (*Lilium Superbum*). These tropical looking flowers when seen in countless thousands are a sight never to be forgotten. Gorgeous with their tall, prolific spikes of bloom are the low salt marshes along the Atlantic coast, where these deep yellow and orange or flame-colored lilies tower above the surrounding vegetation.

If you wish to see this wilding in all its glory you must visit the places just mentioned, as there, for some unaccountable reason, its color intensifies. The plant rises to the height of five or seven feet and is crowned with a terminal group of from three to seven beautifully speckled and shaded lilies. The peculiar way in which the petals curve backward has, no doubt, suggested its popular name. Anyone who has ever smelled these lilies, as well as their cultivated cousins, the tiger lilies, is familiar with the discolorations of the nose which he received for his pains. This powdery colored matter is the pollen which the anthers—those caterpillar-shaped bodies which swing from the tips of the filaments—secrete, and which the bees carry from one flower to another, thus causing cross fertilization and setting the seed. In order to accomplish this delicate operation the flower provides lines, called pathfinders, attractive and speckled, so as to lead the bee visitor to the place where the nectar is stored. Nectar alone does not satisfy the bee, but the dark, rich pollen is necessary to mix with it as a food supply for the bee babies. While laden with the pollen their bodies brush against the sticky stigma of another lily, and a microscopic growth ensues, by means of which the seeds develop and mature.

How gorgeous are those cardinal flowers yonder in the thicket! They are the richest of nature's offerings. Their tall racemes of intensely brilliant blossoms, which look as though they were suffused with the blood of some wildwood creature, peep shyly from beneath the overarching alders and blackberry bushes. The depth and brilliancy of its hue have suggested its name from the color of the famous hat worn by the seventy ecclesiastical princes of the Roman church. Because of its vivid hue few who pass it can withstand the temptation to pluck every spray within sight, so it is becoming rarer every year in certain localities.

The cardinal is a lobelia, and like all its family has an irregular, monopetalous corolla, split down upon the upper side. The pistil protrudes through this split, and is rubbed against by the pollen-laden insect which comes from another flower.—*Selected.*

HISTORY OF THE LOCUST.

THE locust occupies a unique and interesting place in the insect world. Perhaps the knowledge of this fact makes it desirable to him to appear at his best, and the first thing after his debut is a change of clothes. A sense of timidity or something after that sort makes it convenient for him to effect this change in apparel at about the going down of the sun; so observation of his maneuvers is rendered quite difficult. He is very deliberate in the shifting of his garments, no doubt having learned the folly of undue haste by his undisturbed rumination beneath the surface for seventeen years.

His appearance is made through a hole about half an inch in diameter. On his arrival he is a shiny brown creature, which is rather a strange color, considering the many years that he has remained "indoors." He is about one inch in length, his eyes are red, and his wings are not worth mentioning. His front legs are very agile and strong, and are armed with claws that are very serviceable to him in making excavations. He generally aspires to some elevated position to effect the change in his wardrobe and to hang up his old clothes. He obtains a firm footing for his front toes, for it may require a considerable effort to extricate himself from the suit that he has grown up in. It seems that his garment "opens on the back," as here is where the first sign of disrobing manifests itself. This line gradually develops into a crack, and extends to about half the length of his body. His head is first to make its appearance, and his red eyes are of a more brilliant color than when they were veiled by the brown skin. Just back of his eyes are two curious black spots; with the exception of these and his red eyes, he is white. He is not exposed long to the air, however, till he begins to darken a little, gradually becoming a sort of grayish cream color. The next move, after he has disrobed the front half of his body, is to pull his front legs out of the skin. His old clothes seem to have been tied on with fine white strings and these seem to hold him for a while, but they soon break and he has his freedom. At first his wings are very small, and are yellowish and opaque, but very soon they begin to unfold and fall away from the body; their growth in three hours' time is simply marvelous. An eyewitness to the performance says of it:

"The insect rests for some time in a horizontal position, making no move except to bend and straighten his legs languidly from time to time, as

if trying them. After a while he makes a more decided trial of his legs, and raises his body a little, experimentally, once or twice; then all at once, with a determined effort he raises himself quickly to a vertical position, grasps the top of his old skin with his front feet, settles himself firmly, and pulls the rest of his body free. All this is done within a minute or two, in contrast to his former slow movements. It is an exciting time for the fortunate observer.

"Now comes the most wonderful part of the transformation—the expanding of the wings. They seem to grow before one's eyes, as the insect stretches them, little by little, shaking them with a slight quiver every few seconds. With each movement the wings grow longer, broader, smoother, and more transparent, till they cover his body, and finally extend beyond it at their full length. At this stage the insect looks like an immense white fly, but a little later he folds his wings down at his side, in the characteristic cicada fashion, and he is a perfect locust in form, though still pale in color. The remainder of his night's work consists in changing this color to black with the trimmings of deep yellow, which all self-respecting locusts of this kind wear by daylight, and very early the next morning he will probably be found still resting close to his cast-off skin, his dress correct in every detail."

Locusts have committed considerable ravages in America, and various methods have been resorted to to destroy them. A bounty has been given for the collection of their eggs, which may easily be turned out of the ground; the adults may be taken by means of cloths and nets swept over the field; destroyed by boiling water, they are greatly relished by hogs. They are devoured by insectivorous mammals and birds, especially domestic fowls; winds sweep them into the sea, and immense numbers are drowned by the high tides which inundate the marshes.—*The Classmate.*

OUT IN THE FIELDS.

The little cares that fretted me,—

I lost them yesterday

Among the fields above the sea,

Among the winds at play,

Among the lowing of the herds,

The rustling of the trees,

Among the singing of the birds,

The humming of the bees.

The foolish fears of what might happen,—

I cast them all away

Among the clover-scented grass,

Among the new-mown hay,

Among the husking of the corn

Where drowsy poppies nod,

Where ill thoughts die and good are born,—

Out in the fields with God.

—Elizabeth Barrett Browning.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

STRANGE how we despise the gossip and discredit her story and then proceed to tell our confidential friends the awful thing she is circulating!

THE problem about how the little busy bee improves each shining hour is not half so attractive these days as the one about how the cucumber manages to keep cool.

A GOOD many people have a peculiar hankering after the other fellow's job, but if a close analysis of their desire was made to determine the particular thing which attracts them, they would in a good many cases be ashamed to own up to it.

THE chapter of "Around the World Without a Cent" intended for this issue did not reach us until a late hour,—too late to have the illustrations prepared which are to accompany it. It will appear next week and will be followed by the account of an interesting visit to the Holy Land.

IN this issue we are printing a somewhat lengthy clipping from a well-known periodical on "The Work-at-Home Swindles." We urge all to give the article a careful reading and take it as a warning to have nothing to do with advertisements of this kind. One will be on the side of safety and common sense and real honesty by steering clear of every offer that overdoes the bargain scheme to the extent of offering something for nothing.

WE have on hand several chapters of a series of articles on "Historic New England," written for the INGLENOOK by a resident of one of the New England States. We expect to run the series during the time when many of the younger members of our family

will be following the varying fortunes of the early history makers of our country as a part of their school work. We trust the articles will contain much that will add to the store of information of the older as well as the younger lovers of history.

NOR all ministers can see their duty as clearly as did the pastor of a wealthy New York church who gave up his work there to take charge of a church in another city with a difference of \$12,000 in salary against the latter place. Of course there are many other ministers who make even greater sacrifices because of duty, and it is the noble lives of these men who make all other considerations subservient to the "one thing" of their profession that are saving the church from total secularization. As it is, the church has lost much of the respect and reverence and therefore power that should be its due because of its tendency to weigh its work in the balances of dollars and cents.

IT is doubtful whether the Czar's visit to the several European countries is giving much pleasure to either guest or hosts, in view of the assassination at Stockholm of Major General Beekman of the Swedish coast artillery and the reports that anarchists in the countries to be visited have been preparing for the Czar's visit for months with the purpose of attacking officials in these countries. Is it "uneasy lies the head that wears a crown"? It is to be doubted whether even this simulation of rest is made by the one who in this the common people's day so jealously guards his despotic power over his subjects. One ought to pay dearly for the possession of power to which he has no right and if this uneasiness should bring the Russian Emperor to recognize the rights of his people and to see the incalculable good he might do them, it will not have harried him in vain.

JUST to encourage the amateur gardener at this time and impress him with the fact that outdoor work is highly beneficial to the health and conducive to long life, we wish to call his attention to Mrs. Hester Cordoy, of Delmar, Delaware, who at one hundred and twelve years of age cultivates two large gardens. The old lady has relatives who would gladly care for her, but she insists on living alone and working her gardens. Of course even in this healthful occupation the most beneficial results are secured only when there is a love for the work. To raise cabbages merely for the sake of having cabbages to sell or to eat is about as small and unsatisfactory a business as one can engage in, but to raise cabbages for the sake of watching them grow and develop and respond to this or that treatment, as well as for their commercial value, is to experience the pleasure of the scientist, artist and "trucker," all in one.

A PLEA FOR EDUCATION THAT EDUCATES.

THROUGHOUT the country the latter part of June witnessed the closing exercises of many colleges and universities. Much wholesome advice has been given to those just starting out into the busy world, and if we might count on even half of it being followed we would have little to fear from a wrong use of the skill and development attained. In view of this wholesome advice and encouragement to righteous living one wonders where the fault lies through which so many in the ranks of the educated get their false ideas of life which lead them to be anything but a blessing to their fellow-men.

June 24 witnessed the sixty-fifth commencement day of the University of Michigan. Nine hundred and one graduates were given diplomas, including eighty-five post-graduates who received masters' and doctors' degrees. Professor Charles Mills Gayley, of the University of California, was the speaker. His address was a plea for education that educates, not that entertains the student. He began with the question, "Was the world of learning ever better worth preparing for?" and "Why is it, then, that from every university in the land the cry goes up, our young men were never more indifferent?"

Professor Gayley urged greater attention to studies and less to functions such as "class meetings, business meetings, editorial meetings, football rallies, pajama rallies, and vicarious athletics on the bleachers. Talking rubbish unceasingly, thinking rubbish unceasingly, with all this, what margin is left for the one activity of the college, which is study? In Oxford and Cambridge the purpose is to study and the honors are paid to the scholar. Of nonacademic activities there are but two—athletics and conversation. They are not a function, but a recreation. Nor are they limited to specialists. So long as the social pressure of the university is toward mundane pursuits it will be vain to expect the student to achieve distinction in that for which the university stands."

With many more such common-sense views did the speaker address the large class. He also advocated the plan of the high schools taking over the first two years of work now covered by the colleges. With a higher grade of freshman entering the universities the latter should insist that scholarship be supreme and "encourage emulation by publicity of rewards and responsibilities." By so doing he argued that they would be able to "explode the follies of athletics at long range and offset the hysteria of athletic notoriety."

As we said above, it is inexplicable how, in some respects, we have gotten away from the real meaning and end of education, but with such wholesome advice, together with the feeling of revulsion from the present tendency that is bound to come in some quarters, we may hope for better things in the future.

OBEYING ORDERS.

THE master mechanic had finished showing me through the great car works, where hundreds of men were at work. It was a great railroad plant at the end of a division of one of our greatest railroads. It had been an inspiring hour for me. The order, the power that I had seen displayed, the splendid system with which everything was managed, the well-kept walks, the rush and push and hustle of it all filled me with admiration for the general who was the one man under whose charge all these great activities were being carried on so admirably. He had an oversight of all. Every man in the employ of that division was under him. Every train that went out or came in, every pound of coal that was used, every gill of oil, every can of paint, every bolt, every particle of repair to car or roadbed, were all under this man's supervision, in one way or another, though, of course, he had his lieutenants to look after the details.

After we had gone through the great shops, and were chatting in the plain but well-appointed office, I said to him, "How did you get this position?" I was interested to know, for he had told me that he had begun work in this great shop as a laborer at a dollar and a half a day. He had remarked this incidentally, and as I saw the vast amount of ability which must have been developed in order that he might do what was now being done, I was interested to know by what process he had climbed up the ladder of responsibility and success. So I asked him how it came about that he had managed to climb so high. Turning to me simply he replied—and I shall never forget that answer—"I have reached my present position by doing what I was told."

That was all he said, but this simple reply, spoken most naturally and quietly, tells volumes, and is one of the choicest secrets of success known to the business world. Almost all of those who employ labor tell me that the one thing that they find most difficult to secure, is a man who will do exactly what he is told to do, and do it thoroughly and patiently. No man who is a man wants an employé who is a mere machine, but there is no activity in the world which does not need those who are willing to obey orders. The boy who enters the employ of any business house, determined to do the very best that can be done, the things that he is told, and who is always found in his place doing this, will be certain before long, to be requested to do something higher and more important.—*Exchange*.

"It takes what the world calls a good fellow to set what the church terms a bad example."

"EMERSON says it in this wise: 'Men are as lazy as they dare to be.' It may be added that some are very daring."

THE HOME WORLD

THREE MOTHERS

CATHARINE BEERY VAN DYKE

(An Address Given on Mothers' Day.)

I AM wearing today three white carnations. By these I recall and honor the deeds and lives of three noble women who have been related to me as my mothers.

The first of these was born in western Ohio on September twenty-ninth, eighteen hundred twenty-four, and was married to my father at the age of twenty-four. In their correspondence,—for they lived more than a hundred miles apart,—my mother was modest and coy, as all maidens ought to be. She was a country schoolteacher and wrote well. My father, ardent, earnest and persuasive, quoted in one of his epistles to her those sweet words of Ruth: "Intreat me not to leave thee, nor to return from following after thee: for whither thou goest, I will go; and where thou lodgest, I will lodge; thy people shall be my people, and thy God my God." This must have been conclusive evidence to my mother of my father's sincerity and devotion to her just as it was to Naomi that Ruth meant what she was saying, for on the twenty-third of September, eighteen hundred forty-nine the wedding took place.

She left her home and other loved ones and in the crude way of traveling of sixty years ago, moved with her young husband, just a year her senior, over hill and through dale about a hundred and fifty miles east and began her new life. After two children were born they moved back to within ten miles of her old home where farms were better. Here in Miami County, Ohio, she finished bearing their family of seven children—four girls and three boys. One of the boys died in infancy.

Here she partly reared the children. Here she struggled side by side with my sturdy father, sharing with him the many hardships, disappointments and discomforts as well as many pleasures and blessings of pioneer life. Here she taught us the principles of religion and worship. Here, as far as in her lay, she lived out those principles day by day and in her cheerful, jolly days, played with us, sang to us and taught

us to sing. She taught us the blessed songs of Zion and I seem to hear her sweet voice yet as it rang out clear and confident in one of our favorite hymns:

"Oh, how happy are they who their Savior obey
And have laid up their treasures above!
Tongue cannot express the sweet comfort and peace
Of a soul in its earliest love.

"This sweet comfort is mine since the favor divine
I have found in the blood of the Lamb;
Since on him I've believed what a joy I've received,
What a heaven in Jesus' blest name!"

Here she associated with her neighbors and with my father in the deacon's office, visiting the sick, ministering to the poor, entertaining relatives and friends and endearing herself to all. Here, in the press of a busy season, when father was preparing to build a new and larger house and was getting ready to take life a little easier, she was stricken with her last illness. After living with my father for twenty years, when her eldest child was eighteen and her youngest one six and she herself but forty-four years old, God invited her to a broader, more perfect life with him.

Yes, it is true that God gives us but one mother; but one who has suffered the birth pangs for us and who can in every natural and instinctive way sympathize with us completely and love us perfectly, but, in his infinite provision for our protection and direction, God has, in many instances, brought women into homes as second mothers who have exalted and magnified their office.

Some time after my mother's death—too soon to suit my oldest sister—a new woman came into our home—oh, so different from our little mother! to take her place. She came, too, for she had been a widow, bringing a little girl with her just a year and a day older than our baby sister. The woman was slender, rather tall, hollow cheeked, and almost altogether grey-haired though she was only thirty-five years old. And she did not belong to the same church with my father! She was a Quakeress. I had seen her but

once or twice before she married my father. He had told me, though I was only twelve then, that he expected to bring her to be our new mother and had asked me if I thought I would like her. I had said I believed I would. So when she came, to be loyal to my father for the confidence he had reposed in me, I called her "Mother." My oldest sister, hearing me apply that sacred name to any other than our own, dear, real mother, gave me, as I presume she gave the others, as a substitute, the name "Ma" and, as a rose does smell as sweet by any other name, the name Ma, too, has become a very sacred one in our family, and this saintly woman has been known far and wide by the sweet and significant name of "Ma Beery."

With a tendency to tuberculosis she came to our farm and into our home. An elderly aunt lived with us. A year later a little boy baby, son of father and Ma, came also into our midst. These with our hired help and all swelled our family to an even dozen in number.

She kept and cared for a number of cows and chickens, in addition to her housework. She marketed the products and managed the household finances well. She lived, as much as convenient, an outdoor life. She became strong and robust, at times weighing a hundred and seventy-five or eighty pounds. Three years after she joined our family, she was baptized into my father's—the Brethren—church, was installed as deaconess and has lived a faithful Christian life.

Instead of antagonizing us—my older sisters especially who were so bitter against her supplanting our mother—by some latent faculty or unction she won us all to her side and gained our loyal coöperation and support. She was our comrade, our protector, our champion. This was not done in a day. She had not moved into a house of angels.

She was not demonstrative; she was not sentimental nor emotional. She could not sing a tune. We never caught her on her knees in private praying for us. Yet she was patient, enduring, long suffering, tactful, trustful, hopeful, masterful. Yes, she loved us though I do not remember of ever hearing her say so. She cared for us when we were sick, waited on our company, never stood between us and our plans for self-improvement. She was not officious but a wise counsellor. When my oldest sister, in the second year of her married life came to her death bed, our Ma watched by her bedside day and night and said she would go with her through the "dark valley" if she could. Then it was again that my sister "made good" to Ma and said: "O Ma, if you should live as long as you deserve to live you would never die!"

Four years ago my father was called to join the ranks beyond the River, having lived with Ma for thirty-five years. A year later her own daughter

passed away. Her baby boy is now the father of a family of six children and is a minister of the Gospel. Ma is still living and recently celebrated her seventy-third birthday. May God bless all good step-mothers!

I come now to speak of the life of a very remarkable woman, the mother of my husband.

This little dark-haired, dark-eyed woman was born seventy-eight years ago on the twentieth of May. At the age of twenty she was married to Archie Van Dyke Jr., who afterward became a minister and elder in the Church of the Brethren. She lived with him forty-seven years and in this marriage were born fifteen children—nine sons and six daughters.

Ten years ago, when Mother Van Dyke died, these children were all living, her baby boy being past twenty-one years old. For a family of two parents and fifteen children to live, as it were, intact, for more than twenty-one years you will agree is a very remarkable dispensation of Providence.

Some people seem to think that the bearing and rearing of many children is against a woman's health and tends to destroy her happiness and peace of mind. Here is one instance in which this was not the case.

Every baby of the fifteen was welcome in its turn and I sometimes think that even yet each one seems to have an inward notion that he was her particular favorite, and, so far as I have been able to discover, she had fifteen favorites.

My mother-in-law was a woman deeply religious and orthodox; and she reared her family according to such principles.

These children were all born in the country among the hills of central Pennsylvania where digging was hard. In those days the demands upon preachers were urgent so that father was often away from home. But with all the stress of providing for this large family I have often heard Father Van Dyke acknowledge the goodness of God in words like these: "Thou hast cared for us from the cradle and we have never known want."

Mother Van Dyke was a woman with a purpose and that purpose was to rear her children for Christ and the Church. She strove early and always to keep them pure in body, mind and heart. She gave to each her personal self in the minutest details of each child's physical and spiritual needs. She was scrupulous in her notions of cleanliness and order, a good cook, industrious, of course, and solicitous, almost to a fault, about both her husband's and her children's comfort and well-being. The children, it is said, each had a box near his bed in which each week were deposited his clean stockings and underclothes so that on Saturday evening or Sunday morning there were no mixups nor any confusion as to the whereabouts of the desired garments. Not a birthday nor

a Christmas passed without some token of remembrance and love from Mother. She wrote often to her married children and those away from home. Her letters were full of strength and courage though always of entire dependence upon God and his Word. Could such a woman be anything but self-emancipated? She lived to see all of that number baptized into the church of her choice and theirs and her chief concern in her later days was that her children might honor God and be loyal to the church. How she would have shielded them from the rude blasts of temptation and sin that blow so fiercely about us all! Perhaps the most telling influence of this little mother's life is seen in the fact that the home of each one of her children is a carefully regulated religious home.

I quote a few thoughts from her dying message to her family:

"To our dearly beloved and precious ones: I may not have the privilege of seeing or speaking to you as some are far away. I desire to make this request: Search the Word. Believe and obey it. We have no promise short of this that we can be saved. I have made many mistakes as you all know, but I have asked our dear Father many times to forgive me. You may all do better than I have. I exhort you, Search the Word. Let nothing separate you from the love of Christ. Be strong! May not one be led away from the simplicity of the Truth. This home of ours must be broken up; but up yonder, if we are faithful a home is prepared that we may enjoy through an endless eternity.

"Our dear Father has been so good that we have been spared so long together an unbroken band. I have often earnestly prayed that I might be spared with you when you were helpless and so much needed my care and promised I would strive to raise you in his service. My request was granted. I have ever loved you with all the tenderness of a mother's love and now I leave you all in God's care. May he ever bless and comfort you."

It was also her desire to have the children associate and communicate as much as possible in order to keep strong the family tie. For many years, both before and since her death, a family letter has existed going from one address to another until every member has contributed his message; then the first takes his old letter out and replaces a new one and so on—the letter being always "on the wing." Sometimes it has gone from the West Indies to Alaska with its intermediate stopping places. Just now it stops in Pennsylvania, Illinois, Kansas, Nebraska, Colorado, North Dakota, Montana, Oregon, and California.

I have given you true sketches of the real mother, the step-mother and the mother-in-law, but what does it all mean to us and what is it for? These three types which I have here described are by no means the only

ones nor are they even exceptional types of true motherhood. But these three have placed a wonderful responsibility upon me. In the light and with the advantage of my experience with these three women more will be required of me as a woman and as a mother than had I not had this advantage. God means for us to go on unto perfection and he will hold us responsible for every chance he gives us to improve.

We are apt to lose sight of the value of having had Christian parents. We are in danger of not applying our own religion to the bringing up of our children. The tendency today is toward the childless home. It has been said that in a hundred and fifty years from now, at the present rate of decrease, there will be no more children in the world. The drift is toward the lighter, easier, faddish things of life and we are inclined, with all our show of thrift and hurry, slothfully to move along the line of least resistance. But this course does not improve manhood and womanhood, does not develop stalwart character; and men and women who want to enjoy the height of their physical, mental and spiritual powers must choose the hard things—the heroic life, and that life is outlined in the Word of God and delineated in the life of Christ.

PROTECTION AGAINST FLIES.

WHEN, a few summers ago, some public-spirited citizens and health officials undertook to rid their neighborhoods of mosquitoes, they brought upon their heads not a little ridicule, as well as some well-argued objection as to the impossibility of exterminating this pest. But they went ahead, drained the marshes and oiled the stagnant pools, and now their neighbors, enjoying almost entire freedom from the scourge of former years, are ready to join in the good work.

This experience should encourage those who are urging a campaign of extermination against that much more dangerous foe to mankind, the common house-fly, or "typhoid-fly," as the government entomologist suggests that it be called. This is not the "amoosin" little critter that it seems to be, as we lazily watch it, on a warm summer day, playing tag with its fellows or tickling the nose or bald spots of our drowsy companion. It is a most active carrier of disease, not of typhoid fever only, but of summer diarrhœa of infants, tuberculosis, and many other infectious diseases. There is probably no other living creature that is responsible for one-half as many deaths as this once-thought innocent nuisance.

Much can be done, of course, by screens to keep the flies out of the house, and by fly-paper and formalin solutions to kill them after they have got in; but here, as elsewhere, prevention is far better than cure. Flies breed always in filth; in this part of the world largely in horse-manure, but also in garbage and the excrement of man and other animals. They may

breed in other less filthy material when the place of their choice is inaccessible, but then comparatively few of the eggs hatch out, and still fewer of the maggots develop into flies.

The best preventive measure is to keep the stables scrupulously clean and the manure in a tightly closed pit. When this is not possible the manure should be removed every week, since it takes the flies ten days to develop. When this is done, the material so removed should be treated with chloride of lime or a solution of Paris green, or should be spaded into the ground, else the flies will hatch out just the same in the new locality.

All garbage-cans should be tightly covered, and vaults and cesspools treated regularly with copperas or chloride of lime. With these precautions observed by every one, any neighborhood can be practically freed from the plague of flies.—*Youth's Companion*.

HOT WEATHER REMEDIES.

WITH the coming of the hot days, comes also the discomfort of prickly heat, and physicians tell us this is due to unclean skin pores. Before bathing at night or in the morning, take a handful of cornmeal and rub it into your skin from the chin to the feet, and over the face and neck. Rub the meal in well over the chest, hips and stomach, using the meal plentifully. Then rub the meal off with a rough towel, wash or bathe in hot water with a pure vegetable soap, and enjoy the comforts of cleanliness.

For chigger bites, apply liquid sulphur; or rub salty grease on the bites. When coming in from the field of grass, wash the body in thick soapsuds and leave on for a little time, then rinse. This is splendid for children, who suffer intensely from the pests.—*The Commoner*.

If a new broom is dipped into hot salt water the splints will be toughened and the broom will last much longer.

WHEN frying eggs, put a sprinkle of flour in the pan. This will prevent them from popping and will brown better.

The Children's Corner

WHO'S AFRAID IN THE DARK?

"Not I!" said the owl,
And he gave a great scowl,
And wiped his eye,
And fluffed his jowl •

"Tu whoo!"

Said the dog, "I bark
Out loud in the dark.

Boo-oo!"

Said the cat, "Mi-iew!"

I'll scratch any who

Dare say that I do

Feel afraid

Mi-iew!"

"Afraid," said the mouse,

"Of the dark in a house?

Hear me scatter

Whatever's the matter.

Squeak!"

Then the toad in his hole,

And the mole in the ground,

They both shook their heads

And passed the word round.

And the bird in the tree,

The fish, and the bee

They declared, all three,

That you never did see

One of them afraid

In the dark!

But the little girl who had gone to bed

Just raised the bedclothes and covered her head.

—The Play Box.

TEN WAYS TO HELP MOTHER.

Do you ever help mother? How many ways to help her can you think of? Would you like to know some others besides the ways you know, or would you rather not know any more? You may think there are too many already. Below you will find ten ways to help mother. If you know of any others, or if you know of several others, kindly tell us about them and we will give them place on this page. Here they are:

1. Keep the caps and hats hung up where they belong, no matter whose cap or where you find it. Just put it where you know it ought to be.

2. Keep the papers folded right side out and piled nicely together on the library table. It takes mother a good many minutes a day to do just that.

3. Get into the habit of remembering where you see things. This will help not only mother but everybody in the house. It is such a comfort to the people who lose things or forget where they put them.

4. See how many times a day you can "save steps" for her by running errands. It is what little feet were made for, partly.

5. Laugh twenty times every day. It will help make others laugh.

6. Like things she does for you. Tell her how nice they are.

7. Whisper in her ear sometimes. Whisper this: "I love you."

8. Watch for chances to do things she has spoken about. Don't wait for her to ask you. It is such fun to surprise people!

9. Notice when she is sick or tired or headachy, and go about the house on tiptoe.

10. Don't tell her you are going to be this kind of boy or girl—have the fun of seeing her find it out.

THE QUIET HOUR

THE HARVEST OF SOULS.

Gather the harvest in:

The fields are white, and long ago ye heard
Ringing across the world the Master's word—
Leave not such fruitage to the lord of sin;

Gather the harvest in.

Gather the harvest in:

Souls dying, without hope, all o'er the lands,
East, west, north, south lie ready to your hands;
Long since that other did his work begin;

Gather the harvest in.

Gather the harvest in:

Rise early and reap late. Is this a time
For ease? Shall he by every curse and crime,
Out of your grasp the golden treasure win?

Gather the harvest in.

Gather the harvest in:

Ye know ye live not to yourselves nor die;
Then let not this bright hour of work go by;
To all who know and do not there is sin.

Gather the harvest in.

Gather the harvest in:

Soon shall the mighty Master summon home
For feast his reapers. Think ye they shall come
Whose sickles gleam not, and whose sheaves are thin?

Gather the harvest in.

—Selected.

GOD-FORGETTING.

WALTER SWIHART.

BABYLON, once the mighty city of the Euphrates, rich, grand and royal, for centuries "most glorious among the kingdoms," but wicked to its center! Isaiah prophesied: "It shall be overthrown as Sodom and Gomorrah; it shall never be inhabited. On its ruins the Arabian shall never pitch his tent, nor the shepherd make his fold: wild beasts of the desert alone shall lie there." How completely is this verified—the city, the walls, the gardens have become a waste—a desert of blown sand.

Ur beyond the river—the home of Abraham—Ur, cradle of the awakening-place where first the morning star of promise shone, like Bablyon has been wasted, covered up and lost.

And Nineveh—proud, wicked, wealthy, boastful—Zephaniah said, "The cormorant and the bittern shall lodge in the upper lintels of it: their voice shall sing in the windows. This is the rejoicing city, *that dwelt carlessly*, that said, *I am* and there is *none other* beside me: How is she become a desolation, a place

for beasts to lie down in!" Nineveh has for ages been buried in the sands along the upper Tigris.

Thebes, city of the Nile, with monuments, columns, gateways, sleeping figures, mausoleums, temples—Thebes, grandest city of the world! And it? Ezekiel said, "I will execute judgment upon On (Thebes). I will pour my fury upon Sin, and I will cut off the multitudes of On (Thebes)." The Libyan sands of three thousand years have drifted through her ruined courts.

Likewise, scores and scores of other cities well-built; planned and reared by the ant-humanity, intending them to outride the ravages of time. Today we look with astonishment upon their work. What intelligence! What art! What energy! What determination! Yet all are gone, fallen into dust—kings, lords, peasants, servants, slaves and the land reverted back to its original domain—the sun and wind. And why? Babylon was steeped in license; Nineveh, lost in pride, Thebes in dissipation—GOD WAS RULED OUT—FORGOTTEN!

Looking a little farther; the chosen children, when they had come out of their long bondage; when through trials and repeated tribulations they had come face to face with the promise given to the fathers, they were disappointed. Their constant discipline had been, "Thou shalt have no other God before me," yet they did forget. Yea, seven times after they were settled upon the land of promise were they subjected to the yoke of oppression. Why? *They had forgotten their God!* Even in the time of Solomon when the promise reached the zenith of the royal kingdom, disease was eating out the soul of Judaism. As Isaiah remarked, "Israel doth not know, my people doth not consider."

Later when there rang out on the still night air "Glory to God in the highest, and on earth peace, good will toward men" dead, empty Phariseeism could not hear it,—wanted no reform,—wanted the formal priesthood,—wanted the dead letter of the law: denied weightier matters "judgment, mercy, faith,"—robbed widows' houses,—made long prayers,—rioted on the labors of the poor. In the very face of prophecy they rejected the *man Jesus*—the man who would not break the bruised reed; who would not cast down but raise up; who, against their forced hypocrisy, uttered many stinging rebukes.

Is it an accident that Chaldea lies buried in the sand? That Egypt is a desolation? That Chorazin is but a name? That foxes and conies dwell in Bethsaida? That owls and bats haunt the wreck of Capernaum? No, it is the result of disobedience, the effrontery of pride—the *forgetting of their God*.

Ancient heathendom, wise and masterly in her ways, perished by the corruptions bred within herself. Ancient Judaism, evolved and fostered under the direct hand of God, allowed her environments to overrule, and she fell. Troy, Rome, Carthage, because of their infections, weakened, sickened, died.

Today in our own fair land are conditions monstrous in themselves—arch-God among them is high commercialism. It looms, it shadows, it prophesies. By men crazed through it, our rights are trampled, our freedom manacled; small interests swallowed up. Bloated in fortune they levy upon the very rights of the hearthstone. Aye, they tax our smoking lamps; toll our children's bread! In this mad whirl the saloon, the brothel, the dens, divorce, Sunday desecrations are legalized. Is it not the same old story running down through the ages—"forgetting God"?

Though we are practically bound, we are not yet overcome. Though our rights are much restricted, we still have the *home, the church, the Sunday school*. We cry, "Awake out of sleep: put on the armor of light." For the hand that awed Belshazzar, overthrew Pharaoh, razed the walls of Jericho, overruled the Midianites, rent the temple veil, still endures and some time in the future may write "Mene, mene, tekel" on our own temple walls. Can you not hear the ever-nearing sound in these,—*dishonesty, dishonor, drunkenness, gambling, license, divorce, Sunday desecrations*,—who wonders at God's vengeance? Let us bow down the ear and listen to the heart-throbs of that sweet singer of old: "I will delight myself in thy statutes! I will not forget thy word."

Churubusco, Ind.

NOT MERELY A LIFE PRESERVER.

THERE are many people who regard their religion much as the traveler at sea regards his life preserver—as a handy thing to have in case the ship should go down. The majority of people would rather go out and pick wild flowers than go to a prayer-meeting. They take religion just as they do medicine, not because they relish it, but because they suppose they *need* it. They would rather have a bouquet of flowers than a handful of tracts, and yet the Bible maintains that "godliness is *profitable* unto *all* things, having promise of the life that *now* is, and of that which is to come." 1 Tim. 4: 8. And the promise to the child of God is that he shall grow up as the lily (Hosea 14: 5).

Beyond question many professing Christian people

miss the real thing. They try to keep their religion and their daily life in separate compartments and as a consequence they do not get, by a long way, what is coming to them in this life.

They live miserable, narrow, contracted, wretched lives when they might be living large, noble lives that would seem almost charmed to those with whom they come in contact.

If they would only take God into partnership in all their life's affairs, and find out from him what he wants them to do as well as what he has for them, then they would be able to make good. For the Word says, "Acquaint now thyself with him, and be at peace; thereby good shall come unto thee" (Job 22: 21), and "Thou shalt also decree a thing, and it shall be established unto thee." Verse 28. If you will do this you will become an inspiration to those with whom you come in contact, for "when men are cast down, then thou shalt say, There is *lifting up*." Verse 29. All that is worth while. It is not an empty theory. You may have to give up something for it, but you will get a thousand times more than you will give up.—*The Lifeboat*.

LOVING SERVICE.

SERVICE and sacrifice are the natural language of love. Other men may have ambition for themselves, but a Christian must do as his Master did—serve humanity. The life that ended on the cross, how little it is understood! How many know that there is but one material of which a cross can be made? There was never yet one cross of gold or silver or precious stones; the only material that can get into that shape is love; love that manifests itself in service which will not shrink from sacrifice. The first recorded word of Christ was: "Wist ye not that I must be about my Father's business?" and his last: "It is finished." What lies between these words? Constant ministry. When he said, "Let him that is chiefest among you be servant of all," he outlined the form that the Christlike must take.—*Amory H. Bradford*.

THE TIMELESS BOOK.

SOMETIMES the Bible is called the "dear *old* Book." But it is really the newest book of all, most modern, contemporary and permanent like all good things. It can say, "I am," even as does the living Word. It is a young Book. The dew of the morning is upon it, the freshness of the spring is in it, and the angels of the resurrection forever blow their trumpets of renewal above its pages. It is also the Book of hope, of promise, of tomorrow. It is bright with the radiance of still unrisen suns, rich with the sweetness of unripened summers, and the golden wealth of ungathered harvests.—*Northwestern Christian Advocate*.

ECHOES FROM EVERYWHERE

John D. Rockefeller has contributed another \$10,000,000 to the general board of education, making \$52,000,000 in all. Mr. Rockefeller also released the board from the obligation to hold in perpetuity the funds contributed by him.

The Socialists of Virginia this year have put out a full State ticket and advocate in their platform compulsory education, free schoolbooks, feeding and clothing of children whose parents are unable to supply them, and the abolition of the power of judges to grant injunctions in contests between capital and labor.

Marriage to a deceased wife's sister, recently legalized in England, has been declared by the church council of the Church of England to be immoral and against the principles of the Scriptures. The use of the prayer book in solemnizing such marriages is also reprobated in strong terms. The vote on the question was 224 to 24.

Prof. John A. Brashear of Allegheny calls attention to a peculiarity of the solar eclipse of June 17. For a few seconds it was an annular eclipse, then a total eclipse, and finally an annular eclipse again. Although we have records of annular eclipses for four hundred years, and of total eclipses for thousands of years, Prof. Brashear maintains that this is perhaps the first occurrence of the kind.

Those who are familiar with motoring know that when it becomes necessary to remove a tire on the road there is unpleasant work at hand. If the motorist did not think to bring an extra tire along with him, then his fate is still worse. A French inventor has devised a tire which he claims will do away with both these troubles. It is pneumatic, but is made up of twelve separate sections, which fit around the wheel, each one having to be blown up separately. The advantage lies in the fact that if one of the sections is punctured it can at once be removed and another substituted. It is an easy matter to put the section in place, and there is no trouble in carrying along with one a good supply of them.

Prof. Alfred E. Stearns, head of the Phillips Academy, Andover, Mass., calls attention to the prevalence of the swearing habit among boys in our schools and colleges. He cites close observers, who say that profanity is more common than it was a generation ago, and that it is the usual thing among American boys, whereas among English boys it is not considered honorable. Analyzing the causes, he comes to the conclusion that the vice of profanity is generally adopted by boys as a matter of pride or bravado; they have an idea that it sounds manly to use bad language, and they resort to it in order to prove that they are not mollycoddles. Then when it has become a fixed habit it requires rare resolution to throw it off.

In the Superior Court of Washington, Judge Clifford decided the new State anti-cigarette law to be unconstitutional on the ground that it conflicts with the interstate commerce law. At Aberdeen, Wash., Superior Judge Ben Sheeks ruled that the anti-cigarette provision is applicable only to the sale of cigarettes or materials used in the making of cigarettes and does not prohibit smoking.

The world-wide falling off in business in 1908 made itself felt in the traffic through the Suez Canal. During 1908 there passed through the canal 3,795 vessels of 13,633,283 tons net, a decrease of 472 vessels and 1,095,151 tons as compared with 1907. There was an increase in the size of the individual type of vessels, and the average time of passage, seventeen hours and twenty-four minutes, was the best that had been made in any year since the canal was opened.

In recognition of the growing importance of the subject of the public health and preventive medicine, Harvard University has announced the establishment of a department in its medical school exclusively devoted to those subjects and the election of Dr. Milton J. Rosenau of Washington, D. C., as professor of hygiene and preventive medicine and head of the new department. Dr. Rosenau will begin his service at Harvard with the opening of the next college year.

On suggestion of Secretary of State Roach, Attorney General Major has notified the Adams Express Company that it must take out a permit, as required by law, or cease doing business in Missouri. Furthermore, it must comply with the law, which requires all corporations to have general offices in the State. Unless the company complies suit will be instituted in the Supreme Court to oust it from Missouri.

Fraternal organizations, building and loan associations operated exclusively for the mutual benefit of their members, labor organizations or any corporations operated exclusively for religious, charitable or educational purposes will be exempt from the taxation provided for in the recently adopted corporation tax. An amendment to this effect was adopted by the Senate July 6, after considerable discussion pro and con.

In denying a report printed recently that an absolute cure for the sleeping sickness had been discovered by physicians in the Rockefeller Institute, New York City, Dr. S. J. Meltzer, one of the experts connected with the institute, later made the announcement that the disease is not caused by the bite of the tsetse fly, as has been popularly supposed. After more than a year of experimenting, during which exhaustive tests were made with mice as subjects, the specialists at the institution established the fact that the ailment is caused by the bite of a tiny insect known as the trypanosom.

Dr. William Tell Kudlich has brought to the notice of the Health Board of Hoboken, N. J., a plan for exterminating the mosquito, which consists in planting mosquito-ridden tracts with *arzolla*. The plant is a native of Africa. It in a short time covers marshy land with a layer three inches thick, thus both suffocating mosquito larvæ and preventing the living insects from depositing their eggs in the water. The plant is said to have been used with some success in the German colonies of Africa.

During a session of the recent convention of the National Education Association at Denver, James Yadkin Joyner, superintendent of public instruction of North Carolina, was elected president of the association. His election is regarded by his supporters as a victory in their fight against regulation of the prices of school textbooks. Among other things done by the association, it went on record against the existence of fraternities in high schools in a resolution which declares such organization to be opposed to the spirit of democracy. It was also decided to investigate the feasibility of simplified spelling, but the convention took no decided stand for or against.

Vague but alarming reports from Central Asia indicate that the earthquake of July 7 did enormous damage in Western and Persian Turkestan and Northern India. It appears that the death roll will be heavy although dispatches give only meager accounts of the catastrophe. It is reported that the shocks were of greater intensity than those which destroyed Messina, and as the country is thickly populated it is feared the result of the quake will be grave when the details are learned. Owing to the remoteness of the territory affected and the poor means of communication, definite reports are not likely to be available for several days.

The first American city to take up for trial the plan for giving employes more daylight in which to enjoy recreation is Cincinnati, which by action of the councilmen has passed a law making the more-daylight plan effective from May 1, 1910, until Oct. 1 of the same year. The official clock of the city will be turned ahead one hour so that the workmen will go to their labors one hour earlier than usual, and will then have an hour more of daylight in which to enjoy themselves. One of the councilmen of the city says that the measure was passed by the city board because of the pressure which was brought to bear upon the members by thousands of workmen and a large number of prominent business firms.

A unique scheme to evade prohibition laws has been devised by the incorporation of express companies which operate between States. In the last two or three months several of such companies have been incorporated in various parts of the country. The commission received an inquiry from the Mississippi State authorities a few days ago respecting the operations of an express company at Natchez. Mississippi is a prohibition State, yet it developed that an express company had been organized and incorporated at Natchez, the bulk of the business of which appears to be the transportation of beers and liquors from another State into Mississippi. The beverages are consigned to individuals in Mississippi, and are delivered by wagons of the express company. The curious part of the transaction is that the express company was incorporated by dealers in beers and liquors. A similar case has arisen in Massachusetts.

It is understood that a majority both of the Canadian and American Commissioners of the International Waterways Commission will recommend that a dam be built on the Niagara River, opposite Buffalo and Fort Erie, for the purpose of raising the level of Lake Erie. In the autumn of every year there is a fall of about two feet in the level of the lake. This reduction of available navigation depth seriously affects the shipping interests; and with the increase in the size of vessels it is becoming a menace to navigation. The estimated cost of the dam is about \$5,000,000.

The French Chamber of Deputies by a vote of 548 to 11 has adopted the motion introduced by the Socialist leader, Jean Jaures, to invite the government to call an international conference of all the powers interested for the purpose of securing the gradual and simultaneous reduction of customs tariffs. Immediately after the vote was taken a new motion for the postponement of further discussion on the clauses of the customs commissions bill was defeated. M. Klotz, in behalf of the commission, and M. Cruppi, minister of commerce, acting for the government, accepted M. Jaures' proposal, though Minister Cruppi styled it as "perhaps chimerical."

Formol has been recommended as a fly poison by several writers, who have studied its action and the best method of using it. It is necessary, in order to obtain good results, that the formol shall be swallowed by the insect, hence the flies must be attracted to the poison by mixing with it an appetizing food and by spreading the mixture over a large surface. Honey has given poor results. The best mixture is that of formol with milk. The best results are obtained by using a solution containing 15 per cent of the formaline of commerce, 20 per cent of milk, and 65 per cent of water, placed in large flat vessels. Most of the dead flies fall, not within the vessels, but around them, sometimes at a great distance.

Librarians and historians are being given no little anxiety over the fact that the newspapers of today do not last like those of a few decades ago. The journals of the past 20 years, when bound and laid away in the libraries become in time brittle like pine shavings, so that when they are handled they break and are lost. It is now being suggested that the managers of newspapers print a few copies of each issue on paper such as was formerly used, these to be sent to their home and other libraries, so that current history may be well preserved. The wood pulp paper is excellent for the passing, ephemeral sheet, but it has not the enduring qualities necessary to stand the wear and tear of the years to come.

To quietly annex Macedonia while Turkey and Greece are involved in the controversy over Crete now appears to be the object of Czar Ferdinand of Bulgaria. Although the facts have not been officially made known and every effort is being made to preserve secrecy as means of preventing interference of the powers, the Bulgarian government is known to have represented seriously to Turkey that Czar Ferdinand can not much longer endure the ill treatment which he says is being accorded Bulgarians in Macedonia. The Bulgarian population of Macedonia lives on good terms with the Turks themselves, but between Bulgarians and Greeks bitter racial feeling exists. The hostility which subsided slightly after the granting of the Turkish constitution has revived and the murder of Bulgarians has been resumed by Greek bands.

Among the Magazines

A CONVICTION FOR AUTOMOBILE MANSLAUGHTER.

Although William Darragh, the chauffeur convicted of manslaughter in the first degree by a New York jury, complains that he is the "victim of prejudice created in the community by the unlawful acts of others," more disinterested observers look upon the verdict as the first significant warning which reckless drivers have received. "The verdict will stand as a landmark in the relation of the law to the new problems of public safety raised by the automobile," says the New York World, "and the new field of criminality opened by its use as an instrument of slaughter." The Springfield Republican believes that "this trial and its outcome should be effectively sobering and restraining in its influence." It will be remembered that the crime for which Darragh was convicted was the killing of thirteen-year-old Ingevaard Trimble on March 27 last. According to the evidence upon which the jury convicted him, the chauffeur was driving his machine at the rate of forty miles an hour when the accident occurred. He failed to blow his horn, and after he had struck the boy he deliberately increased his speed, and later fled to Texas where he was finally arrested. It was also brought out in the trial that the boy's body was carried for some distance, jammed between the mud-guard and the lantern, before it fell to the pavement lifeless.

Judge Mulqueen, in pronouncing sentence to not less than seven nor more than twenty years in Sing Sing prison, took occasion to warn reckless drivers "that the next man who comes to the bar of this court charged with this offense may pay the penalty with his life." Judge Mulqueen, in what the New York World calls a "model of calmness and restrained force," also went over the history of the trial in careful detail before the sentence was imposed. He said in part:

"No new or obscure law has been invoked in this instance. The statute defining murder in the first degree is very old. It provides as follows:

"The killing of a human being, unless it is excusable or justifiable, is murder in the first degree when committed by an act imminently dangerous to others and evincing a depraved mind, regardless of human life, although without a premeditated design to effect the death of any individual."

"That law was enacted at a time when the automobile was unknown and when the present conditions could not possibly have been foreseen. And yet it so clearly applies to the reckless use of these machines that I doubt if its terms could be improved upon by the most expert legislative draftsman. It was urged by your learned counsel that you did not intend to kill your victim. But it is an elementary legal rule that a man's intent may be inferred from his acts.

"It has been said that you have been convicted for the crimes of others and that the popular clamor produced

this verdict. Nothing is further from the truth. . . . If any motive swayed the jury other than a sense of duty it was not a desire for revenge, but rather a spirit of mercy. Indeed, I am convinced that if you had been a rich man or a dissolute man the verdict would have been murder. The legal proof of murder was overwhelming. But not even the most sympathetic juror could acquit you of manslaughter. The statutes defining that crime were clearly applicable and no question of intent is involved in them. The law does not seek revenge, and punishment of one criminal is intended to serve as a warning to others.

"A difficult situation confronts us today. The automobile has come to stay. Properly used it is a source of healthful recreation. It is an important factor in business. It affords remunerative employment for many. But it is clear that its use is fraught with the gravest danger to the people. Therefore all drivers and owners of these machines must be extremely careful. Recklessness and negligence will subject them to severe penalties. They must not seek their own pleasure or convenience at the risk of the public. It is the paramount duty of the State to protect the lives of our people.

"It is incumbent on the court to impose a sentence that will drive the lesson home to all."

"Well deserved as is Darragh's punishment," says the New York Times, "there is hardly any question that he would have escaped with a lighter penalty had not his crime been the last and worst of a series, the length of which had justified a general public indignation and inspired a common determination to teach chauffeurs to respect the rights of pedestrians."

The New York Tribune treats the subject in somewhat similar vein. We read:

"The idea has too much prevailed among a certain type of automobile-drivers that their rights on the street are superior to those of any one else; that when they sound their raucous horns it is the duty of everybody else to get out of the way, and that if any one fails to get out of the way and consequently gets hurt it is his own fault. Such fellows need a stern reminder of the intolerable error of that idea. They need to be made to realize that the rights of the general public on the streets are superior to those of any particular class of it; that an aged and infirm person has just as good a right to walk slowly across a street as an automobilist has to run his machine along it at any rate of speed; that it is more incumbent upon the drivers of such engines to avoid running over persons than it is upon persons to avoid being run over; and that when a driver does run over anybody he must bear the responsibility for it. The conviction of Darragh ought to go far toward bringing some motor-maniacs back to sanity and toward inducing some motor-criminals to respect the law. If it does not, then we must hope that at the hands of other just judges and juries every one who does as Darragh did will meet with Darragh's fate."—Literary Digest.

ANOTHER STEP FORWARD.

In a recent article in the Independent one of our writers suggested the federalizing of our agricultural colleges at Washington. This led to a correspondence, suggesting that the thought be worked out formally, and that the writer of the article propose some method whereby, at Washington, there might be a sort of clearing house of the several State colleges and experiment stations. There seems to be no good reason why we might not have an American University of Agriculture at our national capital, which might serve the purpose suggested, and at the same time go farther, in doing such advanced work as might be classed as strictly university work; a school for the graduate work of those who have already passed through the State colleges or otherwise secured graduate privileges. We are rapidly accumulating the problems for such a university. Our Department of Agriculture is handling some of these questions as well as it can with its present organization.

But leaving this question for the present, why should there not be a conference or university convocation of all our State industrial colleges at Washington once a year, possibly during the month of September; a convocation of the presidents or deans of the colleges and such professors as may be elected by the faculties?

More specifically, what would be the object of the conference? This would surely unfold and shape itself with freedom, but we might anticipate the discussion of the most important annual discoveries and experiments of the State colleges. These would be sifted, compared and possibly corrected. Certainly a review of localized work by a body of pronounced experts, trained to the broadest generalizations as well as the keenest analysis, would be of national value. A second object would be to take charge of interstate problems of an agricultural and industrial sort. Production is not limited by State lines, and the marketing of agricultural products reaches from California to Maine. We cannot, much as we would, confine the codling moths, the gipsy moths, the root galls, the blights and the beetles. In the third place, the conference would prevent an iterant waste of force in experimentation. This is an important matter to be attended to, in order that the bulletins sent out to the farmers shall not traverse the ground of experiment repeatedly, and frequently with contradictory conclusions.

A fourth purpose of the convocation might be to publish the more important discoveries, of course with due recognition of State investigators, but with added authority. A large amount of the best work that is now done is never heard from outside of narrow areas. Nor is there any reason why a national body of this sort should not serve as an arm of the International Institute of Agriculture, which is to meet annually in Rome. In this way an invulnerable world's peace organization would come about; a force, in every fiber of it, making for human good will and coöperation. The final world's organization will have to be on an industrial basis.

Congress might advisedly be asked to appropriate an adequate sum to pay the expenses of the convocation and to carry out any experiments proposed for the national welfare. The whole country is vitally interested in the increase of our productive power. The food problem is going to press keenly, and very soon we have got to make two blades of wheat grow where one grew before. Our corn must yield one hundred bushels to the acre and we must stop the waste of one-fifth of our crops by insects, blights and our own heedlessness or ignorance. Our population will number two hundred

and fifty hungry millions by the end of the present century. There are no more wild lands to pour the tide of immigration into or to be filled up by our natural increase. The tide is already backing up to reoccupy the deserted farms of New England. What we need is national organization on an industrial foundation.—The Independent.

ALASKA'S VARIED RESOURCES.

What does Alaska stand for? On this point there is a wide divergence of opinion. To the tourist it means magnificent fiords, heavily forested islands, high snow-clad mountains, glaciers, and picturesque Indian villages. To the whaler, arctic floes bordering a flat treeless coast, with here and there an Eskimo sod house. To the merchant, a field for exploitation, the source of salmon, cod, and halibut. To the hunter, the best game tract on the continent, with its huge bear, moose, countless herds of caribou, and white big horn. To the pioneer farmer, a region of some agricultural promise. To the prospector, long, weary journeys, lonesome camps, disappointments, incessant toil, and substantial rewards, if he be the lucky one. To the capitalist and engineer, an empire to be opened up by railroads, highways, cities, and the development of gold, copper, and coal mines. While to the average man, it must be confessed, Alaska is but a small spot on the map somewhere near the pole, where the snow lies deep and men grow suddenly fabulously wealthy,—the source of seal-skins and an endless stream of gold.

Of these varied impressions each is in part correct, but a composite of all would best represent the Alaska of today. Yet it is no easy task to blend such discordant elements. Even Alaskans, accustomed by long residence to think of their country in terms of its great magnitude, seldom do it justice. The Alaskan fisherman has as little in common with the inland prospector as has his prototype of Gloucester with the Colorado miner. The life of the whaler, again, is outside the experience of either prospector or fisherman. The lode miner of Juneau is apt to despise the placer miner of Fairbanks as little more than a roving adventurer. The pioneer prospector who has won his gold from the auriferous gravels unaided by capital or machinery views the advent of the trained engineer with suspicion. Those who have spent their lives among the somber rocky fiords and heavily forested islands of southeastern Alaska evince great skepticism regarding the possibility of any agricultural development. On the other hand, the resident of inland Alaska, familiar with broad fertile valleys, luxuriant grass, and long, bright days, realizes that some farming is possible. The small fur trader in isolated posts has still another point of view, for he lives under almost as primitive conditions as did the voyageur of the Great Lakes two centuries ago. At Nome and Fairbanks,—the thriving centers of rich mining districts, possessed of telegraphs, telephones, railways, electric lights,—all the essentials and most of the luxuries of modern life are to be found.—From "The Alaska of Today," by Alfred H. Brooks, in the American Review of Reviews for July.

One day a little motherly body of seven or eight went to school with her tiny brother, who had been absent for some weeks. "Where have you been?" inquired the mistress. The little girl was full of excuses, but eventually a bright idea flashed into her mind. "Please, teacher," she whispered, "my little brother's been ill," and turning to her diminutive relative, she said, "Sneeze, Billy, and let the teacher see what a bad cold you've got."

REVISED EDITION OF
Ropp's New Commercial Calculator
 And Short Cut Arithmetic

THE STANDARD FOR STORE, FARM, BANK OR FACTORY

Pocket Edition.

Greatly improved, enlarged and thoroughly revised.
 Contains an entirely new system of unique Tables,
 Short Cuts and Up-to-date Methods.

Unquestionably the most complete and comprehensive
 Calculator ever published.

Has more than twice the matter, scope and capacity
 of Ropp's former editions, of which

Nearly 1,500,000 Copies have been Sold.

The Answer to Your Problem as Quickly as a Watch
 Shows the time.

It also explains and simplifies the principles of Arith-
 metic, Mechanics and Mensuration.

It will make the study and use of Figures easy and
 interesting to both young and old.

It will enable every progressive mind to become an
 expert, sure and rapid calculator.

It will prove a boon to all whose education in arith-
 metic has been limited or neglected.

48 Cuts Illustrate the Elements of Mechanics and
 Mensuration.

It defines about 70 points in "Commercial Law"
 which every man and woman should know.

It is especially designed for farmers, mechanics,
 business and professional men.

Three Editions, Five Bindings.

Office Edition (9½x5½ in.)

Cloth binding, gold stamp, large type,\$1.00

Pocket Edition (6½x3¾ in.)

Cloth, with pocket, flap and silicate slate,50

Leather, with pocket, flap and silicate slate, gilt
 edge, 1.00

Vest Pocket Edition (5¼x2¾ in.)

Cloth, round corners, red edges,35

Leather, gold stamp, burnished edges,50

SUNDAY SCHOOL RALLY DAY

Few days cele-
 brated by the Sun-
 day school are more
 important than that
 known as "Rally
 Day." By a united
 effort on the part of
 every worker at this
 time you should be
 able to reclaim ev-
 ery former pupil
 and many new ones
 besides. Personal
 visits and invita-
 tions should be sup-
 plemented by one
 of our illustrated
 post cards.

No. 47.—Boy's Rally Day card.

No. 48.—Girl's Rally Day card.

No. 49.—Cradle Roll Rally Day card.

Our Rally Day post cards bring them back.

Buckeye Pure Home Made APPLE BUTTER

Is pronounced by hundreds of our customers, the best they ever ate. It is the product of apples, apple cider and granulated sugar; very appetizing and wholesome. Our Motto: Highest class of goods and a square deal guaranteed to all.

Write for circular and special prices.

C. J. MILLER & CO., Smithville, Ohio.

Battle of Gettysburg

made plain by Brother F. Williams. A drive of twenty-two miles over the field for \$1.00 each. Have been a Guide since July '63. Also Guide for autos. Send a card when you will come. Frank Williams, 312 York St., Gettysburg, Pa.

NEFF'S CORNER

Contracts are now all let for the 176 miles of new railroad that will complete the connection between Galveston, Texas, and Clovis, which will put us on a short, through line from the Gulf to the Pacific. Through traffic from Chicago and from the Gulf will meet here on its way to the Pacific and Clovis will be a division point for both lines. That means that the capacity of the car shops, round house and railroad yards here will be doubled, and that Clovis will soon be a city of 10,000 people. Property values have doubled during the last few months and we expect them to double again in the next few months. Beauty about investments here, if a man buys he can sell again. Evidence that people are satisfied with their investments here is to be found in the fact that after they have put in some money and tried it awhile, they invest again and again. If you would like to correspond with some of these people, drop me a line and ask for their addresses. If interested, don't hesitate to ask for any information you desire. We are having fine rains, prospect of good crops, and our farmers as well as our business men are happy and prosperous.

JAMES M. NEFF,

Clovis, New Mexico.

Late and Early Card

FOR THE SUNDAY SCHOOL. On one side may be read the words "I am Late"; on the other "I am Early." Printed in three colors on heavy card board. Size, 5½x8½. Price, postpaid, 10 cents.

The International Sunday-School Lessons

FOR 1909

Are on the Acts of the Apostles

Every Sunday-school Teacher will need the helpful assistance of some first-class teachers' help. The lessons deal with the persecutions of the early church and the spreading of the Gospel which attended the dispersion of the saints. Lesson writers of splendid ability have been engaged for this year and we confidently hope to make the **Brethren Teachers' Monthly** the best teachers' assistant on the market. If you have never used the Monthly, ask for a sample copy. We will gladly send a copy to each of your fellow teachers if you will send us their names and addresses. Subscription price, 50 cents per year.

BRETHREN PUBLISHING HOUSE

CRADLE ROLL BIRTHDAY POST CARDS

The phenomenal growth of the Cradle Roll Department of the Sunday School calls for constant activity on the part of the publisher to supply novelties and helps that will suit this peculiar field. Among the most useful helps are the birthday cards of which a new and beautiful line is just issued which may be mailed as post cards. The cards bear appropriate photographic reproductions embellished with exquisite floral designs and having greetings and verses in colored lettering; on the address side of the card is space that may be used for a personal message or invitation.

Form P. First Birthday—Boys.—A beautiful madonna with dainty decoration of trumpet border and lily of the valley.

Form Q. First Birthday—Girls.—Photograph of girl baby with border of snowdrops and colored leaves. One candle burns at top of card.

Form R. Second Birthday—Boys.—A bright boy's face with decoration of apple blossoms and golden bells.

Form S. Second Birthday—Girls.—A chubby two-year-old girl with pretty

background of violets and dainty lace.

Form T. Third Birthday—Boys.—A stalwart boy's figure in panel embellished with beautiful floral designs.

Form U. Third Birthday—Girls.—The girl's picture on this card is bordered with delicate grasses and pansies; three candles are burning on shelf.

The cards sell at the rate of 2 for 5 cents or 25 cents per dozen, postpaid. Order any one form or assorted.

Ask about our "One Dollar Cradle Roll Outfit."

Life and Sermons of Elder James Quinter

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

Price, postpaid,\$1.00

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

Ho! for Canada

It is not the purpose of the CO-OPERATIVE COLONIZATION COMPANY to slacken interest in its Colony at EMPIRE, California. This colony is now well under way; colonists are moving in and are well pleased and the work is moving along satisfactorily. But as the policy of this company is,—“CHURCH EXTENSION BY COLONIZATION,” steps are being taken to locate a colony in the Northwest.

After considering the various sections offered for settlement, the Directors at a recent meeting decided to locate

Colony Number Two Near Portage la Prairie, Manitoba, Canada

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its nearness to good markets,—only 56 miles from Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Manitoba.
6. The Low price of land, when quality and location is considered. These lands are now ready for settlement, are low in price and will soon be taken.

Join our Colony Number Two, secure a good farm in a prosperous section with good, nearby markets, excellent transportation facilities, where School and Church privileges are assured, and among people with whom you are acquainted. For fuller information, dates of Land Seekers' Excursions, etc., address:

		\$28,647,000	1,552,540	

To December 31, 1908, the Federal Government has already expended over 28 millions in preparing homes for probably 20,000 families, possibly more, and must spend millions more before these projects are finished. With the Government the railroads that serve this territory are vitally interested in seeing that these acres are successfully settled by prosperous farmers. Whether these farmers are on government lands or on private lands irrigated by the government, is of minor importance; the main proposition is to supply as many homes for as many people as possible on these government projects.

Parties wishing information about any of these projects with the view of securing Government land or private lands for future homes should write to the undersigned for printed matter descriptive of the section of the country they wish to locate in.

*TRUCKEE-CARSON PROJECT

Mr. J. C. Waite,
777 Federal Bldg., Chicago, Ill.

Dear sir:—

I have, of course, been extremely busy since coming here. Nobody can appreciate what has to be done, until they get into it.

All of my crops are looking fine. They say my alfalfa can not be beat. It is cut and cocked up now. It will stand me in \$20.00 an acre this one cutting and I will get two more cuttings this season besides pasturage this early spring and late fall.

I figure it will net me \$50.00 an acre this year at least, after paying expenses of labor, etc.

This alfalfa stand is only 1 year old.

Well, I must ring off. Trusting that I may hear from you soon,

I am yours truly,

(Signed) A. O. Foskett, Sec.

Tell the folks in Chicago they can never locate cheaper here than at the present time.

History of the Brethren

By M. G. Brumbaugh.

This book is written from the most valuable early records, and gives a list of many early members in Europe and America with biographies of the leaders, analyzes the influences that led to Alexander Mack's action at Schwarzenau in forming the Brethren church, and contains a

description of the Ephrata Society movement. Profusely illustrated with fine engravings. The work is authentic, thoroughly reliable and intensely interesting, is well printed in clear type, and substantially bound. 559 pages.

Buckeye Pure Home Made APPLE BUTTER

Is pronounced by hundreds of our customers, the best they ever ate. It is the product of apples, apple cider and granulated sugar; very appetizing and wholesome. Our Motto: Highest class of goods and a square deal guaranteed to all. Write for circular and special prices.

C. J. MILLER & CO., Smithville, Ohio.

Battle of Gettysburg

made plain by Brother F. Williams. A drive of twenty-two miles over the field for \$1.00 each. Have been a Guide since July '63. Also Guide for autos. Send a card when you will come. Frank Williams, 312 York St., Gettysburg, Pa.

NEFF'S CORNER

Contracts are now all let for the 176 miles of new railroad that will complete the connection between Galveston, Texas, and Clovis, which will put us on a short, through line from the Gulf to the Pacific. Through traffic from Chicago and from the Gulf will meet here on its way to the Pacific and Clovis will be a division point for both lines. That means that the capacity of the car shops, round house and railroad yards here will be doubled, and that Clovis will soon be a city of 10,000 people. Property values have doubled during the last few months and we expect them to double again in the next few months. Beauty about investments here, if a man buys he can sell again. Evidence that people are satisfied with their investments here is to be found in the fact that after they have put in some money and tried it awhile, they invest again and again. If you would like to correspond with some of these people, drop me a line and ask for their addresses. If interested, don't hesitate to ask for any information you desire. We are having fine rains, prospect of good crops, and our farmers as well as our business men are happy and prosperous.

JAMES M. NEFF,

Clovis,

New Mexico.

CAP GOODS

Our business has almost doubled itself during the last year. We are sending goods by mail to thousands of permanent, satisfied customers throughout the United States. The reason is simple.

Our Goods are Reliable, Our Variety is Large. Our Prices are Low.

All orders filled promptly, postpaid. Satisfaction guaranteed or your money refunded. Send us a sample order and be convinced. Write us for a booklet of unsolicited testimonials and new line of samples, which will be furnished free. Send at once to

R. E. ARNOLD, Elgin, Ill.

The International Sunday-School Lessons

FOR 1909

Are on the Acts of the Apostles

Every Sunday-school Teacher will need the helpful assistance of some first-class teachers' help. The lessons deal with the persecutions of the early church and the spreading of the Gospel which attended the dispersion of the saints. Lesson writers of splendid ability have been engaged for this year and we confidently hope to make the Brethren Teachers' Monthly the best teachers' assistant on the market. If you have never used the Monthly, ask for a sample copy. We will gladly send a copy to each of your fellow teachers if you will send us their names and addresses. Subscription price, 50 cents per year.

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

Revised Minutes

Contains the revised minutes of all the Annual Meetings up to and including 1896. Two hundred pages. Indexed under 1,200 subjects.

The Appendix.

This edition contains an appendix of almost one hundred pages, devoted to the minutes of the Conference held in 1897 and 1907 inclusive. A copy of this book should be in the hands of every minister and church worker in the Brotherhood. The book is printed on fine quality of paper and substantially bound in cloth

The Price.

Single copy, prepaid,\$1.00
Six copies to one address, prepaid, 5.00

One Copy Free.

Our price is very low, considering the size of the book, contents, and binding, but if you will dispose of five copies among your friends, and have same sent to one address, we will mail you one extra copy for your own use.

Children's Meetings, and How to Conduct Them. By Lucy J. Rider and Nellie M. Carman. With lessons, outlines, diagrams, music, and helpful suggestions. Introduction by Bishop J. H. Vincent. 9th thousand. 12mo. Cloth. Price, \$1.00.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.
"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.
"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

THE INGLENOOK

Vol. XI.

July 27, 1909.

No. 30.

ABDUL-HAMID II

G. WILFORD ROBINSON

THE foregoing is the name of the late Sultan of Turkey, whose recent deposal has been greeted by the nations of the world with joyful acclamations. This, the result of the revolution created by the young Turks, means the emancipation of the Turkish nation from one of the most tyrannical despots known in history.

He has been called the "European Sick Man" because of his ill health from birth. But the eminent statesman Gladstone styled him, "The Great Assassin," and the name is very suggestive of the many massacres which have been instigated by his cruel hands.

But the day has come at last that thousands, millions—including the Sultan's own family—have been patiently waiting for. The Young Turk Party—a liberal organization which demands a constitution for Turkey—has wrenched from the absolute despot his rule and power.

Abdul-Hamid is the thirty-fourth sultan of the Osman family, and is sixty-seven years old. His mother died of pulmonary trouble at the age of twenty-six, and his father also died of phthisis at the age of thirty-nine.

Abdul-Hamid came into the world, therefore, with the germs of the malady that carried off his father and mother, but so far he has succeeded in resisting them. Because of this affliction he has been called "sick man of the East."

Abdul-Hamid's infancy was spent in the harem among slaves and eunuchs. Sickly and lonely, he differed from his brothers and sisters in character, tastes and habits. He avoided his brothers' society and took no part in their games. A celebrated orientalist, who knew him well when a boy, said his face always wore a distrustful and cunning expression.

He always had the displeasure of his father who never spoke of him but with contempt. One evening

that the Sultan was at dinner with his sons he noticed an improper action of Abdul-Hamid and turning to a prominent gentleman present remarked: "I feel no uneasiness about my other children, but I'm afraid I can do nothing with him." Another time, speaking to an uncle of the former gentleman, he complained that his son Hamid showed a great fondness for intrigue. The official tried to defend the young prince and ventured to reproach the Sultan gently for his coldness toward him. "I am tired of that boy," replied the sovereign. "I tell you he is a born intriguer. He is not the one you can give too much rein." These incidents give an insight into Abdul-Hamid's early character.

The love of money is a characteristic trait in Abdul-Hamid and was noticeable ever since he was a child. His monthly income was about \$4,000, but unlike the other princes he had no debts, and kept his own accounts and managed the investments of his money and the revenue from his estate.

In his childhood he showed great antipathy for study and little aptitude for books. As is well known today, he is practically uneducated and ignorant of his own tongue.

His youthful mind inclined much toward superstition, and a new existence began for him when he met with a fanatical old woman, superstitious and a crafty intriguer. During the long evenings he passed the time with her, and other sorcerers and soothsayers, and was initiated into the mysteries of magic and astrology which were born and much practiced in the Orient.

Many astrologers or necromancers predicted that young Hamid would mount the throne and enjoy a long reign. And in time, little by little, the prediction came true. Abdul-Hamid studied the black art with fervor, not because it predicted he would mount the throne, but because it was to aid him to accomplish that object.

When his uncle was deposed in 1876 his brother ascended the throne under the title of Mourad V. But Mourad was on the throne but a short time until he began to show symptoms of intellectual incapacity. The moral tortures and some stirring events which happened caused a cerebral disorder which deprived the young sovereign of his reason.

Prince Abdul-Hamid, so envious of the throne, watched with great anxiety the progress of his brother's malady. He is believed to have practiced magic in hope of hastening its progress, and according to the statements of persons worthy of credence who lived at that time at the palace, the prince employed other unlawful means to make the invalid's condition worse. Owing to the state of the young monarch's health a provisional abdication was brought about which gave to the prince his long coveted desire—the throne. But Midhat, the eminent statesman, shortly before his proclamation compelled him to give a promise in writing that he would restore the throne to his brother as soon as he was cured. Later, after Midhat was exiled, by some accident his residence was destroyed by fire. It was, perhaps, thought that the precious document was in it. But Midhat had carried it away with him.

How faithfully this promise was kept is well known. Since his accession to the throne his brother's palace was closed to everyone not sent by the Sultan. Although since then Mourad has regained all his faculties he remained a prisoner and has suffered many insults and persecutions from his imperial brother.

It is said he originated a proposition suggesting putting to death the unfortunate brother because the law does not permit two sultans to exist at the same time. But this inhuman proposition was rejected.

Many are the means which he employs to get rid of troublesome people. Vengeance is his favorite dish and woe to the person who causes him to eat thereof.

He soon became fearful of Midhat, the man who had dethroned two emperors, and had his Grand Vizier arrested and sent into exile where later he was executed. The Sultan ordered his head sent to him to make sure of his death. Another time for some reason he was going to put one of his under-secretaries out of the way, but he learned of it and saved his life by fleeing to Paris.

A few years ago a prominent official published a work on morals, inspired by the Koran, which displeased the Sultan who had him arrested and exiled to Mecca. This act aroused great indignation among the ulemas and was considered an insult to Mahomet. Thus he proved himself not a good Mussulman and professes religion only as a political instrument and not for the moral uplifting of his subjects. He

detests Christians and frequently uses that term to designate a person in whom he has lost faith.

The author of another book, to whom I am indebted for my data, has been condemned by the Sultan to death and has sought refuge in a foreign country.

His nature, in fact, is cruel. An instance of this is shown in the famous drowning of the *softas* who had been dissatisfied with the Russo-Turkish war. Among the more recent cruelties are the massacres of 1896. Another recent incident is the exiling of 1,700 persons on suspicion of being implicated in a conflagration in the imperial harem.

These incidents and many others show the nature of a cruel tyrant who exiles or puts to death everyone against whom he has a real or imaginary grievance. His victims are rarely heard of again once they fall into his power.

This is a brief sketch of the Sultan whose thirty years' rule of tyranny and cruelties has only inspired fear and terror in the minds of his subjects; the one who seized his power by intrigue, kept it by force and cunning until liberalism which he has stifled for years has grown too powerful even for this absolute despot and has broken the chains which held it in abeyance and proclaimed: "We will not have this man to rule over us"; the tyrant who shall be known to all generations as the Red Sultan of Turkey.

A SHORT SERMON TO LITERARY ASPIRANTS.

Text: Behold there were many rejection slips.

ALL things have a beginning. No matter what the trade or profession may be, which we wish to enter, we must begin at the bottom. All writers must begin at the bottom, whether soon or late. It may be with the early efforts of a child, or the patient, painstaking work of mature years, when the mind, that has been slowly ripening, feels that feeling of unrest, that strong desire, to write; to tell the world your tales; to teach the world the truth enfolded in your essays. You have that desire to be a leader of men, and thought. As a poet you desire to make the nations sigh, and weep and laugh. You wish to be great—successful. You can be successful but you must avoid a good many things on the way. You must not be too much on the lookout for roses, or else the thorns will discourage you. And on the literary road there are more thorns than roses.

You and I may have begun to set our thoughts on paper ten years ago, but a beginning there was, and it had its doubts, its crudities, and its lack of self-confidence.

We have learned that there are many ways of beginning to write. The usual way is to begin alone and in nine cases out of ten in ignorance. After a while (if we have the courage to stick to our purpose) we do a little better. We are bound to do better. It

stands to reason that a persevering mind can do great things. We learn by degrees what we should have done, and what we should not have done. Slowly, wearily, and often—nay, always with an amazing waste of effort, so it seems, we increase ourselves, broaden out, widen our scope, attain the knowledge how to succeed.

While we write we must read what others have written. We must study human nature. The best study of mankind is man. When traveling in a railroad train, tired of reading, time hangs heavily on our hands. The ride grows monotonous. Why not try to describe the scenery we are passing? Why not try to describe the old gentleman who sits in front, the woman in the opposite aisle? The characters that hang around each station? There are a thousand things to absorb. Read, write, take notice, absorb. Read everything, even the ads in the trolley car. Saturate your being with literature.

It is a mistake to dabble in tragedy. A witty writer once said: "It is very pleasant to be sad when you haven't anything to be sad about." The story you are writing may gratify you, but you must always think of your public. Study the contents of the current magazines, and see just what they are printing. To the public, as a rule, life is serious, and they read your story for amusement, relaxation, and forgetfulness. Cheerful characters, bright, sparkling humor, a rosy atmosphere, live-happy-ever-after endings.

Personally I like the kind of endings that are sad. Endings that touch a responsive chord in one's soul and that make the reader remember the story he (or she) has read. I prefer the literature that sticks in one's bones—but, as I have mentioned above, there are our friends, (?) the editors, who demand the other kind of literature, and as they make out the checks, the other kind of literature they will have.

A story is not a mere creature of paper and ink. When you write a story, live it. You must be the principal character—walk like him, talk, suffer, laugh; do, achieve like him. Put your life's blood into your story. You may come out with a wilted collar and your hair sticking all ways for Sunday, but you must enter your work, not alone with your head, but with your heart and soul. You can't expect to reach other people's depths if you don't, at first, stir your own emotions.

Above all things, don't be too romantic. Put plenty of romance in your work, but don't overdo the waving pines, the silver moon, the ripple of the stream and clinging vines stunt. Use common sense in your peppering and salting of local color.

If you live ten miles out in the country, way back of sundown, don't write about the great city and society. Keep your low necks, Prince Alberts and

drawing room teas between the covers of your Laura Jean Libbey, and your Captains of Industry in the *New York Journal*. If you live in the city, don't write an essay on how to keep cows. If you are near the sea, for goodness' sake avoid writing about lumber camps, and if you live in a lumber camp, do not, under any consideration, write about starboard, port, and other nautical terms. Stick to one thing. Study that thing, learn all there is to be known about it, and become proficient in your subject. In time you can write about everything. But not yet. Soon you will have a whole world to write about. Human nature is the same all over. You will know about love, hate, discouragement, despair, success, and a million other elements that, if they are not in your head, they can be found in the dictionary. Study words. What they mean, where they come from.

Avoid being commonplace. You are not copying real life so much as you are transposing it. You may use a situation which not alone you, but most if not all of your public has experienced; the end of your story, the climax, must not be what it was, but what you would have liked it to be. Life is very well stocked with thrilling possibilities, but they are mostly only possibilities except when the imagination of the story-teller develops them.

As Charles Reade had a rule for writing: "You must have a thrill every thousand words." That was for a novel. For a short story the thrill must run the entire narrative. Suggested in the opening paragraph, continuing through the middle of your story, and, finally, at the end appearing with the force of a volcano—short, pithy, dramatic endings make a story. The rest is mere pudding. Have a good beginning and a good ending. But don't let your reader know what is coming. Keep him in ignorance of the outcome; make him expectant, and, then, why, fool him! Make him think your story is going to end one way and have it end in an entirely opposite direction.

Have a plot. Life is ever moving onward. We are here today; somewhere else tomorrow. The fiction writer must place his narrative like a gulf between his characters, at the opening and closing of his tale. Better or worse; changed in their attitudes toward life, or each other; they must be different. (If they are in the way kill them. This is a favorite method used by many writers.)

It is necessary that the interest have a proper focus. Your hero or heroine must occupy the center of the stage; cast a paler light on the other actors; blur them somewhat. They are only fabrics of a lighter shade, used to weave in with the brighter colors, thus making a brilliant composite whole, restful, graceful, delightful and pleasing to the mind and eye.

Be simple. Use short words. Make your sentences

(Continued on Page 733.)

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXVII. In the Toils of a Turkish Police.

"If I miss my boat, your city will have to support me till the next one," I said to myself, as the policeman led me up a long flight of stone stairs that was to take us—only Allah knew where.

Coolly he walked down the open hallway and entered a small office of some Turkish dignitary. Now I began to show less anxiety, and the big man in the chair, hearing the tale of the policeman, waved us out of his presence to some one higher in rank. Winding me up in this maze of difficulty, he next took me down through a group of soldiers who glared upon me as if I were a Bengal tiger that had just swallowed a native.

The next magistrate was at lunch. He was the first one to show a gleam of mercy, paid close attention to what I was saying to him before the policeman had made any statements to him, and said a few words to the officer who now acted as if the farce had ended in this office, and that he must take me back and "turn me loose."

He was about to give me my freedom in a remote part of the city where I would have difficulty in finding my way back to the wharf. I remonstrated at this and told him it was his duty to see that I got back all right so that I might lose no time in getting out to my ship in case she for some reason had not sailed.

He did go with me, but at the same time he assumed control of my liberty and treated me just like his prisoner. Fortunately, when we emerged into the long, wide street running from the depot to the wharf, I saw the railroad agent coming on foot. He had received the train on which I came, attended to all of its business and had leisurely walked down town; while I, hurrying to make my boat, had not gained a single minute. I told him my trouble and he at once asked the officer to point me out the way to the wharf.

The real motive of the policeman was to extort money from me. Almost any one else would have given him a fair sum for the privilege of setting out

to sea at once rather than miss their boat. One dollar, or possibly twenty-five cents, would have set me free at the start. I do not intend to give a single cent for such low purposes on any part of my tour and will set an example of stubborn independence. Once giving way to these rascals will only make it harder for the next tourist who may not be as fearless as I.

A tall Arab was soon pushing me out toward the

I Am Being Taken Out to the "Lazareff."

Lazareff that was apparently still taking on more cargo. She was half hidden by other vessels anchoring between her and the beach and the tide had swung her end for end, so that she seemed to be moving. But I cheered my boatman and as I did so, some friend of his called out from the quay: "Make him give you two francs."

When about half way out he demanded his fee. I objected to paying him until he landed me, for as I had been warned by others, if I paid him now he would demand a second fare from me before he landed me on the ship. For passengers must demand that every piece of baggage be deposited on the deck of the vessel, together with themselves, before settling

for the boat hire. Of all my boatmen he was the most importunate and savage. But I sternly refused to hear him. When we reached the ship and I knew that I was to be one of its happy passengers again, he refused to land me, still shouting for his fee.

On deck the officers and passengers were intently watching us to see who would win out. They were taking my part. I was standing in the prow of the

I hired a Turkish boatman for forty cents to row me over to where lay our battleships, the *Brooklyn* and the *San Francisco*. I was homesick and weary of the many dangers through which I had just passed among foreign strangers.

The object of these war vessels was to defend our interests in the Turkish Mediterranean. Our consul had been fired upon by one of the natives and the Mohammedans were now threatening to break into and loot our American College at Beyrout. The honor and lives of the girls in attendance here were at stake. Both battleships had their guns trained upon the college and at the first impulse of an outbreak by the Moslem fanatics, were ready to hurl shells into the city.

We stopped first at the *Brooklyn* where I displayed my flag, the stars and stripes, and sent up my card. Soon I was invited to come up on deck.

It was the first battleship I ever saw at close range. There was such a splendid cleanliness and order about everything. It was a lesson of neatness and orderliness and system to the boys who were enlisted for a year or more in the sea service of Uncle Sam.

The boat proved to be much bigger than I had expected. The scene was marvelously

beautiful and powerful in aspect. They took me to the chaplain's stateroom and office. He was a Harvard man and enjoyed a more luxurious study aboard the *Brooklyn* than the preachers of the big churches enjoy in his city. I saw through the kitchens so sweet and clean, and entirely unlike the ordinary ocean ship. They were so wise, these good Americans in far-off Turkish waters, for they at once set to cooking me a great big dinner. What made this so much better, I didn't tell them I was hungry. They surmised that. They knew what I had to eat in countries outside of our own great bake oven land. So they killed the fatted calf for the wandering prodigal. I had boiled potatoes, boiled beef, American bread and cocoa. Then they gave me a fine lunch for my boatman who rowed me to the *San Francisco* a half mile distant, though because of the size of the vessels, apparently but a few hundred yards away.

SHOSHONE IRRIGATION DAM.

MAUDE HAWKINS.

IN northern Wyoming, east of Yellowstone Park, just below the junction of two forks of the Shoshone River it flows through a canyon of solid granite, with almost perpendicular walls several hundred feet high. In the narrowest portion of this canyon the govern-

Our Ship Plunged Below the Waves.

boat, about ready to leap off and swim to the vessel that now rocked heavily in the surging sea, when I would have paid him little or nothing. He was in the act of pushing his boat away from the ship so that I might be his captive at his will when a wave struck us, throwing our boat so close to the ship, I was able to seize hold of the flying steps and draw myself up out of his reach before he could get from the stern to the prow to prevent me, the passengers cheering me as I climbed, safe and sure, up on deck before them.

The Arab then came above after fastening his boat. Opening my hand I showed him four pieces of silver which I meant to have given to him if he had dealt fairly with me. Then removing one piece, I handed him the three pieces which he took while trying to hide his discomfiture by a forced grin.

The next morning we sailed into Beyrout that lies on a pretty bay at the foot of the proud Lebanon Mountains. On our right lay at anchor two fine men-of-war,—ordinary fighting vessels when compared with our biggest and best ones, but still magnificent enough in the eyes of an American far from home to call forth screams of delight.

On account of plague, the port was quarantined against us and no one was allowed to go ashore except those who expected to remain there.

As our ship would lie in the harbor for some hours,

ment has constructed a dam which will excel in height all other structures of the kind in the world. It is eighty-five feet wide on the bottom and two hundred feet long on the top. Its height is 328 feet, which is forty-eight feet higher than the Flatiron building in New York. The water it stores is sufficient to cover an area of ten square miles to a depth of seventy feet, or it would cover 456,000 acres one foot deep.

The engineering features of this dam are indeed wonderful. About 15,000 acres of valuable farming land in one of the most beautiful valleys in the West will be reclaimed by means of this irrigation project.

It is in a section of wonderful scenic grandeur. The soil is very fertile and it is free from cyclones, blizzards or severe storms. It is in close proximity to the most wonderful park in the world.

This was opened to settlers May 22. The farms are offered for settlement under the homestead law, but the actual cost of supplying the water to the land will be charged, which is about \$46 per acre, also one dollar per year per acre for the maintenance of the irrigation system.

Towanda, Pa.

THE PASSING OF THE BRIG

JOHN S. FERNALD

AMONG the various classes of "square rigged" vessels now closely following the little "pinkie" (see INGLENOOK of January 26) towards the port of Oblivion, the brig probably heads the fleet and will be the first to arrive there, or at the near-by haven of Total Extinction.

Whether or not the whole line of square riggers will ever be superseded by "fore-and-afters" is a mooted question, but the tide is now setting strongly in that direction.

The earliest form of sails was that now known as "lateen," still used to some extent in the East. This was gradually changed in the early centuries to what is known as the "square rig," by bringing the yard to a horizontal position and increasing the number of sails on each mast. As vessels increased in size and longer voyages were attempted the triangular sails, now known as jibs and staysails, and the fore and aft sail known as the "spanker," were added. Jibs are carried on a spar extending out from the bow of the vessel, and in larger craft on its extension called the "jibboom." Staysails are carried between two masts, or between a mast and the deck. The spanker is supported by the "gaff" above and the "boom" below, and is carried only on the after mast.

entine," with three or more masts, only one of which is Originally square riggers were of three kinds, the "ship," with three masts square rigged; the "bark," with two masts square rigged and one carrying the spanker only; and the "brig," with two masts, both

Brigantine and the Vessel Which Is Driving Her from the Ocean, the Fore-and-aft Schooner.

square rigged. Later modifications include the "barkentine," with three or more masts, only one of which is square rigged, and the "brigantine" or "hermaphrodite brig," with two masts, one square rigged and one fore-and-aft. In all combinations the square sails are carried on the forward masts, to assist in "tacking," but to explain the process and reasons of the same would require more space than we now have at our disposal.

The so-called "fore-and-aft" rig, which is driving the square rigger off the sea, and is herself being closely pursued by the powerful rival of both, the

steam propelled craft, came into existence as late as 1714. In that year Capt. Andrew Robinson of Gloucester, Mass., built a vessel, with two masts, and fore-and-aft sails on both. At the day of the launching no name had been found for the novel rig, and as the vessel slid from the ways into the harbor a bystander exclaimed: "How she schooners!" Capt. Robinson, hearing the remark, answered: "Then she must be a schooner," and that name has stuck to the rig till today, without regard to the number of masts. For more than a hundred years the idea of carrying square sails forward was clung to, and as late as 1845, when the schooner *Mary Farrow*, of one hundred and forty-eight tons, was built in Belfast, Maine, and rigged without a square sail, the wise ones said a vessel so large as that would never tack without square sails forward. They were greatly surprised, however, to see her beat out of the harbor and not once "miss stays" or "wear ship."

The brig takes her name from a private craft used in the Mediterranean, but the rig early became a favorite with the hardy seamen of Britain, Scandinavia, Holland and the countries of Southern Europe. In the early history of the American Republic, the stars and stripes were carried to all quarters of the globe at the masthead of this class of vessels. The great clipper ships of that day carried the larger cargoes, but where smaller lots were to be shipped the brig, of from fifty to three hundred tons, found no voyage too long or too dangerous. She penetrated the frozen Arctic Seas in quest of whales, brought valuable products from the Indies and China, in fact, wherever on this planet the foot of civilized man stood, there the American brig, manned by bold Yankee tars, was to be found. Like her larger sisters, the ship and the bark, our little two-master had a field to herself, and well she utilized it.

Doubtless other nations built and navigated brigs in about the same proportion to other craft as the United States, for the flag of every maritime nation on the globe was to be met with frequently adorning the masthead or "peak" of a brig. The official lists of the United States treasury department show that 224 brigs were built in this country in 1815; 197 in 1825; 80 in 1835; 87 in 1845; 126 in 1855. After 1856, when the number built was 103, the figures rapidly declined on brigs, while the number of schooners increased. Ships and barks fell off largely during the same period, but not to so great an extent as the brigs. The last brig built to fly the American flag was launched in 1880, and the total number now entitled to American registry is but five, while of her closely allied type, the brigantine, there are but six. These living brigs were built between 1872 and '78, and the brigantines from 1877 to '92. Nearly all were built and are now owned on the Pacific coast.

ON THE WING.

D. M. CLICK.

MAY 20 we left our home near Grand Junction, Colo., for a visit to Virginia, our native State. Twenty years have elapsed since I left the land of my childhood in the beautiful valley of the Shenandoah. The first part of our trip was made over the Midland Railroad through the beautiful, picturesque scenes of the Rocky Mountains. How wonderful are the works of God! Well may David say his wisdom is past finding out. One moment we behold the lofty snow-capped peaks, and then in another instant look hundreds of feet down into the chasm below us.

Our company consisted of my wife, four children, myself and my brother, N. S. Click. Our first stop was made at Rocky Ford, Colorado, where we visited cousin David Heckman's family and others. We attended church services twice, also Sunday school and Christian Workers' meeting. The brethren here have a large, well-arranged churchhouse with a number of efficient workers in the ministry; also we noticed that the young members were quite active in the young people's meeting. God bless our young people everywhere. May they willingly and actively take up the work assigned them so that they may be able to carry on the grand work of the church when it falls on their shoulders. Our visit with the Father's children here was very pleasant and we hope profitable to all who were concerned.

We should have stated that Brother Levi Hertzler of Fruita, Colorado, was also in our company. Though blind, he seemed to enjoy himself. Brother Hertzler attended the Annual Meeting and will visit with his relations in Pennsylvania during the summer.

We found the accommodations on the Midland Railroad all that we could ask for. They have clever and accommodating employees. From Colorado Springs we traveled over the Sante Fe Railroad to Chicago. Over this road we enjoyed the best of accommodations. We noticed while speeding over the great plains, that God has bountifully blest the tiller of the soil; the waving wheat and barley fields remind us of God's goodness to the children of men.

From Chicago to Harrisonburg, Virginia, we traveled over the Baltimore and Ohio Railroad and were somewhat disappointed in the accommodations on this road.

We reached Harrisonburg May 26 and were met by my brother-in-law, John Barnhart, and taken to the home of my wife's father, Philip Barnhart, at Hinton, six miles west of Harrisonburg. The next day we went to the conference grounds and here we met many of our old friends and relations, many of whom I had not seen for twenty years.

Our brethren had an ideal location for their meeting—a beautiful park well covered with grass, and timbered with all kinds of beautiful trees, such as the

oak, hickory, walnut, pine, maple, etc. The Annual Meeting was largely attended. On Sunday it was supposed there were over 30,000 people present. The best of order prevailed and the services were deeply spiritual. It was the best meeting of the kind we have ever attended. We will have more to say of the meeting in our next notes.

Hinton, Va.

INSECT POWDER.

DALMATIAN or Persian insect powder consists of the dried and pulverized flowers of two species of chrysanthemum (sub-genus *Pyrethrum*) of which one grows wild in profusion on the snowy mountain slopes of Montenegro and the neighboring districts of Albania, Dalmatia, Herzegovina, and Italy. The other species is a native of Asia Minor. The exportation of pyrethrum powder from Montenegro began in 1865. The price was very high, exceeding one dollar per pound until the cultivation of the plant was commenced in Dalmatia.

Extensive plantations were made in California in the eighties, in consequence of which the price of the powder in the United States fell suddenly to about 8 cents per pound. It was soon discovered, however, that the cultivation of pyrethrum in California diminished its potency, and the price of the European product rose in consequence of a renewed demand from America.

The best time to pluck the flowers is in the latter part of May, when they are just opening and possess greater insecticidal power than in the fully expanded condition. The flowers are bought by dealers, who dry them, obtaining one pound of dried from four pounds of fresh flowers. Nine or ten tons of the dried flowers are annually exported from Montenegro. Formerly they went almost exclusively to Trieste, whence they were distributed to Venice, Vienna, Budapest, and Berlin, where they were pulverized. In recent years an English firm in Podgoritzta has been endeavoring to capture the entire crop for a firm in New York. This firm bought 5 tons in 1906, and 7 tons in 1907. The flowers destined for America go first to London, where they are pulverized. In consequence of this attempt to corner the market the price has risen from 26 to 49 cents per pound.

For some purposes pyrethrum has been largely superseded by naphthalin, but pyrethrum powder is still employed extensively and effectively for the destruction of insects in the house and on the farm. The Montenegrin product is the best, probably because of the dry and cloudless summers of Montenegro. Even the stalks of the Montenegrin plants are said to furnish as strong a powder as the flowers produced in other countries.—*Prometheus*.

THE SCHOOL AND THE COMMUNITY.

INSTITUTIONS, like persons, have their influence, and play their part in the world's regeneration. The dictum that "no man liveth to himself and no man dieth to himself" is as true of a church, society, lodge, or school as of an individual man or woman. The world is full of mighty forces that shape our destinies; and, to deny it or acknowledge it, there is no human force more potent to civilize and uplift than that of the public schools.

The school possesses this deep influence mainly because it touches life at its most impressionable stage. The proverb of the bent twig and the growing tree is more than a mere proverb; it is a profound truth underlying all sane moral training. The priest who asked for the first ten years of a child's life must have been a close student of the human mind, and its phases of growth and development. With rare insight into the heart of things, that great man of business, John Wanamaker, has said, "Save a man, you save one person; save a boy and you save a whole multiplication table." Speaking of the inner life, what a man is at twenty, that will he be at forty and at sixty. But, during the first twenty years of one's life, it is far different. This is the formative, the period when life is in the making, when mind and soul are as wax to be moulded at will, when the child's character is plastic and may be worked like clay in the hands of a potter. And so because the school comes in contact with the child in this stage when his nature can be so moulded and directed, when the lessons here taught are as seeds sown in fertile soil, it is second only to the family in its enduring influence on society.

This deep and abiding influence of the school is due also to the fact that the school's training and guidance are felt by the child in a desultory way. Three-fourths of the calendar year is the school year. For the best six hours of the day, five days in the week, nine months in the year, the care of the growing boy and girl is in the hands of the school. There are some who would say that the family influence is much stronger and much more lasting than that of the school because it is felt by the child twelve months in the year, seven days in the week, and at all hours of the day. This is true, and is as it should be—when there is a family influence, and it is a beneficent one. Too often, however, the home influence is positively harmful. Often, too, the child is cheated out of the care and training that is rightfully his because of the business duties of the father or the social ambitions of the mother. Too often there is a feeling of indifference concerning the child's training on the part of one or both of the parents. Too often, the boy, especially, has no real home, but instead, a place where he may board and lodge with those who brought him into the world. And finally it is frequently the case, that the parent

does not understand his child, and has neither sympathy nor comradeship for him when he hungers for both.

The ways in which the school exerts its influence upon the life of the child are many. From his books he acquires much, from his mates more than his books. The playground, the classroom, the study periods and the recitation periods are all charged with silent or spoken influence. And in this process of character-building and mind-development, the teacher plays a large part. For the wholesome influence of the true teacher can hardly be overestimated. How often has the wise teacher moulded the thoughtless lad or the heedless girl into a noble manhood or a gracious womanhood. How often has the teacher's righteous anger rebuked the shameful act which, left unchecked, would have in time cankered the growing life. How often has the timely word of reproof shamed the unmanly deed, and waked the latent sense of honor. The kindly word of encouragement, the friendly clasp of the hand that bespoke a loyal sympathy, the mere mention of a good book—these are little things, but how often have they been the influences that have made a man of the boy, a woman of the girl.

A generation ago the schools were looked upon much as charities. It was felt that the children should be furnished the opportunity of acquiring a passing knowledge of "the three R's." Farther than that the community felt it was in no sense bound to go. It was not recognized that primarily the school exists, not for the children, but for the community as a whole. It was not thought, as now, that the school should exist "because the state and society at large can get more out of an individual when he is educated than when he is not." Rarely was there any interest taken in educational affairs. When school meeting was attended, it was usually with the sordid end in view of keeping down the tax levy, or for the purpose of voting for a shorter term of school so as to decrease the running expenses for the ensuing year. High schools, in the true sense of the term, were unknown outside of the large cities. Libraries and laboratories were unthought of. Specially trained teachers were undreamed of. Almost any one could teach school, it was thought, and the average monthly salary paid to teachers was perilously near twenty-five or thirty dollars, with that of the principals and superintendents only about twice as much.

But in the last decade there has been an awakening. Today we are building up our schools, and are recognizing that "the schools are not charities, they are necessities, without which civilization would come to a standstill." We are taking pride in our high schools. We are demanding that our teachers be men and women of specially trained minds, fitted in every way to bring out the very best there is in our children. We are investing in single seats, books for the library, and

apparatus for the laboratory, and we recognize the investment a good one. We are equipping our buildings with steam heat and fire escapes. The wages of the average teacher have been doubled, and we feel that the money is well spent. The recent legislature has provided State aid for high schools that maintain normal courses, and hereafter students completing normal courses in standard high schools will be given certificates to teach. Indeed, it will be a very few years until a high school education, or its equivalent, will be required of every teacher in the public schools, whether that teacher wishes to teach in the city or the country. The day of the teacher with no more than a district school preparation is passing, and its passing means the coming of better schools.

There is yet, however, much that remains to be done. Our entire school system, and especially our high schools, must be made more practical. At present the high school is hampered in its work from the fact that there is a mistaken notion that all its work should be planned with the view of fitting the student for the university. The high school must be freed from this university incubus. The idea that the high school is merely a feeder to the university is a deplorable one. Not one student out of twenty will find his way to the university. Though the term itself savors of demagoguery, yet it is true that the high school should be "the people's college." It should be made to appeal to all classes of youth. The boy who is not naturally a studious boy is of more concern to society than the boy who takes to his books readily. The girl who leaves school in the seventh or eighth grade because she doesn't "see any use in going to high school," is the very one the high school ought to interest. Latin is an important study and should have its place in the high school curriculum by all means; but it should not be allowed to overshadow all else, and become a bugbear to the student who happens to lack the classical bent. So our high schools should be brought down nearer to the real life of the average boy and girl. Not every boy can be or cares to be a lawyer or a minister, nor does every girl care to be a teacher or writer, and for those who have other inclinations, there should be an opportunity and encouragement to excel elsewhere. So our high schools need more teachers, and broader and more liberal courses. Every high school should offer something in the way of a business course to interest the student who expects to go into some line of business. Manual training, too, should have a place in the modern high school, for ours is an industrial age, and many of our boys and girls could easily be interested in an industrial education. Our education should be not only of the head, but also of the heart and hand. Many of the boys who drop out in the first year of high school or in the eighth grade could easily be kept in school by the aid of a few classes in manual

NATURE STUDIES

THE STORY OF BOB WHITE.

THE story of Bob White is simply told, as becomes the life of a simple member of the quail family. Many interesting facts concerning the habits of the bird, its usefulness to the farmer and its popularity on menu cards are told.

There are seven members of the quail family in the United States. The most beautiful species occur in the Southwest and on the Pacific Coast.

Of the seven species only one, the Bob White (*Corlinus virginianus*), is indigenous to the eastern United States, where it ranges from southern New England to Florida and Texas. The sub-species, the Florida Bob White and the Texas Bob White, are recognized by scientists.

Owing to the climatic influences, the birds of Florida and of Texas differ enough to be distinguished as geographic races. But wherever it occurs, the Bob White has the same call and varies little in habits.

The Bob White proper is a handsome bird, but is the plainest of the seven species, with the exception of the cotton top or scaled quail of the deserts of southern Texas and Arizona. The latter is slaty bluish on the upper parts, which are ornamented with scale-like markings, and has a whitish crest.

The most bizarre and curious of all is the Merns quail of the high, broken plains and mountain slopes of southwestern Texas, southern New Mexico and Arizona.

It looks not unlike a little guinea hen. It is the gentlest and most unsuspecting of the quail family and is frequently killed with a stick or a stone by persons who encounter it in their walks. The people in the region which it inhabits have given it the name of fool quail on account of this trait.

The Bob White is the most widely distributed and popular game bird in the United States. While it is rapidly being exterminated, its preservation could be secured very easily, for unlike most wild fowls or animals, it does not vanish with the growth of agriculture but increases when not molested by hunters.

The Bob White is called a quail in the Northern, Western and Middle States while in the Southern States it is known as a partridge. Both names were brought to America by English colonists. The name Bob White is from the familiar call note of the bird.

In some of its characteristics the bird differs strik-

ingly from other members of the family. "For example, the crest—a well-developed adornment of several closely related American quails—in Bob White is invisible except when the bird is excited."

The common Bob White ranges more or less generally over the eastern half of the United States and southern Ontario, except in the colder mountainous parts, from Maine to Florida, and west to South Dakota, Kansas and Texas. In addition colonies have been introduced and found to thrive in Colorado, New Mexico, Utah and the island of Jamaica. The bird has also been found in limited numbers in Cuba, Mexico and Guatemala.

In the field, the nuptial call note of the cock bird is an infallible guide to its identity. This familiar challenge, sounding to the sportsmen like "Bob White," "Bob-Bob-White," and to the farmer like "more wet" or "no more wet," is by no means the only note of the species during the breeding season.

It was the good fortune of the writer during the last week in June, 1902, to hear the nesting note and other calls. Again and again the cock left his distant perch where he had been whistling "Bob White" and, still calling, approached the nest on the banks of a little sluggish briery run between open fields.

When within fifty yards of his mate he uttered the rally note, so thrilling to the sportsmen in the fall, "ka-loi-kee," which the hen often answered with a single clear whistle. Then followed a series of queer responsive "caterwaulings," more unbirdlike than those of the yellow-breasted chat, suggesting now the call of the cat to its kittens, now the scolding of a caged gray squirrel, now the alarm notes of a mother grouse, blended with the strident cry of the guinea hen.

As a finale sometimes came a loud, rasping noise, not unlike the effort of a broken-voiced whip-poor-will.

The call of the hen to her youngsters is invariably "ka-loi-kee, ka-loi-kee," while the youngsters respond "whoil-kee." At close range the whistle of the bird loses all its melody and becomes a nasal shriek almost painful to the ear.

As many as forty-two eggs have been found in the nest of a Bob White. The main breeding season for the Bob White in the Northern States is May, June

and July, although Professor Robert Ridgeway, curator of ornithology in the Smithsonian Institution, found a nest of Bob White eggs in southern Illinois in the middle of October.

Another naturalist found a nest filled with eggs in Missouri in January, on which the mother bird was found frozen. Two or three broods have been produced in a season.

There is a tendency among Bob Whites toward local migration. In Virginia and Maryland particularly they leave their summer homes on the approach of winter and congregate near the large water courses.

The habit of the bird during the hunting season is to move about most actively and feed in the early morning and late afternoon. The best shooting is to be had the hour before sunset, in the places where the birds have decided to spend the night. They roost on the ground, forming a solid ring, with tails in and heads out.

The Bob White as an ally of the farmers is chiefly valuable as a destroyer of weed seeds. Professor Judd made an estimate of what the Bob White would accomplish in this line for the farmers of the two States of Virginia and North Carolina from the beginning of September to the end of April.

He allowed four Bob Whites to each square mile of land, which is a low estimate, and would give 354,820 in the two States. The crop of each bird holds half an ounce of seed and is filled twice a day.

Since at each of the two daily meals weed seeds constitute at least half the contents of the crop, a half ounce daily is thus consumed by each bird, and on this basis the total consumption of seed in the two States covering the period mentioned would amount to 1,341 tons. A similar calculation shows that 340 tons of destructive insects would be consumed by the birds in the same period. The Bob White eats the Rocky Mountain locust, the chinch bug, the potato beetle, the cotton boll weevil and cotton worms and army worms.

Professor Judd estimated that with proper management some farms of from 500 to 1,000 acres would yield a better revenue from the raising of Bob Whites for the market than from poultry growing. In North Carolina many farms yield a regular income by this industry.

The shooting rights are leased to sportsmen who pay considerable sums for the privilege. In some places in Maryland, Virginia and North Carolina sportsmen pay from five to twenty-five cents for every bird shot.

Millions of dollars can be realized by the proper management of the quail crop of the United States. No game is so much sought for in the market as quail.

"The writer" says Professor Judd, "knows of a

single dealer in Washington who in 1902 sold 100,000 quail. The present price is \$3 to \$5 a dozen, yet Audubon tells us that in 1810 the birds could be bought for 12 cents a dozen and in 1851 for 50 cents a dozen."—*Selected.*

FASCINATION OF THE ORCHID.

HALF a century ago orchids had not attracted any great amount of attention, while today it is quite the thing to be interested in their culture. But it cannot be denied that there is a subtle fascination about the flowers of the orchid which one does not find in ordinary plants. Always curious in form, the blossoms of some of the varieties are almost grotesque in design, whilst the colors of the different species are of an infinite diversity, the like of which may not be found in any other group. Once to engage in the cultivation of the orchid is to become a slave to the influences of the bewitching flowers, and your true collector is never so happy as when among his treasures.

Where there is a demand there will also be a supply, and with the tremendous boom in orchids has come into existence the specialist in this plant—a man who devotes the whole of his life to the serious business of growing, importing and producing varieties of orchids. It is only by visiting an orchid establishment that one may realize what an important commercial industry has sprung into being. Here we shall find large greenhouses, under the care of experts, entirely given up to the cultivation of orchids, each structure filled with thousands of plants of all ages and sizes, from the small seedling up to the well-established plant, gay with its cluster of lovely flowers.

All parts of the world send their contribution to the grower's collection, for orchids are indigenous to almost every country. To imitate nearly the natural conditions which each species demands has called forth not a little ingenuity on the part of the horticulturist, and, indeed, there are still varieties which baffle the grower, even with the best of modern appliances at his command. Many kinds of orchids do not root in soil at all, being entirely epiphytal in habit, the plants attaching themselves to tree trunks. For such as these, an intensely damp atmosphere must be maintained in order that the air roots may be able to find a sufficiency of moisture. As opposed to these, some of the orchids from the temperate regions require a cool and rather airy house, and would not thrive well under very humid conditions.

The only way in which the florist may raise new varieties of orchids is from seed—the system of artificial cross fertilization of the flowers being brought into requisition to obtain the hybrids. This is a laborious process, calling for an immense amount of patience. Orchids are among the most capricious of plants, and the experimenter is more often than not

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THE apostolic injunction to "be content with such things as ye have," doesn't mean that we are to be satisfied with our present attainments. "On to perfection" is given as our watchword in character building, and our growth in this direction is greatly increased when we leave off fretting about the accumulation of material things.

PERHAPS in no other one way are more efforts for improvement in some particular line nipped in the bud than by the calculating, indifferent individual who points out this or that other thing that is as much or even more in need of improving. We cannot all be equally interested in one line of work, but it would be a good thing all around if we had the grace to lend encouragement in word or deed to every good work, knowing that the success of one only increases the chances of success for another.

SUCCESS, in its generally accepted meaning, is a relative term. A man is said to be successful when he has reached a certain goal. If he falls short of it he is called a failure, although along the road leading to the coveted goal he may have won victories whose ultimate influence will place him far beyond the prize which he once considered dear. On the other hand, the man who has won an abundant possession of that for which he has striven sometimes finds that the success so-called has been the most potent influence in bringing him defeat farther on in the race. Let us be slow to put down as a failure our own or others' efforts so long as they have been honest and earnest.

EARLY reports of the casualties of the Fourth, while still gruesome and pointing to much suicidal carelessness, give some encouragement to those who have endeavored to enlist the people in a sane observance

of the day. Among the leading cities Chicago and Washington are especially noted this year for the success of their efforts in this line. With these examples of what can be done other cities should lend a hand to the work of reform. In the meantime a campaign of education should be carried on through the medium of the press and other agents so that people may become thoroughly aroused to the necessity of aiding every reasonable effort to do away with the things that spread the pall of suffering and death over a day that should bring rejoicing to every one.

PLEA FOR TRADE SCHOOLS.

IN the East and in the West some of our leaders in the educational field continue to agitate the question of industrial education in our public schools. Recently E. G. Cooley of Boston, formerly superintendent of Chicago schools, raised his voice in a plea for trade schools in a session of the National Council of Education at Denver. His speech was in part as follows:

"Since there are two million boys and girls to be educated for the professions as against thirty million who must depend on the labors of their hands and sweat of their brows to live, it is essential that immediate changes should be made in the present educational system.

"The schools of the plain and common people are attempting to give to their pupils an opportunity to acquire the social heritage of truth and ideas resulting from the laborious investigations and profound meditations of all past ages. The leisure class theory of society has dominated the educational theories of the schools. The privilege of acquiring the social heritage has been given to certain selected members of society who are planning to follow the professions.

"While we have talked glibly about giving every boy a chance to become President of the United States, every one knows that the chances of this happening are only one in several millions. These chances hardly justify keeping the training of all children along the lines that seem likely to profit the few. Such a theory of opportunity as this can hardly be called democratic, and the so-called democratic opportunity of becoming President is not a real opportunity to get the kind of education demanded by the conditions of modern society.

"A system of schools that permits an increase in the number of the exploiting class can hardly claim to be democratic, when we recall the percentage against the great mass ever realizing any advantage from it."

Perhaps the fact that the present system of education encourages an increase in the number of the exploiting class when the percentage is so great against the majority ever realizing any advantage from it, may largely account for the efforts of so

many to escape the life of manual labor which they should follow, giving us the large third class which by hook or crook maintains its existence by its raids upon the other two.

Clearly the schools are not giving the people all they have a right to demand in the way of preparation for life's duties. Whether industrial education, even in its best interpretation, is the only improvement needed, remains to be seen. And see it we will, for its advocates have too much argument on their side to be put off without a thorough test of the plan. Then if the ultra enthusiasts or extremists can be kept within reasonable bounds we may see one child as thoroughly equipped for his life work as another and the boast about equal rights and privileges will have some foundation.

THE COMIC SUPPLEMENT.

MORE than two years ago on this page we expressed ourselves somewhat freely on the above subject under the heading, "Something about the 'Funnies.' " Our examination of these pages of the modern newspaper and our observations of their influence convinced us of their power for evil and we endeavored to open the eyes of parents to the harm they were doing in allowing this poison to be taken in by their children. Since that time other periodicals have carried on a persistent war against the comic supplement and the result has been that some of the leading newspapers have cut this feature out of their Sunday issues.

The Boston *Herald* was one of the publications which had the courage to do this. At the time it was predicted that they would lose largely by their folly (?) but after an eight months' trial they have no desire to again adopt "this miserable attempt at humor." Here is what the *Herald* itself says on the subject:

"The *Herald* had no difficulty in finding substitutes for its colored pages. Not only has the abandonment of the comics been praised by social and other organizations and by individuals whose interest is general, but the approval from the homes into which the *Sunday Herald* enters has been the most convincing evidence that a colored comic is not essential even to the amusements of the children. It is an unfortunate estimate of the American people that assumes that the grosser and the lower is the most popular. We believe it worth while to recognize a different standard of popularity. The demand for the 'comic' is overestimated."

In commenting on the *Herald's* statement the New York *Outlook* says: "The plea put forward by all those who pander to the taste of the public instead of trying to lead it, or even to meet it on higher levels, is itself a confession. The public does not want vulgar things. There is a vulgar vein in a good many people

to which appeal can be made, but there are better things in these people to which finer things will appeal with even more force. The so-called comic supplement, as at present issued, is a device to coin money as rapidly and with as little trouble as possible. The public does not want it; for the public wants its children to be decently educated; it does not want them to be vulgarized in taste, manners, and ideals. A little more editorial energy, a little lifting of editorial standards, a little sense of editorial responsibility, and possibly the expenditure of a little more money, will substitute for the present indefensible vulgarity of the so-called comic supplement decent drawing and decent text."

It is to be hoped that the opposition to the "comics" will continue to be agitated until they are entirely displaced by matter that will have only a beneficial influence.

A SHORT SERMON TO LITERARY ASPIRANTS.

(Continued from Page 723.)

short. Don't try to make literature. Write your thoughts as you think them. When you write differently than you think, you are manufacturing, and there is a straining after effect. Do not think that your thoughts are so original that they will not be recognized as being worth anything. *Be original.* The successful author is the one who is not afraid to send forth a story that is different, new, out of the ordinary. Not new themes in old dress; not old themes in new dress. But altogether different.

In conclusion: Don't be discouraged. You will receive more rejection slips (I can prove it) than checks. Don't write so much for the money that there is in it, as the experience you are getting is worth more. The recompense, the reward, both of money, fame and recognition will come on you before you are really prepared to receive it. Like Byron, you will awake some morning and find yourself famous.

Then when you are basking in the sunshine of your achievements, you will thank those editors and publishers because they refused your first efforts, which were crude and unfinished. Every rebuff, every refusal, every adverse criticism, will only spur you on to improvement if you have in you the element that spells

Success.

RICHARD BRAUNSTEIN.

Big things are only little things put together. It is encouraging to think of this when confronted with a big task. Remember that it is only a group of little tasks, any one of which you can easily do. It is ignorance of this fact that makes some men afraid to try.—*W. P. Warren.*

THE HOME WORLD

THE PREVALENT USE OF SPECTACLES

DR. O. H. YEREMAN

THE mechanism of the different ranges of vision is produced by the increase and decrease in the convexity of the crystalline lens produced by the ciliary muscle. When in a healthy condition, this little muscle is able to change the focus of the eye instantly from the viewing of the far distant fields to the discerning of the finest print close at hand. But after many years of strenuous service, the ciliary muscle begins to wear out, and at the age of forty to forty-five years the average person is not able to focus his eyes for fine print. This inability to focus for reading is technically called presbyopia, and is due to other anatomical changes besides the wearing out of the ciliary muscle. The advent of these changes is evidenced by difficulty of reading fine print by artificial light; by having to hold the book farther away than before, to be able to see well; by inability to thread a fine needle, and to work on black or dark goods.

With many these changes are evidences of approaching old age, and unwilling to allow their friends to find it out, they force their fagged out ciliary muscles to active duty until, after a short period of desperate effort, they are completely exhausted, never again to perform their delicate important work. When this

glasses necessarily indicates the aging of the individual, as our present day strenuous life with much close work and reading predisposes many to an early weakening of the ciliary muscle, necessitating the early use of glasses. If, instead of putting off the use of glasses until compelled to do so, at the first sign of

Perfectly-fitting Glasses.

the appearance of presbyopia, the eyes were tested by a competent oculist, and glasses employed whenever the eyes are subjected to prolonged use at close work, thus giving help to the weakening ciliary muscle, its strength could be maintained and its services enjoyed for quite a few years longer.

I am treating the wife of a lawyer at present, who although young in years, has made the fatal error of overtaxing her ciliary muscles, until they absolutely

Ill-fitting Glasses.

refuse to act; and she can not force them to do so, even with the aid of glasses.

I suggested the employment of an oculist for testing the eyes, because of the thorough understanding of the entire organ of vision which he is supposed to have. For the benefit of many who do not differentiate between an optician and an oculist, let it be understood that an optician may be a jeweler, or any individual who, having learned the rudiments of the mechanism of vision, tests eyes and fits glasses for such common trouble as presbyopia. An oculist, on

Axis of Glass in Center.

Axis of Glass Eccentric.

condition takes place, the only remedy is to place a pair of glasses in front of the eyes to increase the convexity of the lens artificially, and bring the rays of light to a focus on the retina—the seeing part of the eye. It is a mistake to think that the use of

the other hand, is a physician, having completed his education as a doctor of medicine, and passed his State board examination, and obtained a license to practice his profession; and who, after a few years of such practice, decides to limit his studies and attention to the diseases of the eye. This man is backed by a knowledge of the entire human body and

Frames Too Narrow.

its diseases. His experience in practice has taught him the relation of the eye to these other organs. His knowledge is therefore not limited to the mechanism of vision; but embraces every disorder from which the eye may suffer. He is able to look inside of the eye, and examine its nerves, bloodvessels, lens, and other important structures. He is qualified to treat the various diseases of the eye, and operate on it whenever it becomes necessary. The insidious onset of many diseases can be discovered on the delicate membranes on the inside of the eye, and many a person has been saved life-long misery by the early discovery of such

Frames Too Wide.

diseases by his oculist. I well remember a man who came to me from a long distance some years ago. All he wanted was a pair of reading glasses; but a careful examination of the interior of his eyeball showed signs of degeneration of the optic nerve due to the use of tobacco. He was informed of it and urged to stop its use immediately, which he did and saved himself from blindness. Many diseases of the kidney first manifest themselves in the eye, so that it is advisable at all times to go to an oculist and get competent service.

But what about the traveling man who poses himself as a specialist, and goes from town to town peddling glasses? It is safe to believe that a competent man will have all he can do at home, without needing to peddle his wares from town to town. So numerous are their acts of deception that I must tell you of one of them. Two years ago one of these "Professor Eye Specialists" went to Frederick City, Md. Among his other victims was an elderly lady having trouble with her eyes, whom he told that unless she bought glasses of him she would go blind. Thus he scared the lady into buying three pairs of gold (?) glasses, for which she paid him ninety-three dollars. One pair was to be worn for distant seeing, another pair

for reading, and the third pair was to be worn one hour each day as a tonic (?) to her eyes. In a few hours the sheriff was looking for this charlatan, but it is needless to say that he had already left town. The deception of many in this manner has made the pendulum of opinion swing to the opposite side, and many a man will declare that glasses from the ten-cent store or the hardware shop are just as good as those for which you pay a fancy price. This is the other extreme. There is a great deal of difference in the quality as well as the manufacture of lenses. Between the ten-cent glasses of the hardware store and the hundred dollar lens of the microscope, there is a great deal of difference. Aside from the quality, however, the proper center of the lens is of the highest importance.

Rays of light passing through the focal center of a lens are not refracted (or bent) at all, and the degree of refraction varies with the distance from the focal center. Rays of light passing through a properly centered lens are focused on the most sensitive part of the retina, called the fovea centralis. A decentered lens would focus rays of light on some other part of the retina; and not only force this less sensitive portion of the eye to do work for which it is not intended, but also cause the decay of the fovea centralis by misuse.

The middle ground between these two extremes is the safe one. The "stamped out" defective glasses of the drugstore are injurious to the eye, while the exorbitant price of the traveling "specialist," for his fancy glasses, is injurious to the pocketbook. A fair price paid to an honest oculist, will protect both the eyes and pocketbook.

I am often asked how long a pair of glasses should last. There is no hard and fast rule governing this; but an average for reading glasses is five years. Some may be able to wear them longer; others not so long, but five years is a fair average. We must remember, however, that this applies only to glasses used by elderly persons for reading purposes.

It is not only necessary that the right lenses be used, but it is equally important that the frames fit the face properly. The center of each lens should be in front of the pupil of each eye, and be kept there in an erect, and not slanting, position. We are so particular about our clothing, shoes, gloves, etc., fitting us; and yet the proper fitting of frames is more essential than any of these. Therefore the best lenses in proper frames, fitted by a competent man, are what tired eyes need; and as we are given only one pair of eyes during a lifetime, we can ill-afford not to give them the very best of care.

THE MISSING COAT.

LILLIAN M. WIRE.

"I BELIEVE I'll give father's coat to my brother," said Mrs. Devine.

She was looking things over after the funeral, as one always must do, no matter how lonely and dreary the house seems. And, indeed, who has not noticed that when a dear one has left us, the home seems utterly empty as if there were nothing left.

On this bright spring morning, Mrs. Devine thought it a good time to examine her husband's belongings and put some of them away. When the lady found time to look for the coat, she could not find it anywhere.

"I think it is so strange," the mother said to her daughter, "that I can not find the coat."

"We'll surely find it somewhere," Louise answered cheerily.

But in spite of this assurance the mother never again saw the missing garment.

Five years later it was found on the floor of the unfinished attic, destroyed by rats and mice. One who could not bear to see the coat given away had placed it in the unused room.

As for the brother, he never possessed a coat as warm as the one his sister so kindly planned to bestow upon him. Many a chilly day, he shivered in the wind when going to and from his work.

It was well that the mother never knew why she was disappointed in her project. Now she is sleeping the "last long sleep."

I thought as I looked at the remnants of the once useful garment, What a pity! Then the words spoken by the lowly Nazarene came to my mind: "Lay not up for yourselves treasures upon earth where moth and rust doth corrupt, and where thieves break through and steal. But lay up for yourselves treasures in heaven where neither moth nor rust doth corrupt and where thieves do not break through nor steal."

A LITTLE GIRL'S GRANDFATHER.

My grandfather is a pretty sober man. He doesn't ride you on his foot, he doesn't chase you with his shaving brush; but I guess he likes little girls.

One night I woke up when my auntie came to bed. The room was all black. I wasn't a bit sleepy. I could hear kind of queery things outside. My pillow felt like a miserbul pillow. My auntie said: "Oh, do lie still! Do go to sleep!" Then I lay still. The ocean was making a mornful sound. I wished I could see my mother. I hoped she wouldn't die before I got home. Once there was a little boy—he was horrible naughty to his mother, and she died that very night. I wished I could tell my mother I was

sorry for every naughty thing I ever did so long's I lived.

My auntie said: "What is the matter? What are you crying about?"

She said a good many things to me. She said she was wore out. I wished my father would come and take me in his arms and carry me home right off. I got all chokled.

Pretty soon my auntie said: "See what you have done, you naughty girl! You've waked up your poor tired grandfather!"

It seared me very much. I hugged my pillow tight.

My grandfather came in. He said "What's this?"

My auntie said: "She won't try to stop. She ought to have a whipping!"

Then I cried out loud. I put my hands over my mouth, but I only cried worsen.

My grandfather said, "Oh, well, well, well, well, well!"

He sounded just as good—sounded as if course he wouldn't whip me. He said, "Your grandmother has sent you a drink of water."

It was very kind of my dearie grandmother. I sat up in bed. My grandfather put his hand on my shoulders. It is a nice big hand. The light shined in at the door, and stopped its being such a dreadful dark. It was beautiful water.

My grandfather said, "You don't want to cry any more, my daughter."

I said, "No, grandfather."

He seemed as if he knew I wanted to be a good girl. He seemed to like me just as well. I laid down in bed. My pillow felt like a good pillow. My grandfather put his hand on my head. He said, "I would go right to sleep, my daughter." I said, "Yes, grandfather"—and next I knew 'twas morning!—*Marcia Cary, in Congregationalist.*

TO CHRISTIAN PARENTS.

A MOTHER was expressing to a Christian of great experience her anxiety for her children's salvation. Her answer may comfort other anxious parents.

"My dear," she said, "I have gone in and out among a large circle, and have watched many families grow up around me, and my experience is that parents get what they work for in their children.

"If parents desire, above all things, that their children should be obedient, they turn out obedient; if they desire them to be rich, they are rich; if well educated, they are well educated; if brought up for the world, they are worldly; and if for Christ, they grow up Christ's."

There is much truth in this. Though no Christian parent would knowingly bring up his child for the world, yet the associations, the training, and the in-

spirations are too often worldly. As the young tree is bent, so will it grow.

Should not all parents ask themselves seriously, "What is my chief desire for my children? and am I working to accomplish it?"

What we work for we should also pray for. Some parents only pray, some only work; let us do both. It is God who giveth the increase.

There is a solemn warning, as well as encouragement in his Word: "God is not mocked: whatsoever a man soweth, that shall he also reap." May it be "life everlasting"!—*Selected.*

"IN FLY-TIME."

DR. WALTER M. CROSS, city chemist of Kansas City, gives the following methods of exterminating the house fly as published in the *Kansas City Star*. The first remedy advocated is plenty of soap and hot water well supplied with a scrub rag, wherever the flies may congregate, and especially in the kitchen. A thorough application of this, aided by a sharp stick, to the cracks, crevices and corners, moldings and isolated places about the rooms, will kill eggs deposited therein last fall and early winter before fly-time ended. For the new crop, the advance guards of which are just now appearing, he recommends the following, which he has tried and found successful. He says the flies are not prohibitionists, and like the taste of beer. At night place an ounce (two tablespoonfuls) of beer in a saucer and drop into it a pinch—about two grains—of arsenic of soda; as soon as daylight comes, the flies wake up with a horrible thirst, and swoop down on the saucer of beer and take long draughts of the brew. Presently they get the stomach-ache bad, and a few minutes later they are dead. The saucer should be removed before the daily routine of the housework begins; otherwise, the dead flies may be dropping in the cookery preparations. Where there are little children, the saucer of poison should be put out of their reach.

Another way recommended is by hanging. Flies can not resist the desire to roost on a pendant cord or string. Take equal parts of rosin and sorghum molasses and boil them until the rosin is in solution; then dip twine strings in the mixture, and hang the strings so as to make them inviting to flies. They will go for these strings like a hungry dog to a hunk of beef; the combination of roosting place and molasses to eat is so attractive they can not resist it. The mixture in which the strings were dipped is the same as that used on commercial sticky fly paper.

Of course, the string with its load of flies should be taken down and burned every morning and new ones strung up in their place. The methods are inexpensive, and should be tried. Flies are worse than a nuisance—they are disease carriers.—*The Com-moner.*

The Children's Corner

THE NEW WELL BUCKET.

ONE day, fifty years ago, a little boy stood watching his old grandfather as he put a new bucket on the well pole. The old bucket that for more than a fourth of a century had swung in the curb, drawing up each day pailful after pailful of clear, cold water from the well's dark depths, had at last become so warped and cracked that it was no better than a basket for holding water.

Sanborn Fairweather was the little boy's name, and he had watched with keenest interest his grandfather getting this new bucket ready for the well pole.

It was an emptied paint cask, holding a large pailful of water, and to cleanse it of paint he had built a bonfire in it of straw and birchbark, which quickly burned away its oily smearings. Then it had been carefully scraped and washed and fitted with four new iron hoops, and the old bucket's strong iron ears and bail.

"There! The new bucket is hung at last, good and strong, grandpa," Sanborn gleefully cried as the pole, being let free, swung up above the curb, the stout bucket dangling from its rusted chain. "How much water, guess, grandpa, will it haul out of the well before it gets as worn out and leaky as the old bucket?"

"Enough to fill a millpond, child, I'll guess, if it swings in the curb for thirty years, as did the old one."

"Come, Sanborn, you and I will draw up the first bucketful of water, but I'll not be here to help draw the last one," and grandpa's face grew very thoughtful.

"Here she goes!" Sanborn shouted, giving the well pole a strong, quick pull that sent the long, heavy sweep creaking up in the air, and the bucket with a jerk and swing down into the deep well.

Grandpa Fairweather laid his shaky old hands on the pole as the bucket filled, and helped little Sanborn draw up the brimming measure dripping with cold, clear drops.

"What makes you whisper, grandpa?" Sanborn asked, as together they lifted the bucket to the curb's plank floor; "are you talking to me?"

"No, child, but to God. I was asking him that everyone who in the many long years to come shall draw water from this well shall also draw living water from the fountain of life, Christ's love."

"Oh!" was all that Sanborn said, but in after years when he came back to the old home and saw the swinging well bucket, he thought of his grandfather's prayer and of the well of living water of which whosoever will may drink.—*Exchange.*

THE QUIET HOUR

BLESSED SOLITUDE.

MARTHA SHEPARD LIPPINCOTT.

Blessed solitude, the hour
 When the soul communes with God;
 Through its ways of meditation
 Hath our Savior often trod.
 Oft communing with the Father,
 Silently he walked apart,
 Till he felt the inner spirit
 Speaking through his loving heart,
 Then he spoke unto the people,
 Gave his messages, divine,
 So the light of all his wisdom,
 In their souls might, also, shine.
 Let us, too, then, in the silence,
 Learn, our Father's voice to hear;
 So he'll always guide our footsteps
 And be ever seeming near.

Philadelphia, Pa.

SOMETHING ABOUT TRUTH.

J. S. FLORY.

A CERTAIN minister said, "The supreme event in history was the revelation of the truth in Jesus Christ.

"The transcendent privilege of man is to know the truth.

"Man's greatest need is the power to harmonize his life with the truth.

"Truth is larger than the Bible.

"The revelation of God may be complete, but it is folly to say the limits of man's understanding of it are fixed.

"It is impossible for one generation to formulate truths which will meet all the needs of future generations.

"Creeds have a needful place in our lives, but out of place, they are a menace to our spiritual existence."

These ideas are significant and ought to make us ask, "What is truth?" The mistake so often made is to put our own interpretation on what God or Christ really means in the book we call the Bible. The different meanings claimed by finite men is what has caused the turmoil of religious persecutions in the ages past and always will cause trouble until we learn the right way to interpret the Bible. When we make our lives an interpretation of what truth is and there is a clear harmony in living the Christ life with Christ's character and the characters of those who proved they were born of God by their all-righteous living, there

will then be no doubts as to what is the real pregnant truth of Christianity; that and that alone will open wide the gates of gospel grace into the "City."

The worldly man or woman who becomes so thoroughly made over as to demonstrate to the casual observer that they are no longer conformed to this world and the governing power of mind has so completely transformed their lives that every discordant note will be silenced, then he or she may go on like the Master to conquer and continue conquering until victory is won. No one has any fault to find with the church of the Living God who is alive to every known duty. It is the halt and lame who find the law of liberty a hard task to accept. The pilgrim whose feet are shod with the preparation of peace has no fault to find even if the way does lead by the "boggy man" of the proud world. He started on the route Christ traveled from Gethsemane to Calvary, hence no regrets. He knows the crown is after the cross. Everything in its order.

Truth is the same now it ever was. The larger it comes to us the more we have reason to rejoice. One thing sure, no child of God can outgrow the truth. It may make the child grow up to the full stature of a perfect man in Christ, our federal Head. The food Daniel lived on proved to be better than the food of the proud king and even he had to confess temperance was best after all. It will always pay to dare to be a Daniel. Never yet has it paid to be disloyal to the truth. Truth is the only thing that will make the Christian free. The Christian really is the freest person that walks the earth or breathes the non-poisonous air of the kingdom of God. He is bound to no secret order, he or she never bows at the shrine of fashion or folly. Above no social class of the four hundred. Knows the social circle of freedom's halls are heavenly places in Christ Jesus. God's truths, the psalms they sing, are sweeter than honey in the honeycomb.

Truth's field has no limit other than the needs of the soul and the expanse of everlasting realms of bliss. Truth is as deep as the foundations of eternity, high as the limitless heavens, and boundless as the home of God who is omnipotent. Omniscient as the wisdom of God is truth. Oh, the foolishness of man to tamper with truth, to try to circumscribe its meaning or to add to its interpretation. It is the one thing that admits of no comparison. The one thing so

ponderous, so full of life and strength that apparently crushed to earth it will arise again in all the majesty of its Author. In a sense to man, truth may be more voluminous than the Bible, though it means all between the Alpha and Omega of the wonderful Book, and yet the world cannot contain all the truth outside of it. Be still, O worm of the dust, and believe THE TRUTH.

Pasadena, Cal.

CONSECRATION.

At the present time there is much high-mindedness in the religious world—man thinking himself able to gain heaven. Man is loath to believe that self must be destroyed, but this and this only is God's way. Consecration is needed because self and everything of a selfish nature is foreign to God. Man is born in selfishness and sin and cannot of himself rise above it. Until emptied of self God cannot fill us with his fulness. A stream cannot be more nearly pure than is its source, neither can a fountain yield both bitter water and sweet.

Consecration is an entire yielding of the will to God—being able to say from the heart "Thy will be done" in all things. It means writing one's name at the bottom of a blank page and allowing God to fill it. The future is dark—one step at a time is all we can see. God, the Father, leads, and with uplifted hand clasped safely in his, we follow. Faith reaches from the soul to God, and we are not afraid. This is consecration.

If the will is really given up, everything else goes with it; but sometimes we think we have consecrated all, and when God calls for our time and talent, to use them in spreading the Gospel, there come up plans that we have made—plans for devoting our time for the accumulation of wealth, of using our talents for the winning of fame, and these stand between us and God. This is Satan's stronghold. If he can succeed in keeping one thing between us and God he has robbed us of everything. God never fills a soul with his love until he has the privilege of cleansing and fitting it for the indwelling of his Spirit.

The sinner consecrates his will—it is all he has that God can use. God does not want his sinful self; his burden of sin he brings only to get deliverance, and God removes it as far as the east is from the west.

The Christian consecrates the things that God has given him: his time, talent, friends and possessions. These are sacred because God has made them so. We need to consecrate these because they already belong to God and he would have them used to his glory.

All who would serve God need consecration—in fact it is impossible to serve him without it. Not

only missionaries and preachers need it, but those whose calling is at home. If we are ever used in God's service we must be consecrated in our home life. If ever the world is convinced of the reality of the Gospel, the every day life of consecrated souls will do it. Consecrated souls are so given up that they manifest the Christ life in their dealings, conversation, and appearance.

Since consecration is so important are there not some manifestations of its presence? Yes, and some of them can only be found where it exists. One of these manifestations is victory. Victory over self and the works of the devil. Who can overcome the secret inclinations of the heart, except it be by the power of God? God asks us to give our lives into his hands that he might give us victory that our enemies cannot refute. The soul having given up everything for God, naturally trusts God for everything. Here is the secret of victory.

Then there is the manifestation of power,—power to touch the hearts of the unsaved, to convict those who do not live worthy of their calling. The very presence of a consecrated child of God is a silent rebuke to worldly minded churchmembers. Not only have we power in personal effort, but our influence goes beyond our possibilities. The people of the world do not question the integrity of a thoroughly given up man of God.

Thousands are trying to serve God with unconsecrated hearts. Some knowingly, but many because of delusion. One evidence of this condition is a desire for the things of the world. The apostle's admonition is, "Love not the world." If we love the things of the world we are yet carnal, not having yielded ourselves to God.

Another evidence of a lack of consecration is an unwillingness to work wherever he calls. No one is ready for active service in the church who is not willing to fill a call at home. God knows for what we are best fitted. Where he wants us, is the place of most happiness.

Some have mistaken intellectual development or a high state of culture for consecration. If things morally low are repulsive to you it is not a sure sign of spirituality. Culture and refinement are good and needful, but let us first be sure that everything is on the altar. This only will stand the final test when the earth and its work shall burn.

"Oh, to be nothing, nothing,
Only to lie at his feet;
A broken and empty vessel
For the Master's use made meet:
Empty that he might fill me,
As forth to his service I go;
Broken that so, unhindered,
His life through me might flow."

—*Christian Monitor.*

ECHOES FROM EVERYWHERE

The American Woolen Co., known as the wool trust, has formally given notice to the manufacturers of clothing that an advance of 25 per cent on all goods will go into effect in the autumn.

Mrs. Margaret McCarthy, New England's oldest woman and probably the oldest woman in the United States, is dead, aged 112 years. Mrs. McCarthy was born May 30, 1797, at Minewah, County Cork, Ireland, and had documents which proved the fact beyond question.

Luther Burbank's latest creation, "the wonderberry" or "sunberry," has been labeled as "worthless" by the judges of the Massachusetts Horticultural Society. Thousands of amateur gardeners have made unsuccessful attempts to grow the berry, which is expected to rival the blueberry.

For some time in New York City the Hudson and Manhattan Railroad Company have been running special cars between Hoboken and 23rd Street, in which only women passengers were allowed. They have now been discontinued, owing to the fact that the women did not patronize them.

News comes from Pekin that the United States government has made formal protest against the ratification of the proposed treaty between Russia and China, giving virtually sovereign power to Russia in the towns along the line of the Russian railway in Manchuria. The objection is that the American residents in those towns will thus be deprived of their rights.

By order of the board of prison inspectors Missouri penitentiary convicts will no longer be required to wear stripes except for infraction of the rules. It is thought that the dread of wearing the detested stripes will be an incentive to good behavior on the part of convicts. It will require several days to make the change as there are 2,240 male convicts in the penitentiary.

The New York Aquarium has acquired an octopus after considerable expense and difficulty. The specimen was captured in Bermuda waters, and conveyed to New York in a large tugboat, which was specially chartered for the purpose. During the forty-eight-hour trip from Bermuda to New York, seamen were kept busy pumping water into the tank which contained the octopus.

The longest pipe line in the world is that which extends from the Oklahoma oil wells to New York harbor. At the present time the oil field of Oklahoma is the most active in the United States. It is not likely that the line will be put to immediate use for conveying oil over the whole distance. The completion of the system is regarded rather as a provision for emergency, and to meet the future conditions, when the Pennsylvania and West Virginia fields shall have been depleted.

Ambassador Takahira of Japan will sail from Seattle on August 17 in the event that Congress adjourns in time to enable him to get there before that date. He will go direct to Yokohama, Japan. The ambassador said that the question of his return to the United States would not be decided until his arrival in Japan. Personally, it was his expectation to return in the fall.

The Smithsonian Institution of Washington will erect on the very summit of Mount Whitney, Cal. (altitude 14,500 feet), an observatory which will enable investigators to study atmospheric conditions at great elevations, in dry air, and in clear skies. The observatory will be erected from the Hodgkins fund, and will comprise a three-room structure of stone substantial enough to stand for centuries.

The final dimensions of the great drydock which the United States navy is building at Pearl Harbor, in the Hawaiian Islands, show that the government is wisely building for the future. The dock will be 1,152 feet long from the coping to the outer sill, 140 feet wide at the top, and will have 35 feet of water over the entrance sill at mean high-water level. There will be a sill at the middle of the dock, for an intermediate caisson which will divide it into two docks, 575 feet and 532 feet long respectively.

Because of a depleted treasury and the certainty of a deficit it is probable the government will order an issue of \$397,000,000 for the purpose of building the Panama Canal. The subject was discussed by President Taft, Senator Aldrich, Representative Payne, Secretary MacVeagh and Assistant Secretary of the Treasury Norton. Cardinal Gibbons was also present. Out of the money realized from the bond sale the treasury is to be reimbursed for the \$40,000,000 paid to the Panama Canal Company of France, and \$10,000,000 paid to the Panama republic. The intention is to make the bond issue a part of the tariff bill.

Edward Payson Weston, the veteran pedestrian, finished his walk from New York to San Francisco July 14, just five days behind his schedule. He traveled a distance of 3,895 miles. Though tired, Weston insisted in walking five miles around Oakland to compensate for the five miles' trip across the bay on the ferry. A great throng met him at the Sixteenth Street station at Oakland at 9 o'clock and he was cheered all along the route. "Now let some of you fellows come on and show what you can do," he said. "I've shown I've got something left in me." Weston is 71 years of age. He walked from New York City to San Francisco in 105 walking days, resting Sundays. He had stipulated he could make the trip in 100 days. Whenever he came to a river he walked backward and forward a sufficient distance to make up for the distance traveled on the ferry. He averaged 38.1 miles a day for the trip.

Officers of the American Peace Society are sanguine over the prospects for influence on the public of the world in the coming international peace congress which meets in Stockholm Aug. 29 to Sept. 5. They point out that advocates of peace now command respect, whereas twenty years ago, when the first international peace congress was held in Paris, it was regarded as a meeting of impractical dreamers.

A call has been issued for a convention of the cattle breeders of the United States to be held in Denver next January, at which the danger that beef will soon go to prohibitive prices will be discussed. The packers and the beef producers of the West are back of the meeting, which is designed to call attention to the recent alarming decrease in cattle raising. Plans will be discussed for reawakening the interest of western ranchmen in the industry.

The tariff conferees have agreed to adopt the corporation tax amendment as redrafted by Attorney General Wickersham with the assistance of Senator Root. The tax is made 1 per cent, and holding companies are exempt. There are also exceptions of mutual benefit insurance and building and loan associations. Both the Attorney General and Senator Root appeared before the conferees to explain the details of this measure. It will take the place of the inheritance tax which was adopted by the house.

Neither trust fed, trust clothed nor trust armed will the American regular soldier be if Secretary of War Dickinson can prevent. The Secretary of War has just issued a new rule for the purchase of supplies for the army. He directed Brig.-Gen. Henry G. Sharpe, commissary man, to enter into no direct contract with any corporation which is a party to a trust or combination in restraint of trade. He has also directed that no dealings be had by the department with any agent or middleman who may be a representative of such a concern.

Rates of the Adams Express Company, the American Express Company, Wells, Fargo & Company, and the Pacific Express Company, between New York City and Boise, Idaho, and points similarly situated in the intermountain territory, according to a decision of the interstate commerce commission, "in almost every instance violate the general principle that a through rate shall not exceed the lowest combination of the local rates between the same points." This sweeping holding was made recently in an opinion in the case of the Boise Commercial Club against the express companies named.

Reports from the interior of Crete, July 18, say that many were killed in an earthquake that shook the island. The damage to property is also reported to be great. Means of communication with the interior are limited and the reports are meager, but it is understood the quake was coincident with the disturbance in Greece. Reports of death and disaster in the earthquake which devastated the province of Elis, Greece, July 15, continue to come in slowly. Troops have been hurried to the province and relief measures are being taken by the government. Dispatches from the officers of the troops say that a famine is threatened and ask that supplies be forwarded at once. The troops have met thousands of peasants who have quit their homes and are wandering aimlessly fearing another shock. The death list is now placed at 400, but it is acknowledged to be incomplete.

It has been left to the managing board of the Moscow, Windau, and Rybinsk railway to turn the gramophone to practical use, for the board has announced its intention to set up a huge gramophone at the Moscow station of the line, so that the arrival and departure of every train can be announced clearly to the traveling public. At the same time the gramophone will sound the bell thrice, as is usual, before a train starts on its journey. As over 70 per cent of the people of European Russia are unable to read or to write, the ordinary time tables are not of the smallest use to them, and the gramophone referred to has a splendid future before it, if only it can be made to speak clearly and loudly enough.

Don Carlos, of Bourbon, pretender to the Spanish throne, died in Lombardy, Italy, July 18. He had been ill a long time and latest reports indicated he was suffering from apoplexy, with accompanying paralysis. Don Carlos, who claimed under the special law of succession established by Philip V, to be the legitimate king, by title Charles VII, was born in Austria in 1848. His father was a brother of Don Carlos, Charles VI, in support of whom, it was claimed, the Carlist risings of 1848, 1855 and 1860 were organized. The rights of Charles VI devolved upon his prother, Don Juan. In 1868 Juan abdicated in favor of his son, whose standard was raised in northern Spain in 1872. Don Carlos himself invaded Spain July 15, 1873. Then followed the "four years' war," which ended in January, 1876, when the last stronghold fell. Subsequent Carlist agitations have been of little or no importance.

Many hospitals in England are provided with a special apparatus for extracting iron and steel fragments from the eye by means of powerful electro magnets. The magnet employed has a core three feet long and six inches in diameter of the best Swedish soft iron. Two hundred pounds of insulated wire are wound in two coils about the core. The end of the magnet is threaded to receive terminals of different shapes to suit various conditions. The magnet is mounted on ball bearings, and can be moved in any direction. The strength of the magnetic field may be varied at will by means of a rheostat. When used at its maximum power, the magnet exerts a pull of 30 pounds per square inch at a distance of an inch. A special type of apparatus is provided for reclining patients. In this case the magnet is mounted on trunnions, and is tilted by means of suitable gearing operated by a hand crank.

The national assembly of Persia, composed of the chief mujtehidis and the leaders of the nationalist forces, proclaimed the crown prince, Sultan Ahmed Mirza, Shah of Persia in the presence of an immense crowd in parliament square. Azad Ul Mulk, head of the Kajar family, was made regent.—The government is busy preparing to hold elections for the new assembly, and the official investiture of the Shah is not likely to take place until the next assembly meets. Efforts also are being made to establish a satisfactory police system. The new police commissioner, an Armenian, proposes to create a police system in the capital on the European model, with a force of 900 police selected from the Bakhtiaris and the Persian Cossacks. The organization of this force will insure the preservation of order and relieve the troops now in Teheran for service in the provinces, where there are still some dangerous elements of the population which require to be checked.

Among the Magazines

THE CURSE OF LEGAL TECHNICALITY.

Reverses of verdicts in serious criminal cases continue, in spite of protest and agitation. Supreme Courts profess deep sympathy with the demand for substantial justice and protection against crime, but go on upsetting hard-won victories for law and order on purely technical grounds.

In one State the Supreme Court sets aside a conviction because a "the" was inadvertently omitted from a rhetorical flourish in the indictment. It excuses itself by saying that the Constitution prescribes the flourish with the "the" and that it can't override the Constitution. Another Supreme Court sets aside a verdict in a sensational murder case because the jury was in some small particular improperly drawn. The question of guilt or innocence, of the proof and justice of the verdict, is not touched.

What is needed, clearly, is a provision in each Constitution expressly forbidding the appellate tribunals to exploit technicalities. Some States have already adopted such prohibitions, and all the others should follow suit. Rhetoric and surplusage should be swept out of all indictments, informations and legal documents, but, pending that reform, directions to the courts forbidding them to exalt trivial or irrelevant technicalities above the merits ought to be made a part of every Constitution. To say that courts can't even read a "the" or "of" into an otherwise perfect indictment is to step into the realm of absurdity. Constitutions should not even remotely sanction legal wanderings in that realm.—Chicago Record-Herald.

SAVED BY A LETTER.

The letter "e" has saved a St. Louisan, temporarily at least, from serving a 2-year term in the penitentiary. Because this letter was dropped in the drafting of the indictment against the accused man, the Supreme Court of the State has decided that he is entitled to another trial. Leo Judd is the name of the man who thus profits by a technicality. He was accused of fraudulent registration, the charge being that he had registered under the name of Charles Cohn. The evidence showed that Judd had really signed the name Charles Cohen and his lawyer argued that he was therefore not guilty of the offense charged against him. Technically, of course, he was not, but that he was guilty of attempting a fraud was not disputed and it was for that offense that the jury found him guilty. His crime lies in the fact that he signed a false name, and the effect is exactly the same whether he signed the name of Cohn or Cohen or Jablitzovitch. The purpose of fraudulent registration is to pave the way for illegal voting; the name has nothing whatever to do with the matter so long as the desired end is attained.

This decision is a parallel for one recently handed

down by the Supreme Court of Missouri, by means of which another man was saved the disgrace of a term in prison because the indictment under which his conviction was obtained omitted the word "the." In drafting the indictment, the circuit attorney wrote "against the peace and dignity of State," when he should have written "against the peace and dignity of THE State." The omission of the word "the," of course, had no more to do with the question of the guilt or innocence of the defendant than the omission of the letter "e" has to do with the guilt or innocence of the man Judd, who is the latest beneficiary of the system of deciding cases on technicalities rather than on evidence. The argument of the court in the Judd case is particularly interesting because it explains the mental processes through which the court went in reaching its conclusion that the defendant should be granted a new trial. Cohn is not Cohen, the court says. A rose by any other name may smell as sweet, but a man who is bad under one name is not of necessity bad under another, hence the information in this case is defective. The opinion says:

We can see no reason why this is not as material as any other provision in this section, and this being so, the circuit attorney properly decided it necessary to allege that the defendant did sign said registration book on the margin thereof, but when he came to make that averment, after alleging that the defendant had answered that his name was Charles Cohn, he proceeds to charge and allege that defendant unlawfully and feloniously did sign said register and books of registration by writing the name of Charles Cohen; in other words, it charges a registration under one name and a signature of an entirely different name; that is to say, the allegations of the information are repugnant in material matters.

The more often we meet with repugnant matters of this sort, the more thoroughly do we become convinced that they are not more repugnant than the result that they have in thwarting or delaying the administration of justice. Such decisions, and they are by no means peculiar to the Supreme Court of Missouri, loudly argue for the enactment by State Legislatures of a law such as that introduced recently in the Missouri General Assembly by Representative J. J. Kyle of Thornfield. The bill, which passed the House but failed to pass the Senate, provided that "neither the Supreme Court, nor any courts of appeals, shall reverse or remand any judgment rendered in any civil or criminal case, on any ground, unless the court, after an examination of the entire record, can affirmatively say that the judgment of the trial court was for the wrong party, and that but for the errors complained of a different judgment would have been rendered." Such a law might not have the approval of a certain class of lawyers, but it would go a long way toward correcting some of the most serious delays of the law and toward reducing the cost to the people of criminal prosecutions.—Woman's National Daily.

WHAT THE IDEAL PHYSICIAN SHOULD BE LIKE.

Dr. F. Cathelin, an occasional lecturer in the schools of medicine in Paris, publishes a paper in the *Revue du Mois* (Paris), in which he depicts the modern physician, not as he exactly is, but as he would like him to be, as he himself says. He dwells upon the question of the suitability, in point of character and conscience, of any candidate for the honors of the medical doctorate, as being a crucial one for the public, and suggests that those responsible for the acceptance of students for the medical profession care little enough for what the doctor terms the personal harmonies of disposition, provided the candidate can "pull through" his examinations.

Doctor Cathelin maintains that no person who does not possess certain "six moral senses" should attempt to enter the medical profession. These senses are: The sense of duty, the sense of responsibility, the sense of kindness, the sense of manual skill (which he subdivides into the sense of boldness and the sense of prudence), the sense of beauty, and the social role.

The sense of duty toward the patient is the very first requisite in a doctor. This sense can only arise from a positive and innate altruism or love of one's fellow creature,—a quality similar to that which moves the hospital nurse to devote her life to the care of the stricken. There can be no personal sensitiveness, nor lack of interest in details, as against an absorbing curiosity that complicated cases arouse. And yet, with all this sense of duty which calls for extreme goodness or sensitiveness of heart, he must not show a trace of emotion when his duty calls him to operate on a McKinley, a Carnot, or a Frederick II. In the profession the word equality has certainly found a lasting place. No matter how far he may have gone in his profession, or how rich he may have become, if he possess this sense of duty in his heart, he will die an active member of his profession, unless old age prevents him working.

In the matter of responsibility a doctor must follow the traditional advice,—namely, to do as he ought to do, no matter what the issue. No doctor can be held responsible for results that are independent of his zeal, and to limit his action by undue legislation is to put a stop to scientific medical progress. As for the sense of kindness, it is certain that the age of the brutal surgeon has gone by. There may be occasions when it is desirable, on account of a surviving family, to tell a patient that his end is approaching. But in the generality of cases, to pretend to see recovery in a patient is often effective, and is always kind.

The proper sense of manual skill in a physician is founded on reflective audacity,—that is to say, an audacity born of a sincere wish to succeed, and of common-sense. Bold doctors are frequently characterized as innovators. It is incontestable, nevertheless, that many of these doctors prove the greatest. Boldness is frequently the difference between the clever and conscientious surgeon and the simple operator or dissector who has grown bold through indifference. And yet, the surgeon's "nerve" must always be kept in check by his prudence. That prudence must depend much on his intuition, without which a doctor is a public calamity. Judgment and correct intuition must be part of his equipment. His sense of beauty must really be a sense of the artistic, an anxiety to execute with neatness and celerity; without these no operations can be said to be correctly done, either from the point of view of medical science or from that

of the patient. But, above all things, a doctor must be good in the sense of his possessing good moral qualifications. His social role, therefore, becomes of the greatest importance.—Review of Reviews.

PLAY AND THE BOY.

"Why, we've done everything for him," will be our first indignant answer, if anybody asks what we have done for the American Boy. "Look at our schools and our colleges!" Then, after a second thought, we may acknowledge that, as a nation, we have not taken good care of the normal, healthy boy upon whom the future of the country depends. We have looked after the boy as an individual possession, perhaps; but until recently we have been indifferent to him as an American institution. We have cared for the blind, the deaf, the truant, the feeble-minded and the incorrigible. They have had gymnasiums, amusement-grounds and all the luxuries civilization can devise, because their needs have appealed to our sympathies. Meanwhile, the boy without a handicap, the ordinary, vigorous, everyday boy, has been neglected. Schools have been provided for him, but his other needs have been ignored. Too often he has been denied childhood's inalienable right to play.

We have been slow to realize that the playing, wrestling and ball-throwing of boys are actually preparations that will make them the working, struggling, enterprising men who by and by will control the destinies of the nation. We are beginning to feel our obligation to provide proper environment in which the boy shall be helped in his play, but we have not yet realized the full possibilities of this outdoor education.

This playground idea is as old as the ancient civilizations. At seven years of age the Athenian lad entered the palæstra, where the first half of the day was passed in gymnastics, dancing and games. Until the boy was ten or twelve years old all studying was done in the open air, and until he was sixteen the training of the body was given precedence over the training of the mind. What the Greek system of education accomplished in producing not only physical perfection but superb attainment in art, literature and philosophy, has never been surpassed. Chicago has expended ten million dollars upon public playgrounds, concerning which President Roosevelt said: "They are the greatest civic achievement the world has ever known." These playgrounds and those of the other one hundred and thirty-six cities that support playgrounds are experiment stations from which the whole country may obtain inspiration for the future.

When it is remembered that the playground appeals to the boy in the formative period from childhood to manhood, the magnitude of our obligation is apparent. It is a civic obligation quite outside the domain of philanthropy, since it improves the quality of the citizenship of the future. The playground is as much a civilized demand as the public school, and it should be conducted as if it were of equal importance. Well-directed play is of just as much value as well-directed study.

The acceptance of the obligation to help the boy in his play will hasten the eradication of child-labor. When all the factories have poured forth their workers—girls as well as boys—into playgrounds, then, and not until then, shall we be justified in boasting of our American civilization.—The Delineator.

FASCINATION OF THE ORCHID.

(Continued from Page 731.)

but ill rewarded for his trouble. Still the business of raising orchids from seed is a fascinating one, though the process is very slow.

In the first place, it is usually a matter of from nine to twelve months after the fertilization of the flower ere the seed will be ripe. As a rule, it is bound to be more satisfactory to sow the tiny seeds on the soil around an orchid—the plants seeming to grow more happily under the shelter of a foster parent. Another three or four months passes, and the baby orchids make their first appearance in the world as small, green cushions hardly as large as a pin's head. How jealously the grower guards his charges, taking every precaution to shield them from extremes of heat or cold! It is no matter of wonder, for any of these green specks may grow into a plant which will be worth an enormous sum of money. Of course, as to this, the florist is quite in the dark, and five years, or in the case of some species, even ten or twelve, must elapse before the new orchid will be old enough to display its bloom.

The flowering time is anxiously awaited, and when it arrives quite often the florist will scan his collection of freshly raised plants in vain for any great novelty, and another disappointment is added to the long list of those which every orchid breeder will experience. However, if luck be on his side, out of several score of plants, one may be unique, and if the form should be an attractive one, there will be plenty of collectors only too glad to acquire the new variety without any demur at the high figure its owner demands.—*World's Work and Play*.

THE WOOLERS OF THE WOOD.

THIS romantic story may not be issued in book form, beautifully embellished, but if it should be, it would still be unfair to keep the reader in suspense, so we shall proceed at once to set forth the remarkable career of these (wood) be lovers.

This happy (Pear) lived in the (Buckeye) State, at (Mulberry) Grove, near (Ash) tabula. Mr. Henry (Hawthorne) was no common scrubby (Locus[t]), but was strong, tall, and majestic like the (Oak), a very (Pop[u]lar) young man, and she—Miss Minnie (Myrtle)—was a slender, genteel (Willow)ey creature, whose very nature seemed to (Pine) for affection and (Wood knot) be denied. It was a lovely scene to behold them as they sat on the rustic (Elm) seat, under the (Chestnut) branches, or to see them as they wandered through the (Sugar Maple) groves, which they often did until they reached the (Beech).

The sweet scented (Peach) blooms and the (Apple Tree) blossoms added to the joy of it all. Now, Henry was true as the needle to the (Pole); every time he gazed into her (Hazel) eyes, or looked on her

(Cherry) cheeks, his heart jumped for joy. He loved her more and more every time he (Cedar), and she was equally devoted; in fact, she was (Plum)b gone on him, but he never tried to (Bamboo)zle her, or (Palm) off any deception, and when the time arrived, he said, "Will you leave all and (Gum) to me?" "I will truly, surely," she said; "I must first ask my (Paw)," and here was the shadow, for he seemed set against it, firm and unyielding as (Hickory), but she did not care a (Fig) for this, for he soon relented and said, "Do as you think best; I (Walnut) further oppose you," and now they will be made one as soon as they can suitably (Orange) matters.—*American Boy*.

THE SCHOOL AND THE COMMUNITY.

(Concluded from Page 729.)

training. For this purpose, too, the judicious encouragement of school athletics will prove of great value. Our grade departments as well need to be overhauled and made more practical. The important things need to be emphasized, and the frills need to be dropped. The child should be taught especially those things that will help him most in his daily life when he goes out into the world. It is to the shame of our public school system that business men can point out so many public school graduates who are wretched spellers, poor writers, and have no working knowledge in simple arithmetic.

In conclusion it may be well to point out that there is an interdependence between the school and the community. The more the community does for the school, the more the school will do for the community. The children of today will be the citizens of tomorrow. It is merely a matter of "casting bread upon the waters." It is an investment of influence.—*Interstate Schoolman*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED—A minister to locate in Bristol where land is good and cheap. Good markets. Write for a 1909 farm price list for further information.—M. H. Miller, Bristol, Ind.

WANTED—That you know fully what M. M. C. has done for young people. This may be the turning point in your life. Have you seen our Booklet? Speak.—Mt. Morris College, Mt. Morris, Ill.

WANTED—1,000 Sisters to send for sample of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Ill.

DAYBREAK IN THE DARK CONTINENT

The author, Wilson S. Naylor, D. D., Beach Professor of Biblical Literature in Lawrence University, has been especially fitted for his work by extensive travel in Africa. He furnishes a clear, concise, comprehensive treatment of the theme. You will enjoy it. Many mission study classes use this as their textbook on Africa.

Special Features of the Book. Two hundred and sixty pages of text; eleven full-page halftone illustrations; two-page relief map with key; eight pen sketches; questions and references; chronological and statistical tables; bibliography, charts and suggestions; and a concise index. Price, cloth binding, 50 cents; paper, 35 cents. Postage, 7 cents extra.

BRETHREN PUBLISHING HOUSE
ELGIN, ILLINOIS

OLIVE BRANCH OF PEACE

AND GOOD WILL TO MEN

Elders S. F. Sanger and D. Hays

An interesting history of what the Brethren and Mennonites endured during the Civil War period because of their Anti-war principles.

"Upon the whole, the object in publishing this little volume especially as it relates to the Civil War is threefold: 'First, to give a true and faithful record of the sufferings and experiences of these Christian People.

"Second, to testify to God's goodness in protecting them.

"Third, to strengthen the faith of Christians who may yet be required to suffer persecution for the sake of Christ and his Gospel of good will to men.'"

One of our agents reports: "I took 12 orders for the book in one hour. It sells on its own merit." **Ask for terms to agents.**

Bound in cloth. Two hundred and thirty-two pages. Back and side title stamped in gold. Illustrated. Do not fail to order a copy.

Price, postpaid,75 cents

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

LITERARY ACTIVITY

OF

THE BRETHREN IN THE EIGHTEENTH CENTURY

Prof. John S. Flory, Ph D.

Every one who has read this book is ready to speak a word of commendation.

"I have read with much interest Prof. Flory's book, 'Literary Activity of the

Brethren in the Eighteenth Century.' It is, no doubt, one of the very best contributions to our historical literature that has yet appeared. The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every state-

ment. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author, —A Great Book."—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

"I wish to express my appreciation of 'Literary Activity of the Brethren in the Eighteenth Century,' by Prof. John S. Flory, Ph. D. I consider it a very valuable contribution to our church literature. The author is to be congratulated for the thorough treatment of his subject. His style is easy and attractive. It is a readable book and ought to find its way into many homes."—Prof. T. T. Myers, Juniata College, Huntingdon, Pa.

Bound in cloth, 335 pages,\$1.25

Brethren Publishing House
Elgin, Illinois

Two Centuries of the Church of the Brethren

This book contains the twenty addresses delivered at the Bicentennial Conference, Des Moines, Iowa, June 1908. The first large edition was soon exhausted and we have not been able to fill orders

for some time. The second edition is now ready and will be in demand, as several thousand of our readers neglected to purchase during the life of the first edition.

This new edition is printed on thin paper, making a volume about two-thirds the size of the former edition. Typographical errors have been corrected and the binding improved. Large, clear type, 400 pages.

The book is embellished with Twenty-five Full-page Photogravure Effect Portraits. These illustrations consist for the most part of portraits of the speakers who delivered the Bicentennial Addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

The book is a fitting souvenir of the Bicentennial year and should be found in every Brethren Home.

Send your order by return mail.

Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. A splendid sidelight to the Sunday-school lessons for 1909.

It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One cannot read the book without feeling a desire to help in spreading the Gospel.

Told at Twilight;

Or Bible Stories
That Never Grow
Old

By Elizabeth D. Rosenberger.

This book is written for boys and girls in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire for more Bible knowledge.

The book is beautifully illustrated. 151 pages.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

Ho! for Canada

It is not the purpose of the CO-OPERATIVE COLONIZATION COMPANY to slacken interest in its Colony at EMPIRE, California. This colony is now well under way; colonists are moving in and are well pleased and the work is moving along satisfactorily. But as the policy of this company is,—“CHURCH EXTENSION BY COLONIZATION,” steps are being taken to locate a colony in the Northwest.

After considering the various sections offered for settlement, the Directors at a recent meeting decided to locate

Colony Number Two Near Portage la Prairie, Manitoba, Canada

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its nearness to good markets,—only 56 miles from Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Manitoba.
6. The Low price of land, when quality and location is considered. These lands are now ready for settlement, are low in price and will soon be taken.

Join our Colony Number Two, secure a good farm in a prosperous section with good, nearby markets, excellent transportation facilities, where School and Church privileges are assured, and among people with whom you are acquainted. For fuller information, dates of Land Seekers' Excursions, etc., address:

Co-operative Colonization Company
North Manchester, Indiana

		\$28,647,000	1,552,540	

To December 31, 1908, the Federal Government has already expended over 28 millions in preparing homes for probably 20,000 families, possibly more, and must spend millions more before these projects are finished. With the Government the railroads that serve this territory are vitally interested in seeing that these acres are successfully settled by prosperous farmers. Whether these farmers are on government lands or on private lands irrigated by the government, is of minor importance; the main proposition is to supply as many homes for as many people as possible on these government projects.

Parties wishing information about any of these projects with the view of securing Government land or private lands for future homes should write to the undersigned for printed matter descriptive of the section of the country they wish to locate in.

*TRUCKEE-CARSON PROJECT

Mr. J. C. Waite,
777 Federal Bldg., Chicago, Ill.

Dear sir:—

I have, of course, been extremely busy since coming here. Nobody can appreciate what has to be done, until they get into it.

All of my crops are looking fine. They say my alfalfa can not be beat. It is cut and cocked up now. It will stand me in \$20.00 an acre this one cutting and I will get two more cuttings this season besides pasturage this early spring and late fall.

I figure it will net me \$50.00 an acre this year at least, after paying expenses of labor, etc. This alfalfa stand is only 1 year old.

Well, I must ring off. Trusting that I may hear from you soon,

I am yours truly,

(Signed) A. O. Foskett, Sec.

Tell the folks in Chicago they can never locate cheaper here than at the present time.

J. A. Bowers' apple crop of 1907 netted \$1,000 per acre, and in 1908, \$700 per acre.

E. A. Blair gathered from seven and one-half acres of apples 3440 boxes of fancy apples which netted \$5,500.00.

These results are only from a few points and a few individuals. Some localities report even greater yields, and show the possibilities of the country. The fruit crop was very good; many of the growers realized from \$700 to \$800 an acre for their apple crop this year, clear of all expenses. More land was sold in Idaho in 1908 than in any previous year. Land is still cheap. Settlers are going in very fast and the best opportunities will soon be taken.

\$400 Prize Cup Won by Colfax County, N. M. In Competition with Entire Irrigated West

Miami Ranch

is located in the choicest part of Colfax county, New Mexico, and it was largely due to the products grown upon and adjacent to this ranch that Colfax County won this valuable cup at the Interstate Industrial Exhibit held at Albuquerque, N. M., last October. Every State was represented—products from land selling as high as \$1,000 an acre were shown—but Colfax County won by many points.

Many other prizes have been won by this section of the country. New Mexico wheat took first prize at the World's Fair in Chicago, while apples raised in an orchard directly adjacent to Miami Ranch won the Gold Medal at the Chicago World's Fair. This orchard yields the owner an average annual income of \$300 an acre.

Miami Ranch

offers you health and pleasures as well as wealth. It's situated in a rich, cheerful valley, surrounded by picturesque mountains. Elk, deer, bear and other large game are to be found in the mountains, while thousands of wild duck and geese inhabit the surrounding lakes. The Rayado River, which flows through this ranch, is noted throughout the central west for its trout fishing.

The rainfall is sufficient to insure big crops. But with the gigantic irrigation system recently installed, there is not the slightest chance of crop failure.

The climate is perfect, the air is pure, and the scenery beautiful. Excellent church privileges, a good school and pleasant neighbors are all to be found on Miami Ranch.

Write for a free copy of our booklet, "Westward Ho." It tells in detail all about Miami Ranch. Tells how and when you can get a round-trip ticket from Chicago for \$30, and from Kansas City for \$25, via the Atchison, Topeka & Santa Fe. Write at once and take your choice of the bargain offers which we are now making on both large and small farms.

Farmers Development Company, Springer, New Mexico

The Great Commission

An artist's conception of the ordinance of Christian Baptism, reproduced in colors. An appropriate decoration for the home. Size of picture 18x24 inches. We have secured the entire stock of this work of art and are pleased to announce them at a sacrifice while they last. Each picture securely packed in a mailing tube.

The Brethren Family Almanac for 1909

A FIRST class almanac for the home. The twelve calendar pages contain the date of over 300 important historical events. Every member of the church will be interested in the biographical sketches of such men and women as Elder R. H. Miller, Sister Sarah Major, Elder John H. Umstad, John H. Filmore, Elder Peter Nead and Elder Jacob Mack. Announcements concerning the Annual Conference for 1909, and a History of the Brethren Church in Franklin County, Virginia, are unusually interesting. The Ministerial List occupies nearly 19 pages and gives the name and address of the 2,938 ministers of the Church of the Brethren together with a list of the Gish Fund Books. Several pages are devoted to a list of the Home and Foreign Mission Boards of the church with name and address of the members of each board. Sunday-school workers will be interested in the list of State Sunday-school Secretaries. A cyclopedia of useful information. Sixty-four pages. Price, postpaid, 10 cents.

No. 31.

ALFRED TENNYSON

DALLAS B. KIRK

"So was their meaning to her words. No sword
Of wrath her right arm whirl'd,
But one poor poet's scroll, and with his word
She shook the world."

—From "The Poet."

ALFRED TENNYSON was born in Somersby, England, August 6, 1809, this year marking the hundredth anniversary of his birth. His father, Dr. George Tennyson, was a clergyman, musician and poet. His mother, Elizabeth, was a daughter of Rev. Stephen Fytche. When seven years old Alfred started to school at Louth, a near-by village. The manners being rude and discipline rough he stayed only two years. His scholarly father now taught his son for the next ten years. It was in the home library that he read a number of his father's books.

When fifteen, Alfred wrote some verses which promised well for a bright future.

In 1827 he and his brother Charles published "Poems by Two Brothers."

These two young men attended Trinity College, Cambridge. Alfred was one of the apostles here. At the college in 1829 Alfred won the chancellor's medal for writing "Timbuctoo," a poem in blank verse. Arthur Hallam said, "Alfred Tennyson promises fair to be the greatest poet of our generation."

His father died in 1831 but Alfred lived with the family until 1837.

He published in 1830 a volume of lyrical poems.

"O strengthen me, enlighten me!
I faint in this obscurity,
Thou dewy dawn of memory."

—From "Ode to Memory."

In 1833 was printed "The Lover's Tale," and many years afterward (1879) appeared its sequel, "The Golden Supper."

In the golden dawn of the new century a bright morning star appeared—Tennyson, and such stars as Wordsworth, Scott and Coleridge were now set-

ting in the west; for the last three poets had already gained immortality.

1833 found the people reading "The Lady of Shalott" and other poems, which contained "A Dream of Fair Women," "Lady Clara Vere de Vere," and "The Palace of Art." In the latter poem we have the poet's theory of art. The Lady of Shalott almost reaches the high water mark of symbolic poetry.

"Out upon the wharfs they came,
Knight and burgher, lord and dame,
And round her prow they read her name,
The Lady of Shalott."

Arthur Hallam (the poet's dearest friend), who was engaged to the poet's sister, died in Vienna in 1833.

Another close friend of Tennyson's was Edward Fitzgerald, translator of "Rubaiyat" of Omar Khayyam.

Alfred's brother Charles married Louisa Sellwood in 1836, her sister Emily acting as one of the bridesmaids. Soon after this Alfred Tennyson became engaged to Emily Sellwood.

In 1842 "English Idylls" and other poems were published, which included "The May Queen," "The Two Voices," "Morte'd Arthur," "Dora," "Locksley Hall" and "Lady Clare."

"If you are not the heiress born
And I, said he, the lawful heir,
We two will wed tomorrow morn,
And you shall still be Lady Clare."
—From "Lady Clare."

And here are a few lines from "Dora":

"And for three hours he sobb'd o'er William's child,
Thinking of William.

So those four abode
Within one house together, and as years
Went forward, Mary took another mate;
But Dora lived unmarried till her death."

Wordsworth said, "I have been endeavoring all my life to write a pastoral like your 'Dora' and have

not succeeded." While Fitzgerald said, that "as an eclogue it came near the book of Ruth."

His popularity as a great poet was now rapidly gaining foothold in the reading world.

Carlyle wrote him in 1842: "I have just been reading your 'Poems' (edition 1842) and mean to read them over and over until they become *my* poems."

Tennyson's fame was firmly cemented when the "Princess," a medley, came out in 1847. This poem shows woman's place in relation to man and contains such short poems as "Sweet and Low," "The Splendor Falls on Castle Walls" and "Tears, Idle Tears," which are now favorite school songs.

Tennyson now received an annual grant of two hundred pounds through Sir Robert Peel.

In 1845 Edmund Lushington married Cecilia, the poet's younger sister.

After seventeen years of thoughtful composition "In Memoriam" was published in 1850. This lengthy elegy was written in memory of his departed friend, Mr. Hallam. This elaborate poem is widely read and shows the author's philosophy upon the subject of life and death. It is here we find,

—"that comes of self-control,
The truths that never can be proved
Until we close with all we love
And all we flow from soul to soul."

We learn from the memoir that Tennyson believed he was the originator of the metre in this poem, until after its publication, when he was told that the same metre was found in some of the poetry of the Elizabethan age.

In June, 1850, at Shiplake on the Thames, Alfred Tennyson and Emily Sellwood were married. They traveled for a while in Western Europe.

Having a very small capital to start with, they took an old house at Warminglid in Sussex but the first storm blew a hole in the wall and they finally found a fixed habitation at Chapel House, Twickenham.

On the death of Wordsworth in November, 1850, Tennyson received the laureateship. Hunt, Knowles and Taylor were the other names which had been given to Queen Victoria by Lord John Russell. Her Majesty was in favor of the author of "In Memoriam."

Tennyson's first child died in April, 1851. They now traveled in Italy and on their return trip met the Brownings in Paris.

In 1852 an "Ode on the Duke of Wellington" appeared. This was the first poem published while performing the duties of laureate.

In the lines,

"Not once or twice in our rough island-story
The path of duty was the way to glory,"

we find the keynote of this heroic character, Wellington.

A son (the present Lord Tennyson) was born in August, 1852. The poet's income was now five hundred pounds. He bought in 1853 Farringford on the Isle of Wight which is within sight of the sea.

Received honorary degree of D. C. L. in 1855 from Oxford University.

This same year "Maud" was published; this monodrama is a sentimental metrical romance in verse and shows the author's views on the social reform. It is here we read,

"My dream? do I dream of bliss?
I have walked with—Truth."

Howett said, "I don't know of any verse out of Shakespeare in which the ecstasy of love soars to such a height." While Gladstone said, "Mr. Tennyson's power of execution is probably nowhere greater."

The poet's ideas of democracy are found in "The Idylls of the King" (consisting of twelve parts or books) published in 1858.

In 1864 appeared "Enoch Arden." This epic is the pathetic story of a seafaring man. What a world of meaning in,

"But if my children care to see me dead,
Who hardly knew me living, let them come,
I am their father; but she must not come,
For my dead face would vex her after life,"

after Enoch gets a glimpse of his wife and children in their cheerful home. This poem has been dramatized in New York and London; was translated into Latin and also into seven different European languages. An excellent work and a credit to the author.

Made honorary fellow of Trinity College in 1869.

This is the year in which "The Holy Grail" was published. Fitzgerald wrote Tennyson: "I feel how pure, noble and holy your work is, and whole phrases, lines and sentences of it will abide with me."

And who is there, but can get inspiration from the thoughts which cluster around,

"Doubt not, go forward"?

1870 first saw "The Window, or the Songs of the Wrens" and two years later "Gareth and Lynette." This contained the "Last Tournament" and completed the series of poems, "Idylls of the King," which are considered by many his masterpieces. These epics of chivalry are worth a careful study.

When Tennyson read "Guinevere" to George Eliot, she wept. Lionel, the poet's younger son, married Miss Locker in 1878. In 1879 Charles Tennyson (Alfred's brother) died. 1880 "Ballads and Other Poems" was issued, containing "The Defense of Lucknow," "De Profundis" and a sonnet to Victor Hugo (author of that world's masterpiece, "Les Misérables"), etc.

Tennyson's dramas were published, 1875-84. The most noted are "Queen Mary," "Harold" and

"Becket." He lacked the dramatic faculty of a Shakespeare and his talent for creation was small, yet we must all acknowledge his broad intelligence and his keen interest in the problems of his age.

His Christianity was to him of the real sort, and his love of nature was a devotion.

Made a peer in 1884. This tribute shows the extent of his life work.

This same year "The Cup and the Falcon" was issued.

In 1885 his son Lionel died of a fever on the homeward voyage from India. "Tiresia and Other Poems" was published this year. "Locksley Hall; Sixty Years After," together with the "Promise of May," came out in 1886.

And "Demeter and Other Poems" was published in 1889.

Robert Browning, a brother poet, died this year, which distressed Tennyson acutely. He said of Browning: "A great thinker in verse. He has plenty of music in him, but cannot get it out; he has intellect enough for a dozen of us, but he has not the glory of words."

Tennyson took a deep interest in the young authors of his later years. He was pleased with the patriotic verses of Rudyard Kipling and wrote a kind letter to him.

Tennyson's work ranks high in the Victorian age of literature and commands a place in the world's literature of the nineteenth century.

He was to England what Longfellow was to America.

Generally speaking he lived a secluded life, thus bringing him close to the heart of nature. He had a reverence for law and freedom.

The sweet singer died October 6, 1892, having lived to a good old age.

The funeral services were held in the poets' corner, Westminster Abbey: two anthems, "Crossing the Bar" and "The Silent Voices" (both written by the departed poet), were used at the services.

He was survived by the following world-renowned English personages: Ruskin, Queen Victoria, and Gladstone, and outlived Macaulay, Carlyle, Dickens, Matthew Arnold, David Livingstone and Lord Beaconsfield.

There have been twenty-six poems by Tennyson set to music, he holding second place, our American Longfellow leading with thirty-nine.

I can highly recommend to every reader who wants to know more about this English poet to read "The Memoir" and "Tennyson's Complete Poems, Unabridged." The latter is published by Grosset and Dunlap, New York City, contains nearly 900 pages and can be obtained at almost any bookstore for fifty cents.

"Crossing the Bar" was written during the last years of the poet's calm life, and we close with its tranquil thoughts, hoping that it may be a reality to each reader:

"Sunset and evening star,
And one clear call for me!
And may there be no moaning of the bar,
When I put out to sea.

"But such a tide as moving seems asleep,
Too full for sound and foam,
When that which drew from out the boundless deep
Turns again home.

"Twilight and evening bell,
And after that the dark!
And may there be no sadness of farewell,
When I embark;

"For tho' from out our bourne of Time and Place
The flood may bear me far,
I hope to see my Pilot face to face
When I have crossed the bar."

Pentz, Pa.

IN THE MEADOW.

We walked in the meadow, one morning in summer,
And gathered some blossoms that grew by the way,
And heard in the woodlands the brown partridge drummer
Beat up his brown soldiers to drill for the day.

The robins were singing their songs, sweet and merry,
And bluebirds were caroling, plaintive and clear,
And far away up in the limbs of a cherry,
The sound of a mother bird's talk we could hear.

The air was astir with a jubilant chorus,
The fields and the woodlands were bright with a smile,
And the blue sky bent tenderly, lovingly o'er us,
No cloud in its brightness to stain or defile.

We stopped by the stile where the fragrant sweet clover
Held up to the morning its clusters of red,
For the kiss of the sun, as a girl to her lover
Lifts up her pink cheek with her wishes unsaid.

We paused in our walk and looked out on the meadows
That glistened afar in the smile of the morn,
And noticed the shifting and tremulous shadows
The blithe breezes made in the rows of the corn.

How happy the winds were that whispered around us,
And laughed in our faces with frolicsome glee,
And the many sweet flowers in vain strove to drown us
In waves of sweet odors, a deep fragrant sea.

"Did you hear what the wind said?" I asked of the maiden,
That walked by my side with her hand in my own;
She answered: "Ah, no! for the breezes are laden
With too many whispers to hear one alone."

"I heard," low I answered: "They said, 'See those lovers,
They walk through the meadow, each heart full of bliss;
The secret the wind-nymph most quickly discovers,
'T is told in a look, a word or a kiss.'"

She blushed, and I saw all the roses grow paler
With envy and longing. She lifted her eyes,
With a shy, feigned expression that could not avail her—
I knew that she felt neither fear nor surprise.

So I kissed her, and then all the winds fell to singing
Some merry glad song that was almost a psalm,
And down deep in my heart was a melody ringing,
That chimed with all nature in infinite calm.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXVIII. Addresses the Boys on the Battleship.

ONCE upon the *San Francisco*, which I found rather more democratic than the *Brooklyn*, I was asked to address the boys. They gathered at the prow, under the canvas, about one hundred and fifty of them, bright, cheery, robust American youths, and heard me in a lecture and then in some readings, numerous of them being so kind as to present me with cash presents of from twenty-five cents to five dollars each, for they knew how much harder it was for me to get along by my way than it was for them, and they looked at me as if I had been a wonderful hero. I told them of my narrow escapes in Turkey and of the ever-present difficulties besetting my path, and from what they themselves could glean from the nature of the Turks

about them they appreciated to the full what I told them and wondered how I ever endured the terrible strain all alone, in my adventures. We were glad to see one another, I tell you, and some of them said they were homesick and wished they were back home, or along with me.

On going up the *San Francisco* I had dismissed my boatman and when ready to leave for the Russian vessel I had the honor to be conveyed back in the little steam launch. From the deck of the *Lazareff* the passengers saw me in the little white launch, gliding over the bay, with the beautiful stars and stripes flying at her stern, and as I drew near they went wild with delight.

When the launch drew up under the Russian ship so that I could climb up the rope ladder, the passengers aboard leaned over the taffrail to get a closer glimpse of the little launch and of the stars and stripes flying so proudly from her stern. And when I came up on deck, they took me by the hand with such an enthusiastic fervor as to make me feel that to be AN AMERICAN CITIZEN was a FORTUNE IN ITSELF.

Some of My Audience on Battleship San Francisco. Do You Know Any of Them?

Shortly after the Russian vessel was under way the Russian Jews again began their prayers. They each bound the square little box called "frontlet" on the forehead, the leather thongs passing around the head and being tied. On the left arm they wrapped a leather strap, giving it seven twists, and then began the oscillatory motion, twisting their heads and

trunks and reciting in a mournful melody portions of the Holy Scriptures.

In the afternoon we landed at Joppa, where four or five lusty natives rowed me and my wheel ashore for about a fourth of what it was really worth, for the rocks here are dangerous in the swell and only strong and experienced men may pull at the giant oars.

I was at last in God's land. Joppa! How queer its streets! How strange its customs! The first five minutes here was worth a thousand dollars. Talk about museums and Barnum's circuses. This is a hundred times better. As I walked up the narrow, crooked, rough-paved streets I bought ripe figs and melons and oranges. Our Lord chose a good country

in which to be born and to live. People are satisfied here.

My tires were in bad shape and I was so eager for my mail that I could not wait, but took the little train for Jerusalem, sharing en route a watermelon with a Moslem, and pulling a ripe fig from a tree growing close to the track as I stood on the platform in the mountains near Jerusalem. It was about sixty miles and just before sunset we reached the city of the Great King.

The natives at the station who had come to greet their incoming friends, leaped and jumped at them like madmen, kissing them first on one cheek, then on the other. The Arab hackmen and baggage carriers made savage attempts to get my little bundle and me, but I preferred to take my own time and walk into the city of Jerusalem, about a quarter of a mile away, the walls of which we could plainly see.

My mail would be at Cook's Tourist Agency where I had it sent from any friends writing me. But I could not get it till the office opened on the following day. I was nervous about it, for I didn't know whether my mother was dead or alive. She had been carried to the hospital at Freeport, Ill., for operation for gallstones and no one who saw her believed that she would live, not even the doctors. The last letter from her found her just about to go under the knife. The letter or letters lying in the office a few doors from my hotel contained the information—the news from a far country,—which would make me sad beyond words, or glad in the extreme.

From the top of the grand new hotel where I was welcomed by the genial proprietor and by Dr. Sulah Merrill, our delightful and cultured U. S. consul, I was shown, first of all, the bare hill of Golgotha where the Savior had been crucified for me. Then my guide turned my gaze to the right where rose the graceful Mount of Olives. The temple area, between, and David's tower near by, could be seen.

With a big bundle of mail in my arms I ran to my hotel and began to open it. First I opened the letters

from home, in order of their postmarks. Mother had been operated upon. She had rallied. She was living. I read fast and thanked God for the glad news. Then I tore open another. She was improving rapidly and was to leave the hospital! So, I was all right. The Holy Land, which before was offering to me, as a tourist, a doubtful pleasure, now unrolled in fairest colors beneath my buoyant spirits. I was to have a grand time there, and I knew it. But I couldn't help praising God and re-confirming my faith in him who does everything perfectly. Dr. Merrill and wife rejoiced with me. They were happier for my sake. I walked about over the city of a thousand woes like one enchanted. I bathed my temples in the cool, clear waters of Bethesda. I bathed my eyes and my lips,

hoping that its healing balm would cause my eyes to see more of the goodness of our world and that my lips, anointed by this seraphic water, might speak more acceptably the praise of the Maker above.

No one but the believing Christian who has been here can know of the wonderful delight and strange emotions that filled my soul when I looked for the first time upon these most

sacred spots of all the earth. It was wonderful even to bow the head and say grace at the table; to kneel at the bed and say my evening prayer; to lie down upon the clean, white sheets, and just dream and dream and dream and, whether waking or sleeping, laugh to myself to know that I had at last reached the Holy Land and that although I had started penniless I was in the most wonderful city of all the famous historic places on the globe, with all the land open to me for my eager feet. Over everything and in everything, I saw the Christ, not as a fanatic, or as a narrow bigot; but as a student of the Bible and of history; I saw him here, with customs and dress exactly like those in the days of Abraham and Paul. As I sauntered down the Jewish street near the hotel, some men were buying grain from one of the dealers. The wheat was heaped up on the measure, then pressed down, and finally heaped again, and running over, and then poured into the bosom,—

Launch from Battleship Leaving Russian Vessel After Bringing H. M. Spickler. Beirut, Mediterranean Sea.

the big sack-like folds of the outer garment of these men, hanging against the chest and stomach.

A strange light pervades the Judean hills. I am in a strange country, but I am at home to everybody and to everything. I want to be so full of life and good and so running over and pressed down and shaken together as to get and give the most out of life.

Tomorrow I intend to try to walk down to Jericho, twenty miles away.

JUTE.

T. H. FERNALD.

JUTE is a vegetable fiber which, although having been generally known but comparatively few years, has come to occupy a position with rice and flax. The term *jute* was first used by Dr. Roxburgh in 1795, in which year he sent a bale of the fiber to the directors of the East India Company, calling it "the jute of the natives." At an earlier date the substance was imported into England under the name of "pât" by which name it was called in India. The modern name is from *jhot* or *jhout*, by which it is known in the Cuttack district today, where there were extensive factories owned by the East Indian Company. At the time Dr. Roxburgh used the term *jute*.

This fiber is made from two species of the *corchorus*, a low shrub, native of India. The leaves are simple, the flowers are single, but occasionally in clusters, placed opposite the leaves; sepals five, deciduous; five petals, many stamens, one style, with the fruit pod-like. There are fifty different species.

There are but two species of the plant used in making the fiber, and there is but very little difference in them; a person not accustomed to them could not tell it. These with other species are native of Bengal, where they have been cultivated from a very early date, although it is believed they did not originate in Northern India. Of the two species used in making jute one attains a larger size than the other, while in one the seed-pods are globular, rough and wrinkled; in the other they are slender, quill-like cylinders.

They are cultivated in India not only for the fiber, but for the leaves which are used for a pot-herb. In 1872 there were 921,000 acres of land in Bengal under the jute cultivation.

Jute has not until recently been cultivated to any great extent except in Bengal, although it has been raised in the Hankow district, in China, from an early date. It has been raised in the United States to some extent, but not largely, and also in Egypt.

It requires a hot, moist climate, with abundant rain, and a very rich soil. The land should be well tilled and abundantly fertilized. The ground being well prepared the seed is sown from about the middle of March to the end of May. The seed is sown broad-

cast, the young plants are thinned out to six inches apart, and are ready to be cut down from about the middle of August to the middle of October. The plants are cut well down to the roots, and the best fiber is made from the part which is cut while in blossom.

The quality of the jute is judged by the color, luster, softness, length, strength, uniformity and cleanliness of the fiber. The best jute is made from a clear, yellowish white, soft, silky, smooth, fine, long and uniform fiber. The length of the fiber varies from six to seven feet, but is often fourteen feet.

The spinning and weaving is not very much different from that of hemp, the machinery being similar. The coarser has machinery differently adjusted from the finer fiber.

Jute has of recent years been manufactured into paper, as well as cloth, and is now grown quite extensively in the southern section of the United States, and the trade is rapidly increasing in this country.

THE WEB OF LIFE.

LUELLA G. FOGELSANGER.

LIFE is sometimes compared to a great river rising at the throne of God and flowing steadily on until it reaches the ocean of eternity. It has been compared to a journey through a dreary desert, over burning sands and rocks and mountains; yet containing at uncertain intervals verdant oases which rest the weary eye and cheer the drooping soul. It has been compared to a race in which many are striving; yet the path being so steep, so narrow and so difficult, few attain the goal.

We use still another figure,—that of weaving. Our mind is the loom; our past life the finished product; and our strong traits of character, whether good or bad, constitute the warp of this fabric; while our thoughts and acts serve as the filling or woof. The will is the shuttle which goes steadily on, moving back and forth, weaving in the tiny threads which modify the harsher lines made by the warp, and which make the finished material so delicate and so beautiful.

This process goes silently on, never ceasing. The good weaver works silently and patiently, cheering others by the beauty and splendor of his delicate threads. These threads not only glow themselves but they cast a radiant gleam on the work of less fortunate ones. Many workers sit in the shade of the juniper tree and weave in their threads with fear and trembling, never lifting their eyes to the bright sunshine, or the weary workers about them, but they continue to mourn and weep over their own petty discouragements and imperfections. Their work may be fairly good and evenly woven, yet it lacks that luster which

radiates from the fabric woven under the glorious light of heaven.

The weaver is doubly blessed who smiles, while his heart is bruised and bleeding. The soul cannot always scale the heights of idealism and cause the individual to forget the vexations, the pains, and heartaches which are the inheritance of the body; but it can surely do as much as the tiny flower when it lifts its face towards heaven, and radiates a soothing perfume to the passer-by. At such times, when the days seem long and the nights dreary, a voice like distant music sings to the drooping spirit:

"There is no task which may not be finished; no burden which shall not be lifted; no cloud which shall not be dispersed; and no night which hath not its glorious dawn."

Do we realize how awful are the records of this shuttle if we are selfish, envious, unkind or unfaithful? Do we realize how a fabric containing such threads will appear under the searchlight of truth which reveals every imperfection? Do we realize what little effort a kind word requires? What little time a kind act takes? How much good a bright smile does? If we did, would we not have more golden threads in our fabric? These threads would cover by their gleam the many knots and unsightly blemishes which even the best weaver allows to occur in an unguarded moment.

The smallest threads make the most beautiful patterns, and the one who is content to weave in such fillings as humility, meekness, patience, longsuffering and obedience, will not have a fabric that will look brilliant from the world's point of view; but on the side towards heaven will be gleaming threads of silver and gold which even the ages of eternity cannot dim, and one that will be in harmony with the perfection found in the bowers of the heavenly Eden.

By the faithful performance of every duty we may cause the soul of a more talented person to unfold and blossom forth in acts of piety and goodness which we ourselves could not attain; or we can hold an unsightly, irregular, blemished texture before their eyes, and by this imperfect example cause them to cease trying and be satisfied with the mere tinsel of this life.

A myth is told of the Greek goddess Athene, who among other things was goddess of weaving. At one time she taught a mortal maiden this useful art. The maiden became so proficient that she challenged Athene to a contest. The contest was held and Arachne, the maiden, entirely vanquished Athene. This so enraged the goddess that she struck Arachne with her shuttle, and the maiden, humiliated at the insult, hanged herself. Athene, angered at her for this, changed her into a spider. So, by the myth, the world has since had the little spider to teach lessons of skill and diligence by its untiring patience in weav-

ing its dainty and beautiful webs. And just as the spider contains within its little body the possibilities for weaving beautiful webs, so there is something implanted in the human breast which yearns for the ideal and ever strives after it.

Yet do we weave our web of life with as much diligence as do these tiny creatures? If we would, there would be no regrets like myriads of little insects swarming about us continually. When the shuttle flies back and forth and the idle word becomes a part of our web, we cannot with tears of regret remove it; an unlearned lesson leaves a vacancy which cannot be filled; an act of disobedience or rudeness leaves a place which cannot be smoothed by the deepest remorse. "When Eve stood without the green bowers of Eden, tears of remorse could not reinstate her; when Esau sold his birthright, groans of anguish could not bring it back; when the five virgins failed to provide oil for their lamps, the opportune time had gone forever, and justice was meted by a righteous judge."

If one should fail in this only task given him, would not the angels in heaven weep that such costly raiment was marred and disfigured by unsightly blemishes? As the lily is pure and spotless, so may these fabrics be, if care and diligence are exercised in choosing the material.

May we all weave such threads into these immortal fabrics that when the years have gathered on our heads and left their silver threads above our brows; and when the eager hopes of youth, the courage of our older years, and all that makes us long for better things, shall merge into a restful peace, we may hear our Savior softly call, "Dear tired weaver, look up and see the dawn, 'tis God's reward for you."

Elizabethtown, Pa.

OUR EASTERN TRIP. No. 2.

D. M. CLICK.

OUR former letter closed at Annual Meeting and now we will give the readers of the INGLENOOK a few reflections while at the park at the Conference. For those who carefully observe the passing scenes at such great gatherings it is quite interesting to notice how indifferently many of our own people spend the time, especially on the Lord's Day. We are sometimes told that our young people are quite careless and even impious at places of that kind, but we wish to state here that our young people showed as much or even more true piety than some older members whom we would think ought to set noble examples for the young. We should all endeavor at all times and at all places to show ourselves living epistles of Christ, read and known of all men.

While the large tabernacle was crowded to overflowing and many could not get near enough to hear,

yet there were many good sermons delivered at different places on the grounds so that our people could have the privilege to hear the speaking if they desired to. Some being asked to go and hear certain ones who were preaching in the park, replied that they heard preaching at home and that they had come there to have a good time, and these were not young members either. Would it not be wise in us all to carefully consider our influence at such places and also what effect our words may have on others? "Let your light so shine before men that they may see your good works."

Then at the noon hour there was a rush and a jam to get into the large dining hall for dinner. Many men acted very unkindly to the women and children seeming not to care for any but themselves, crowding the weaker ones aside so that they might gain admittance first. Many of our dear brethren and sisters are favoring the idea of dispensing with this Sunday dinner and in view of these conditions would it not be more in keeping with the Bible injunction to remember the Sabbath day to keep it holy? It seems but natural that it would be much better for the spiritual growth of the church if we could dispense with these Sunday objectionable features. A deeper spirituality is what we need in both old and young and may we all pray and labor to that end.

The yearly meetings are a great stimulating power to those who attend for the purpose of being spiritually built up, and may we ever endeavor to still make them a source of greater good to the church and for the saving of perishing souls.

A few days after the Conference closed we left Harrisonburg and went to Mount Sidney in Augusta County and here at Middle River church we had the pleasure of enjoying a love feast June 5. We also had the pleasure of worshiping with the members of this church on Sunday and Sunday night following.

WITH AN AMERICAN GIRL IN MALTA.

WE approached the island of Malta about 6 o'clock in the morning. The Mediterranean was calm; the skies were clear. In my mind this island figured as a vague but wondrous place of importance in mythology and biblical history. For was it not here that Ulysses was held enslaved by the charms of the nymph Calypso? Was it not here that the Apostle Paul was shipwrecked on his way to Rome—a captive?

As our ship passed St. Paul's Bay we gazed long and earnestly at "the place where two seas met." We saw the chapel erected to the memory of the great apostle. We noted "the certain bay with a beach" and began to feel the spell of the rock-ribbed Isle of Malta.

Then, as we steamed into that wonderful harbor and

saw the formidable fortifications, the English guns frowning down on us, and the English and Maltese flags waving welcome to us, we realized that at last the land of dreams was at hand.

Rowed ashore in small boats by stalwart Maltese men, we at once began to feel the strange sensations of Valetta—Malta's capital. The photograph shows something of the harbor and the fortifications; but little idea of the whole great harbor and of the picturesque city itself can be given by any picture.

First we drove in queer little carriages up the main thoroughfares to the Church of St. John. Once within the portals of this great building its spell seizes upon each visitor. Little idea of its grandeur can be conveyed. Ornate and to an artist's eye overdecorated, it is still to the ordinary observer "a thing of beauty and a joy forever." And as the priest with hushed voice conducts the visitor from one chapel to another the mind is filled with a variety of impressions—not only with wonder at the beauty, but with marvel at the vast amount of workmanship displayed. Then, as with bated breath you gaze on that beautiful silver altar, which was saved from the cupidity of Napoleon by a quick-witted priest, who painted it black—you realize how historic is the ground which you are treading. And as you look upon the tombs of the grand masters and the four hundred marble memorials of the Knights of St. John, you picture again the stirring deeds of the Maltese knights, their greatness and glory.

As we left the cathedral we met a flock of goats, which were being driven from door to door. We watched the driver stop to milk the goats whenever he found a purchaser. By this method of delivery each buyer is sure of pure, unwatered milk. It was a sight strange and interesting to us Americans.

But most interesting to us of all things we observed was the headdress of the Maltese women. The large and strange looking head covering is called the valdetta. It is made of Florentine silk and the piece over the head is stiffened; a small loop near the bottom, in which she places her finger, is the only method the Maltese woman uses to secure her peculiar head covering.

The stories of the origin and meaning of the valdetta are various, but that accepted by most people is a sad one. When Napoleon took Malta in 1802, his soldiers forgot all law and decency and many of the Maltese women were outraged. So the valdetta was made to cover the heads of all Maltese women and to express to the world their shame and their mourning. The season of mourning—100 years—has now passed, so many are discarding the characteristic head-dress.

As we proceeded up some of the narrow side streets, built, as shown, with rows of stone steps, we gazed in-

to the little shops, and now and then stopped to examine the noted products of Malta—the Maltese lace. The streets in themselves were exceedingly interesting—the shops were queer and inviting; but the motley throng upon the streets is enough to turn one's attention from the shops, for it is the most cosmopolitan in the world. Even the Maltese themselves, who speak a dialect, a mixture of Arabian and Italian, are the most mixed of races. Not only are the Maltese a mixture of Arab and Italian, but as we look at them we feel sure that in their veins runs the blood of various conquerors—Phœnician, Roman, Vandal, French and English.

On this day, when we visited Valetta, the people were celebrating the greatest fete day of the year. So we found ourselves in the midst of a huge carnival. All the streets were filled with merry-makers. Clowns and floats and gayly masked maidens thronged every street. Few were laboring, for almost all celebrate this great festal day. The procession was a long one, and at its head were two mummers, who waltzed for miles through the city, graceful and tireless. Indeed, in their gay attire they all appeared a care-free, happy, child-like people.

But we, impatient of the revelry, turned aside from flowers and confetti and throngs of people to the quiet side street, where we found the lacemaker at work. It was a peaceful little place, and though we were invited within the humble home, the nimble fingers never ceased to move rapidly making the dainty lace, which, like all of the true Maltese, was beautifully made. The care and patience of the woman working at her ill-paid task served as a lesson to us impatient sight-seers.

Not content with impressions of Valetta alone, we proceeded to the railway station and bought for three pence half penny a third-class ticket to Citta Vecchia, the ancient capital of Malta. Seated in the queer little carriages with Maltese soldiers, native priests and English gentlemen, we Americans gazed with surprise at the country outside of Valetta. We noted that there were few trees, but our guidebook said that numerous hurricanes had destroyed them. However, the grass was green and the vegetation luxuriant.

Long, loosely-built stone walls separate one tiny farm from another; these walls are built so that the water may, during the rainy season, filter through from one terrace to the one beneath. Few farms have more than three acres, and often one serves as support for a number of families. The people live on fish, olive oil and bread or macaroni. House servants' wages are about 16 shillings a month. This interesting information was given our party by an English school-teacher who happened to be in our coach.

As we gazed at these tiny rock-enclosed spots and then at the houses, we became more and more inter-

ested. Each house was made of stone and was square or oblong in shape. Each contained but one door and usually only one window. These were made of wood (we learned that glass was too expensive).

So, through this strange and picturesque country we journeyed the eight miles to the ancient city of Bible times. From the picture the reader may gather a faint idea of the walls and the native houses, with the Citta Vecchia in the background. But no words can describe that ancient, crumbling city.

As we climbed the hill and walked the narrow streets, first passing through the poverty and squalor of the wretched district, and then on up to the Church of St. Paul, erected upon the site of the house of the Roman governor Publius; as we left the upper air and journeyed underground into the old catacombs (second in size only to those at Rome); as we penetrated further and further underground we felt most truly the spell of antiquity. But when our guide took us into the cave where Paul was concealed during his three months on the island, we all felt the power and greatness of that wonderful biblical character as never before.

When we reluctantly turned from the decaying city and again sought our train at the foot of the hill, we shook from us the spell of far-off times and looked with double interest on the Malta of today.

Then we learned that Malta is improving under English rule; that many are availing themselves of the education offered by the English government; that wages are higher than they were a few years ago; that new methods and new customs are giving this quaint people more and more of modern civilization.

Still, when we had again reached Valetta and saw the carnival at its height, the gayety, the mirth, the wildness, we wondered if the Maltese were not content to be left to their own ways.

Before we returned to our ship we stopped at the renowned Chapel of Bones. A pious priest escorted us through the wondrous cavern and explained that here were over 2,000 skulls of Maltese soldiers killed over 300 years ago in gallant defense of their native land; and that these bones were collected and placed in these remarkable designs—patterned after the Maltese cross—by one Maltese monk, who devoted his life to the labor of constructing this grewsome work of art.

With a shudder we left the strange place and sought our ship and soon were sailing out of Malta's most magnificent harbor, watching with regret the towers and battlements of Valetta pass from our view.—*Woman's National Daily*.

LIFE fellowship with Jesus is the only school for the science of heavenly things.—*Andrew Murray*.

NATURE STUDIES

BIRDS IN THE SOUTH.

J. I. MILLER.

THE native birds or those that stay with us all the time are different from those in the North. One of our sweetest song birds is the native mocking bird. It is an early riser, often perching on the house top or in some close-by tree and sending forth its melodies at the first peep of day. It is about as large as the brown mocking in Pennsylvania and Missouri with larger wings. In color it is a mixture of white and pale blue, making it a sort of gray.

It rears about three or four broods of young birds each summer; lays from three to four eggs at a time. It is very destructive to our grapes, figs, peaches, etc., when they ripen. And while it is a violation of the law to kill them many are shot to save the fruit.

The wild canary is another nuisance. It is a little larger than the tame canary, is much the same in color and is also very destructive to fruit. It is not much of a song bird.

The oriole is much the same as that of the North but a little darker in color.

The prettiest bird we have here is the cardinal or native redbird. It is a real bright red, with a nice top-knot or crest on top of head and is a most beautiful singer. We have one in our house and have had for more than a year that found its way through a broken pane of glass into the schoolhouse where our daughter was teaching and she captured it. It can and does sing in so many different ways or tones, but from the fact that they are rather shy they take to the woods and do not come to fruit trees unless the trees are close to the woods.

The above are about all the song birds except the common meadow lark. They are nice warblers, same in size and color as in the North, but more plentiful; they are here by the thousand.

Then we have lots of game birds, but I will leave them for another article. The robins of the North spend a portion of the winter with us, but are not so numerous as they were in Florida; they do not sing while here. They eat the berries of the China trees and become intoxicated so they lie like dead for ten or fifteen minutes, then sober up and fly away. They never nest in our part of the South as we know of.

A very few bluebirds come here in winter, but do not

stay long. We did see a few spend the summer in Florida.

The butcher bird is a native bird of the South and is the most cruel bird we have ever seen. It is not quite as large as the robin, but is a great fighter and cruel in the extreme. It will catch all manner of bugs or insects of small size and impale them on any sharp object it can find. In Florida it put them on the thorns of the orange trees; here its principal place of torment is the barb on the wire fence. We have seen snakes from six to twenty inches long that these birds "hung up." They will take young birds from the nests of other birds and hang them up, and we think they do it for wanton cruelty, as we have never known them to eat their prey later on. This may seem like a bird story to those that have never seen the butcher bird and know nothing of its habits, but it is true all the same.

BIRDS WE SELDOM MEET.

THINK of a bird cutting down a tree, and a good-sized tree at that! It seems almost an impossibility, particularly as the bird which accomplishes this feat, the South American woodhewer, is no larger than a pigeon. Its bill, however, is extremely powerful, and is as sharp as can be. The woodhewer ranges through tropical South America, and is not at all popular. Sometimes it attacks a coffee plantation, and it is also fond of the milk of the India rubber tree.

In size, as told, it does not exceed a small pigeon. It is usually brownish in color, occasionally mottled, while its neck is streaked with gray. Its beady eyes have a malicious look, as if it really enjoyed doing damage. In fact, its appearance is in no sense pleasant, almost terrifying, when we stop to think what it can do with its bill. But the woodhewer never tries its powers on man, its savage instinct being directed wholly at trees and the insects it devours.

Occasionally the woodhewer strays into the extreme southern section of North America, but not often. Here it is usually confounded with the woodpecker, which is really a slander, for the latter bird is a benefit, save when it becomes too friendly with ripened fruit. Central America, particularly that section thereof adjacent to Mexico, is frequented by the woodhewer, and great mahogany trees have been found in Guiana lying prone, looking as if they had been felled

with a lumberman's saw, when really the sharp bill of the woodhewer is the only agent that brought about the fall of the tree.

There has been much speculation on the part of naturalists as to just why the woodhewer insists on cutting down trees, pruning off huge limbs in other instances, and committing a thousand and one similar deeds. If rotten trees or those that were withered were selected, the matter of food-hunting would be the given cause. But there are no insects in the heart of a sound tree, nor when the woodhewer has finished is there sign that it sought to devour any of the freshly cut wood. It may be that there is a food element of which naturalists know nothing.

Inasmuch as there is no woodhewer in captivity opportunity of closely studying its habits has been lacking. A number of the birds have been captured, but they pined and died without exception. The curious theory has been advanced that the woodhewer is solely actuated by instinct that leads it to destroy trees and limbs thereof with a view to causing the tree to decay, and thus become the lodging-place of the bugs and worms which it eats. That it does live on such food is known.

The woodhewer is perhaps one of the greatest of object lessons in patience nature gives us. Just imagine how many times that bill must be moved back and forth to cut off even the branch of a tree. The bird never seems to tire, however, and once it assumes a task, never abandons it.—*Charles C. Johnson in Young People's Weekly.*

THE MARTINS' COMING-OUT PARTY.

WE have the finest martin box in town. In the summer when the little birds are first taught to fly, it is the liveliest place I know. I saw a brood of young martins introduced into society there last year. It was quite as important a social event as any human debutante's tea could ever be.

All the martins from far and near were invited. I watched them come, new ones arriving on every gust of wind. The bird house is near the barn, so the top of the barn became naturally the great ballroom.

On the roof is a cupola, and on the cupola is a gilded weather vane, which served the martins for a reviewing stand. There were many interesting special "features" introduced into the evening's entertainment; tournaments, winged contests for prizes of admiration, all sorts of races, short dashes around the chimneys of neighboring houses, long flights to the hills and back, soaring ascensions to a far-off cloud.

The old birds seemed to be exerting themselves to impress the youngsters, and the new little martins exhibited a proper degree of respect and appreciation. They loved the show.

One fine old Beau Brummel of the bird colony,

wearing an elegant suit of deep indigo feathers, was evidently a universal favorite, and I fancied I saw signs of incipient jealousy among the young martins not so sumptuously attired. The Beau had the air of addressing the assemblage with "Now, watch me!" Then he darted off, swept suddenly straight down, caught a moth, turned sharply, caught another winged insect, and then with the speed of a humming bird, he disappeared. I thought the wind had blown him away, but as the young birds seemed quite as interested as ever, I suppose he was simply out of my sight. In a minute there was a flutter of wings over my head like a fanfare of trumpets, and down came the old bird, turning back somersaults, his mouth full of bugs which he gallantly presented to the young ladies.

There were many such displays of skill, so many I could not follow them all. There was really too much going on at once. One unfortunate accident occurred, which I will relate though the birds did not seem to take any notice of the affair one way or the other. It happened very suddenly. There was a foolhardy over-smart young martin, who had been trying all the afternoon to attract attention. Eventually he sailed from a great height straight for the barn at a tremendous speed. He seemed to be dropping down. All the birds fluttered and whispered among themselves as if they were saying, "That foolish young thing is going to show us what a sudden stop he can make!" He may have miscalculated the distance, or he may have been crossed in love. Who knows? But—he struck the lightning rod and impaled himself on it! He must have died instantly. He never even quivered; and there his body remained until it fell the prey of some prowling cat later on. There was no panic, apparently not even any great excitement among the birds, just a fluttering for a moment, and then the games went on. Martins are so stoic. They are real philosophers. It seemed a terrible fate to me, but they did not even miss their little comrade, whose bravado—or whose broken heart, perhaps—had ended his brief career.

The sun went down on the festivities. Large clouds were gathering in the west that threatened rain. The oldest birds, more cautious than the rest, gathered their little ones about them ready to take home. One by one the guests departed, and our little martins retired to their box by the side of the barn. A few of the younger birds, enamored youths we will suppose, waited around the gilded horn on the top of the weather vane yet a little longer. The twilight fell. The martin family grew quiet within the little bird house, and by and by I saw a young blade making his way, a trifle crookedly, as if his thoughts were not all on his flight toward the town. Presently he was out of sight behind the pine trees in the west. Night had fallen and the Martins' Coming-Out Party was over.—*Our Dumb Animals.*

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

PUTTING one's self in the other fellow's place is done quite as often these days for the purpose of seizing the benefits of his advantages and privileges as for the original purpose of letting him profit by one's own.

SOMETIMES one's zeal for a certain cause overreaches itself and really adds strength to the other side. An instance of this is that of the war alarmist whose exaggerations set level-headed people to thinking as never before of the ties which bind nations together and of the follies of war. One Hobson has doubtless made numbers of strong and fearless advocates of peace.

As a result of the untiring efforts of the late George T. Angell, of Boston, 75,000 Bands of Mercy have been organized since the beginning of the movement in 1882, with a total membership of 2,250,000 children. The value of this number to the cause of mercy is incalculable. Already the world at large is beginning to enjoy the blessings from such organizations in laws looking to the welfare of helpless animal life and the greater protection of human life.

SOME people consume a good deal of time and energy in trying to bring their desires and tastes into line with the plain and sometimes unattractive path of duty. Others adopt the easier if less honorable method of making their duty coincide with what they wish to do. It is strange what strong argument they can put up as to why they should do thus and so. Stranger still these very people generally consider that what certain other people wish to do, whose interests are vitally connected with their own, must have no relation with what they ought to do. Have any of our readers ever had the misfortune of coming into

close contact with this species of selfishly selfish selfishness?

DOUBTLESS a number of our readers are just now in a position to give us some valuable advice and suggestions on the subject of vacations,—how and how not to spend them. We are of the opinion that by far the larger number can discourse knowingly on the "how-not" side. Few people have succeeded in striking the combination which brings an ideal vacation. While the information would come too late to be of practical use this season, we would be glad to have some word from our readers on the subject. We would have time to work it over to suit our own peculiar circumstances until another season, and perhaps receive much benefit from it. Who will be the first?

THE SIMPLE LIFE.

WE have heard much talk lately about the simple life, but when one comes to inquire as to the real meaning of the term he finds it has no generally accepted meaning, except of the most indefinite sort. Specifically the term has almost as many meanings as there are people with an opinion on the subject. Even the author of the book with the title, "The Simple Life," while it is largely due to his discussion of the subject that so much has been said about it recently and not a little good has been done, lays down no inflexible or plain rules for one's guidance in this ideal way. Moreover, he unconsciously shows by his style of writing that he himself has come far short of the acme of simplicity in the matter of expression.

And it must ever be so, that as long as our habits of life differ, giving us a different outlook on life, so long will our opinions differ on what constitutes the simple life. It is not our purpose, therefore, to endeavor to improve on what the author, Wagner, has said, by way of making a definite application of the principles he has dwelt upon, but we wish to emphasize the value of a general thought which is so simple that its application can be made by every one to suit his or her particular case.

The thought is embodied in the teaching of the Savior who, ethically and experimentally, knew more about the simple life than any of us will ever be able perfectly to put into practice. He sums it up in three words,—“Be not anxious,”—and makes the application to four things: Be not anxious about what ye shall eat; be not anxious about what ye shall drink; be not anxious concerning raiment; be not anxious about the future.

Any one can see at once that these strike directly at the very foundation of our complex life. Take away anxiety on these points and the train of toil this anxiety exacts, and we might cease altogether talking about the burdens of life. The Savior says

plainly that the life is more than food—more than eating—and the body is more than the clothing that is put upon it, and when we place these secondary things in a secondary position in our lives, we will be on a fair road to enjoy those incomparable blessings of the simple life.

In the same discourse, speaking of Christian growth and attainment, the Savior says: "If thy right eye cause thee to offend, pluck it out, if thy right hand cause thee to offend, cut it off." The application may well be made to these things of overmuch civilization which bind us down and make us slaves instead of the masters we were intended to be.

To the housemother let it be said: "If the cooking and serving of the food for your family, becomes a great burden, robbing you of the strength you should have for training your children and for other important work, cut down the number of dishes for each meal,—have less variety,—prepare the food with wholesomeness rather than attractiveness as the end to be secured. Go through every department of the house in the same manner. Let clothing and furnishings make their natural contributions to comfort and convenience, but when they go beyond this, cut them off. To the husband and father,—the business man: If the business you are in makes you hard-hearted and suspicious and grasping, puts you out of touch with your wife and children by consuming all your time—even time that rightfully should be spent in sleep,—stop it; get into something else. Better for all time be the man of whom the world contemptuously says, "Oh, he's doing business in a small way," than to be the one whose business "does" him, physically and morally. To the young people: If being "up with the times" means being surrounded with an artificiality that robs you of your vigor, your sweetness and your wholesome, optimistic view of life, cast it from you. The real times ask no such sacrifice. Real success, real usefulness only strengthen these priceless qualities and make life a glad, workful, restful existence.

* * *

NO REDRESS.

"I HAVE a serious complaint to make to this institution," said a plain-looking man to the president of a great State university a few days ago.

"State your complaint," said the president, annoyed to have a busy day interrupted by some inconsiderate caller.

"This is my complaint," said the visitor, taking time for it. "Two years ago I sent my son to this university to get an education. I trusted him to the State, believing it would do him no harm. He went to your teacher of philosophy and ethics. This teacher has taken from my boy the faith he had in the Bible, in the divine and the miraculous and the future; has robbed him of his

faith in prayer and his implicit confidence in the Christian religion and set him adrift on a sea of doubt and skepticism."

"It will do him good to think it out," said the president, calmly.

"Wait," said the plain citizen. "My complaint is right here. Your teacher in philosophy has not given my boy anything in the place of what he has lost. He has taken from him his old faith and has not substituted for it a single foundation for his heart or mind. What redress have I for all this loss? What redress has my boy?"

The president of that State institution has not yet answered that question.—*Home Herald*.

THERE IS NO DEATH.

SELECTED BY LELA MAUD BYERLY.

There is no death! The stars go down
To rise upon some fairer shore;
And bright in heaven's jeweled crown
They shine for evermore.

There is no death! The dust we tread
Shall change, beneath the summer showers,
To golden grain or mellow fruit,
Or rainbow-tinted flowers.

The granite rocks disorganize
To feed the hungry moss they bear;
The forest leaves drink daily life
From out the viewless air.

There is no death! The leaves may fall,
The flowers may pale and fade away—
They only wait through wintry hours
The coming of the May.

There is no death! An angel form
Walks o'er the earth with silent tread,
He bears our best loved things away,
And then we call them "dead."

He leaves our hearts all desolate—
He plucks our fairest, sweetest flowers;
Transplanted into bliss they now
Adorn immortal bowers.

The bird-like voice whose joyous tone
Made glad this scene of sin and strife,
Sings now, in everlasting song,
Amid the trees of life.

And where he sees a smile too bright,
Or hearts too pure for taint and vice,
He bears it to the world of light,
To dwell in Paradise.

Born into that undying life,
They leave us but to come again;
With joy we welcome them—the same,
Except in sin and pain.

And ever near us, though unseen,
The dear immortal spirits tread:
For all the boundless universe
Is life, there is no death!

THE HOME WORLD

WHEN THE SHADOWS ARE LONG

J. F. STUDEBAKER, M. D.

NATURE's shadows begin lengthen in the small hours of the day; her longest shadows steal upon us when the sun "drops down behind the sky." Then is the time for repose, the actual oblivion of cares and the cessation of bodily activity and nerve wrecking of business competition. This rest is dependent upon a limited amount of fatigue without taxation upon reserve energy.

Some one has told us that our body changes every seven years. This means that the old must be replaced by the new, especially when rest is insufficient. So a man who lives seventy years would have ten new bodies. What a splendid opportunity to improve the old one—ten trials! Then again some scientist tries to enumerate the microscopic units of the brain, the cells, telling us that we have 50,000,000 and that they hasten to retreat to give a place for new similar minutiae, which develop from the old cells, every three months,—thus four new brains a year.

Think of the brains a boy would have at the age of seventeen or eighteen if new cells kept multiplying without the loss of old ones. Perhaps nature does retain many of the old cells and so accounts for the adolescent's massive and stupendous wealth of knowledge, making him his father's superior in judgment, reason and wisdom, or reckons for his delusion about his scholarly acquisitions and his profoundness of thought at the end of the first year in high school or college, having heard a few Greek and Latin words meaningless to him. Haven't you all felt such at some time?

This is the boy's age of ideals and an ideal is but the lengthened shadow of a boy. He is constantly full of new life—ever active and not normal if content with being a hothouse plant behind the stove. He plans to do great things. If a farmer's life is his ideal he is going to be a first-class agriculturist, raising the best wheat and corn in soil free from contamination by weeds; if a professional career, the most proficient,

progressive and noble; if a business vocation, the most alert, aggressive and successful, or possibly the active figure of a large corporation of commercial interests. He is to be somebody. This is why he is bigger than his pa. His father's tape measure is too short to circumduct his prospects. If he is doing simple clerical work in a banking institution he has a better grasp (so he feels) of the best banking system than its president and board of directors. What is the cause of such an awakening? Over activity in cell production. He outgrows and overestimates himself. He thinks of and tries to do wonders until he is tired and then, lulled by the slumberous music of the voices of night, rolls to one side like a kitten and sleeps peacefully until the dawn's blush brightens the orient.

Now this boy, who has practically insurmountable plans, possesses a rare jewel, ability to relax into quiet repose, to allow nature to regain her equilibrium. For the body does not certainly exist without destruction of her integral parts when in activity. She rebuilds most after moderate exercise and during rest. The process is life by constant death. Longevity depends upon the balance of these two forces. Anabolism, or building up of tissues, is in excess of katabolism, or breaking down, in the boy, whereas the reverse is true in advanced adult life.

It was intended that nature should have long shadows at short, regular intervals instead of perpetual day, that katabolism would not exceed the expectant development of cell life during the various periods of existence. When daylight begins to soften into twilight the vegetable as well as the animal kingdom (except mankind and the creatures of night) sink into repose. Men being highly organized and in many cases disorganized do not hold good to this harmony in the world about us. They initiate new ideas, schemes and projects to develop the interests of their occupation.

The spirit of progress today is commercialism. To

be a good farmer one must be a business man. He studies the methods of greatest production with the best preservation of soil and the issues which control the markets. A banker must be a financier. A wage-earner must observe the lessons of economics. The ambition is to enlarge one's horizon. This restless activity gets a monarch hold upon its individuals. Instead of quietude of mind and body after ten hours of earnest endeavor, they strenuously overlap the time of the crickets, strenuously sleep a few hours of subconscious sleep (dreams of business) and awake in the robin's best hours, when he almost rents himself vying with others in his happy notes of good cheer. Two or three hours' melody in the morning's orchestra of birds loses him all his reserve energy and then he quits.

But some one says we are not birds. Neither are we all like Edison who can work hard with only four hours' sleep daily. Napoleon had not more than five hours' rest in twenty-four and was one of the world's distinguished generals, but remember he had a disease of the nervous system, epilepsy, that cost him the battle of Waterloo and later his life. He needed more hours of relaxation to increase his number of decades.

After a certain hour each day all things connected with a person's vocation should be forgotten and seven to nine hours of undisturbed and continuous sleep

secured. Shorter hours are required in early adult life and longer periods after middle age. This is a wise protection of your future years.

CROONINGS.

Come to me, little one, drowsy and dear;
Mother will spare me her darling awhile;
I am so lonely when twilight is near—
Lie in my arms, love, and nestle and smile.
I have no little one, dearie, like you—
No little hand to hold close in the night;
No one to dream of, the lonely hours through--
No one to wake for, when God sends the light.

You are so sorry? O, bless you, my sweet!
Dear little fingers that wipe off the tears,
Soft little body and little white feet,
How will they treat you—the terrible years?
Life is so fair to a baby like you—
All things are wonderful under the sun;
Rainbows are real and all stories true—
Would they might be so when childhood is done.

Wide little eyes that are questioning so,
Life is no stranger to you than to me;
The secrets worth knowing I never shall know;
The end of the rainbow I never shall see.
So, little drowsy one, nestle and sleep—
Angels are near, as the days come and go—
Sweet be thy dreams in their close-watching care—
Lullaby, little one, lullaby low.

—Elsa Barker in *Woman's Home Companion*.

SHALL THE CHILD HAVE AN ALLOWANCE?

CLARA NORTH RULEY

IN answering this question so frequently asked, one might well use the Yankee prerogative and answer it by asking another: "Why shouldn't they?"

Perhaps three-fourths of the failures, not financial alone, but moral failures, are caused by a lack of knowledge of money matters on the part of either man or woman. There are some things one can never learn by theories alone, and spending money is one of them. It is absurd to expect the man to manage financial affairs with judgment when he has had no training, whatever, in that direction, and it is just as absurd to expect a woman to manage the financial end of her housekeeping with success when she has had no actual experience. And moreover it does not pay. In our youth we handle small sums of money, if indeed we are fortunate enough to handle any, while as adults the amount we handle is large, making our responsibility much greater.

If behooves us, then, as we train our children and prepare them to meet the other responsibilities in life

to teach them the value and use of money and in no other way can this be done so well as by giving them an allowance.

Some time ago in the correspondence column of a well-known magazine the question was asked, "What should be the amount of a very small child's allowance?" and the answer came thus: "Three cents is enough, one for Sunday school, one to put in his bank and the other to buy candy with, always being sure to advise him on the kind of candy."

In this advice the intention might have been good, but if it were, that was the only good thing about it.

In the first place, if the object in giving a child an allowance is to teach him how to use money one is sure to defeat his own ends if one tells the child just what use to make of it. They must be taught to use their own judgment, even at the cost of a few pennies. One should at all times impress upon the child the right of the church and charities in general to some of his allowance, but is it not infinitely better to let him

decide just what amount he is willing to give, helping only with precept and advice but not with dictation? Then again, is it always desirable to have a child so imbued with the idea that no matter what happens one must hoard away a certain amount? Does not that practice encourage parsimony and niggardliness, not economy? And then would it not be wise to give the child the third penny to spend for what he wishes, not dictating to him in any way, so that he does not injure himself?

As a child grows older his allowance should be increased and he should be required to purchase some of his apparel, his stockings perhaps, and his ties, or pay his laundry bill possibly. Always provide him with a sufficient allowance each week so that he may buy what you have required him and have a small sum remaining. He will soon learn that by caring for his clothes and person he will be able to augment the sum he has remaining and will tend to be more careful of his person. It helps a boy to economize on tablets and pencils if he buys them out of his own pocket money. Advise him as to his pleasures. Teach him to look forward to the week when the great flutist gives the recital and make him realize that by saving his money until then he can go, but do not expect him to have the forethought to know this of himself.

As for the girl she should have her weekly stipend, which should increase as she grows older, and as it is increased the number of things to be purchased by her should also be increased in like proportion. She should be taught to learn the relative value of materials, what material wears the longer and why, and what material will give her the most value for her money. Indeed, it is wise to have the girl go shopping with her mother, if the mother can show the wisdom not to dictate but merely to advise. The price of a dress that does not wear well or is unsatisfactory in other respects perhaps, is not wasted if the girl learns a lesson thereby. It will teach her to listen to the advice of older and wiser heads better than all the lectures in the world. But always let her suffer the consequences of a mistaken purchase. It is sure to hurt a mother to see the daughter spend Saturday afternoon mending her hose when she has planned to go to the picnic and all because she spent all her weekly allowance for chocolates and had nothing at the end of the week to invest in the new hose. It makes mothers want to purchase the needed articles themselves or mend the old ones, but that is the sort of selfishness that is bad for the girl and should not be indulged in. By the time a girl is sixteen she should be able to buy all her own clothes, indeed everything she needs, and if her parents are able should have her drawing account at the bank. This teaches her to look forward farther than to the week's end and tends to develop her business judgment. Then, too, a bank account teaches a girl to handle the

technical points of business and this she cannot learn in any other way.

A boy at sixteen should be able to manage his own money affairs and should be earning his allowance through the summer vacation, at least, either in working for his father or in some other way.

But whatever one does if one gives an allowance at all it should be sufficient to cover the child's requirements. Do not do as one father I know. He gave his daughter one dollar a week, which at first glance seems a fairly generous amount, but when one learns that out of it she was required to pay for her music lesson, which required fifty cents, bank a quarter, and buy her music and hair ribbons out of the remaining quarter, one could not wonder at the poor child's hunted expression. She was always in debt, either standing off her music teacher or the proprietor of the music store. Instead of getting good results from her allowance, she is reaping bad ones,—ones that will in all probability cause her to be a failure in her after life.

Milford, Ind.

THE SACREDNESS OF FATHERHOOD.

GOD alone has absolute power to create. He might have retained this power forever. He chose rather to confer infinite honor and infinite responsibility on man by delegating to him the power to recreate. This power to perpetuate the race, as a sub-creator, and to be a direct factor in determining its character and destiny, is divine. Its exercise in fatherhood is among the most sacred functions of existence. In this life alone its results for good or evil are beyond computation. Considered by the standard of an endless life, they are overwhelming. Were there not unknown possibilities for good results, in each experience of parenthood, no man understanding what it means could venture to assume fatherhood.

Much the larger share of human suffering comes though impaired physical health. Weakness and disease make men a burden on society, lead to poverty, drunkenness, social impurity, larceny, and kindred evils. No man is free from guilt who transmits a single element of physical weakness or disease which he can avoid.

The habitual use of stimulants and narcotics destroys nerve force and mental balance. Their effects are often more prominent in the second and the third generations than in those who first indulge. Purity in thought and act is an imperative demand which the sacredness of actual or possible fatherhood places on all men.

In assuming fatherhood you are acting for God; exercising the holiest function ever given you. If a man goes out as the agent of a business firm, or the representative of a great nation, he must be loyal to the power which commissions him, and in whose name he acts. How much more when a man as-

sumes fatherhood, in behalf of the Infinite and Eternal Father! He who does not love God cannot transmit the tendency to love him. Such a man must rather transmit the tendency to hate and disobey God, for which he, not his child, is responsible. This stupendous fact lies at the core of all true religion.

The husband has to bear little of the passive service and continuous burdens which attend parenthood. The wife has an absolute right to all the help which pure love, exhaustless patience and tenderest sympathy can afford. This is due to the child also, who must suffer loss in proportion as these are withheld from the mother. If any husband denies these, or worse still, gives, in place of them, indifference, neglect, harshness or abuse, he becomes a shame to the name of fatherhood, a disgrace to his sex, an enemy to his own child, and a sinner before God.—*A. H. Lewis, D. D.*

THE GIRL TO BE AVOIDED.

SHE is the girl who takes you off in one corner and tells you things that you would not repeat to your mother.

She is the girl who is anxious to have you join a party which is to be "a dead secret," and which, because people are very free and easy, makes you uncomfortable, and wish you were at home.

She is the girl who tries to induce you, "just for fun," to smoke a cigarette, or to take a glass of wine; and you don't know, and possibly she doesn't, that many of the sinners of today committed their first sins "just for fun."

She is the girl who persuades you that to stay at home and care for and love your own, to help mother, and to have your pleasures at home and where the home people can see them, is stupid and tiresome, and that spending the afternoon walking up and down the street looking at the windows and people is "just delightful."

She is the girl that persuades you that slang is witty, that a loud dress that attracts the attention is "stylish," and that your own simple gowns are dowdy and undesirable. She does not know, nor do you, how many women have gone to destruction because of their love for fine clothes.

She is the girl that persuades you that to be on very familiar terms with three or four young men is an evidence of your charms and fascination, instead of being, as it is, an outward, visible sign of your perfect folly.

She is the girl who persuades you that it is a very smart thing to be referred to as a "gay girl." She is very, very much mistaken.

And, of all others, she is the girl who, no matter how hard she may try to make you believe in her, is to be avoided.—*Ladies' Home Journal.*

The Children's Corner

THE CAT THAT ANSWERED AN ADVERTISEMENT.

You know that there are some people who say that cats cannot read good, plain English. If that is so, will you please tell me how it happened that this one came to the front door of the Belden family in answer to Ted's advertisement?

"The mice are eating us out of house and home!" said Mary, as she brought in the cream for breakfast. "I don't see what we will do if we don't get a cat."

"We really do need one," said mother, thoughtfully; but I don't know of a good mouser anywhere."

"Why don't you advertise?" joked father, as he drank his coffee. "An 'ad' in the *Gazette* or *Post* ought to bring you one."

"Costs too much!" laughed mother.

"Well, then, stick up a sign!" said father.

Ted thought it over as he finished his breakfast. He could "stick up a sign" just as well as anybody. Where should he put it? He decided that a good, big, handsome one, done in red paint and pinned up on the front door, would be as good as anything; and so, half an hour later, that was what callers might have seen if they had come so early. It stayed there all the forenoon, and this is what it said:

"Wanted—A Cat."

A few people saw it, and laughed, for it was such a big piece of brown wrapping paper, and the letters were so big, and red, and scraggly, that you couldn't help seeing them, unless you were very, very near-sighted.

Just before luncheon time mother had to go to the front door for something, and there stood a lean, lank, gray cat, with one paw up, trying to catch the fluttering corner of that brown paper sign. It seemed as if it were trying to say, "I've come! Why do you want that sign any more?"

"Ted, did you put that thing up there?" asked mother, taking the pins out in a hurry and carrying the dreadful looking sign inside to use for kindling. "What will the neighbors think! Such a front door for people to look at!"

"It brought the cat!" said Ted in triumph.

And, sure enough, there was the long, lean, gray cat following close at their heels everywhere they went, and meowing for milk. He turned out a splendid mouser, too, and to this day Ted firmly believes in advertising.—*Selected.*

THE QUIET HOUR

A PETITION.

RICHARD BRAUNSTEIN.

Jesus, Eternal God, Creator,
Who didst make from naught
This earth, and by thy power
Dost support all things
Therein, and from their birth
Until their death preserve,
To thee I pray:

O thou who art the first and last,
Beyond the future and the past,
Who in thy loving mercy hast
Washed all my sins away,
Accept my ev'ning prayer:

"Now I lay me down to sleep,
I pray the Lord my soul to keep."

For thou who keepest heavenly spheres,
Encircling round the globe,
From contact with each other free,
Thou surely canst keep me!

"If I should die before I wake
I pray the Lord my soul to take."

O thou who gavest unto those
Who loved and served thee
This promise, "Where I am
There also thou shalt be,"
To thee I pray!

"If I should die before I wake"
Do thou, O Lord, my spirit take.

THE SIMPLE CHRIST-LIFE.

D. E. BRUBAKER.

THERE is a constant tendency in the heart to be drawn "away from the simplicity which is in Christ." This is not a new modern trend, springing up suddenly. It began back in the first century of the Christian church. In his correspondence with a church which he had founded, Paul expressed fear (2 Cor. 11: 3) that "as the serpent beguiled Eve through his subtilty," so also their minds "should be corrupted from the simplicity which is in Christ."

Paul having been instrumental in the conversion of these Christians, yearns for their safety—and expresses sincere godly jealousy, reminding them figuratively that he had espoused them to one husband, even Christ, and with joy looked into the future when he "should present them as a chaste virgin to Christ." Can we wonder then that he should express fear, and throw out a timely warning?

The religion of Jesus Christ is the simplest and yet most effectual system the world has ever known—and herein is its glory—and power.

Simplicity is the opposite of complexity. The law given by Moses was the very best code of morals which the world ever had up to that time. But when we compare the complexity of that law with the simplicity of the Gospel of Christ, we can but express our wonder and admiration at the wonderful change for the better. The law of Christ is simplicity itself in comparison to the law of Moses; especially with its added complications as interpreted by the scribes of the law, so that in Christ's time none but he himself could clearly and with due authority untangle the knotty questions.

And how sharply he rebuked this constant tendency of the conservators of the law for their corrupt additions. But if the law of Moses was corrupted into dense complexity, the greater simplicity of the Gospel of Christ was doomed to share the same fate.

It was a hard struggle at the very day dawn of the clear simple truth for the first pioneer ministers and teachers to guard it against the attacks of "men of corrupt minds" who were zealous to add the superseded points of the law of Moses to the Gospel. And again the devotees and advocates of the pagan religions were just as zealous to attack the simplicity of gospel truth and corrupt it with the complications of paganism. So there came a time before the close of the first century when men who nominally had embraced gospel truth set about to corrupt the truth, or in other words "corrupt the minds of Christ's disciples from the simplicity which is in Christ."

It was done through Satanic agency—as the minds and simple life of the first pair of the race had been beguiled in Eden. It was a dark day for the early church when men within her walls would "arise, speaking perverse things to draw away disciples after them" (Acts 20: 29, 30). This would be done by men departing from the faith (gospel simplicity), giving heed to seducing spirits and doctrines of devils, speaking lies in hypocrisy, having their conscience seared with a hot iron (1 Tim. 4: 1, 2). Paul here warns of what happened and how it happened back at the dawn of creation through the subtle doctrine of the devil. He showed malicious skill in presenting his doctrine—poisoning the mind of good Mother Eve to

distrust the simple, plain command (truth) of her Creator. Thus little by little she was indoctrinated by her evil teacher. Step by step she left the *true*, the *sublime*, the *simple* and embraced the untrue, the corrupt, the complicated.

The path into which Satan led our foreparents was a thorny and dark one indeed, with such fatal results as their minds never foresaw.

This later and more general apostasy which Satan headed as leader to corrupt from the simplicity of the Gospel, set in probably before the close of the first century. In a remarkably short time was set up image worship, angel worship, worship of saints, the enshrining of the relics of martyrs, making prayers and supplications to the dead—the doctrine of purgatory with all of its absurd complications, the burning of incense, changing the ordinance of marriage (forbidding the clergy to enter that state), corrupting or changing the sacred ordinance of the communion, usurping the authority of God over the conscience and souls of men. This corrupting force in its onward course finally culminated in the fiercest, bloodiest persecutions which the world ever saw, and even paganism itself in its persecutions had cause to blush.

Mt. Morris, Ill. ❧ ❧ ❧

THE HOUSE AND THE FAMILY.

THERE is a great difference between getting into a house and getting into a family. A burglar may get into your house, but he does not get into your family. A person may come to your home uninvited, and stay until his visit becomes a visitation, but he never gets into the family. In fact, there is very little family there so long as he remains, for a stranger in the family interrupts intercourse, hushes conversation, disturbs the current of affairs, and makes the family for the time being a mere boarding house instead of a quiet home.

The church of God is a family, a sweet and sacred refuge from the woes and ills of earth. Here the fatherless find mercy and compassion, and the tempted and troubled are strengthened and consoled. Here the sick find helpers, the perplexed obtain guidance, the naked find clothing and the hungry bread. To many the church of God becomes a home, and the family of God is really the only family with which they are connected. They sojourn among strangers, they endure trials, they dwell in the tents of affliction, but their hearts turn toward that sacred place where two or three assemble in the name of Christ, as to their real earthly home and abiding place.

But it is sometimes the case that here strangers intrude themselves, and the family of God is disturbed by the presence of outsiders. These are spots in the feasts of charity, men who turn the grace of God into lasciviousness, men who through their wealth, or influence, or position, crowd themselves in among the

disciples of the Lord, and make themselves as much at home as a wolf in a sheepfold, or as a Judas carrying the bag and stealing the funds.

It is one of the griefs of true Christians that the peace of the church is disturbed by the intrusion of ungodly men, and their devotion interrupted by the discordant voices of those who have neither part nor lot in the prayers and praises and thanksgivings of the Lord's disciples.

One of the great privileges of the family is to be alone, and away from intermeddlers, where love can flow freely, and where no disturbing element enters in to disquiet or interrupt the blessings of the sacred hour. And the people of God often find it their joy to be alone with him and with his people. Happy are they who have this privilege, and who know by blest experience the comforts of that fellowship which is with the Father, and with his Son Jesus Christ, and one with another.—*Christian*.

WORDS OF WARNING TO YOUNG MEN.

YOUNG man, it is not the ugly devil stalking about with horns on his head, showing his cloven foot, his long, forked tail, and blowing fire and brimstone from his mouth and nose, that you need to fear; but it is the devil in the form of a nicely-dressed, oily-tongued, young gentleman, who offers you a cigar, invites you to take a walk with him after night that he may "show you the city," politely proposes to treat you to a glass of beer, offers to accompany you into a gambling den or worse place, that you may "see the sights," etc.—that is the devil you need to fear as you fear the mouth of hell. He has overcome and lured to their ruin hundreds and thousands of young men who were once just as innocent and just as intent on living honest, upright lives as you are. If he had come to them as a "roaring lion," they would have taken alarm, and shunned him. Today it is the devil in the garb of a gentleman, a friend, an angel of light, that you need fear, and ever to keep a sharp lookout for.—*Religious Telescope*.

YOUR OWN CHURCH.

BE true to your own church. Give it a hearty and loyal support by word and deed. Remember that it belongs to you; that it is a part of your religious life; that in it and by it you are being trained for usefulness here and immortality hereafter; that its honor is much in your keeping; that its growth and purity are affected to the extent of your influence by what you say and do; that the people who have faith in your word will look upon it largely according to representation, and that with its good name and prosperity are bound up the glory of the blessed Jesus. Then do nothing to injure its reputation, or to weaken its power for good or to mar its fellowship.—*Dr. Thomas Parry*.

ECHOES FROM EVERYWHERE

Marion and Vigo Counties, Indiana, with one-tenth the population of the State, have one-fifth of the saloons, one-third of the criminals and one-fourth of the paupers of the State.

John Leonard Roeder, born at Gerstenbach, Germany, January 21, 1800, and a resident of Quincy, Ill., for 60 years, is dead. He served as a staff officer of General Blucher at the battle of Waterloo.

Rosa Nouchette Carey, the novelist, died in London, July 20. She began her career as a novelist in 1868. Her works included "Robert Ord's Atonement," "Not Like Other Girls," "Other People's Lives" and the "Highway of Fate."

The new pennies with the head of Lincoln instead of the Indian, are now ready for distribution. The Philadelphia mint has coined a total of 20,000,000 of the new coppers ((\$200,000). There are 1,650,000,000 of the old pennies in circulation.

Coöperating with the geological survey the bureau of corporations, under direction of Secretary Nagel, will push investigations of the water power trust. It is claimed the General Electric and Westinghouse Electric Company are in a combine to control the country's water power.

Warning against the use of phenacetin, acetanilid and antipyrin has been issued by the Department of Agriculture. These drugs have been found to be poisonous and habit-forming, scarcely less objectionable than opium. Investigation shows physicians are using much less of these drugs than formerly, because of their depressing effect upon the heart.

Rapid progress is being made in the building of the Grand Trunk-Pacific railway's new line. The first train has reached Alberta, 700 miles west of Winnipeg. The line is to be extended to Prince Rupert on the Pacific coast, about 300 miles north of Vancouver. It is expected all gaps will be completed in September, in time to move the 1909 crops.

Measures to make the prohibition law more effective promise to overtop everything else in the special session of the Alabama legislature, which convened July 27. Under the constitution the Governor must specify all subjects to be considered by an extra session, and in his call he named sixty-five subjects. Nine of these relate to prohibition, ranging from a constitutional amendment for prohibition to a measure declaring places where liquor is kept to be illegal. A long and hard fight is expected on the effort to submit a prohibition constitutional amendment. A "safe and sane league" has been organized with the avowed purpose of working to defeat the submission and to defeat the amendment if it is submitted.

After four days of stormy debate the House passed the urgent deficiency bill, carrying \$454,809. Over the opposition of the Democrats \$25,000 was voted to pay the traveling expenses of President Taft. The House refused to vote a month's extra pay to capitol employes. They also refused to comply with a mandate of the United State Supreme Court to pay J. M. Ceballos & Co. of New York \$205,614.

A world-wide fight on intemperance will be made by the International Anti-Alcohol congress, in session in London. The American delegates to the congress declare the report they are drafting, and which they intend to submit to the United States government, will show that the United States, Canada and Australia have beaten the world in progress toward prohibition, but Germany leads the rest of the world in scientific investigations of the evils of intemperance.

By order of the Wisconsin State board of prison inspectors, the price of convict labor has been raised from 60 to 75 cents per day per man. The order takes effect December 31. As the State furnishes everything except the machinery, the price is considered cheap. There are from 1,500 to 1,800 convicts worked on contract. The penitentiary is run at a loss of \$30,000 a year and it is expected the 15 cents a day increase will make the institution self-sustaining.

July 25, Louis Bleriot, one of the oldest French aviators, successfully crossed the English Channel in his monoplane, thereby winning the \$5,000 prize offered for the accomplishment of that feat besides incalculable glory as a successful aviator of the twentieth century. Bleriot made the passage in a little less than half an hour, traveling at a rate twice as swift as that of the fastest mail boat.—July 20 Orville Wright made a remarkable flight at Fort Meyer, lasting 1 hour, 20 minutes and 45 seconds. In all the machine traveled as far as from Washington to Baltimore, equivalent to flying across the English Channel and back again without stopping.

Premier Aristide Briand, the socialist deputy appointed by President Fallieres to succeed Clemenceau, has succeeded in completing his ministry. General Brun has agreed to accept the portfolio of war, while Admiral de la Peyrere will become minister of marine, in charge of the navy. M. Briand will present the names of his entire cabinet to President Fallieres for confirmation. General Brun will succeed General Picquart, whose advocacy of the cause of Captain Dreyfus won him a portfolio in the Clemenceau ministry. It was the scandalous condition of the French navy that led to the overthrow of the Clemenceau ministry, and Admiral de la Peyrere will be charged with a thorough reorganization of the navy. That the Briand ministry will be a stormy one and will require great statesmanship is proven by the fierce attacks that are already being made upon the new premier.

Five thousand persons whose object is to send to prison reckless millionaire owners of automobiles whose custom has been to shift to their drivers responsibility for death-dealing "joy riding," have organized in New York City. Justice Bischoff issued them a certificate of organization. During less than two years 132 persons have been crushed to death by automobiles in Greater New York and vicinity, but only twice have owners been held responsible. Chauffeurs contend that in 95 per cent of the cases the accidents occur under orders from their employers.

The American engineers have arrived at Vladivostok to superintend the boring of the tunnels which will join Asia with America. The tunnels will be run under the Behring Straits from Siberia to Alaska, a distance of 60 miles. When this great mechanical task is accomplished it will be possible to go from Paris, Berlin or Moscow to New York by rail, by taking the overland train across Russia to Vladivostok, crossing under the straits in the tunnel, passing through Alaska by rail and thence into the United States.

John Wanamaker of Philadelphia has purchased the largest pipe organ in the world and will erect it in his department store. The organ was built by a Los Angeles (Cal.) firm at a cost of \$110,000 and was on exhibition during the World's Fair at St. Louis. Since then it has been stored in a warehouse and was sold to defray storage charges for which it had been sold by default. It is so large a pony may be driven through its largest pipes and it will require ten freight cars to move it to Philadelphia. Mr. Wanamaker will enlarge the music hall of his store and the organ will be used for giving free concerts.

Pennsylvania is seeing to it that the foreigners who come into her territory are not armed, or if they are armed when they come, they must soon give up their weapons. The game wardens throughout the State have been warned to enforce the law, which prohibits unnaturalized foreigners from having any kind of firearms in their possession, not even a gun in the house. If one is found there it is subject to confiscation and the owner liable to arrest. This law began to be enforced on the first of July, and should do much toward preserving order, as foreigners are not well acquainted with the laws of this country and its customs, and resort to weapons might be taken on slighter provocation than would be warrantable.

The seven years' work of the imperial cancer research fund was reviewed in London a few days ago, at the annual meeting of the scientists concerned in the tests made. So complicated and difficult is the problem that the whole seven years have been devoted to a negative or preliminary effort, chiefly to testing manifold theories and remedies. This work is now complete, with the discouraging result that everything has been disproved and rejected. Trypsin is the last to go, the most elaborate experiments yielding absolutely negative results. Despite the unbroken record of failure, the investigators are pursuing a line of inquiry which leads them to speak hopefully of final success. Now that the work of elimination has been completed, they are devoting their efforts almost exclusively to experiments. More has been learned during the last seven years than during the previous seven centuries, and the interchange of data and results with other laboratories throughout the world leads the investigators to expect confidently that the solution of the problem will be reached within the next few years.

Although the trade treaty with Japan does not expire for two years, this government has been asked to begin at once to negotiate a new treaty. Under the most favored nation clause Japan extends to the United States all the conventional rates which it has granted to Great Britain, France and Germany. On the other hand none of the reduced rates authorized in Section 3 of the Dingley act, which are granted by the United States to certain foreign countries, are extended to Japan.

Last year \$56,000,000 was spent by the railroads of the United States for cross-ties. The average price of the ties was 50 cents each. Only six per cent of the ties were used by electric railroads. Forty-three per cent of the ties were oak, and nineteen per cent of yellow pine. Owing to the growing scarcity of suitable timber, other woods are being used after treatment with various preservatives, and it has been found that these treated woods outlast the more expensive untreated oak ties.

France is not so wildly excited over the aerial triumph of one of her sons, Louis Bleriot, in sailing over the English Channel in an aeroplane, as to forget the accomplishments of other "conquerors of the air," and July 26 Wilbur and Orville Wright and Henri Farman were made chevaliers in the Legion of Honor. The decoration of the Wright brothers with this signal honor in recognition of their record-breaking flights at Lemans and Pau, has been long under contemplation and the bestowal of the rank was the occasion of much felicitation. Hart O. Berg, the business manager of the Wright brothers, and Santos Dumont, one of the pioneers in French aviation, were promoted to officers in the Legion.

On the Hot Springs farm in the Tanana Valley, Alaska, watermelons are being successfully grown. This farm is located in 64 degrees north latitude. It is one of the government experiment station farms, combines 150 acres and the ground is heated from the same source as the hot springs. The government maintains five experiment stations in the territory. C. C. Georgeson, special agent in charge of all stations, says Alaska is an agricultural country; that good hay can be produced in any quantity for winter feeding, while the native grasses can maintain live stock in excellent condition in summer. He also says potatoes, cabbage and all hardy vegetables can be grown to perfection up to and even within the Arctic circle.

According to a decision rendered by Judge Nortoni in the case of Ernest Jaeger of Neosho, Missouri, appealed from Newton County, neither home-made wine nor hard cider can be sold in local option territory. Jaeger was fined \$300 for selling home-made grape wine. His attorneys claimed home-made wine is exempt under the dramshop law. Judge Nortoni holds that local option laws supplant dramshop laws in dry counties. According to Ben Deering, who has made a compilation of Missouri liquor laws, Judge Nortoni's decision is of great importance. It is the first time a high court has passed on the Wood local option law passed in 1887. It establishes the principle that only wine for sacramental purposes and pure alcohol for medicinal, art, scientific and mechanical purposes can be sold in local option districts. The sale of whisky, wine or beer on a physician's prescription is prohibitive. All a physician can prescribe is pure alcohol. Eighty counties and about 20 towns of considerable size are affected.

Among the Magazines

A PRAYER FOR MOTHERHOOD.

Is it a far cry to the realm of souls,
Oh, thou, thou God of mothers, who must hear?
For love stands always at the gate of prayer
With brooding heart, perchance to thank or grieve.
Lord, is it sin that I should make complaint
And fret the way of faith with this unrest?
For thou hast sent bright friendships, strung with flowers,
And happy thoughts, and sunshine through the years.

Youth blossomed, and thou gavest beauty's kiss,
That still abides, despite long discontent.
Rank and esteem are mine; and that acclaim,
Silent but sure, which woman proudly holds;
And crowning all, a holy wedded tryst,
Sealed with the golden signet, heaven-betrothed.

I have not been anhungered, oh, dear Lord,
For bread or drink; my limbs have not been cold.
I have not felt temptation's driving force
To lie or steal, to murder or to die.
In lowly mood I thank thee, Lord, for these.
But, oh, dear God, thou God of mothers still,
I asked, believing, and have been denied!

On yesterday, when morn was at its glow,
And all of earth gave back its welcome smile,
A woman paused beside my open door.
Her hands were filled with fruit she begged me buy,
Then pointed to the burden on her back.
She had no shelter for that tender head
Save two strong arms, so hard and bare and brown.

She had no name to leave, if she should die,
That sometime in his life her boy might bless;
No cot or thatch that she might call a home;
Nor resting-place save that which chance might send.
But laughing down upon the dimpling face
That seemed so pure, and guileless of its want,
She sat at ease beside my shaded step,
And nursed her ruddy baby on her breast.

I gave her food and drink, still in thy name;
Oh, God, I could not bless, and turned away—
I—I, a woman steeped in rugged faith,
To wail again the old Hebraic curse
Upon unfruitfulness and empty arms!

Last of a noble sheaf of lineage,
Rich in the heritage that man calls dear,
What boots it to the hapless heir of these—
A barren limb, hung on an estopped tree!
The blood of heroes on armorial shields
Shall fade to nothingness within the dust;
While sword and cassock, 'scutcheoned high and pure,
Taunt like a hiss a lonely woman's heart.
For e'en the gaping beggar in the street
May clasp her babe, and with a pitying smile,
Hoarse whisper to her mate, "She hath no child!"
Yea, happier far, dear God, the fate of her,

A Rachel who would not be comforted,
Or some pale Niobe, bowed through the years,
For thou hadst blest them ere they wept their loss.

If there be found within the faith to trust
The old Hebraic God—to hear his voice
From pillared cloud, or holy burning bush—
So would I come, as wailing Hebrews came,
Remembering faithful Sarah, laughed to scorn.
Or failing this, dear God, let thy young Christ,
Born of a woman, too, send me sweet dreams,
The while I kneel and watch his holy star
Rise in thy heaven: so I shall wake and find
This bosom healed, this heart robbed of its thorn.

—The Century (June).

APPROPRIATE EDUCATION WITH REFERENCE TO SEX DURING THE ADOLESCENT PERIOD.

Education should have regard for laws of physical nature as well as for social and economic demands. Marked rhythm is a distinct law of the female life, just as persistence is a law of male life. With schools constituted as they are today there is no appropriate opportunity for girls to rest at times when the development of the reproductive organs demand repose. Disregard for this law has led to countless wrecks of nervous systems, and frequently to the undoing of the victim's nature. Physicians tell of many cases of high school girls and college women failing to menstruate during the school year, while others are very irregular and unnatural in this respect. Girls and women can accomplish as much as boys and men, but they should follow the laws of their own natures in their work. There are periods when woman is much more brilliant than man, and these may well serve to counterbalance a period of rest.

That energy cannot predominate at two points of the system at the same time needs little proof. When the life energy is needed to develop the girls' sex nature, too frequently preparation of studies, recitations and examinations divert it from this vitally important function to aid in the brain activity. The result is frequently permanent impairment of health. How and when the girl studies is of paramount importance—particularly between the ages of 14 and 20.

Study should have large regard for vocation. On this account the curriculum should be so adjusted as to allow the girls to study more largely those phases of certain subjects in which their future needs cause them to be interested: For example, chemistry, physics, mathematics, and domestic studies. I should not debar woman from any study which man may pursue, but should give her greater range of choice.

While I concede the social value of boys and girls mingling properly together, the observation of many is that the schoolroom during the recitation is not the

best place to cultivate the social qualities. While recognizing that the sexes cannot be segregated even in a small degree in most sparsely settled sections, still for the thickly settled communities it is possible to make the segregation limited or complete according to circumstances.

A mixed school is not best fitted for either boys or girls. If boys were to go their ways as boys, and girls as girls, in mixed schools, utter demoralization would result. Visits to high-class public boys' schools and girls' schools reveal how differently the sexes use their freedom,—how different their bearing and conduct.

In schools in which boys and girls are separated, men should have special charge of boys; and women of girls. With such oversight there is better opportunity for the teacher to be in confidential parental relation with the pupil.

I do not recommend solely men teachers for boys, nor solely women teachers for girls; but the pupils should be instructed by teachers of their own sex at least in those subjects in which ideals are particularly cultivated—notably literature and history; also in those subjects in which sex has a marked influence on their capacities and natural interests.

Boys frequently deceive themselves into a justification of indifferent work on the ground that, "oh, girls can do this." Pitted against each other, and not against girls, the tendency is for them to enter more enthusiastically into their work. On the other hand, in co-educational schools, girls are prone to show that they can do at least as well as boys, and many prove this at great cost to all their future life and comfort.

We talk of considering the needs of individuals in our school arrangements; but we give little heed to the fundamental, essential and vital difference of the needs of male and female.—Speech at Ohio Teachers' Association.—Ohio Educational Monthly.

THE TEACHING OF PATRIOTISM.

The country has again passed through its annual noisy demonstration. The usual Fourth of July casualties have been recorded, and once more a "safe and sane" celebration of the nation's birthday finds numerous advocates. It is likely that many noisy demonstrations, were not, by very many of the participants therein, connected in thought or sentiment with July 4, 1776. This is not to be wondered at. The relation between patriotism and noise is not at all an intimate one. This is true to the extent that one may reasonably doubt the genuineness of the patriotism that permeates the individual who is given to apostrophizing the flag upon the slightest provocation.

Yet every man and every woman of mature years ought to be a patriot;—ought to be animated by an honest, deep, abiding love of home, of city, of State, and of nation—ought to try to be an ideal citizen who will be glad to serve his country, without saying much about such service—or about "the grand old flag."

To train the young men and young women of today into such useful, patriotic citizens for the future is to a large extent a training that is entrusted to the public schools; and so it is pertinent to point out some traits of the ideal citizen, and profitable to hold these traits prominently in view in our attempts toward inculcating true patriotism.

1. The ideal citizen will weigh all questions in the scale of his own reason, and draw his own conclusions from facts presented. He will stand upon his own feet, and use his own mind to direct his own life.

2. He will be a gentleman. He will be possessed of sturdy independence, vigorous thought, mental and moral uprightness. He will not be hasty in judgment, extravagant in ambition, or grasping in his desires. He will have a backbone as strong as steel, but tempered with gentleness of disposition and courtesy of manner.

3. He will be in the best sense a politician—not that public nuisance, a political partisan. He will try to live by that motto of every good citizen, "The best means to promote the greatest good to the greatest number."

The ends to be sought are the most healthy development, and the highest and largest happiness to the whole people. Only in this manner can the full duty of a patriotic citizen be accomplished. Such a good and patriotic citizen each of us should desire to be. Toward such a conception of real patriotism every teacher should lead the boys and girls who are placed in his charge.—Interstate Schoolman.

THE PROSTITUTION OF EDUCATION.

If one wants to witness a few startling educational somersaults he needs only to keep an eye on some of the educational institutions of the country which are willing to give up all their traditions, yield their charters, and bow the knee to the image of the golden calf in order to satisfy the more or less arbitrary demands of the Carnegie Foundation for the Advancement of Learning, all for the sake of a few prospective pensions for retiring professors. Mr. Carnegie did a generous thing in setting aside \$18,000,000 for this purpose and later offering to add \$5,000,000 to this sum in order to provide sufficient income to enable the Foundation to admit the State universities to the list of beneficiaries. Many most commendable things have already been done by the Foundation, but it is extremely pitiable and humiliating to notice that already several institutions of higher education have discarded their steadfastness of purpose to adhere to high moral and religious aims in the conduct of their administration and curricula. Sectarian institutions or church schools were excluded from the possibility of becoming beneficiaries of this fund, but the alacrity with which some of the church-endowed schools have given up their religion and prostituted the very ideals that have made possible their existence in the past and have thus put themselves in the position of suppliant beggars upon bended knee, is disgraceful, to say the least.

It must not be forgotten that these pensions were provided for retiring and worn-out professors. An educational institution is not maintained as a charitable institution for its professors, but is maintained primarily to prepare young men and young women for the duties of a strenuous and effective public or private career. For an educational institution to yield up all of the ideals for which its founders stood, for the sake of a few paltry dollars, is a disgrace to the good name of higher education.

This Carnegie Foundation Board has declined to admit such institutions as the University of Illinois (admitted by practically all educators of standing to be one of the best institutions in this country), for the reason that the university maintains some courses in agriculture, engineering, etc., that are less than four years in length. We wonder who is better able to judge of the wisdom of maintaining such courses, this Foundation Board or President James and those who are on the ground dealing with the actual problems of life in Illinois.

But President Pritchett, of this board, has written a letter to Governor Harmon informing him and in this

way the people of the State that the three State institutions of Ohio have also been excluded from the list of pensioners. What a calamity! In some future issue we expect to analyze the charges made in that letter, but for the present we voice the sentiment as expressed in an editorial appearing in the Columbus Dispatch of June 22. We quote from that editorial as follows:

The dictation by the managers of the Carnegie Foundation to colleges and universities that it deigns to aid with pensions for aged professors has reached Ohio and has been directed at the universities supported by State funds. We are all now better able to measure the folly and arrogance of the thing. When the pension fund was created, it was announced as a supplementary recompense for worthy professors who had been worn out in work at meager pay. But the manner of its use is altogether different, the chief aim now being to regulate the methods and direct the policy of the educational institutions with which the eligible professors are connected. The universities that are run to suit the managers of the Foundation will share in the pension benevolence, but others will not.

Could there be a grosser perversion of the plan as originally announced and widely approved? The needs of the worn-out professors are utterly lost to sight in the determination to direct the educational forces of the country, to make them conform to some arbitrary standard and to punish them if they do not. The open hand of philanthropy has become the mailed fist. Will the transformation be allowed to stand? Will this great money power that Mr. Carnegie has created be permitted to dictate conditions of admission, courses of study and even the dismissal or retention of professors? It is a most dangerous influence, the first appearance of which should everywhere be resented. No institution can afford to sacrifice its independence of action or its freedom of judgment for a portion of this pension money, and the State universities particularly must reject the proffered entangling alliance with swollen wealth. The education at Ohio State University has been provided by the people in connection with the federal government; its management will not be surrendered to the representatives of great wealth.—The Ohio Teacher.

COUGHS, SNEEZES AND SIGHS.

ONE of the most interesting facts about the human body is its power of self-protection and self-preservation—its power of evading or overcoming the thousand and one conditions which, unless corrected, would be injurious or destructive. Among the most common of these acts of self-preservation are the cough, the sneeze, and the sigh.

One of the simplest of the body's devices for self-protection is the cough. The cough is merely a blast of air propelled from the lungs in such a manner as to dislodge forcibly some foreign substance which has been drawn into the throat, the windpipe, or the tubes leading to the lungs. The membranes lining these parts of the body are sensitive, and when a foreign matter comes in contact with them, an alarm message is at once sent to the nervous "headquarters," and the result is the sudden, spasmodic expulsion of breath which is called a cough. Often the cough is produced by the irritation of the accumulation of

mucus on the surface mentioned. In this case, as in the case of a foreign body, the cough is merely a means of expelling the matter.

A sneeze is exactly like a cough, save that the obstruction occurs in the nostrils, owing to the deposit of some irritant or foreign matter, and that the blast of air is thrown out through the nose instead of through the throat and mouth.

Why do we sigh? When grieved or depressed the tendency is to hold the breath. This means that the body suffers for oxygen; and the long, deep breath which we call a sigh is merely a means by which the body obtains for itself the necessary amount of oxygen.—*Chicago Tribune*.

Between Whiles

That's the Question.

Clifford can ask questions quicker than we can answer them, and a few days ago his uncle told him he would turn into an interrogation point. I agreed with him and said, "Yes, I had once seen a picture of a little boy turning into one. He had become more and more curved, and finally had become just a large interrogation point."

Cliff listened intently and when I had finished he instantly asked, "Well, how did they keep the dot under him?"—The Delineator for July.

Office Boy—"The editor is much obliged to you for allowing him to see your drawings, but much regrets he is unable to use them."

Fair Artist (eagerly)—"Did he say that?"

Office Boy (truthfully)—"Well, not exactly. He just said, 'Take 'em away, Joe; they make me sick.'"

Enough to Scare Anyone.

While out walking with her papa and mama one day, Florence, aged four, ran some little distance ahead. As she got near a mule hitched to a farmer's wagon the animal began to bray. She wheeled instantly, and running to her mother as fast as she could go, said in round-eyed astonishment, "Oh, mama, sumfin said sumfin."—The Delineator for July.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

The International Sunday-School Lessons

FOR 1909

Are on the Acts of the Apostles

Every Sunday-school Teacher will need the helpful assistance of some first-class teachers' help. The lessons deal with the persecutions of the early church and the spreading of the Gospel which attended the dispersion of the saints. Lesson writers of splendid ability have been engaged for this year and we confidently hope to make the **Brethren Teachers' Monthly** the best teachers' assistant on the market. If you have never used the Monthly, ask for a sample copy. We will gladly send a copy to each of your fellow teachers if you will send us their names and addresses. Subscription price, 50 cents per year.

NEFF'S CORNER

Contracts are now all let for the 176 miles of new railroad that will complete the connection between Galveston, Texas, and Clovis, which will put us on a short, through line from the Gulf to the Pacific. Through traffic from Chicago and from the Gulf will meet here on its way to the Pacific and Clovis will be a division point for both lines. That means that the capacity of the car shops, round house and railroad yards here will be doubled, and that Clovis will soon be a city of 10,000 people. Property values have doubled during the last few months and we expect them to double again in the next few months. Beauty about investments here, if a man buys he can sell again. Evidence that people are satisfied with their investments here is to be found in the fact that after they have put in some money and tried it awhile, they invest again and again. If you would like to correspond with some of these people, drop me a line and ask for their addresses. If interested, don't hesitate to ask for any information you desire. We are having fine rains, prospect of good crops, and our farmers as well as our business men are happy and prosperous.

JAMES M. NEFF,

Clovis, New Mexico.

Life and Sermons of Elder James Quinter

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

Price, postpaid,\$1.00

HOUSE**

Elgin, Illinois

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands; for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

Ho! for Canada

It is not the purpose of the CO-OPERATIVE COLONIZATION COMPANY to slacken interest in its Colony at EMPIRE, California. This colony is now well under way; colonists are moving in and are well pleased and the work is moving along satisfactorily. But as the policy of this company is,—“CHURCH EXTENSION BY COLONIZATION,” steps are being taken to locate a colony in the Northwest.

After considering the various sections offered for settlement, the Directors at a recent meeting decided to locate

Colony Number Two Near Portage la Prairie, Manitoba, Canada

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its nearness to good markets,—only 56 miles from Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Manitoba.
6. The Low price of land, when quality and location is considered. These lands are now ready for settlement, are low in price and will soon be taken.

Join our Colony Number Two, secure a good farm in a prosperous section with good, nearby markets, excellent transportation facilities, where School and Church privileges are assured, and among people with whom you are acquainted. For fuller information, dates of Land Seekers' Excursions, etc., address:

Co-operative Colonization Company North Manchester, Indiana

or

W. Scott Garrioch,
Portage la Prairie, Manitoba, Canada

Utah,	Strawberry,	810,000	60,000	Private
		\$28,647,000	1,552,540	

To December 31, 1908, the Federal Government has already expended over 28 millions in preparing homes for probably 20,000 families, possibly more, and must spend millions more before these projects are finished. With the Government the railroads that serve this territory are vitally interested in seeing that these acres are successfully settled by prosperous farmers. Whether these farmers are on government lands or on private lands irrigated by the government, is of minor importance; the main proposition is to supply as many homes for as many people as possible on these government projects.

Parties wishing information about any of these projects with the view of securing Government land or private lands for future homes should write to the undersigned for printed matter descriptive of the section of the country they wish to locate in.

GEO. L. McDONAUGH,
Colonization Agent, U. P. R. R.,
Omaha, Nebr.

Fallon, Nev., June 18, 1909.

*TRUCKEE-CARSON PROJECT

Mr. J. C. Waite,
777 Federal Bldg., Chicago, Ill.

Dear sir:—

I have, of course, been extremely busy since coming here. Nobody can appreciate what has to be done, until they get into it.

All of my crops are looking fine. They say my alfalfa can not be beat. It is cut and cocked up now. It will stand me in \$20.00 an acre this one cutting and I will get two more cuttings this season besides pasturage this early spring and late fall.

I figure it will net me \$50.00 an acre this year at least, after paying expenses of labor, etc.

This alfalfa stand is only 1 year old.

Well, I must ring off. Trusting that I may hear from you soon,

I am yours truly,

(Signed) A. O. Foskett, Sec.

Tell the folks in Chicago they can never locate cheaper here than at the present time.

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Gareth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

Price, each, postpaid, only

25 cts.

Set of eight designs, postpaid,

SPECIAL TERMS TO AGENTS ON REQUEST

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

Profit by the Experience of Others at Miami Ranch

Why hesitate! You can no longer doubt the advantages of living at Miami Ranch. There's no longer the least risk attached to an investment there. Scores of other good families have **proved** that it's all we claim it to be. They are all prospering and enjoying the kind of health that can be found only in the mountains of New Mexico.

Read what one of our settlers says regarding Miami Ranch—and he is no more enthusiastic than his neighbors are:

Farmers Development Company,
Miami, New Mexico.

Gentlemen:

A year ago my wife and I made a western trip through Texas, Colorado, Utah and New Mexico with a view to finding a desirable place to locate for my health and for investment, having been in the hardware business in Bellefontaine, Ohio, for 13 years in the firm of Osborn & Churchill.

I had heard of the Miami Valley located in Colfax County, New Mexico, which was opened up less than a year prior to my visit, by the Farmers Development Company. I was very much impressed with the present and future prospects of this beautiful valley. I made another visit last August and purchased 40 acres, several others purchasing like amounts at that time.

This community is composed of an intelligent and industrious class of people from the Middle States, largely from Ohio. I disposed of my business interests in Ohio and arrived here the 19th day of February, 1909, to make this my home. I find as I become better acquainted with this community, that it is the most perfect country I have had the pleasure of visiting. The health giving properties in the pure air and sunshine is acknowledged by the most prominent physicians to be the best in the United States.

I find for investment that one cannot make an error, as climatic conditions and location for fruit are ideal, and for general crops most excellent. Land is advancing because people are looking for improved farms as well as unimproved, which creates a demand for both.

I find my health already improving, having only been here two months.

There is an abundance of water to irrigate, having the best and most substantial reservoir in New Mexico, this company has spared no time or money to make it perfect. People are happy and contented. I can recommend this Valley to my friends feeling that I have done a good deed,

Respectfully,
(Signed) W. W. Osborn.

—Big Excursion August 17th—

With such convincing evidence as we have given you regarding the extraordinary advantages of a home at Miami Ranch, can you any longer resist the temptation of at least investigating our offer! Can you be contented where you are, knowing that you would be better off, in every way, somewhere else?

But we don't ask you to be rash. We don't want you to leave your present home until you have seen us and our land. We don't ask you to take our word. We want you to come out here and **see for yourself** the opportunities you are missing.

Get ready and catch the big excursion on the

Atchison, Topeka and Santa Fe for Miami Ranch, August 17th. The **round trip** is only \$30 from Chicago and \$25 from Kansas City.

Take a little vacation and run down here. You don't need to buy unless you want to—the trip itself will more than repay your fare. You couldn't take a more enjoyable trip if you spent four times the fare to our place.

Trout fishing, elk, deer and bear hunting, wild goose and duck shooting, mountain climbing, boating, swimming, beautiful scenery, clear skies, pure air, ideal weather and all that combines to make life one round of pleasure and health, you will find at Miami Ranch.

If you can't get away for this excursion write for our **FREE** booklet "Westward Ho!" But try to get down here while there are still some choice selections in our second and last opening. Don't let money matters stand in your way. We can arrange payments to suit your convenience.

FARMERS DEVELOPMENT CO., Springer, New Mexico

SUNDAY SCHOOL RALLY DAY

Few days celebrated by the Sunday school are more important than that known as "Rally Day." By a united effort on the part of every worker at this time you should be able to reclaim every former pupil and many new ones besides. Personal visits and invitations should be supplemented by one of our illustrated post cards.

No. 47.—Boy's Rally Day card.
No. 48.—Girl's Rally Day card.
No. 49.—Cradle Roll Rally Day card.

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

Read What Prof. Holden of Ames Agricultural College, Ames, Iowa, Has to Say:

"You may say for me that southern Idaho is THE IDEAL PLACE FOR THE YOUNG MAN who is looking to make a start in life. Every acre of irrigable land in this section is worth, in yield or income, three times as much as the best land in Illinois and Iowa. I am for Iowa, but if a man is to move, southern Idaho is the place to go, and for the young man, full of wonderful opportunities.

"The diversity of crops appealed to me as strongly as anything I saw. The irrigation farmer for instance, is not dependent upon any one crop. He doesn't have to wait until the end of the season to get his money because there is something seasonable and saleable at all times during the year. He raises fruit, wheat, alfalfa, oats, vegetables, hogs, cattle, sheep, in fact everything grown in the temperate zone.

"One man told me that he raised 18 bushels of clover seed on one acre of ground during the past year, and I found that the clover seed crop runs 8 to 15 bushels per acre.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

Homeseekers' Round Trip Rates in Effect on First and Third Tuesdays of Each Month During the Year From Chicago

Blackfoot, Idaho,	\$42.50	Mount'n Home, Idaho,	\$53.90
Boise, Idaho,	57.50	Nampa, Idaho,	57.20
Butte, Mont.,	42.50	Ontario, Ore.,	57.50
Caldwell, Idaho,	57.50	Pocatello, Idaho,	42.50
Hailey, Idaho,	53.60	Salt Lake City, Utah,	39.00
Huntington, Ore.,	57.50	Shoshone, Idaho,	49.00
Idaho Falls, Idaho,	42.50	Twin Falls, Idaho,	50.80
Ketchum, Idaho,	54.60	Weiser, Idaho,	57.50
Market Lake, Idaho,	42.50		

COLONISTS' ONE WAY CHEAP RATES will be in effect from Sept. 15 to Oct. 15 inclusive. Write at once for printed matter giving full particulars about Idaho, and its possibilities, climate and other attractions.

AN AMERICAN PROBLEM

O. H. KIMMEL

THIS is the season of the year when the poorest child in the great American cities looms up to view. This is the season when the schools have temporarily relinquished their hold upon the youth, and it is the season when the physical equilibrium of all, children and grown people, is hardest to maintain. Those who have time and means depart for the summer resorts, the lakes, the seashore or the mountains; but the great mass remains at home,—those who cannot get away, those who are not able to leave, and those who by nature and constructive ability are not permitted to leave their work, which brings in their pittance, called a living, even for a very short period. Among these latter named we will find the ones who need the attention of the people who have the talent, time and opportunity to look into the conditions which enshroud these people. Some of these people are doing very well, and they are living in reasonably good communities—these will take care of themselves—but some reside where conditions are really bad, they receive the poorest pittance as wages, and they stagger out an existence from day to day in a most hopeless and pitiful condition. They are soured to their lot, and are helplessly lost in it; theirs is a life of the worst type, the life often of crime and the miseries of the underworld.

These are members of the lowest type of humanity that America affords today. They are unfortunately surrounded by conditions that have degenerated them into a low class of human beings. True, this class of people does not compare in number with the respectable class of people, but the number is surprisingly large, so large as to warrant the notice and the attention of the thinking population of our country. The great trouble lies in the fact that these people have families. They have children, and these children grow into maturity, some of them, at least, under the most blighting of influences. If they were not raising

families the question would end, for with the passing of this generation the condition would cease, but they are rearing children and this is what must give the greatest concern.

It is impossible to pass this matter by lightly if we are deeply concerned about the future welfare of our country. The great city did not exist when the foundation of our government was laid, and the question had never been up before our forefathers, and therefore this question, new to the experiences of the American race, will have to be worked out by this and the coming generations of the race. The republic can not go on unheedingly for all time, and permit these conditions to continue to undermine the vital functions of the government and of society, for such a cancerous growth will surely increase—it does increase—and its baneful influences will spread. So the question is up before the people of America, especially the people in the American city. The city will need to be purged, it will have to raise its standard of morals, it will need to dress anew in many of its functions, and its people will have to take onto themselves the responsibility for conditions, and the spread of corruption in city government must give way to cleaner ways. The city must recognize the little settlement worker and lend him aid, and some of our cities are now doing this in a small way. The Social Settlement, the Aids, the Playgrounds, and all these auxiliary movements must be countenanced and given support and aid by the government of the city. The citizens must become aroused to the importance of this work, too, and must feel a personal interest in it.

Sometimes the people in the better circumstances resent the fact that the children of the poorer classes must receive municipal attention. They wonder why the children of the workers must receive attention when theirs do not. One society lady in one of the large cities of America approached one of the leading

settlement workers of her city with this very question. She asked him why so much attention was given to the poorer classes, and the working classes, and then said to him: "Will not our children, the children of the well to do, be the men and women of the future who will control the government; will they not be the lawyers, the doctors, the leaders in national life and will not our daughters be the wives of these people?"

He replied by giving a real illustration that was more convincing than a volume of argument. He said: "When I came over here today I made inquiry by personal canvass and in other ways to find out how many children live here in this block, this block in which you reside in your magnificent home. I have learned that in all this block of beautiful grounds and magnificent dwellings, only thirty-five children live. Over in my block in the tenement district there are over four hundred and seventy children. That is why I am for the children of the workers, because there are so many of them. Your children may be the lawyers and the doctors and the magnates but those over where I live, and their kind, will man the mills and the factories and the railroads, and will produce your wealth for your children just as their fathers and mothers are doing today."

And they will do more than this. They will, the poorer classes will, take up space in the jails and almshouses and asylums. They cannot all live in these surroundings and escape these places.

The children of the workers, especially the workers who are unable to earn good salaries, live some of them in communities where the surroundings are too horrible to describe. Parents here are raising children who are exposed to all kinds of evil temptations and vice known to man. They are old in the experiences of life and crime before they are old enough to be admitted to the public school. Some of them have vicious parents and are natural criminals the day they are born. They stagger through life, from childhood to the grave, always hopeless, always crafty and mean, always knowing that there is a better way—away somewhere where they may not enter in, but always careless for law and authority, soured to the world and the miserable life that they must live. People often say that it is useless to try to do anything with these people, for they cannot be reached. This is, in a sense, true. The present generation, perhaps, would never make a good citizen, and the next might not. But if the evil influence was permanently removed there would be, from these very people evolutionized out at last, a better citizen, an upright and thrifty people.

It is a distressing thought to think that grown men and women are living out miserable lives in the poorer districts of the great city, but it is far more distressing

to think of the young babe born into these surroundings. Where vice is law, and the underworld is recreation, where the vermin-strewn alley keeps apace with the refuse-littered street, where the association is made complete by rickety and illy-kept buildings or tenement houses, where sunlight in its glory and purity never comes, where the grass sprig and the flower are never seen, where the brook is the foul-odored sewage in the gutter, where pure earth is buried under pavements of stone and brick, where all in nature that appeals to the growing child is shut out, and where a thousand things that cannot be described, because they are too horrible for words, are the daily haunts of these little children; it is, I say, distressing to think of children born into these surroundings. What, but a life of crime can be expected, and what else is realized?

The Settlement Worker has his influence with the parents and the older children, the school reaches them after they are six, the Aids may help them when they are old enough to talk, but so far nothing seems to have been evolutionized that will help the prattling babe. The popular idea that the mother is the saving influence has all along held sway, but in this situation the error of this idea is incalculably wrong for the poor unfortunate mother is too often raised herself under these influences, and her ignorance and misery disqualify her for the responsibility of raising the child to anything else than the life of a degenerate or a criminal. She cannot protect the child from the vermin of its filthy surroundings, nor from the horrible influences, and before it is old enough to give expression to its thoughts, its thoughts are influenced by the surroundings so that when the expression comes it is the expression of its own experience in these blighting surroundings, and by the time the child is forced into school by the civil officer it is, in the experiences of vice and the life of the underworld, so well advanced that it could tell the teacher and superintendent so many things.

It is useless to portray these conditions, it is more useless to try to portray them, for they must be seen to be understood, but the great heart of our people know that they exist even to an appalling extent. This dark, subtle enemy to humanity and to civil institutions is apparent, is spreading, and is appalling in what it accomplishes. How is it to be overcome? Who will listen to the warning, and of those who listen, who are talented with a power to help overcome it? When the public realizes that this condition exists, and that it is responsible for its existence, and when men and women who are able take the field and actually overcome these conditions in all the cities all over the land, then the bottom will have been reached. When America can produce a thousand workers such as Jane Addams of Hull House, when a thousand philanthropic men and women such as Raymond Robins and his estimable

wife, when such men as Zueblin can be induced by the score to lead the way, the masses will follow and this condition will soon give way to the better life.

That our civilization is not yet fully worked out is evident. That it is still in its experimental stage cannot be altogether doubted when we think of all the great questions like these that are yet to be worked out. That our experience has not met this question before, and that the experiences in meeting it and in solving the problem that it brings forth will be new cannot be contradicted, but the fact that the question will be met and solved lies before us, for the race has always braved the storms to reform and better its condition of government. A few people are now show-

ing the way. Within a few years others will be in the ranks and this question will be worked out. To the pessimist we say, be still. This work will be done. This condition now exists because we in our experience with civilization, do not know what to do to better it. A few are experimenting. They will find the way out and then the masses will follow. They are already telling us that these people must be restored to nature where they can see God's workings. They say that the alleyway must be cleansed, that the street must be renovated and set to shade; that grass shall grow by the wayside and in the yards; that flowers and shrubs must take the place of the debris on the open spaces,

THE RUSTLING OF THE CORN

RICHARD BRAUNSTEIN

In my study chair reclining,
In repose my fancy's twining
All the joys which girt the present
With the days now lost and gone,
And the pulses of my vision
Beat in rhythmical precision
As once more I hear the night breeze
Sighing in the corn.

In those days of peace and plenty,
I a robust lad of twenty
Rose, refreshed from out my slumbers,
In the early flush of dawn,
Saw the sun rise o'er the meadows,
Chase away the lingering shadows,
And the morning breeze was sighing
In the fields of growing corn.

Like an army formed for battle
In the pasture grouped the cattle,
And the dewdrops shone and glimmered,
Pale and glinted on the lawn.
From the tangled hazel thicket
Came the chirping of the cricket,
Beating time—at least in seeming—
To the rustling of the corn.

Then the footpath by the river,
Where the maple branches quiver
And I met her,
She who vanished like the breath of morn.
I can hear the songs of thrushes,
I can see her smiles and blushes
As I kissed her,
To the music of the rustling of the corn.

Thus I sit here idly dreaming
Of the olden days, and deeming
That the height of memory's pleasure
Is the days now lost and gone.
While from out the shadowy places,
Peer the old familiar faces,
And I hear the summer breeze
Softly sighing in the corn.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXIX. Midnight Walk to Jericho.

THE most dangerous journey on my tour around the world has been my midnight walk, alone, unarmed, to Jericho.

When I left the Grand New Hotel in Jerusalem at five in the afternoon I expected to reach the Samaritan Inn, ten miles away, before dark. It was not at all my intention to make a night journey of it when the perils from Syrian robbers is greatest. But in Jerusalem's maze of crowded streets I lost my way, and when I found St. Stephen's gate the sun was low.

The Brook Kedron, gorging the rough valley flanking the eastern wall, lay below me. Beyond it, half way up Mount Olivet, on the left, Gethsemane. Passing Absalom's tomb on the right, the road swings in a grand half-circle around the southern slope of the mount. Some Bedouins, wearing dark camel-hair blankets, with light-colored headdress wrapped with thick, black cord, were passed. Some walked. Others straddled little, bow-legged donkeys that leered from side to side as though about to fall from under their excessive burdens. Still others careened from tall camels that sniffed the cool October air and licked their dry chops in anticipation of an early supper. In the side of the hill stood the city slaughter house near the traditional spot where Judas took his life. Beyond, near the road, the site of the fig tree cursed by the Master. Several miles farther around, Bethany, where Lazarus lived with his sisters.

Almost identical in color with the tan gray of the hillside, the wretched village of forty hovels was already fading away in the twilight. Below, on the right, in a clump of olive and fig trees a camel caravan had been unpacked and was resting near a fussy little fire surrounded by wild-looking drivers. I was tempted to stop here and sleep on the ground near the camp, but the chances for molestation by them during the night were too many, while the mountain road, swinging away in dreamy, half-darkened curve, lured me on.

"A certain man went down to Jericho." Well, if he went at all, he went *down*. The Dead Sea, twenty miles away, on nearly the same level as Jericho, is almost four thousand feet below Jerusalem. One

thousand feet fall in twenty miles is great. This is four thousand feet. As I picked my steps down the rock-cut "stairway" that fell beneath my feet, it was like the surprise of one descending a stairway in the dark who finds one more step at the bottom than he expected. Here were a thousand such steps, with other features strangely weird and startling to a solitary traveler.

Although the stars were now out and the forms of the mountains could be seen lying beneath their bright beams, the light failed to penetrate the canyons. As if in mocking contempt for my startled state of mind, the mountains about me assumed prodigious proportions. Several times I stopped and listened, peering through the darkness, holding to a jagged rock to keep from falling down the road that *sloped like a roof!*

It was easy to imagine every black object a ghoul, and moving. Was that one coming? That slender black spectre? If so, what was it? Should I run? If so, which way? Should I speak? If so, what? There was another! Was it a bush, or an animal? How I stumbled over the sharp, flinty stones, only to stumble over others, picking my way down through these scarecrows, veering sharply to the left, then abruptly to the right, around a giant boulder. The very rocks seemed alive. Not that I was afraid, exactly, but curious to know what they were. Not until I crept up and seized hold of the deceiving rock was I satisfied. As I *climbed on down*, it was prudent to look behind me. Those black objects might start up and follow me. It wouldn't feel good to be struck by an ugly club, in the dark, alone, so far from home! Never was I so wide-awake and alert, all over, in my life. When I paused to listen I heard the roar of a cataract! It was the blood, drumming warm courage into my eardrums.

All my sins flocked before me. How easy it was to repent of all of *them!* To him who had often made this same journey alone, I then committed my body and soul. I asked him for guidance over the road he knew so well. For a few moments it seemed as though he walked by my side. A mellow radiance shown about me. But as I pierced the darkness, the stars grew chill again, the mountains blacker, the air

murkier, the stones sharper. And all the hills could do was to startle me with their gloomy maws. My ears kept beating their drums and my muscles were tense with instant readiness for recoil.

Coming upon a cave in a limestone hill I explored it, thinking to make it my castle until daylight. A warm sense of security suffused me as I contemplated sleeping within its protection, when I stumbled upon something that made my hair rise! It was a bundle of clothing. Then it occurred to me that all of these caves over the Holy Land have been for ages the indisputable dwellings of the lepers, and that no one sleeps or lies down in a cave here, except *lepers*. Then my own flesh began to creep and twinge, and I hurried out of my fortress, into the darkness and danger.

Shortly after, a belated carriage for Jerusalem, followed by its mounted guard, passed me. In the next canyon, some desert men, belonging to a caravan camping near by, cleared their throats by way of salutation. I replied by doubling my pace.

No one goes alone over this road at nightfall. The Bedouins themselves are afraid to do it. No other tourist, so far as I am able to learn, has ever made the midnight journey alone. Numbers count everything with these robbers. Two weeks before, two fellahin, at the point of guns, were commanded to give up their vegetables and clothing and then, in the artistic fashion of Adam, were compelled to ride off in the desert. The Savior's certain man was first stripped and then beaten.

The road now led upward through a deep cut that flung itself around a jutting cliff. Here, on the left, a feeble light flickered through the open door of a low building.

It was the *Samaritan Inn*. The landlord, who spoke English, urged me to stay till morning. He told me of hyenas that prowled about at night, of the wolves, wild-cats and panthers, and of the greater danger from robbers. "You will meet hundreds of robbers," he said, a fact that I discredited, for in the first ten miles after dark I had actually *met* none. He was right, however, for the caravans through the Jordan Valley, in order to escape the great heat of that valley, travel at night, and these, on their way up to Jerusalem for the morrow's market had not yet reached the inn.

I went to the door and looked out toward the Jordan. How eager I was to see that stream. But it was nine o'clock at night, and ten miles of dangerous road between us. Again I looked into the night. What sights I saw! The Jordan River! Jericho and its levelled walls. But I also saw wild beasts, robbers, torture, possibly death! So I paid for my lodging and was shown into another room occupied by some rough-looking men lying upon the floor and upon cots.

"That's your bed," he said, pointing to a cot be-

tween two others by the wall. With the candle he then passed out.

I removed only my shoes, knelt and prayed as was my custom, threw myself upon the hard cot, mechanically crossed my hands and became a formal candidate for sleep. I soon found that a mind churned into such extraordinary excitement refused to be quieted. Then it was that an enemy, more numerous and painful than all the brigands of Turkey and the Holy Land combined, made an unexpected sally from their hiding-place. They came by companies and regiments, afoot and horseback, on double-quick, thousands of them, with banners flying. The sting of the fleas, added to the sting of cowardice, insulted my Yankee grit. For three long hours I bravely waged, single-handed and double-handed, this uneven battle with the wild beasts of Judea. I wondered if the wounded man, carried here two thousand years ago, had to endure these awful pests. Sleep did not come. I was mad because I had paid for lodging that I could not use. At midnight I sounded a retreat, ran up the white flag of capitulation, and came out to see the landlord for the second time, preferring the torture of *brigands* to the torture of *fleas*!

When I passed into the day-room, there stood before me three of the most typical wild Bedouins I ever saw. The first look of their black, shiny eyes, set in dark faces two-thirds hidden by blankets reaching to their feet, was significant of cupidity. But I was mad about the fleas, and danger seemed attractive in comparison.

"They are going to Jericho, on camels," said the landlord, as their piercing eyes ran over me in selfish anticipation of booty—"they will show you the way."

I was between two fires, the fleas and the robbers. Their looks,—the wildest picture of humanity I ever saw, and at midnight, on the road to Jericho, cooled my pedestrian ardor. One of them, noticing me shrink from them, told the landlord he was a Christian, intimating that there would be *less* liability of my being victimized at their hands.

But where did these Bedouins, or brigands, prowling about on the Jericho road, at midnight, come from?

Jericho is near the Jordan. The Jordan is the boundary line between the land of Moab and the Holy Land. The Bedouins of Moab are to the Bedouins of Palestine as outlaw desperadoes are to civilized robbers. Regular tourists never wander into the land beyond the Jordan, and the daring adventurer who risks his life in penetrating that wild and lawless land must be accompanied by a heavy guard of Turkish soldiers. The Sultan positively refuses to guarantee the protection of any one who goes there. Wonder not, therefore, at my fright when the landlord told me that these men were Bedouins from the *east* of the Jordan. I'll never forget the full force of that phrase,—*east of the Jordan*! I hesitated. They were leaving the inn. As

the last one passed out he waved at me to follow, saying something in Arabic that would have made a baby cry. I was perplexed. To go to Jericho with a party of born thieves was paradoxical. I was unwilling to return to the fleas, and I knew these men could not be trusted. The fleas balanced on one side, the robbers on the other:—the scale tilted in favor of—the robbers!

Drawn by a strange fascination I followed into the moonless night. Once outside, the men began to mount their camels by having them kneel on the stony road. The one who said he was a Christian, begged me to get on in front of him. "No," I said by gesture

and voice, "I will walk." At least I would not ride with a Bedouin *behind* me.

When the three camels moved off tandem, with myself following the heels of the last one, I was chagrined to find fifty or more Bedouins join us in the darkness. I hadn't planned for these, so I hung back. The men on the camels saw me trying to slip away from them and they stopped their camels, calling to me, and only starting again when I came up. I had to go. So I started again on the longest ten miles I ever walked, and the most dangerous.

All Rights Reserved.

AT QUARANTINE

GRANT MAHAN

WE have gone into port a number of times, and only once did we come near being detained at quarantine. It was a timely turning back that saved us. So what we have to say is from the experiences of others at quarantine. Nowadays a great many persons are constantly passing from one country to another; and the tendency seems to be to watch more

recognized by the government of the United States, and one can go from here there without being detained, as was formerly the case. But of course this is only because of the absence of dangerous disease. If anything of that kind were to break out over here, quarantine would be established at once. The same would be done here if some dreaded disease were to

break out over there. And it is right that this should be done, for it is the duty of every government to care for the health of its people. There are, too, more diseases than the physical against which rigid quarantine should be established.

But to be detained and then turned back must be a very unpleasant experience. Some one has looked forward to the establishing of a home in a new country where there are greater opportunities for himself and family. The family worked and waited, and when the time came they sold what they did not want to take along. They

carefully so as to keep out any disease that is greatly feared. There has been fear of the yellow fever being carried from the islands of Central or South American ports to the United States. The fear was not, and is not, without reason; for in some places, or countries, conditions are such as to cause the disease.

This is not true of Cuba, however, for one has a better chance of keeping well here than in some parts of our own South. This summer the fact has been

set sail, and in a few days were in sight of the shores of America. Their ship stopped, the doctors came on board, an examination was made, and some of the family were found to have a disease which would keep them out. And so they had to go back to take up the old life in the old place after having lost much. It is easier to imagine than to describe the feelings of people in this condition.

Such experiences are had by persons coming to

Cuba, too. The greatest hindrance to entrance is eye disease. That is very carefully watched. The steamship companies are not supposed to bring persons without being pretty sure that they can enter. Yet they do come. Not long ago a family was detained twelve days at quarantine, and then sent back because of eye trouble. They had traded their home in the States for a home here; and when entrance was finally denied them the father wrote me that if they could

is better for the few to suffer than for the many to be exposed to some disease that would unfit them for life's work. But the turning back does not prevent this exposure, for in many instances they go back where people are more numerous and they come in contact with a greater number than they would have in the country to which they wanted to go. Yet they have a right to be in their home country, which cannot be said of any other country.

Morro Castle, Havana, Cuba.

not trade back they would be homeless. Their pictures were taken and posted as persons not to be allowed to enter. And so they went back. We do not know how they will adjust their trade.

Such things are happening all the time; and they seem hard. They are hard on the small number who must give up their hope of a new home. And yet it

until certain you will not need them again. Even then it might be well to let them stand, unless they are in the way, for no one knows what may happen. But, after all, only a very small per cent of the people traveling are turned back at quarantine. The well person has little to fear there.

EDUCATION AS THE BASIS OF PROHIBITION

JOHN WOODARD

At the present time, the "prohibition question" is occupying a great deal of attention in the United States. Several States have already forbidden the manufacture and sale of liquor for beverage purposes and we believe others will soon follow. This is a fine thing and we want the good work to go on. But there is danger that we will think the work accomplished as soon as we get the prohibitory amendment in the constitution or the law on the statute book. That is a particular failing of the American people. They think they have accomplished everything as soon as the law is passed, so they quit working. As a result those who oppose the law get men elected who will

not enforce the law. That is why we have so many laws that are not enforced. That is why "prohibition didn't prohibit" in some parts of Kansas and Maine. "Prohibition didn't prohibit" in Portland, Maine, until they elected a sheriff who believed in enforcing the law. He showed that "prohibition did prohibit" under the proper administration.

Good laws are all right. We need them. But we must also have officers who will enforce the laws, and we cannot get them unless we have a healthy public opinion back of them. To develop a healthy public opinion we must educate the people. We must not

only show them that the liquor traffic is a moral and social evil but also an economic and political evil.

Only a little over one hundred years ago, nearly everybody drank. Even the preachers drank and many got drunk and very few people had anything to say against it. But those few were very bold in denouncing the evil practice and some others began to see that they were right. At first it was considered merely a moral question. The campaign was one of moral suasion. Many people were led to see how dangerous the use of alcoholic liquor was to themselves and their families. But while the reformers were pulling men out of the gutter and persuading them to live a better life, the saloons were seizing many other young men and young women and dragging them down to destruction. It was no respecter of persons; the man from the mansion on the hill or the one from the hovel on the back alley were the same as long as they could be tempted into the saloon and had the price of a drink. License, high or low, did not check its onslaughts. Instead, the saloons hung out fancy signs, provided music, and the saloonkeeper smiled blandly and said, "Come right in, boys, this is a respectable place, Uncle Sam approves it. If you don't believe it, look at the license on the walls." He even made a side entrance and hung out this sign: "Ladies' Entrance."

By this time the reformers were tired of pulling men out of the mud only to see them slide back again and others, bright young fellows, dragged in. They saw they were playing a losing game. The saloon could drag them down faster than they could lift them up. "There is only one way left," they said, "and that is to put the saloon out of business." This raised a great howl. The saloonkeeper said that was encroaching on his "personal liberty," and many of the people believed him. They failed to see that "personal liberty" allowed no man to encroach on the rights of others. That was not all. The saloonkeeper said that if they quit business it would kill the town. And many people believed them. It would seem like Christian men would not let any money consideration keep them from abolishing what they knew was a moral evil. But many nominal Christians refused to vote against what they thought was their business interests.

The position of the saloons was a strong one. By corruption they could control elections. Their large advertising made the press their humble servant. Many of the people were afraid to try anything new. These had to be shown that the liquor traffic was an economic evil as well as a moral evil.

On one thing the reformers were agreed. That was that the people had to be shown that prohibition would benefit them. On methods, however, they differed. Some thought that a new political party was necessary to carry on the campaign, so they organized

the Prohibition party. Others thought that an organization to work through parties already in existence would be better, so the Anti-saloon League was organized. The W. C. T. U. women realized how hard it is "to teach an old dog new tricks," so they decided to train the children by temperance education in the schools. Soon college students said, "We must teach the people the facts about all methods and let them decide which method they will take. We will get the college students to study the question and they will teach the people." These students organized the Intercollegiate Prohibition Association, held study classes, and gave oratorical contests in the different colleges where they had study classes and between the representatives of different colleges. Others thought best to work independent of any of these organizations, but they have all labored to educate the people. They have told of the social and political corruption caused by the saloon. They have shown the fallacy of the "personal liberty" argument. They have told how the liquor men consume wealth but do not produce it, and how they injure the capacity of others to produce wealth.

Some of the liquor journals say that the present wave of prohibition is only a temporary affair and it will soon subside. But they have failed to see that the present movement is on an economic basis. When you touch a man's pocketbook, you get pretty close to him. As soon as you convince a man that prohibition will improve his business, he is a Prohibitionist. That is why a great deal of the South has gone dry. It is a business affair. The South has found that prohibition pays financially and, as fast as other sections find it out, they will also go dry.

But the work is not over even in the States that have gone dry. "Blind tigers" will creep in if the law is not enforced and, if the education ceases, men will get in office who will not enforce the law. It is the duty of every American citizen to become thoroughly posted on this question so he can make an intelligent effort to remove the great evil, the liquor traffic.

A SUDDEN SHOWER.

Barefooted boys scud up the street,
Or scurry under sheltering sheds;
And schoolgirl faces pale and sweet,
Gleam from the shawls about their heads.
Doors bang; and mother voices call
From alien homes; and rusty gates
Are slammed; and high above it all
The thunder grim reverberates.
And then abrupt, the rain! the rain!
The earth lies gasping; and the eyes
Behind the streaming window panes
Smile at the trouble of the skies.
The highway smokes, sharp echoes ring;
The cattle bawl and cow-bells clank;
And into town comes galloping
The farmer's horse with steaming flank.

The swallow dips beneath the eaves,
 And flirts his plumes and folds his wings;
 And under the catawba leaves
 The caterpillar curls and clings.
 The bumblebee is pelted down
 The wet stem of the hollyhock;
 And sullenly in spattered brown
 The cricket leaps the garden walk,
 Within, the baby claps his hands
 And crows with rapture strange and vague;
 Without, beneath the rosebush stands
 A dripping rooster on one leg.

—James Whitcomb Riley.

SEEING THE HEART BEAT.

STATE after State in this republic is passing laws against the use of cigarets. Probably one of the next great crusades, after the liquor business is disposed of, will be the tobacco business. The cigaret is responsible for a tremendous amount of destruction,

and teachers, philanthropists, reformers and religious instructors are beginning to understand the greatness of its evil.

A little instrument called the sphygmograph is being used to demonstrate the effect of cigaret smoking on the heart. It takes automatically the pulse beat from the radial artery. This beat is transferred to a slip of paper which records with exact measurement what the heart is doing. Measurements are taken of this pulse wave before the use of tobacco, during its use and afterwards, with plain and unmistakable and scientific demonstration. The accompanying illustration shows with startling clearness the result of these tests. Tracing No. I is the record of the heart beat of a youth of eighteen who has been smoking only two years. It will be seen that not only is the pulsation of the heart very feeble, but it is very irregular. There is an instant indicated by the letter "X" when the

pulsation was so feeble that it could not be recorded. Tracing Number II is the record of the same youth taken immediately after smoking and while still under its influence. It will be seen that the heart is excited to a faster and more decided pace, but there is still irregularity and still a partial arrest of action, as indicated by "X." It is not difficult to prophesy that by his persisting in the use of cigarets for a few years, the pulsations of the heart will become so feeble that we will see the record of his death in the morning paper and the cause assumed will be "heart failure."

In contrast to these two tracings are Numbers III and IV, immediately following. They are the record of the strong, healthy heart beat of a young man of strictly temperate habits. Number V is the heart tracing of a healthy young women. If the diagram which we present here could be shown to the hundreds of thousands of young men who are addicted to the cigaret, they would abandon the pernicious practice if for no other reason than fear of a certain and early termination of life.

The lad who begins this suicidal habit can expect nothing less than a weakened and erratic heart movement, which in the end will destroy the vital force. Fathers and mothers, schoolteachers, and ministers have a great work to do in educating public opinion and removing this source of fearful loss to the republic.—*Home Herald*.

AN AMERICAN PROBLEM.

(Continued from Page 771.)

that the tenement house district must give way to the cottage in the suburbs; that the sweat shop must be closed; that the workday must be only eight hours long in order that the mother and father shall have eight hours for recreation and to spend with their children; that there must be playgrounds for the children in order that the motor activities can be trained; that there must be churches and Sunday schools, and wholesome places of amusement; that the saloon must be controlled or destroyed, and that there must radiate down from high places a greater respect for law.

The child born in the city, who must reside there through the long days, waiting for maturity, who never has the opportunity to go out on the grassy hillside in the spring and pick the violets and spring beauties, is unfortunate to say the least; but the child who is born here under the blighting influences of the worst places in the city is hopelessly unfortunate. So, the Settlement Worker has a great work before him before he causes the reaction that will put these people close to nature and away from the pollution and temptations of the present-day surroundings. We can say God-speed to him in the campaign now on and crave the victory that he is going to win in the end. We can see that he is in the right and that he will conquer for the right.

NATURE STUDIES

IF I WERE IN THY PLACE.

[Original Prize Declamation at Boston Latin School, June, 1909, by Harvard Norton.]

Aha! the trap is sprung, and now I'll find
The thief that's stealing chickens from the roost!
What sneaking prowler of the night is caught?
Perhaps a skunk or weasel it will be.
There is a sudden movement in the grass.
The chain draws taut. A glimpse of yellow fur!
Perhaps I've caught—I have—it is a fox!
Thou art the thief, I've caught thee fair and fast.
A sly old rogue art thou, and seldom seen,
Though often has thy bark been heard at dusk.
Why did'st thy hunger lead thee to this spot?
Could not the teeming forest yield thee food?
The partridge or the rabbit is thy prey.
Such glossy fur as thine I never saw,
'Twould make a splendid trophy for my den.
It is not red—though often such 'tis called,
But golden yellow like the sun at dawn.
No sound betrays the pain that thou must feel.
What other creature could such torture bear?
Don't pull so at the chain and tear thy wound,
Those deep sunk iron teeth are merciless.
Ah! here comes mother; what a great surprise
When she sees this! "Well, here's your chicken thief,
A fine big fox.—You think he is in pain?
And bleeding too?—Why, yes, I fear he is.
What, bathe it? What's the use of doing that?
I'm going to shoot him now, and end his pain.
What, bathe it first? I think I read your mind;
I'll do it, just to please you, if you say.
He might reward me with a vicious snap.
I'll hold him with this mat, you bathe his wound.
There, now I have him firm. Be gentle there."
Thy little body trembles at each touch.
Thine eyes accuse me of a sorry deed.
Poor little creature, art thou, after all.
A cruel fate it is that thou hast met.
I cannot bear to think how it would be
If I were in thy place, my little fox.
That cruel trap has held thy paw too long,
And now I'll ease the spring and free thy foot.
One moment thou shalt have without such pain,
And then the gun; but no! 'tis useless now.
I've done so much for thee, I must do more.
'Twas not my plan to save thy little life,
'Twas she who planned and gives thee thy release.
Hereafter elsewhere seek thy prey. Now, go!
One backward glance. That is enough to show
That thou are grateful to us after all.
How fast thy limping gait doth measure space.
The garden is between us; and once more
The woods, thy home, my little fox, are thine!

—Our Dumb Animals.

BEAVERS.

MAUD HAWKINS.

THAT the beaver is possessed with almost human knowledge which can hardly be called instinct, is manifested in the manner these ingenious little builders construct their houses. So much forethought and reasoning is displayed as to almost place them on a footing with more enlightened builders.

After their dam is constructed, which displays no little engineering skill, they devote their whole attention to the erection of homes. They separate into companies for the purpose. Evidently they have learned the disadvantage of working in common as our Pilgrim fathers did long ago. They at first put into position piles along the border of the pond on which their homes are to be constructed. The houses are oval in shape and are from five to ten feet in diameter, according to the size of the families they are to accommodate. These dwellings are two and generally three stories high and often contain four rooms. The walls are two or three feet thick, rough on outside but smooth inside and so well built that the rain cannot penetrate them.

The rooms are about two feet high, the ceiling is of sticks and mud and the upper one has an arched ceiling, or what we would call in human architecture, plastered on the rafters, a sort of garret. This upper story is above the water. There is a door or stairway leading to each upper apartment. Every dwelling has two doors. One opens into the pond below freezing point, that they may have easy access to the pond, the other opens on the land side to facilitate their taking land excursions in search of food.

Towanda, Pa.

OUR BIRDS.

THE key-note for nature study is sympathy. Our success in life, as individuals, depends to a large extent on our knowledge of and power over physical environment. A teacher with perfect sympathy between herself and her children has almost unlimited power over them. With the little people in thorough sympathy with the bird, or cat, or plant they are studying, their power to see and think and tell is wonderfully increased. This sympathy is particularly necessary in nature study.

Perhaps the most fascinating of all nature study is

the study of the birds. If all the boys' lessons were as full of pleasure and interest as learning to know the birds about them there would be no—

* * * whining Schoole-boy with his Satchell
And shining morning face creeping like Snaile
Unwillingly to Schoole."

When Nature herself is really the teacher a boy will be roused from his bed by the chattering sparrow, the scolding wren, the robin's early call, or perhaps an outburst of song like a mighty chorus from the trees beneath the window. If children are interested in birds, the ear is unconsciously trained and they hear every sound, and interpret the meaning in an amazingly clever manner. Ex-President Roosevelt when a boy showed a keen interest in birds. He "knew the haunts of every species within a wide radius of his home." It is said that few men not specialists know so much about bird life.

How many birds should the children in the primary grades know? That is, with how many birds should they have a speaking acquaintance—call by name when they meet them?

In a room recently visited the children in the primary (first, second and third grades) knew about twenty-two birds, and upon inquiry it was found that the children in the fourth and fifth grades were able to name, at sight, about thirty-five. This number, perhaps, is a little larger than is usually found, but not too large a number for such grades to know. Reports from several different rooms show that the average number of birds known by first grade children is from seven to ten, second grade from ten to fifteen, and third from fifteen to twenty-two or three.

A short period each day given to such study, by a wide-awake teacher, thoroughly interested in the work herself, is all that is necessary to stimulate a love for the birds and awaken a desire for further study. Make as complete a list as possible of all the birds found in the neighborhood. Encourage the children to help. Aside from this—and of far more importance than the recording of the different birds seen—help them to make a special study of one or more birds, even though they be common ones. (Use pictures, drawings and mounted specimens, when possible. Flanagan Co., Chicago, have colored pictures of all the birds. John C. Mountjoy, 378 Wabash Ave., Chicago, publishes a chart showing good colored pictures of the birds. The Davis Press, Worcester, Mass., will furnish for 75 cents a packet of outlines for twelve different birds to be used for color work. These are very helpful in leading the children to note the color markings.)

The keeping of a nature study calendar by individuals, or on the blackboard furnishes an interesting line of work. Record from day to day. Name of birds seen, date (as soon as a new bird has been

discovered, the mounted picture should be hung up with the date attached), and this will answer as a signal for all to be on the watch for facts to be noted in the calendar. (Rand, McNally & Co., Chicago, publish a small ten cent book, called "The Bird Calendar," designed by Clarence Moores Weed, that the third and fourth grade children would find very useful.)

In order to get the best results one must understand the laws of child life. Give children a task in the form of a question—something they can find out for themselves—something they can do, and give them time to do it, then do not fail to ask for the results at the exact time specified. This calendar in a measure helps suggest questions. Are there any bright colors or patches on the bird? Where? Length compared with the birds they know. Are its actions or movements quick or slow? Was it alone or with other birds? Was it near the ground or up high? Upon what did it seem to be feeding, and where did it get its food? (Air, ground, bushes, plants.) Nests. Where does it build its nest? Note birds nesting in orchard trees—robins, orioles, kingbird, waxwing, etc., etc.,—in dead limbs or bird-boxes—bluebird, wren, swallow, woodpecker, etc., etc. (See Olive Thorne Miller's "In Nesting Time.") Nothing is more wonderful or can be made more interesting to children than the ways in which nests are made. Note the tools used (bill and claws). Also the material.

Part of the poems, "Bird Trades" and "Birds' Nests," may be read and memorized.

Birds' Nests.

"The wren builds in an ivied thorn
On old and ruined wall;
The mossy nest so covered in
You scarce can see at all.

"The sparrow has a nest of hay
With feathers warmly lined;
The ringdove's careless nest of sticks
On lofty trees we find."
etc., etc.

Bird Trades.

"The swallow is a mason
And underneath the eaves
He builds a nest and plasters it
With mud and hay and leaves.

"The woodpecker is hard at work;
A carpenter is he;
And you may find him hammering
His house high up a tree.

* * * * *

"Of all the weavers that I know,
The oriole is the best;
High on the maple tree he weaves
A cozy little nest."

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

WE call attention to the article on the first page of this issue which is of more than ordinary interest. All of us should give careful study to problems of this kind, not only for the sake of being well informed, but for the purpose of lending our aid where aid is so much needed.

Now that Congress has completed the tedious business of revising the tariff, the people may take their turn in trying to figure out where we are "at." A method that will take less time and cost less mental energy is to let the manufacturers, and the three or four others who handle the goods before they come to us, do this for us. They are bound to do it anyhow in the end, so we may as well save ourselves where we can.

IN the INGLENOOK of July 13, and the last paragraph of article headed, "The Sunny Side of Louisiana," there is a misstatement which the writer of the article says is a mistake that is as big as forty mules. The statement made is that a man used twenty-four mule teams in the cultivation of a certain crop of rice. It should have been two four-mule teams. The mistake was unavoidable owing to the way the figures were given in the manuscript, but we gladly make the correction as it will enable those interested to make a truer estimation of the profits of the crop.

"HIGH-SCHOOL FRATERNITIES."

At different times in these pages we have called attention to the evils that have been developed by the high-school fraternities and to the earnest efforts that have been directed against their existence by leading educators and others who have at heart the welfare of the rising generation. We do not know to what extent our readers are familiar with these organiza-

tions, or whether any of them have suffered through them, either as honored members or as "outcasts," but we feel that with other evils threatening the well-being of society they should be known in their true light so that all may lend their influence against them. For this reason we are herewith giving a number of extracts from a somewhat lengthy article on the subject in the current number of *Everybody's*:

"Some years ago a swarm of Greek Letters issued from the colleges of America and began migrating in the direction of the high schools. They immediately overspread the whole social sky of their new home, and finally alighted on the shirtwaists and waistcoats of the socially elect.

"Since that time at least five State legislatures and at least five hundred rescue parties of high-school teachers have been busy . . . in an agitated effort to lure the Greek alphabet back into captivity in the works of Xenophon and Homer, where it is much less likely to get a chance to bite the modern youth.

"Some people have scoffed. 'The whole high-school fraternity business,' said a State legislator last year to a body of teachers, 'is nothing but a drop in the bucket of the body politic.' Metaphors aside, such is not the opinion of the members. Far from it. And such is equally far from being the opinion of the teachers.

"'I cannot conceive,' said Mr. Edwin G. Cooley, when superintendent of the Chicago school system, 'of the permanent existence of what is known as the American Public School if the fraternity spirit continues and grows as it has during the ten years past.'

"What is this 'fraternity spirit' which has come to dominate the social life of American high schools from the Atlantic to the Pacific? What is this quirk of childish fancy, this Kids' Crusade, which has become a heavily capitalized Educational Problem?

"A couple of western boys go East for vacation. They meet some other boys and learn that there is such a thing, really, for practical purposes, as the Greek alphabet. They also learn that their new friends, organized into a company, own three of the letters which are certainly good to look at—much resembling chewing-gum trademarks. The new friends offer to lend them the letters, teach them how to shake hands in a complicated way; write the translations of the letters down on a slip of paper so that they won't mislay them in their minds, and send them back West to found a chapter of Pi Phi Psi.

"Returning home, the boys pick out a few agreeable associates of their own social species, hold an initiation, teach the new members the principles of Pi-Phi-Psi-ism, devise a few new complications in the art of hand-shaking, have their coats cut five inches lower in the

front than at the back, have buttons sewed on the flaps of their pockets, turn up ten inches of their trouser legs, take a pair of scissors and clip off the whole breadth of their soft felt hats all the way round, slit holes in the remaining fragments of the hats and twine their fraternity ribbons through the holes, invest some of father's money in an enamel, gold, and diamond Pi Phi Psi label, hook the label to their waistcoats, and paralyze the high-school corridors between classes with a burlesque of a stage imitation of a college boy's imitation of a human walk.

"Why not? It is all as innocent as a flock of lambs. But now the problem begins to appear. Now the school, whether in Maine or in California, begins to get divided into socially successful 'Greek letter' lambs and socially unsuccessful 'Barbarian' lambs. And there now begins among these lambs a struggle for social distinctions, quite inappropriate to their charming time of life and, in fact, so banal and so mutton-headed as to be worthy only of completed sheephood.

Of the high-school fraternity houses, clubhouses for men of from thirteen to eighteen, without any adult supervision whatsoever, the writer says, "They marked a winning round in the long fight made by the American child to skip its childhood and also, by separating the socially elect still farther from the socially ineligible in high-school life, they drove the wedge of caste still deeper into that 'citadel of American democracy,' the public-school system.

"This was the deep-down reason why that rather old-fashioned educator, Mr. Cooley, spoke in such heat and why most school authorities agreed with him, all the way from those of Seattle, in the West, who fought the high-school fraternity question as far as the supreme court of the State, to those of Melrose, Massachusetts, in the East, who pugnaciously said: 'We are firmly convinced that rather than lower our great system of public schools into schools of clique and caste, of contempt for humanity, scholarship and duty, it would be better for the youth and better for the commonwealth if our schoolhouses close their doors and the children labor for an honest livelihood.'"

Speaking of the forcing tendency of these fraternities mentioned earlier in the article, the writer further says: "The high-school fraternity has brought to an acute stage that disease of Prematurity noted in American children (along with other more admirable characteristics) by all foreign visitors. It is the disease of which Mr. Kipling has made a most complete diagnosis in the person of the young hero of 'Captains Courageous.' And the high-school fraternity has stimulated Prematurity in that part of adult life especially which, beyond all others, ought to be unknown to children; namely, the social struggle.

"Social struggle, with all its blindness and all its

bitterness, is likely enough to come some day. Why begin it at an age where our outward actions are crudest and most cruel while, at the same time, by the contradiction that produces many of the tragedies of childhood, our inner feelings are shyest and most attuned to suffering?"

The writer gives illustrations of the social snobbishness practiced in the rules which will not admit to membership those living on streets where there is a car line or shops or those living in flats, etc., and the deceit and extravagance practiced by some in order to gain admission. Speaking further of the fraternity houses and of the societies' tendency to force the pace, the writer says: "It forced the pace of the young boys who spent their spare time at the Chicago high-school fraternity houses till, when President Schneider, of the Chicago Board of Education, investigated those houses in 1908, he found that in at least six instances they had been used to entertain night parties of women from the Red Light district.

"Now, these boys did not go wrong purely because they were fraternity boys. The world has not had to wait for the invention of high-school fraternities in order to see boys sowing their wild oats prematurely. Nevertheless, there was no getting away from the fact that the fraternity system, by giving boys the environment and equipment of an artificial and unhealthy adult life, enormously increased the possibility of such happenings."

Added to the disease of Prematurity there are two other evils of which the high-school fraternities are guilty: They destroy scholarship and disrupt the student body. "The disintegrating influence of high-school fraternities on the student body is felt in almost every school in which they exist. There are a few exceptions to the rule, but the nature of a fraternity is to foster not so much the 'school spirit' as what a fraternity boy once called the 'bunch spirit.'"

If the parents of all the children who belong to these fraternities would join the school authorities and educators in fighting against their evil influence the victory would soon be won, but many parents give their children every encouragement, even quoting the Fourteenth Amendment to the Constitution in defending them and joining others in the "personal liberty" cry. Apparently many fathers and mothers consider the chief duty of parents to be that of giving their children the moon or anything else they may take a fancy for, instead of training them to desire the things that will contribute to their welfare as well as to the welfare of others. The real difficulty in this high-school fraternity problem as well other vital matters lies in getting the right kind of parents for our children. The right kind of parents will give us the right kind of children as sure as the words of the wise man are true.

THE HOME WORLD

“TIRED TO DEATH”

HATTIE PRESTON RIDER

THAT is what we say, when the warmer days of midsummer draw on, and the heat seems to sap our forces, physical and mental alike. To the worker in store, factory, or office, life becomes all but a burden; and as to the home-keeper, the extra labor of washing, ironing, canning and preserving, not to mention that attending the inevitable summer visitors, taxes to the very limit of one's endurance. On this last point there is but one thing to be said: unless your friends are employed, and therefore cannot be spared from their places except in vacation-time, invite them to your home in the cooler and more comfortable seasons of the year.

A little tact will smooth over any attendant awkwardness of the situation, even if they have already announced their intention of coming. The added enjoyment of both parties will more than compensate for the disagreeableness, if any occurs. A real friend wishes to make her visit a pleasure to her hostess as well as herself, which cannot be the case if the latter is sitting on the cool porch with a fan, while the former swelters over the hot stove, hurrying to and fro to make the social and domestic ends of her duty meet. During September and October the country is still pleasant, and in the city, parks and drives are yet things of beauty. Also, there is the early fall attractiveness of the great stores.

However, without counting upon those of us who make the good resolve to visit our sisters only in the cool of early summer and autumn, there are many ways in which the home-keeper and all the rest of womankind may conserve their strength during the warm season. First, is the providing and demanding of simple fare: few meats, if any; milk, if it agrees with the palate and digestion; vegetables, especially those that require no cooking; and fruit desserts.

The everyday wearing of white or very light-colored garments, especially skirts, imposes a heavy burden on the home laundress. By the exercise of taste one can manage to look exactly as well in some thin but darker

material, and as a rule much neater, since a soiled light dress is an eyesore to every beholder. Simple romper suits for the small children, and equally simple but natty ones for the larger, are infinitely preferable to any others, since they mean comfort to the child and mother alike.

Another important point is simplicity in entertaining. If you are holding a private picnic in some favorite park or woodland, plan your refreshments with a view to their easy transportation, not burdening the party with unnecessary dishes, baskets and pails. Lemon juice and sugar may be prepared ready for the addition of water at the grounds, picnic plates substituted for pretty but cumbersome china. Even salads may be packed in a condemned fruit jar that need not be taken home again, and served on lettuce leaves at the side of one's plate, in an attractive and appetizing manner. If one carries to the woods an outfit that would do credit to a fashionable luncheon served in the home dining-room, the gypsy effect which is the chief charm of an outing is entirely destroyed. The “roughing-it” flavor of a real picnic meal is as much better, as the delicious fluffiness of a roasted potato supersedes the soggianness of a poorly-boiled one. More than that, the unnecessary equipments entirely spoil the day for the burden-bearers of the party, be they male or female. Let all the arrangements for your outing be good, but simple and sensible.

To withstand the heat, it is of great consequence that the workings of your own body be in perfect order. Did you ever think what a beautiful, splendid machine it is, so wonderfully planned and operated that the most successful man-made piece of mechanism is a mere feeble copy of some part of its construction? Even at that, no man has ever been able to reproduce the marvelous arrangement by which it rebuilds its own parts, faster than with ordinary use they can wear out. Get a good textbook on physiology and hygiene, such as the children use in the graded schools, and study it, next after your Bible. What would you

think of a man trying to run a locomotive engine, without a thorough knowledge of its construction and workings? When we thus study our bodies, we shall learn that weakness and weariness are not caused by legitimate labor, but by *waste matter retained in the body*.

Nature, which is in reality God working, has provided the plan of the circulatory system to heat every part, just as a hot-water plant heats a dwelling; but he has also provided a scheme for regulating its temperature by means of the perspiration, which not only carries off excessive heat, but also much of the body's waste. In order for its perfect working, however, the blood must not be charged with matter which it is the business of the kidneys, lungs, and digestive apparatus to expel. This clogged and impeded state of the blood causes fever, not only the acute, but the slow sort, the miserable "baked" feeling with which one often wakes on a sultry morning. The consuming of much oxygen, which we get from fresh air and pure water, helps dislodge the waste particles so that the circulating blood can carry them away. If all the organs of elimination worked properly, there would be no such thing as heat prostration, mild or severe; and it is very possible by simple methods to accomplish this, for the three great tyrants that would rule otherwise may be vanquished if we will: Misuse, Fear, and Worry,—which is in reality only a slow form of Fear. Against them, rest is the main weapon.

With the three items we have mentioned—simple fare, simple dress, simple entertainment—one's work will be lessened at least a third. Of that which is absolutely necessary, half the load is removed when one ceases to worry. Think of only pleasant things when you are about your tasks. Look at the green grass and waving trees outside your window, not at the scorching sun on the cement walk. Did you never hear of the man who thought of icebergs on a hot summer day till he was taken with a chill? One need not have his absurd experience, but thoughts do greatly influence our bodily feelings.

Then, be sure to take a rest every day, as long as possible, and in the most comfortable place you can find; a *real* rest, mind you, no sitting down in a cramped position with your hands full of sewing, or even a book. *Rest all over*, body and soul, relaxing every muscle and closing your eyes. Know that "as thy day, so shall thy strength be," is no empty promise, if we fulfill the common-sense conditions. Then breathe! breathe! breathe!—the life-giving oxygen into your body, the peace of God into your soul!

LULLABY.

I was loung'n' amongst m' pillows,
Coaxin' sleep with many a sigh,
'N' some one 'n th' room above me
Was a-singin' a lullyby;

'N' I cud hear th' cradle a-rock'n'—
Creakety, creakety, to 'n' fro,
'N' th' woman a-singin' "Hush—thee—
Go—t'—sleep—t'—sleep-e-e-go."

Ther' wasn't a mite of a carpit
Awn th' floor o' thet room, yuh bet,
'N' th' reg'lar swing o' th' cradle,
W'y, I kin almos' hear 't yet;
'N' th' sleepy coo o' th' baby
Thet was bein' swung to 'n' fro,
T' th' wonderful music o' "Hush—thee—
Go—t'—sleep—t'—sleep-e-e-go."

Yuh wouldn't 'a thought thet a feller
Thet's got down 's low 's I
Would 'a felt kinder queer 'cause a woman
Was a-sing'n a lullyby!
'N' 't first I felt jest like swear'n',
Thet a hotel shud treat me so,
Fur I cudn't hear noth'n' but "Hush—thee—
Go—t'—sleep—t'—sleep-e-e-go."

But 't seemed ter git soft'r 'n low'r,
'N' kinder familyer, too,
Wi' th' cradle a-goin' slow'r,
Jest like my cradle ust ter do,
Till I cud almos' feel th' motion,
Rock-a-by—rock-a-by—to 'n' fro,
'N' my mother a-sing'n, "Hush—thee—
Go—t'—sleep—t'—sleep-e-e-go."

Fur she sung 't t' "I love Jesus,"
Jest 's my mother ust ter do,
'N' 't set my heart all ter ach'n',
'N' th' tears ter com'n', too;
'N' I jest wisht I cud slouch back thar,
'N' my mother cud set thar 'n' sew,
'N' I cud hear her, jest oncet, sing'n, "Hush—thee—
Go—t'—sleep—t'—sleep-e-e-go."

—Ella Higginson, in Harper's Weekly.

FATHERS AND MOTHERS.

WHY is it, says a writer in the *Live Stock Journal*, that so many boys and girls, when they have reached the age of fourteen or fifteen years, seem to grow away from their parents?

When the children are babies, they are loved and enjoyed, but as they grow older they are neglected, scolded, treated as though they are in the way, given no pleasures at home, their opinions never asked with regard to anything and if they venture airing their thoughts they are ridiculed and "squelched."

As soon as they are old enough, and generally before, they are put to work and *worked* about like dumb beasts; just with a view to dollars and cents.

Is it any wonder they long to get away where people talk to them as if they were not fools, and where they can take part in the conversation with no fear of being bluffed?

Many a son has disgraced the name of his parents and brought sadness and misery to his home because of just such usage, and many a daughter has brought shame to her loved ones, because her mother gradually

closed the door of sympathy and companionship against her.

It would pay, in every way, if parents would give more serious thought to the managing of their children.

They should be partners with the boys and girls in work, school, reading, play, and in fact everything they do.

Be thoroughly *interested* in what interests them.

As soon as they begin asking questions, answer them *truthfully* and kindly.

When they do a thing well, tell them so, in few words, but let them know you mean it.

If they fail in an undertaking, kindly direct them in the right way and let them know you have confidence in their success when they make another effort.

Parents should thoroughly enjoy their families and nothing will so surely bring this about as to be *chums* with your boys and girls.

Tell them your secrets and listen to theirs. Let them know you were once—and not long ago—their ages and have had just such experiences as they now have.

Is there anything in the world you would rather have than the knowledge that your children, who are just entering manhood and womanhood, think you are really the wisest and best father and mother who ever lived?

It will pay you now and in time to come, if you give this subject your *very best thoughts*.—*Selected*.

HOW THE ENGLISH CULTIVATE MULLEINS.

WE miss a lot of "fun" as well as beauty by having only one point of view toward "weeds." The farmer has nothing but contempt for mulleins. Yet I saw at least twenty different species of them cultivated in English gardens last summer, and they have been many times pictured in the leading horticultural papers.

I do not advocate planting mulleins along the roadside or propagating them in any community where they are a nuisance, but I wish I could make people who have to see them every day open their eyes to the beauty of them.

Of course, the common mullein is shabby when out of bloom, and I must admit it is the least attractive of the species in cultivation because its blooming is scattered over too long a period, and the flowers are inconspicuous. But the woolly rosette of leaves is beautiful, especially after rain. Indeed, most of the species cultivated in English wild gardens are valued quite as much for the leaves as for the flowers. Verbascums, or mulleins, are a race of biennial plants which form a rosette of leaves the first year and throw up a flower-stalk the second.

The showiest of the mulleins is the Olympian (*V.*

Olympicum), which has the great advantage of condensing its bloom into three weeks. It attains the great height of from six to ten feet and is the noblest of the candelabrum type. Unfortunately, this species is likely to damp off in winter unless well drained. Also, it does not bloom until the third year.

The mullein that undoubtedly has the widest range of color is the purple mullein (*V. phaniceum*), now available in purple, violet, rose, pink, lilac, and white. I wish that some one would try verbascums for wild gardening in America. It would not cost much, because the seeds can be imported without duty from English dealers, and when the plants are once established, they ought to self-sow.

But to return to the roadside. Please notice what a great variation there is in the common mullein—the inflorescence dense or lax, simple or branched, the flowers large or small, and the wool dense or loose. There are ten different varieties of this plant in cultivation in English gardens.

Also, I hope you will look especially this summer and fall for the moth mullein, which has larger flowers and looser inflorescence, and is said to attract many interesting and beautiful moths.—*The Garden Magazine*, August.

FORGOTTEN TROUBLE.

Do you know what it was that caused you to fret,
Only a year ago?

Can you tell me the source of your utmost regret,
Only a year ago?

It looked big to you then and you moped and you pined,
The long nights were sleepless and troubled your mind,
Yet you can't tell what happened, in looking behind,
Only a year ago?

Do you know why you frowned as you journeyed your way,
Only a month ago?

Can you tell now what made all your blue skies look gray?
Only a month ago?

What trouble was it that your happiness marred,
That caused you to say that your heart had grown hard,
And from all future joys in this world you were barred,
Only a month ago?

You've forgotten them all, both the great and the small,
The pain and the woe;

For few are the troubles we ever recall
As onward we go.

Ah, few are the troubles, my brother, that last.
They seem big at first, but the moment they're past,
They slip from the mind, for they never stick fast.
It is well that it's so.

—Detroit Free Press.

SELECTED RECIPES.

Sweet Potatoes à la Dixie—Boil two medium-sized sweet potatoes until barely tender, remove the skins and slice about a quarter of an inch thick. Lay in a baking-dish, alternating the layers of potato with layers of butter and sugar, having butter and sugar on

top. Consult taste as regards the amount of sugar, but do not be too sparing with the butter. Add a half-cup of water and bake slowly until the potatoes have absorbed the sirup. Allow them to brown at the last and serve very hot.

Cooking Breakfast Bacon—Slice quite thin and evenly and lay in a hot pan; let slightly brown, turn and brown the other side. While it is still cooking, roll with the help of a knife and fork and lay in a mound of rice or mashed potatoes. The bacon should be crisp, but not brittle.

Baked Apple Sauce—Peel, quarter and core as many apples as you wish; put into an earthen crock or enameled bake pan, with a little water and cover closely; put in the oven and bake slowly two hours. See that the water does not dry out, but let it cook down to a very little. Dust a little cinnamon or nutmeg over the top when served, and eat with sweetened cream.

TAKE young, tender beets, wash, cook rapidly in salted water until done, then drop into cold water and slip the skin off of them quickly. Slice in rather thick slices and pour over them a buttersauce made as follows: Place a cupful of hot water on the stove, add a tablespoonful of lemon juice, a teaspoonful of salt, and a teaspoonful of very finely minced parsley. Let come to a boil and add the beaten yolks of two eggs; stir until it thickens, then beat in two tablespoonfuls of butter. Lay the beets in slices in the sauce, and heat all over hot water, but do not boil; then serve at once.

FRIED APPLES.

PROPERLY cooked, fried apples make one of the most appetizing breakfast relishes, and it is quickly prepared. Wipe the apples well and core. Melt a piece of butter—a level tablespoonful—in a skillet, and slice the apples a quarter of an inch thick and sprinkle with sugar. Use tart apples. They cook much quicker than sweet ones and have a far better flavor. Set the skillet on the back part of the stove and cover closely. This steams them and the sugar draws out the juice, which united with the butter makes a delicious syrup.—*Selected.*

AN EMERGENCY RHYME.

If poisoned, take mustard or salt, tablespoon
In a cup of warm water, and swallow right soon;
For burns, put dry soda and wet bandages, too;
If blistered, then oil and dry flannel will do;
In children's convulsions warm baths are the rule,
(With castor oil dose, too), but keep the head cool.
Give syrup of ipecac when croup is in store;
For fainting, stretch patient right out on the floor;
To soak in hot water is best for a sprain—
Remember these rules, and 'twill save you much pain.

—The Household.

The Children's Corner

THE WORDS "I" AND "IF."

THERE are a boy and a girl that live near me that seem like nice children. Their names are Mabel and John, and they live in adjoining houses. They are always neat and well dressed, and their manners appear to be good. For a long time, therefore, I wondered why the other boys and girls did not care for Mabel and John. There was no quarrel; they seemed on good terms enough with the other children; but they were not popular.

It was Mrs. Harding who told me what was the matter. She shook her head when I asked her about Mabel. "Mabel would be very nice," she said, "if it wasn't for one word that she uses all the time. She can't form a sentence without it, and it spoils everything she says."

"What word is it?" I asked, puzzled, for to put the same word in every sentence seems impossible at first thought.

"The shortest in the language," replied Mrs. Harding with a twinkle. "Just plain 'I.' Mabel never omits it. 'I think,' 'I want,' 'I did,' 'I said'—it is so tiresome!"

"Is that John's trouble too?" I asked, resolving to attack both mysteries at once.

Mrs. Harding laughed. "No. John's word has two letters. It isn't quite so bad. John is always saying 'If.' He cannot do anything without seeing all the difficulties ahead and then he is always talking about what would have happened if he had done this or that instead of what he did do. John is dreamy and full of excuses and reasons for not doing things. I don't think his word is as bad as Mabel's, but it cuts John off from enjoying life."

Since then I understand why Mabel and John are not popular. I know some grown-up Mabels and Johns, and nobody likes them, either. What a pity to choose an unprofitable word and let it spoil their lives! There are hundreds of thousands of words in the English language to choose from instead. If Mabel made up her mind, for instance, to say "you" twice to every "I" how different life would become for her! If John dropped "if" for a month and took up "certainly" what a profitable change for him it would be!—*Boys and Girls.*

THE QUIET HOUR

THE SHEPHERD'S APPEAL.

Have you seen my lamb that has gone astray,
Afar from the Shepherd's fold,
Away in the deserts "wild and bare,"
Or on the mountains cold?
Have ye sought to bring it back,
By a word, or a look, or a prayer,
Or followed it on where it wandered alone,
And tried to reclaim it there?

Ye gather each week in the place of prayer,
And speak of your love for me,
And pray that your daily life might bear
Some fruit that the world may see.
Ye mean it well; but, once away,
Do you live that life of prayer?
Is the soul of that lamb that's gone astray,
Your chief and your greatest care?
Ye speak of the good that ye mean to do,
Among your fellowmen,
Yet tarry oft 'mid the joys of earth—
They are watching your footsteps then,
And while you have stopped for pleasure and ease,
The lamb that has gone astray,
Has wandered 'mid darkness and sin
Along the forbidden way.

Ye meet in your countinghouse rooms for gain,
And count the cost each day;
Do you ever count what the cost may be
Of the lamb that has gone astray?
The cost of that soul will far outweigh
Your stocks and piles of gold.
Can you leave your gains and your wealth untold
To gather it into the fold?

It is perishing now in the bleak of cold,
While ye might have saved its life.
Are ye thinking too much of your ease and your gains,
To enter the Christian's strife?
When the reckoning is called and the balance made,
Will the wealth of a single day
Atone for the loss of a dying soul,
For the lamb that has gone astray?

—Unidentified.

THE LESSON OF THE LOAVES AND FISHES.

JOHN S. FERNALD.

IN the parables of our Savior we read up from the temporal illustration to a higher spiritual meaning. The multitude failed to see the spiritual import of a parable and the disciples failed to fully grasp its meaning, and the Master gave a full explanation to his little band. This occurred many times, and in each instance we find a lesson for ourselves, as plain and direct as that imparted to the chosen twelve.

But do we see as we ought, in the everyday life

and acts of Jesus the spiritual lessons which they might teach us? Such spiritual lessons are to be found especially in the miracles. Let us look, for instance, at the two occasions where, with a small supply of food, a great multitude was fed. In Matthew 14: 15-21 and 15: 32-39 we have records of two such miracles occurring within a few days' time, but in different places. The general features of the two are similar, hence they teach the same spiritual lesson.

We see in each instance a great multitude of people, all hungry for the physical food to satisfy the cravings of the bodily appetite. The Master and his disciples had compassion on them and sought the means to relieve their hunger. The disciples could see but a scant supply, barely enough to furnish a meal for their own little company. But Jesus knew that there was food enough for all, even in that small supply of loaves and fishes. He blessed the food, and gave it to his disciples and they distributed it among the people. After all were filled and their natural hunger appeased there was taken up more than the original supply.

These miracles show us, besides the temporal feeding of the people, a spiritual parallel, in the dealings of God with us in furnishing the Bread of Life. The multitudes are hungering for spiritual food. Our Savior and his followers can supply that want. We, like the disciples, may not be able to see whence the supply is to come, but if we use what we have, Christ will bless it as he did the loaves and fishes, the multitude will be fed and we shall have more spiritual food than in the beginning. Working for the Master and faithfully following his directions will bring his blessing upon our labors, the multitude will be fed with the Bread of Life and our own supply will be increased.

REGENERATION.

It has rightfully been said that the work of the Christian and the Christian church is regeneration rather than reformation. Some time ago we noticed in one of our exchanges a striking illustration representing the various kinds of reformers trimming off branches on a tree, but no one was laying the ax to the root. This was to represent reformers of various descriptions doing their best to bring about needed and desired reforms, but leaving untouched the evil heart from which spring so many sins and follies. Result: while some impressions are being made along certain

lines, the heart remains the same, and other evils along other lines crop out. What we want is to point the world to Christ; to bring the unsaved to recognize their lost, undone condition, and to see that only in the blood of Christ there is redemption; that there is no redemption from sin so long as the heart is filled with desire for sinful things, and that to be right before God there must be a thorough cleansing from the inside out. When inward cleansing is accompanied by wholesome gospel teaching, it means inward regeneration and outward reformation.—*Gospel Herald*.

THE CHRIST OF THE BIBLE.

"IN apostolic days men advocated a Gospel without the Cross. But St. Paul would have none of it. In the fourth century Arius taught a Christianity without a perfectly divine Savior, and the Church would not have it. In the fifteenth century the Renaissance, intoxicated by the discovery of Greek and Roman literature, despised the 'jargon of St. Paul', and would have paganized Christianity, but the Reformation brought northern Europe back to the Scriptures and to the Christ. Today men are proclaiming a Gospel without the supernatural. They are asking us to be content with a perfect human Christ; with a Bethlehem where no miracle was wrought; with a Calvary which saw sublime self-sacrifice, but no atonement for sin; with a sepulcher from which no angel's hand rolled away the stone. But we must have none of it. We will hold fast, we will transmit the faith once for all delivered to the saints. We will hand down to our children, we will proclaim to all the tribes of the earth, Christ Incarnate, Atoning, Risen, Ascending, our Intercessor at God's right hand, waiting to come again to judge the quick and the dead."—*Bishop of Liverpool at the Student Conference in 1908*.—*Bible Record*.

WHAT WE SAVE.

A GENTLEMAN of wealth in the city of New York once gave \$25,000 for the erection of a church, where the congregation was too poor to build themselves. It became a church noted for the piety and evangelical character of its pastor and people. In a few years its liberal patron lost all his earthly fortune, and was approached by a friend, who has eyes only for this world, who said to him, "Now if you had the money you gave to church, it would set you up in business." "Sir," said he, "that is the only money I have saved; if it had not been there it would have gone with the other; as it is, I have it yielding me an interest which will only cease to accumulate when the knell of time is sounded, and during the ages of eternity will be poured into my bosom, in the blessed consolation that hundreds have bowed at the altar erected with that money and acknowledged their Savior."—*Selected*.

JOHN WESLEY ON THE INSPIRATION OF THE BIBLE.

I BEG leave to propose a short, clear and strong argument to prove the divine inspiration of the Holy Scriptures:

1. The Bible must be the invention of good men or angels, bad men or devils, or of God.

2. It could not be the invention of good men or angels; for they neither would nor could make a book and tell lies all the time they were writing it, saying, 'Thus saith the Lord,' when it was their own invention.

3. It could not be the invention of bad men or devils, for they would not make a book which commands all duty, forbids all sin, and condemns their souls to hell for eternity.

4. Therefore I draw this conclusion—that the Bible must be given by divine inspiration.

LAMPS FOR DARK PLACES.

God's promises are all lamps to light up dark places, and I know of no brighter one than this, "As thy days, so shall thy strength be." If we never had nights, we could not see the stars. And so if you and I never had any trouble, we could never enjoy such a promise as this of which we have written. We do not love nights, but we do love the stars. We do not love sorrow and trouble, but we do bless God for sustaining grace. We do not love weakness, but we rejoice in such promises of God as will uphold us when weakness comes.—*Selected*.

THE SECRET OF A HAPPY LIFE.

Just to let thy Father do
What he will;
Just to know that he is true,
And be still.
Just to follow hour by hour
As he leadeth;
Just to draw the moment's power
As it needeth.
Just to trust him, this is all;
Then the day will surely be
Peaceful, whatsoever befall,
Bright and blessed, calm and free.

Just to leave in his dear hand
Little things,
All we cannot understand,
All that stings.
Just to let him take the care
Sorely pressing,
Finding all we let him bear
Changed to blessing.
This is all; and yet the way
Marked by him who loves thee best,
Secret of a happy day,
Secret of his promised rest.

—Frances Ridley Havergal.

ECHOES FROM EVERYWHERE

The supreme court of Ohio has decided that voting machines cannot be used in that State because they do not meet the requirements of the constitution, which says that all elections shall be by ballot.

West Virginia's State capital became wholly dry at midnight, June 30, by a refusal of the city council to grant a renewal of saloon licenses. Altogether 142 saloons throughout the State went out of business at the same hour, owing to similar action in various towns.

By the arrest of Maracaibo of Theodore Hauer, a German subject, and his lawyer, Raymond Porpacen, a plot to start a revolution in Venezuela to overthrow President Gomez was discovered. Correspondence and secret codes seized with the prisoners show they were acting for former President Castro.

Deploping the fact that the liquor laws are being violated Gov. Comer, of Alabama, in his message to the legislature, advises making prohibition constitutional. He thinks prohibition should be disposed of so it will not be a disturbing factor in every election. He says it is a sad state of affairs when law officers commercialize themselves and law and order leagues are necessary.

The teaching of cooking is a science in Germany, as is everything else in that Teutonic empire. Traveling cooking schools are now sent about, for the purpose of instructing peasants how to cook cheaply and well. Since country people cannot go to school, the government will send schools to them. These traveling kitchens are now established in Hesse, Nassau, Franconia, and the Palatinate, as well as in Bavaria.

Intensive methods of farming must be used if the resources of this country are to be fully developed. Our wheat yield averages $13\frac{1}{2}$ bushels to the acre, while Great Britain's is 32. Experiments are now being made in various places to show how a person can make a living on only one acre. One woman reports that she got \$1,400 from her money crops on one acre last year. This kind of farming requires, however, that brains be mixed liberally with the soil.

The International Harvester Company, with headquarters at Chicago, has announced a plan for sharing profits of the business with employes. It is similar in method to that adopted by the steel trust several years ago. Employes are invited to buy shares in the company, to be paid for in instalments taken from wages. For this purpose 12,500 shares have been set aside of the preferred stock and 15,000 shares of the common stock. The former is offered at \$115 and the latter at \$75, both being under the market price. The object is to effect permanency in the force of 30,000 employes and to encourage them to take an interest in the affairs of the company.

Brushing aside governmental "red tape" in the interest of suffering humanity, Commissioner of Indian Affairs Valentine has taken quick and decisive steps to relieve more than 1,200 Indians in Wisconsin who were left without shelter and food as the result of the recent series of cloudbursts in that State. Without specific appropriation Mr. Valentine telegraphed Superintendent Campbell of the La Pointe Indian agency in Wisconsin to take every possible means to relieve the destitute Indians.

Columbiana County, Ohio, voted dry last fall. August 18, 1908, the Citizens' Savings Bank & Trust Company, of Salem, in that county, had in deposits \$263,487.98. February 5, 1909, its deposits aggregated \$306,590.20. April 26, 1909, they had jumped to \$338,293.06; and June 23, 1909, they reached \$379,808.02, an increase of nearly 45 per cent since last August. These figures are sworn to by the officers of the institution. The principal officer of the bank, who voted wet last fall, is now an enthusiastic dry advocate.

Orders for 10,000 freight cars and a large amount of passenger equipment will be placed by the Baltimore & Ohio. The Pennsylvania is in the market for 8,000 freight cars and the Brooklyn Rapid Transit Company for 2,000 of both open and closed cars. The New York Central has ordered 2,400 box cars especially for carrying automobiles. The Buffalo, Rochester & Pittsburg has ordered 1,000 steel hopper cars. The Boston & Maine has bought 10 locomotives. Other railroads have also placed large orders for cars and other equipment.

Some idea of the general use of false teeth may be gathered from the statement that 20,000,000 of them are exported from America to England every year. When we consider that probably not more than half the inhabitants of Great Britain indulge in the luxury of false teeth, no matter how many grinders they may have lost, these figures would seem to indicate that nearly everyone in England suffers from defective or missing teeth. As far as observation goes, the United States is no better off than England in this respect.

For the first time in the history of a large American city a woman was elected superintendent of schools in Chicago when the board of education met and ratified its nomination of Mrs. Ella Flagg Young, principal of the Chicago Normal school. The selection of Mrs. Young is a hard blow to the Teachers' Federation with which Mrs. Young is not in sympathy. Mrs. Young's salary will be \$10,000 a year, one of the two highest salaries paid public officials in the country. The board also created the position of assistant superintendent, appointing John D. Shoop to the place. Mrs. Young has been a "school ma'am" in Chicago for more than a quarter of a century. She is said to know personally more teachers than any person in the West.

The University of Leipsic, which celebrated the fifth centenary of its foundation July 30, conferred the degree of doctor of laws on Theodore Roosevelt. He was the only foreigner thus honored. Among others to receive degrees were King Frederick of Saxony, Count Ferdinald Zeppelin, aeronaut; Gerard Hauptmann, author, and Professor Fritz von Uhde, German painter. The university took the first opportunity to add former President Roosevelt to its honor list, as it has been understood that the Berlin University will give him the doctor of laws degree when he lectures there in the spring.

The Lincoln pennies are not making as great a hit as the treasury officials had hoped for. Artists have always declared that a penny superior in design to the Indian penny could not be turned out, and it is claimed that the Lincoln penny is a practical demonstration of that statement. The new pennies are being subjected to criticism by others than artists. It was first discovered at the treasury that they did not stack up as well as the Indian coins. The most serious objection to them, however, is that they are thicker than the old coins. Institutions which use coin machines have already begun complaining that the new pennies do not fit the machines.

The feasibility of England, Germany and France going to the aid of Spain in suppressing the Moroccan rebellion is being considered by the British cabinet. On the best of authority it is learned that King Edward, alarmed for the safety of Queen Victoria of Spain, who is his niece, and King Alfonzo, has requested the cabinet to communicate with the French and German ministers regarding the sending of a "mixed force" of reinforcements to the Spanish troops who are in such desperate straits in Morocco. The king cited the joint action of the powers during the Chinese boxer uprising as a precedent for similar action now. Owing to her peculiar interests in Morocco it is believed France would be favorable to such a strong movement and if France and England urge the course there is a strong probability that Germany would join with them. The Spanish troops at Melilla, Morocco, have suffered heavy losses and the outlook of Spain in that country is not encouraging at present. The revolutionists at Barcelona have been suppressed with great loss of life, but they are likely to make more trouble.

It may be that a new department in the executive wing of the government, similar to the colonial office of Great Britain, will be the outgrowth of President Taft's order issued a few days ago by which jurisdiction over Porto Rico is transferred from the department of the interior to the war department. The President's policy is to place all the insular possessions of the United States under the insular bureau of the war department, and eventually elevate the bureau to a department in itself. Senator Root, who created the bureau of insular affairs when he was a member of the cabinet, is an earnest advocate of this policy, and has under consideration a project for transferring Tutuila, Manua, and Guam to the insular bureau. The President holds that the experience which has been gained in governing the Philippines and handling the situation in Cuba can best be utilized by getting all the insular possessions together in one bureau. It is yet questionable whether it would be advisable to place Hawaii and Alaska under the same bureau with the other possessions. The President himself favors such a step, but some of the congressmen are opposed to it.

Central Mexico from the Atlantic to the Pacific and from Querato, on the north, to Oaxaca, on the south, a distance covering more than 1,000 square miles, was shaken at an early hour July 30 by a series of the most severe earthquake shocks felt in the region for the past quarter of a century. The more widely spread havoc was wrought in the States of Neuvo Leon and Guerrero. The towns of Chilpancingo, Chilapa, Concepcion, Fetillia and Coatepec were nearly obliterated. Fire followed in the wake of the earthquake in Chilapa. It is known that scores were crushed to death under the falling walls and were later consumed in the burning ruins. At this date no estimate has been made of the total loss of life and property throughout the quake district.

According to reports from Osaka, Japan, Aug. 1, confusion still prevails as a result of the disastrous fire of July 30-31. Thousands of persons are homeless and hunger is staring many of them in the face. A system of relief has been organized by the municipal authorities, but it is inadequate to supply all needs. Outside cities and towns are generously sending in contributions to be used in alleviating the sufferings of the homeless and destitute. The number of casualties has not yet been determined, but hundreds of injured persons are crowding the hospitals. The latest estimates are that 11,368 buildings were destroyed, these including banks, the stock exchange, the museum, government edifices and factories. Among the buildings destroyed was the Buddist Temple, the largest in the world. While at present it is impossible accurately to state the losses, these are given roughly at several million yen.

The world's aeroplane record for two men, as to both time and distance, was broken July 27 in a beautiful flight of 1 hour, 12 minutes and 40 seconds—upwards of fifty miles and at a speed averaging about forty miles an hour—by Orville Wright at Fort Myer, with Lieutenant Frank P. Lahm of the Army Signal Corps as passenger. The former record was made last year by his brother, Wilbur, joint inventor with him of the machine in which both achievements were performed, at Le Mans, France, with Professor Painleve of the French Institute as passenger. That flight was 1 hour, 9 minutes and 31 seconds. In making the flight, the aeroplane went around the drill ground, which is 4,000 feet in circumference, seventy-four times at a height of about sixty feet. The distance covered would have carried Orville Wright and his passenger almost twice across the English channel. July 30 Orville Wright attained the zenith of hard-earned success. In the ten-mile cross-country flight in the famous aeroplane built by himself and his elder brother, Wilbur, and accompanied by Lieutenant Benjamin D. Foulois, an intrepid officer of the army signal corps, he not only surpassed the speed requirements of his contract with the United States government, but accomplished the most difficult and daring flight ever planned for a heavier-than-air flying machine. Incidentally he broke all speed records over a measured course and established beyond dispute the practicability of the aeroplane in time of peace and in time of war. Wright's speed was more than forty-two miles an hour. He made the ten-mile flight in 14 minutes and 42 seconds, including the more than twenty seconds required for the turn beyond the line at Shuter Hill, the southern end of the course. He attained a height in crossing the Valley of Four-Mile-Run of nearly 500 feet, and the average altitude of his practically level course was about 200 feet.

Among the Magazines

THE TAX ON INCOMES.

Forty years, in which the population of the United States has more than doubled, have passed since an amendment to the constitution has been proposed. Scores of amendments on various subjects have been suggested from time to time, but so little support have they commanded that it began to be accepted that the constitution—like the so-called constitution of England—was not amendable. Now, out of a clear sky comes a thunderclap in the form of a proposal for an amendment giving Congress the express power to lay an income tax.

An emergency income tax was laid and collected during the Civil War. Such a tax was also included in the tariff law of 1894, but it was declared unconstitutional by the Supreme Court by a very narrow margin (since the constitution contemplates that all direct taxes shall be apportioned according to population, and not to individual wealth). When in the last campaign the Democrats called for an income tax amendment, Mr. Taft expressed the view that Congress already had the power to decree such a tax, and that an amendment was not necessary. Now, however, as a part of the gymnastic evolutions which have been resorted to to get the tariff bill through Congress, this plan of putting the income tax up to the people has been devised.

It will serve to divert attention at least, and that is a prime consideration in politics. When you behold such men as Senator Aldrich and Speaker Cannon letting a proposition go through Congress like greased lightning, you may know that it is innocuous. In other words, the expectation is that the amendment will be defeated, and thus receive its quietus for all time, or at least that if it is adopted, Congress will only resort to the tax in time of war or some such emergency. The powers that be, the vested interests, are not going to accept an income tax without a protest, and we may expect to see the fur fly in the next campaign.

Senator Bailey's proposal to have the amendment submitted to special conventions in the States was voted down; the matter was left to the legislatures, and as a rule the legislatures can be manipulated. If the amendment is sanctioned by the legislatures of three-fourths of the States, that is to say, 35 out of the 46, it will be adopted; any 12 States can defeat it, and it's a pity if a dozen sovereign States can't be delivered any time, anywhere, on any proposition, by those who have them in their pockets.

The income tax would fall most heavily on the East; the West and South will see in it a pleasing scheme to make the East pay for the running of the government. The richer sections will be against the tax, of course, and thus the brunt of the conflict will come in the East. If the people want to get the income tax amendment they will have to rise early and work late; it will not adopt itself. Most of the other leading nations are taxing incomes, inheritances, etc., and if we are to go ahead spend-

ing for great national enterprises, we, too, must find more sources of revenue. From this on the income tax amendment will take precedence of everything else as a political topic—and no doubt we shall all hear enough about it before it's over.—The Pathfinder.

OUR ALLEGED CONTRIBUTION TO CIVILIZATION.

The other day an interesting commencement address was delivered at the University of Wisconsin by the Brazilian Ambassador to the United States, Joaquim Nabuco. The theme was, "The Share of America in Civilization," and we dare say that most readers who saw it mentioned in the newspapers felt a certain half-idle curiosity, perhaps for the first time in their lives, concerning the ideas that an intelligent observer from the southern American continent might hold on this subject. We profess to have ceased to care what Englishmen, Frenchmen and Germans think about it. They can't mentally grasp us, it seems, and, of course, they are too set in their a priori notions to see us as we really look. But a South American is different. His own civilization, it stands to reason, is not yet "effete." He has been brought up under a republican form of government, and, anyhow, he lives west of the Atlantic Ocean. He might just happen to see us from an angle that offered a fairly advantageous and recognizable view.

The possibility is strengthened by the bias revealed in the Ambassador's opening remark. It appears that once in going from Europe to Brazil, Mr. Nabuco was taken by surprise to hear a fellow-passenger, the late distinguished traveler, William Gifford Palgrave, ask the captain of the ship what good had come from the discovery of America. For his part, Mr. Palgrave could not think of any original American contribution to human well-being except tobacco. We need not raise the question whether civilization can be said to have existed before the invention of cigars. It is enough to drop the reflection that Mr. Palgrave revealed his intellectual limitations.

Perhaps, however, it is no worse to be supercilious and circumscribed than it is to be unduly serious, expansive and naive, as, it must be acknowledged, President Eliot seems to have been when he propounded the thesis that, over and above tobacco, America had made the following five contributions to civilization, namely: "First, and principal, the substitution of discussion and arbitration for wars as the means of settling disputes between nations; second, the widest religious toleration; third, manhood suffrage; fourth, the demonstration of the fitness of a great variety of races for political freedom; fifth, the diffusion of material well-being among the population." When we remember that the diffusion of well-being among the population has only just been attended to by the Senate, and may have to linger in conference;

that the demonstration of the fitness of a great variety of races for political freedom remains incomplete; that manhood suffrage was invented by Frenchmen, instead of by Americans; that religious toleration began in the Macedonian empire and became European under the imperial rule of Rome; and that the first prize for the substitution of arbitration for war has not yet been awarded, we can but admire the gracious courtesy and the diplomatic language of the Brazilian Ambassador when he puts his only comment upon President Eliot's dissertation into the remark:

"I do not think all the points claimed as American contributions by President Eliot will bear in history the mark—'Made in America.'"

What, then, if anything, have we contributed to civilization—always bearing in mind, of course, tobacco? Mr. Nabuco's answer, if not entirely convincing, is at least not absurd. It reveals a bit of real thinking on the subject, and is worth thinking about.

In his view, our supreme contribution to civilization has been our creation of a unique population and national type by mixing and assimilating all nationalities so far that they speak a common language, with all that this implies of unity of thought and feeling. This, he reminds us, has never been done before. For while the Roman Empire combined many nationalities in a common political system, it did not create a common language. This unique population has been created by immigration, and that means that it has been "formed by self-selection." It is the Ambassador's opinion, moreover, that it is our "ever-changing ethnical composition" that keeps up our individuality.

Next to the assimilation of varied ethnic elements in a new national type, Ambassador Nabuco believes that our great contribution to civilization is a distinctly American kind of democracy. No one would claim that America invented democracy, but doubtless it is true that American life and conditions have imparted new vitality to the democratic idea, and perhaps have contributed something of an experimental sort toward demonstrating its practicability. Taking the trouble to expose Professor Münsterburg's curious contention that American democracy was derived from eighteenth century European philosophy, Mr. Nabuco lays emphasis upon the well-known circumstance that not only were French revolutionary principles taken from America, but that also the mind of Jean Jacques Rousseau was deeply stamped with New World impressions.

Without formally including the Monroe Doctrine among America's contributions to civilization, Mr. Nabuco incidentally speaks of it as such. He believes that it has been a powerful influence in keeping the peace of the world.

Upon these interesting views of a keen-minded and gracious observer we can make no further comment than to express the hope that they may turn out to be true. We think that Mr. Nabuco has come a little nearer to a true understanding of us than most of our visitors have done. And yet, in view of all the things that haven't yet happened, we are disposed to state our own predictions in the cautious language of a certain sagacious Roman citizen: "It doth not yet appear what we shall be."—The Independent.

IMAGINATION IN LITERATURE AND ENGINEERING.

The function of imagination in science has often been noted. It has been left, however, for an editorial writer

in *Engineering* (London, May 21) to point out that in a great work of literature the imagination and the resulting reputation are one man's, whereas a work of applied science can rarely be credited to a single brain. The benefit to the finished product is undoubted, but the original creator is not as great a man as his literary brother, whose work is allowed to retain its primal form. We read:

"The engineer, the business man, and the man of science have rested under a . . . stigma, fixed on them . . . by the parliament of letters, literary men having long affected a certain intellectual superiority over the rest of their fellow mortals. . . . There is still a contention that first-class literary work demands for its production a higher order of intellect than suffices for eminent success in other walks of life.

"The claim, for instance, is definitely made that the creation of a character in fiction involves higher mental powers than were necessary to the devising of the 'separate condenser,' or to the successful development of the reaction steam-turbine. It is contended, for example, that the steam-engine was, in a way, inevitable, and bound to come in the actual nature of events, so that it mattered little to the world whether it was perfected by James Watt, in 1765, or by Smith, Brown, or Robinson a few years later. On the other hand, 'Hamlet' is, it is claimed, a definite creation, possible to one man alone, and, failing him, lost forever. . . . Indeed, it has been seriously maintained that the progress of physics at the present day would be assured were its pursuits left entirely to the 'hodmen of science' and the activities of intellects of the first order directed elsewhere. This view does not, perhaps, differ essentially from that of Bacon promulgated three centuries ago, but it is certainly discredited by experience. It neglects the all-importance of imagination and character. . . .

"Creative power is as essential to the great engineer or business man as it was to Shakespeare. Indeed, it is by no means certain that a work such as 'Hamlet' need necessarily have been the work of one man only. In olden days poems were handed down from bard to bard, each of whom added his quota to the form in which the text has finally been received by posterity, and it is held, by some at any rate, that this was the case with the 'Iliad' and with the 'Odyssey.' It is by a relatively modern innovation that literary works are now left as they come from the hands of their originator, while the works of the man of science and of the engineer are modified, for the better or worse, by their successors. To the average literary man mathematics probably appears the most 'Gradgrind' of pursuits, but original work in mathematics requires imaginative power of a very high order, and the German mathematician quoted by Tyndall was fully justified in asserting that 'we are poets,' and the ancients were amply warranted in classing together mathematics and music."

In fact, the writer thinks, the mathematician is often popularly confused with the mere computer. This confusion apparently existed in the mind of Oliver Wendell Holmes, who, after seeing a calculating-machine, professed a certain contempt for the mathematician, being 'almost able to hear the click of the wheels' within his brain. An able computer, we are told, is often but a very poor engineer. The able engineer suffers in the estimation of his successors, because his work can and will be improved upon by smaller men, serving as a point of departure for generations of other engineers. Literary

work, on the other hand, remains with all its faults, as its original author left it. The writer goes on:

"Both in 'raw science' and in that of the engineer there is undoubtedly a very large amount of useful work possible to men of limited imaginative powers. Each year sees an enormous output of so-called research work of the third order, involving little more intelligence on the part of its author than is required by the attendant of a bank of automatic machines. In each case, however, the output is really based upon the possession by some third party of intellectual powers of a very high class. . . . From the spectacular standpoint the great engineer stands thus at a disadvantage as compared with the great author. . . . The work of a first-class engineer is continuously being modified by his successors; often for the worse. . . . At times, however, the alteration made was also an improvement, and it then became adopted into standard practice. It may fairly be claimed that were the works of great authors subjected to a similar process of constant and continuous modification, changes for the worse being weeded out, and those for the better definitely adopted, the ultimate form of the text might be a substantial improvement upon the original, but it would no longer be possible to assign to such works the unique position now claimed.

"Some may perhaps be more ready to recognize the need of imaginative powers in the engineer than in the business man, but probably there is no great difference in the standard needed for eminent success in any walk of life. Certainly it would be hard to deny imagination to the men that financed the first railways, or the first transatlantic cable, or, to come to more recent times, to those to whom we owe the foundation of the states of Uganda and Rhodesia."

DIALOGUE AND DEMONSTRATION.

"You smoke thirty cigarettes a day?"

"Yes, on the average."

"You don't blame them for your rundown condition?"

"Not in the least. I blame my hard work."

The physician shook his head. He smiled in a vexed way. Then he took a leech out of a glass jar.

"Let me show you something," he said. "Bare your arm."

The cigarette fiend bared his pale arm, and the other laid the lean, black leech upon it. The leech fell to work busily. Its body began to swell. Then all of a sudden, a kind of shudder convulsed it, and it fell to the floor, dead.

"That is what your blood did to that leech," said the physician. He took up the little corpse between his finger and thumb. "Look at it," he said. "Quite dead, you see. You poisoned it."

"I guess it wasn't a healthy leech, in the first place," said the cigarette smoker, sullenly.

"Wasn't healthy, eh? Well, we'll try again."

And the physician clapped two leeches on the young man's thin arm.

"If they both die," said the patient, "I'll swear off—or, at least, I'll cut down my daily allowance from thirty cigarettes to ten."

Even as he spoke the smaller leech shivered and dropped on his knee, dead, and a moment later the larger one fell beside it.

"This is ghastly," said the young man; "I am worse than the pestilence to these leeches."

"It is the empyreumatic oil in your blood," said the medical man. "All cigarette fiends have it."

"Doc," said the young man, regarding the three dead leeches thoughtfully, "I half believe you're right."—*West Virginia School Journal*.

Between Whiles

Berkowitz and Sternberg, traveling salesmen, met on the train.

"I have just come from St. Louis, where I did a tremendous business," said Berkowitz. "How much do you think I sold?"

"How should I know?" replied Sternberg.

"Of course you don't know, but vat do you guess?"

"Oh, about half."

"Half of vat?"

"Why, half vat you say."—*Everybody's Magazine*.

Addition.

"Now, Johnny," said the teacher, "if I gave you three oranges, your mother gave you four, and your aunt gave you five, how many would you have?" "I guess I'd have enough," answered Johnny.

His Money in It, Too.

The saloonkeeper and John were discussing the issue, until finally John, an Irishman, said:

"Yes, Bennie, I'm going to vote dry next fall."

"Now, John, you are joking. You are too good a friend of mine to want to put me out of business. Just think—I have been here twenty years and all the money I have made I have put into this business; how am I going to get my money out?"

John: "Well, Ben, I have been here twenty years, and all the money I have made I have put into this business; how am I going to get MY money out?"

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED—1,000 Sisters to send for sample of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Ill.

NEFF'S CORNER

Contracts are now all let for the 176 miles of new railroad that will complete the connection between Galveston, Texas, and Clovis, which will put us on a short, through line from the Gulf to the Pacific. Through traffic from Chicago and from the Gulf will meet here on its way to the Pacific and Clovis will be a division point for both lines. That means that the capacity of the car shops, round house and railroad yards here will be doubled, and that Clovis will soon be a city of 10,000 people. Property values have doubled during the last few months and we expect them to double again in the next few months. Beauty about investments here, if a man buys he can sell again. Evidence that people are satisfied with their investments here is to be found in the fact that after they have put in some money and tried it awhile, they invest again and again. If you would like to correspond with some of these people, drop me a line and ask for their addresses. If interested, don't hesitate to ask for any information you desire. We are having fine rains, prospect of good crops, and our farmers as well as our business men are happy and prosperous.

JAMES M. NEFF,

Clovis,

New Mexico.

PROMOTION CERTIFICATES

An entirely new and complete line of beautifully illustrated diplomas. Lithographed in black on the very best grade of white ledger stock. Illustrated with

appropriate pictures selected from the old masters. Size, 12x9 1/2 inches. This series consists of eight numbers as follows:

- No. 221—Cradle Roll Certificate.
- No. 222—Cradle Roll Promotion to Beginners' Department.
- No. 223—Cradle Roll Promotion to Primary Department.
- No. 224—Beginners' to Primary Department.
- No. 225—Primary to Junior Department.
- No. 226—Primary to Intermediate Department.
- No. 227—Junior to Intermediate Department.
- No. 228—Intermediate to Senior Department.

Order by Number. Price, 25 cents per dozen; \$2.00 per 100. Samples, 3 cents each, postpaid.

Send for our general catalog containing description and price of other up-to-date supplies.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,

Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

Ho! for Canada

It is not the purpose of the CO-OPERATIVE COLONIZATION COMPANY to stir interest in its Colony at EMPIRE, California. This colony is now well under way colonists are moving in and are well pleased and the work is moving along satisfactorily. But as the policy of this company is—"CHURCH EXTENSION BY COLONIZATION," steps are being taken to locate a colony in the Northwest.

After considering the various sections offered for settlement, the Directors at a recent meeting decided to locate

Colony Number Two Near Portage la Prairie, Manitoba, Canada

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its nearness to good markets,—only 56 miles from Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Manitoba.
6. The Low price of land, when quality and location is considered. These lands are now ready for settlement, are low in price and will soon be taken.

Join our Colony Number Two, secure a good farm in a prosperous section with good, nearby markets, excellent transportation facilities, where school and church privileges are assured, and among people with whom you are acquainted. For full information, lines of Land Seekers' Excursions, etc., address:

Co-operative Colonization Company
North Manchester, Indiana

Bubbles and Other Stories

Edited by Edna A. Newcomer. A collection of 108 poems and stories for little folks. Illustrated with 83 halftones and pen sketches. Printed in blue on fine quality of calendered paper. A few of the many subjects are "Bubbles," "The Little Soldier," "Butterflies," "Her Letters," "The Runaway Goosie," "Bedtime," "A Catnip Tea," "The Goose That Grew," "Ten Little Smiles," "Visiting Grandmother," "Who Is She?" "Building Pebble City," "The Doll Hospital," "Philip's Pet," "If," "When Lettie Reads," "Why the Photographer Waited," "The Honest Old Toad," "The Baby's First Steps," "The Misfortunes of Bill," "Jimmy the News Boy," "Ten Little Pumpkins," "Jimmy Fishhook," "A Young Canadian" and "How Mabel Helped."

A beautiful cover design printed in blue and photo-brown inks. Substantial board cover.

Sixty-four large pages.

Price, 30 cents

Children's Meetings, and How to Conduct Them. By Lucy J. Rider and Nellie M. Carman. With lessons, outlines, diagrams, music, and helpful suggestions. Introduction by Bishop J. H. Vincent. 9th thousand. 12mo. Cloth. Price, \$1.00.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.

"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

Sunflower Stories and Lullabies

By Olive A. Smith.

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Bye Boat." One hundred pages of the most delightful reading. The book is printed from large clear type, on a good quality of paper. The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

Profit by the Experience of Others at Miami Ranch

Why hesitate! You can no longer doubt the advantages of living at Miami Ranch. There's no longer the least risk attached to an investment there. Scores of other good families have **proved** that it's all we claim it to be. They are all prospering and enjoying the kind of health that can be found only in the mountains of New Mexico.

Read what one of our settlers says regarding Miami Ranch—and he is no more enthusiastic than his neighbors are:

Farmers Development Company,
Miami, New Mexico.

Gentlemen:

A year ago my wife and I made a western trip through Texas, Colorado, Utah and New Mexico with a view to finding a desirable place to locate for my health and for investment, having been in the hardware business in Bellefontaine, Ohio, for 13 years in the firm of Osborn & Churchill.

I had heard of the Miami Valley located in Colfax County, New Mexico, which was opened up less than a year prior to my visit, by the Farmers Development Company. I was very much impressed with the present and future prospects of this beautiful valley. I made another visit last August and purchased 40 acres, several others purchasing like amounts at that time.

This community is composed of an intelligent and industrious class of people from the Middle States, largely from Ohio. I disposed of my business interests in Ohio and arrived here the 19th day of February, 1909, to make this my home. I find as I become better acquainted with this community, that it is the most perfect country I have had the pleasure of visiting. The health giving properties in the pure air and sunshine is acknowledged by the most prominent physicians to be the best in the United States.

I find for investment that one cannot make an error, as climatic conditions and location for fruit are ideal, and for general crops most excellent. Land is a dvancing because people are looking for improved farms as well as unimproved, which creates a demand for both.

I find my health already improving, having only been here two months.

There is an abundance of water to irrigate, having the best and most substantial reservoir in New Mexico, this company has spared no time or money to make it perfect. People are happy and contented. I can recommend this Valley to my friends feeling that I have done a good deed,

Respectfully,
(Signed) W. W. Osborn.

—Big Excursion August 17th—

With such convincing evidence as we have given you regarding the extraordinary advantages of a home at Miami Ranch, can you any longer resist the temptation of at least investigating our offer! Can you be contented where you are, knowing that you would be better off, in every way, somewhere else?

But we don't ask you to be rash. We don't want you to leave your present home until you have seen us and our land. We don't ask you to take our word. We want you to come out here and **see for yourself** the opportunities you are missing.

Get ready and catch the big excursion on the

Atchison, Topeka and Santa Fe for Miami Ranch, August 17th. The **round trip** is only \$30 from Chicago and \$25 from Kansas City.

Take a little vacation and run down here. You don't need to buy unless you want to—the trip itself will more than repay your fare. You couldn't take a more enjoyable trip if you spent four times the fare to our place.

Trout fishing, elk, deer and bear hunting, wild goose and duck shooting, mountain climbing, boating, swimming, beautiful scenery, clear skies, pure air, ideal weather and all that combines to make life one round of pleasure and health, you will find at Miami Ranch.

If you can't get away for this excursion write for our **FREE** booklet "Westward Ho!" But try to get down here while there are still some choice selections in our second and last opening. Don't let money matters stand in your way. We can arrange payments to suit your convenience.

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

Read What Prof. Holden of Ames Agricultural College, Ames, Iowa, Has to Say:

"You may say for me that southern Idaho is THE IDEAL PLACE FOR THE YOUNG MAN who is looking to make a start in life. Every acre of irrigable land in this section is worth, in yield or income, three times as much as the best land in Illinois and Iowa. I am for Iowa, but if a man is to move, southern Idaho is the place to go, and for the young man, full of wonderful opportunities.

"The diversity of crops appealed to me as strongly as anything I saw. The irrigation farmer for instance, is not dependent upon any one crop. He doesn't have to wait until the end of the season to get his money because there is something seasonable and saleable at all times during the year. He raises fruit, wheat, alfalfa, oats, vegetables, hogs, cattle, sheep, in fact everything grown in the temperate zone.

"One man told me that he raised 18 bushels of clover seed on one acre of ground during the past year, and I found that the clover seed crop runs 8 to 15 bushels per acre.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

No. 33.

FISHING WITH HOOKS, NETS, AND SEINES

H. D. MICHAEL

In Three Parts.—Part One.

COME, now, all that have about two weeks to spare from your different occupations and let's have a good time fishing. Though it will be on paper only at present, still I believe if you were here we could make it real.

There being so many kinds of fish and in so many different localities with such a large number of ways of fishing for them out here along the Pacific coast, it will require about two weeks or even longer to try our "luck" at fishing for each kind.

First we must charter a gasoline launch to take our party down one of the rivers or bays near its mouth to fish for the fish found there, as then all, whether experienced anglers or inexperienced, can have an enjoyable time, for usually these fish are easily caught, it requiring no skill and only common outfits with plenty of bait.

Then to prepare for the party we will need plenty of hooks and lines, common bamboo poles and a plentiful supply of bait which will not be hard to get, as beef is good, but we must also have some clams, for clam bait seems to suit the taste of these fish to a T. These we can dig en route by getting out onto one of the clam flats that are almost alive with them, as they are easily dug and we are out for all the experiences to be had.

Then the ladies of the party must be sure of having enough wraps along, even though it is a summer day, for when the ocean breeze arises down along the water's edge it will be uncomfortably cool perched on some old wharf, rock, or whatever we may fish from. The ladies must look well to the way the lunch baskets are filled, also, as we will be expected to look after the other arrangements. For fishing, though it may not appear to some to be an appetizer, has always seemed to me to act in that way, for after

strolling along the beach or river shore, looking for the best place to fish, a party is usually ready for a good lunch.

When all is in readiness and we start, say down Coos Bay, with the timbered mountain sides sloping to the water's edge on either side, with the sight of sandhills farther on, and the monotony broken by an occasional farm cleared up and covered with fine grasses or orchards, or by a town, and as we go on, a large ocean steamer or perhaps a lumber schooner will pass us, and as we go gliding over the smooth waters enjoying our ride we are almost unwilling to go ashore and fish, but think a boat ride would do pretty well instead.

Here we are, though, now, down near the bar, so let's carry our rigging ashore and commence our fishing.

We can each choose for ourselves the best and most likely looking place, also the softest rock or board to sit on, and we will then be ready to arrange our hooks and lines, for we will want two to four hooks on each line fastened in such a manner that the upper ones will stand off at right angles from the line, and then as we fasten on a liberal supply of bait and drop them into the water we will imagine ourselves viewing a hundred or more fish, scrambling, splashing and nibbling around them until presently one takes hold.

There he is. Yes, there are two on different hooks of the same line, but before you can take them off and rebait your hooks others have begun catching them, for no one can get a corner on these fish, the way they bite. They are perch and are usually very easy to catch.

But just look at the way that fish runs that yonder fisherman has caught, first darting one way, then back again, and all so quick that one can hardly see how it can do it. He must be careful with that one and let

it tire itself running or it will snap the hook off, as it is a large flounder. On account of their peculiar shape they can cut curves so quickly that if the fisherman has a tight line on them they will nearly always snap the hook for him.

There, he has it out now and you can see how peculiar it looks. It is white and flat on the under side, while the back is slightly convex and covered with a rough, black skin, and to dress it we will first need to scald and then skin it.

You will notice too that its head is twisted, or put on sidewise, it looks like, for its eyes are both on the same side of its head, and it always seemed to me to be one of the queerest looking fish I had ever seen.

Just wait a few moments until more flounders are caught and you will see another peculiarity.

There comes another out now, so see the difference in the two. One's eyes are set so as to look one way while the other looks the other way, or in other words one is a right-side or right-handed fish while the other is left-handed. The story is told that they swim in pairs and are built that way for that reason, but not being able to prove that I can not give it as an established fact.

After we have fished until noon and disposed of our lunch in a satisfactory manner, let's resume fishing to get some to salt down as well as to give to our neighbors on our return home.

There, just see how they bite and how fast we are pulling them out,—one to three at a time. At that rate we will soon have enough to salt a kit or two down, as is often done.

Then, too, if it were the season for the other fish we would be able to have quite a variety, but not all the good things of life come to us as we often wish, but come later, and that will be the way with the other kinds. We will have to fish for them in their season.

There are several kinds we might mention, as the candlefish, herring and coalfish, as well as the squawfish and ocean trout. Then, too, there are the mudcats, or bullheads, as they are called, they being a species of the catfish but a very small and poor looking representative of that family and much despised, as they are not very good to eat and very bad to bother.

After all are tired of this kind of fishing we can next prepare for a more exciting kind,—the deep-sea fishing. We will have to charter a gasoline launch to take us, and for this only those that wish to brave the dangers of a day on the rolling deep must come.

When our party is preparing for this day's fishing we must bear in mind that we are going to have to deal with a different class of fish from the ones caught inside the bay. So we must change tactics, as

we will not need poles but larger, longer, and stronger lines and hooks.

Of course some will be seasick, which may detract somewhat from the sport, but it will be a day long to be remembered and never to be regretted, if all goes well.

To get bait for this expedition will not be so easy, as it requires more, but we will take beef and herring along, if we can get some herring in the upper bay, and then, too, we will want some of the ready-baited hooks which are no more nor less than large hooks with a large chunk of lead melted around the shank of the hook which for some reason seems to hold an attraction for some of the deep-sea fish.

After heaving over the baited hooks we must wait some time and then pull them up and see whether or not we have caught any. They are not as quick to take hold as some of the other fish, but as the day seems to be an ideal one we are likely to get some.

Yes, there is a man pulling up his line and you can see that he can feel the fish on it by the expression of his face. Yes, see, he is bringing one up, for it runs with his line. It is a sole, a flat fish almost transparent and one much prized. It is not a large kind, but it makes up in quality.

Then here come some others; they are ling and tommycod. Here are some big headed black ones, too, so we are getting a good selection. There are black-snappers. We might get some red-snappers too if we could only induce them to take hold and hold on.

But there comes one up near the surface that seems to be larger than the others. It must be a halibut. Be careful in tiring it or it will break the line and we must not lose it as it is the prize fish. It is a fine large one and to my notion one of the best fish found in either salt or fresh water.

You are getting it pretty tired now, so let me get near there with my gaff hook and we will soon have him. Here he is landed,—about an eighty-five pound halibut,—one that when dressed and sliced into round steaks will be fit for a king. Then, too, the liver is considered a great delicacy by some, but none for me, for at one time I tried one and though it tasted fine the after effect was not a desirable one. I was seasick, more than I had ever been out on the ocean, and to one that has been seasick that needs no explanation. I have been told since by others that it must have been a diseased liver.

With a selection like that now and its coming time to start home we will have to hoist anchor and go, but it is with the feeling that the day has been an enjoyable one and remunerative too. On some unfavorable days we might have fished all day and not have caught a fish worth taking home.

TOBACCO.

MARTHA SHEPARD LIPPINCOTT.

TOBACCO was first known to white men when Columbus came here and found the Indians using it. Tobacco contains one of the deadliest poisons known, which is nicotine. It debases the physical, mental, and moral nature and has a tendency to make people dull and listless.

Hundreds of millions of dollars are wasted on tobacco every year, and many diseases and much suffering are caused by it. Think how much good the money spent for it could do, if used for some better purpose.

Cigarette smoking is the most injurious to the health. They are very filthy. In making them old cigar stubs and other things are used; the paper around them is very poisonous, because white lead is often put into it.

Cigarettes sometimes cause sore mouths, catarrh, and often affect the mind.

The use of narcotics produces nervousness, cancers, paralysis, insanity and loss of will power. It leaves a dryness in the throat which creates a taste for drink, and thus many are led to drink who would not do so if tobacco had not created the thirst for it.

It is very hard for persons to permanently stop drinking unless they give up tobacco too.

Men who break the pledge often use tobacco first and then surrender to drink.

They say Turkish cigarettes have considerable opium in them. They are made to sap a man's brain and will power so he will not be able to stop using them. Was

there ever a more fiendish exhibition of greed's heartless selfishness?

In 1862 Emperor Napoleon finding that paralysis and insomnia had increased as the revenue of tobacco had increased ordered an examination of all the schools and colleges, which showed that the scholarship and character of those who used the weed was much worse than that of those who did not. He at once issued an edict forbidding its use in all the national institutions.

The son of an eminent politician wished to enter the Annapolis Naval Academy. Having passed the examination, he was refused because of physical disability. It was found that the glands of his throat were destroyed, and his tonsils were eaten away by excessive cigarette smoking.

Tobacco contains a poisonous property known as the oil of tobacco which contains nicotine, a poison; a substance which evaporates easily and smells and tastes like burnt vegetables; and an extract which is somewhat like dark resin and has a bitter taste. The more common effects are due to the carbolic acid which is contained in tobacco, while the rarer and more severe complaints are due to the three things above mentioned.

Many prominent men have died from the evil effects of tobacco, among them General Grant, who is said to have died from a cancerous throat caused by excessive smoking.

If boys could be made to realize what suffering and how repulsive tobacco might make them, and how hard it would be to get rid of the habit, few of them would want to start using tobacco.

Maud Hawkins.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXX.—In Peril of Robbers.

NOT far from the inn the men began to talk to me. The only word I understood was "America." Their persistency, as they leaned down from their high camels to make me understand, was unpleasant. I knew they were sounding me. Knowing the value of good humor in such a place, I appeared delighted.

Hoping to *compel* me to ride with them, the camels were urged into a brisk trot. But the idea of running was attractive to me, for it would sooner bring an end to my suspense. When the camels trotted, I trotted. When they went fast, I went fast.—around the world without a cent!

We met and passed three caravans, mostly of donkeys, whose drivers, seeing me tagging on behind the camels, inquired of the men who I was and how they captured me!

The air was now growing much warmer, a queer sensation to an all-night-traveler who always before has experienced a lowering of the temperature towards morning.

After a time the third Bedouin dropped back, apparently to join the crowd we were fast leaving in the rear. Was he to bribe them into silence if any harm should befall me? Of the two remaining, I chose the one whose camel and voice I less feared. My first duty was to get so well acquainted with his voice and camel that in losing him I could easily find him again. So I shook hands with him by pressing his bare feet affectionately and slapping him brotherly on the bare leg. The grunt he gave me was satisfactory. He meant to assure me that he would take care of me and that I should not be afraid. "Allah!" I cried, pointing upward. "Allah" he answered, "I

too, I too." "And I," said I. "Umph! Umph!" said he.

When well on our way the men chanted wild shepherd airs in concert. The weird music broke the stillness of the hour and echoed frightfully through the haunted glens. It was the wail of the great desert, the still, the lone, the awful desert,—longing, fatalistic, despairing. As my ears caught the sad cadences, broken by passionate cries that mingled with the sonorous monotony of tune, my eyes were fastened, now upon the tall, angular camels, now upon the men, swinging in tune to the midnight melody. I was following representatives of a life that forty centuries of world-wide progress had not changed!

Suddenly, while passing through a narrow gorge, the singing ceased. A

few determined words, in low guttural, passed between the two robbers. The camels were then brought to a halt, turned at right angles to the road, and commanded to kneel, uttering loud bawls of unwillingness in which I silently joined.

They had selected a spot most desolate. The grottoed crags of the gorge rising around me yawned as if they would swallow camels and all. The light of a star glancing from a rock deep in the dry bed of the gully added a ghostly glimmering to the hour and place. Far behind us, up in the mountains could be heard the shout of those we left behind. For a moment my head swam in the light ether above me. I came near losing self-control. But poise reasserted itself, and with it courage. They seemed to change their intentions. I was merely asked to get on and ride with them. Again I refused.

Three Big Camel Caravans, Camping in Desolate Valley.

"Get on behind," he said.

Still I refused.

"Get on alone, then, I'll walk."

A third time I refused. "You ride, and I'll walk," I said, with gestures and words. "I'm so strong, my feet get tired doing nothing."

No one wanted to ride a big camel more than I. But there were several objections against it. Walking, I could pick my way, and could know when they were leading me from it, which I suspected they would try to do before morning. In a lonelier spot they might take their own time in making me their victim. Accepting the ride, they could demand a fee, take my camera as pay, or possibly make me a prisoner, take me across the Jordan, and hold me for ransom.

When they started at last, I helped my "friend" into his hunchback saddle, the camel usually getting to his feet before he had mounted. As I pushed him into place, my hands recoiled as they came in contact with a sword, dagger and pistol, concealed under his blanket in a belt near his big money wallet. I was glad I had refused to ride against such an arsenal.

The dusty road twisted and doubled on itself, falling away with such a constancy of steepness as to suggest its leading to some fatal end. It seemed as if we would never get out of the hills into the plain. I was too tired or scared to find the big dipper, and I was not sure about the pole star, so that I could no longer tell whether we were going in the right direction, or not.

During the night we passed a score of caravans. Most of the drivers were polite, and gave me no annoyance. Others, brandishing their clubs, threatened with menacing attitude the peace of the community. In passing these, our camels were pushed up on the hillside, or they nosed their way among the other camels, donkeys and men. Into these tangled masses it was dangerous for me to follow them, but still safer than to get lost from them, now that they were piloting me as guides. In one of these mixups I was surrounded by towering camels, some coming, some going, so that I was in danger of being crushed under

their feet. The loaded ones going up squeezed me against the empty ones going down, and I was rolled thus, around and around, like a batch of clothing in a washing-machine. Once on looking around I counted six long, curving necks all stretched out toward me. Their nose would rest upon my cap, their clammy lips would slobber my neck, their feet would be feeling for mine.

Twice I was greatly frightened. The two Bedouins, with their long-limbed camels, had out-travelled the herd of donkeys, which require rest every mile or so. We were again alone. Suddenly they stopped short and listened; leaning far over their camels. They knew how far behind we had left the others. It was for any who might be approaching, they

listened. They had planned something in which I was to figure. But what was it? There are incidents in such experiences when Time itself seems paralyzed with mysterious awe, and when a second is an hour. If they robbed me without killing me, they knew that the landlord would hear about it: he had put me in their care.

We had descended on the road so far as to feel the oppression of the atmosphere below sea-

Grand Hotel, Jerusalem, Where D. L. Miller, Lew Wallace, Talmage, and MYSELF Stopped.

level. There was absolutely no breeze. A sultry calm hung with gloomy pallor over the herbless hills. Silence as of death only aggravated my distress. The Bedouins now left the road where a level plot lay between two deep wadies. I hung behind until I came to a halt, when I approached slowly. They had dismounted and driven their camels off to graze upon near-by thorn bushes, evidently intending to take plenty of time for their work. Their blankets or outer garments were now spread upon the ground. Upon these they laid their weapons, one by one,—all except the fellow on my left who retained in his belt a slender dagger,—which thanks to a good eyesight I saw. Each then squatted upon the blankets, bidding me to sit between them. I sat, but not for rest, although I was very tired, and far enough from each robber so as to make an equilateral triangle between them. There, in the glistening starlight, lay their weapons. Here, we three sat, at two o'clock in the morning, with no law

to govern us but the law of the desert. I knew they meant to overpower me. I had only one weapon,—a western mind,—and the Christ who walked this same road,—and I watched each man as a hawk the gunner. An impulse urged at me to rush off into the darkness. But I was thirsty and hungry, and these men who knew every nook and corner, might keep me hiding for days.

While the fellow on my right engaged my attention with the weapons the one on my left slowly slid behind me. When he passed out of my ken, I shifted my position so as to keep one eye on him, unwilling, out of politeness to the stranger, to allow my back to come before him. With an eye on the Damascus blade the man on my right was showing me (I feel the indent of its needle-like point now in my thumb), I watched the hands of the other on my left, ready to spring, like a trigger, to my feet. That ruse was given up when I handed over my lunch which each weighed, pressed and smelled. When they attempted to break the string, I interfered, and it was handed back. The next thing they wanted was my camera, which when they tried to open I made believe was dangerous,—to my films, of course, and they dropped it, like a hot potato.

Then they argued together. By their accent and gesture I could tell about what they said.

"Shall we do it?"

"No."

"Why not?"

"He may explode that thing on us."

"Who is he any way?"

"More than we think; detective, may be, better let him alone."

And that's what I thought. I felt kindly toward the one who was unwittingly taking my part.

For a minute they were silent,—the longest minute of my life. Then they arose, took up their weapons and blankets, called the camels and were off. Again I refused to ride with them, suggesting that as Jericho was near, I preferred to walk, that my feet really needed a great deal of exercise! (My wheel had been left at Jerusalem, the roads being too rough for wheeling.)

Soon we came to the edge of the hills. Before us, in the coming dawn, lay the sandy, brown plain, the road curving carelessly over the gray dunes and across the rough bed of a dry stream. Yonder, dimly blue, twelve miles away, rose the mountains of Moab, where Ruth grew into womanhood.

The last tryst with the thieves was about a mile from Jericho, where as before we sat upon the blankets. This time, however, they retained their weapons in their belts, and I knew by their actions that they meant to get something from me. By offer-

ing my lunch, I disarmed them from taking anything else.

"Dog" I said,—the Arabic word for "eat," and they began to "dog" my lunch. I took some with them, for it is a law of the desert that he who eats with these men shall be saved from harm.

Dawn was faintly streaking the east. Courage as of a Titan now possessed me. I was master. Pointing to the morning star, I made signs that we be off at once. Half an hour after, my "friend" flung his bony arm in the direction of a light, and cried:

"Er Riha! Saba-jal-sof-keloama!" "Jericho! There is your hotel," and rode rapidly through the town, hastening as if in fear of being stopped, and making straight for the fords of the Jordan.

I had made the midnight journey to Jericho, alone, afoot, unarmed, and I had evidently fallen among thieves.

THE SAILORS' "UNIVERSAL LANGUAGE."

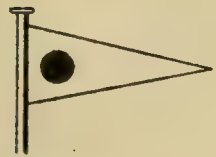

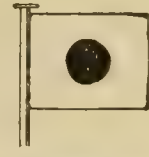

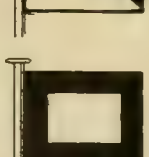

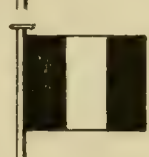

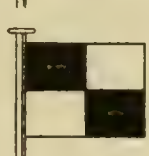

JOHN S. FERNALD.

WHILE grammarians and others are puzzling their brains to evolve and to induce people to adopt a Volapuk, an Esperanto, or other artificial language, the sailors of the world have one in general use, which, for the uses for which it was intended, has proved itself to be both practical and convenient. The international code of flag signals, in use on vessels of all the maritime nations of the globe, is, in a sense, a universal language, fulfilling all the requirements of such in communication between vessels at sea and between vessels and the shore. But, like all things mundane, it is destined to pass away, and will, without doubt, in the near future, be superseded by the wireless telegraph and telephone.

When a vessel is arrayed in holiday attire, as for her launching or other notable occasion, she is sometimes reported as decked with the "flags of all nations." While the expression is far from correct in the sense in which the term is generally employed, meaning the national emblems of the various republics, empires and kingdoms of the world, it is, in another sense, true, for these little flags are, in a way, the flags of all nations. By them the officers of ships of different nations may communicate with each other, although neither is able to understand the language of the other, and vessels of any nation may hold intercourse with shore stations of foreign lands. Every combination of flags expresses an idea, and the "code book" of each nation furnishes the key to men using that nation's language.

Signaling at sea dates back to the time of the Cæsars, when the commanders of Roman war galleys communicated with each other by holding their shields in different positions, according to an understood code.

FLAGS AND PENNANTS TO BE USED IN THE INTERNATIONAL CODE.

<p>A </p> <p>B </p> <p>C </p> <p>D </p> <p>E </p> <p>F </p> <p>G </p> <p>H </p>	<p>I </p> <p>J </p> <p>K </p> <p>L </p> <p>M </p> <p>N </p> <p>O </p> <p>P </p>	<p>Q </p> <p>R </p> <p>S </p> <p>T </p> <p>U </p> <p>V </p> <p>W </p> <p>X </p>	<p>Y </p> <p>Z </p> <p>"CODE FLAG" AND "ANSWERING PENNANT."</p> <p> (Red and white.)</p> <p>When used as the "Code Flag" it is to be hoisted under the ensign.</p> <p>When used as the "Answering Pennant" it is to be hoisted at the masthead or where best seen.</p> <p> (Red and white.)</p>
--	--	--	--

A, white and blue. B, red. C, white with red dot. D, blue with white dot. E, red, white and blue. F, red with white cross. G, orange and blue. H, white and red. I, orange with black dot. J, blue, white and blue. K, orange and blue. L, orange and black. M, blue with white cross. N, blue and white squares. O, orange and red. P, blue with white center. Q, orange. R, red with white cross. S, white with blue center. T, red, white and blue. U, red and white. V, white with red cross. W, blue, white and red. X, white with blue cross. Y, white and red bars. Z, black, orange, red and blue.

The merchant ships also had a similar code. But little progress was made, however, in the systems of sea communication until near the close of the eighteenth century, when flags, representing the numerals from one to nine inclusive, were brought into use by the British admiralty. Other nations followed, some using the numerals and some the letters of the alphabet, but no two alike. The code designed by Captain Marryat of the British navy made the most progress towards a general adoption, but still so many nations used other systems that great confusion ensued. In 1855 the British board of trade took the initiative and called a conference of the various maritime nations for the purpose of adopting a uniform system. With the Marryat code as a foundation the present international code was evolved, through a long series of years and many amendments and additions. Fourteen nations united with England in revising the code and making it available for all. They were the United States, France, Germany, Russia, Brazil, Italy, Austria, Holland, Spain, Portugal, Sweden, Norway, Denmark and Belgium. Other nations gradually joined in the movement until every nation having a merchant marine or a navy was included.

The original international code consisted of eighteen flags, all except four being the same as in the Marryat code. They represent the consonants of the English alphabet with the exception of x, y and z. In 1901 eight more flags were added to complete the alphabet.

When it is desired to use the code a long pointed flag, with alternate red and white perpendicular stripes is hoisted under the national ensign, in the position where it can be best seen by the other party. The flag is then called the "code pennant." The reply is made by showing the pennant alone at the masthead, when it is called the "answering pennant." The flags representing A and B are known as "burgees," nearly square, but slightly notched at the outer end. From C to G inclusive are "pennants," long, narrow and pointed. From H to Z inclusive the flags are nearly square. All are in various colors and of different designs.

The signals are divided into four classes, of one, two, three and four flags. There are but two one-flag signals, C and D, meaning respectively "yes" and "no." The two-flag signals represent distress or danger and those of three-flags cover all other matters liable to come up in the intercourse between vessels at sea, or between passing vessels and the shore stations. Each combination represents a complete sentence, and conveys the same idea in whatever language it is used or read. The four-flag signals are for identification. Every sea-going vessel is assigned four signal letters, and when "speaking" another vessel at sea or when passing a lighthouse or a reporting station she shows

her flags. Each government publishes annually a book giving a list of all vessels, both of government and private ownership, with particulars of rig, dimensions, home port, when and where built, signal letters, etc., and in the case of steamers the horsepower of the engines.

Every vessel carries a code book, printed in the language of her own country, and as the flag combinations represent ideas rather than words, every captain can read the messages even though he might not be able to understand the language of the sender. For instance, NC means I am in distress and want immediate assistance; EY, do not attempt to land in your own boats; BI, my rudder is damaged; BJ, my engines are disabled; JD, you are standing into danger; FZ, heavy weather coming; NM, I am on fire. A steamer showing the letters HDVW would be identified from the list as the Joy line steamer City of Key West, of New York, and a bark showing HJDQ, as the Grey Hound of New Bedford, Mass.

According to the latest official list of vessels of the United States we find that of upwards of 21,000 vessels, sail and steam, 3,080 merchant vessels and 560 yachts had signal letters, while the U. S. navy had 285 vessels with signal letters, and other government departments, including the revenue cutter service, light-house tenders, coast survey, etc., 139.

SOUTHERN ITEMS.

M. M. WINESBURG.

THE city of Birmingham, Alabama, is situated in a mountainous region and is surrounded on all sides by a mountain chain, so whichever way one looks he can see hills. I was told that thirty-seven years ago the town was only a little village of a few houses, but the magic wand of coal and iron has transformed the village into a thriving city.

The center of the town is right level, but away from the center many of the streets have steep grades. While the town proper is not so large, yet it has taken in all the outlying villages to swell its population. There are many heights in the suburbs and just now out on these heights one cannot see the houses for the trees. Highland Avenue is the fashionable section and has some right fine-looking residences on it.

Away across the town looms up Red Mountain where the red iron ore is mined. Even at a distance the red clay shines out from amid the green of the trees. Coal and iron are the mainsprings of the city's prosperity and there are many furnaces and mills scattered in different parts of the town, and many also in the outlying towns which are connected with the town proper by motor lines.

There are several parks within the city's limits—city parks. I have been in two of them. The larger of the two is called the Capital Park. It contains several

monuments; one to Mary A. Cahalan, teacher; another one represents some eminent surgeon; "Davis," by name, and the third is a tall granite shaft dedicated to the Confederate soldiers and Jefferson Davis.

The town has several sky-scraper buildings in it now, more are talked of and there is a fair street-car service and good drinking water. The latter also costs a pretty penny, for there are no large streams of water near.

All food stuff is high priced here, things that one would think would be cheap here are higher priced than they are further north; but then all the market produce is retailed by the green merchants, and the greater number of them are Italians and they control

year. But they do not use the kind of greens that are grown by the market gardeners further north. The standard greens here are the common mustard, rutabaga and the white turnip and collards. The rutabagas and turnips are used top and root, when there is any root to them, that is, it is all cooked together. I can't say that I enjoy a mess of that kind, but the natives and negroes must by the amount of greens one sees on the wagons.

I have been told that there is some fruit grown in this section, but in my rambles I must not have gotten far enough away from town to see any large orchards although I have run across several small ones. It is no new thing to see peach trees in back yards of the city houses or their front yards either. There are also a great many magnolia trees along the streets and some of them are now in bloom.

The timber here is about the same as in any other mountain section South. While the oaks are not as large as those in my home place there are plenty of them, and also of a pine, they call the old-field pine because it grows up in fields that have been at one time under cultivation. There are also lots of sweet gum trees which grow on both the high and low land. I have

An Old-timer,—Charcoal Peddler,—a Familiar Sight on Birmingham's Principal Streets.

the prices. The city makes the farmer pay license to feed it, and therefore but a very few if any of the farmers retail their garden truck in the city. They can sell by the wholesale but dare not sell as low as a peck of anything without a permit and that makes it rather hard for the laboring people, for one almost has to have a stepladder to climb up to the prices those Italians ask for their garden stuff.

The land around the town is rough and rocky and there is not much farming land close around town. In fact I have not yet seen anything I would call a farm on any of my trips outside of the city. While there are garden patches, yet they are not plentiful like they are around other cities I have seen.

Some people in the city have gardens, and they have been having garden stuff for a month back. Early bush beans were in blossom the first of May and sweet corn was about a foot high.

All through the winter and spring months the people here use quantities of greens on their tables and I think that many families use them the greater portion of the

seen the darkies pick the gum from the trunks of the trees and chew it.

There are very many colored people here. In fact, from the number of blacks one sees it looks as if there were more black people than there are whites, and they live all over the town, not just in one part of it. The usual headdress of the women around home is a white towel tied around the head—and often away from home too, for they are passing by every day with huge baskets of clothes balanced nicely on their white turbaned heads.

While I have not seen any snow for over a year, yet there was many a time during the past winter when I thought that Dixie's sunny land was pretty cold in spots, for here we had several heavy freezes and had ice frozen that did not melt away for a week. There were plenty of heavy frosts and one of them as late as the last of April, but it did not hurt the garden stuff much; even in May I found several evenings when a fire felt good, for it got so cool after a rain.

Birmingham, Ala., May 16.

NATURE STUDIES

AUGUST'S FLOWERS.

M. E. S. CHARLES.

AFTER the first of August there is a pause in the blooming of the trees till the pale gold of the witch hazel appears in water-side thickets, where the last glory of the autumn foliage is fading. But during this gap in the program of woodland blossoming, a riot of flowers bloom in the fields, and so the summer calendar of the honey-seeking insect knows no fasts, but an unbroken succession of feast days.

Few, if any, of our native plants add more to the beauty of the midsummer landscape than the milk-weeds, and of this family no member is more satisfactory to the color-craving eye than the gorgeous butterfly-weed, whose vivid flower clusters flame from the dry, sandy meadows with such luxuriance of growth as to seem almost tropical. Its gay coloring, and the fact that butterflies are its frequent visitors have given it the name of butterfly-weed, while that of pleurisy-root arose from its use as a remedy for pleurisy. The Indians used its deep, thick roots as food, and prepared a crude sugar from the flowers; the young seed-pods they boiled and ate with buffalo meat.

The plant is worthy of cultivation and is easily transplanted, as the fleshy roots, when broken in pieces, will grow and form new plants.

By the middle of August the dry meadows and dusty roadsides are gay with black-eyed-Susans, keeping up a showy midsummer carnival with our other roadside dwellers. They seem to revel in the long days of blazing sunlight, and are veritable salamanders among flowers. This is said to be an introduced plant in this part of the country, but it springs up so spontaneously and fits in so naturally with its usual surroundings and is so thoroughly at home wherever it obtains a foothold that it is hard to realize that it has not always been found here.

The summer is well advanced when the tall, conspicuous Joe-Pye-weed begins to tinge "with crushed strawberry" the lowlands through which we pass. In parts of the country it is as common as the goldenrod and asters. With the deep purple of the iron-weed it gives variety to the intense hues that herald the coming of autumn. "Joe-Pye" is said to have been the name of an Indian who cured typhus fever and many

other forms of illness in New England by means of this plant. Certain it is that the Joe-Pye-weed or *Eupatorium purpureum* of the botanics, possesses strong medical properties.

Midsummer finds the blue flag, or wild iris, still lingering on the edge of sunny waters, or in low, moist fields. This is first cousin to the lily of France, which was blazoned on the banners carried to Cressy and Agincourt. In Ireland the iris is yellow and blooms in fields of emerald. Some yellow varieties are found in this country, but our common sorts are in various shades of purple and lilac. There are three erect petals, and three backward turning sepals. The latter are adorned with a tracery of dark purples and gold, elaborate enough to have occupied an artist all day. And all this beauty may be seen only by some wandering bee or marsh fly.

A most complex and wonderful structure fits the iris to attract bees or larger insects, and repel crawlers, and prevents it from setting seed by its own pollen.

Perhaps growing near the iris may be found the jewel-weed or wild balsam, which is usually very plentiful along the margins of brooks and rills. The flowers of the common variety are orange-colored thickly dotted with dull red. The flowers nod and sway gracefully on slender stalks. They are in shape something like a cornucopia with the small end doubled up into a spur or little tail. The plants are from two to four feet high, and bear a profusion of smooth, dark-green leaves, which, like the flowers, droop as soon as they are picked.

The jewel-weed is a sort of second cousin to the nasturtium, and a first cousin to the garden balsam. Its botanical name is *impatiens* (impatient), because the ripe seed-pods recoil from one's touch with a quick, petulant motion. The little pod suddenly bursts, and the elastic movement shoots off the liberated seeds in every direction. This trick earns for the plant its common names of "touch-me-not" and "snap-weed." The jewel-weed, like the violet, bears two sorts of flowers. Besides the showy ones we know, gotten up to lure the insects whose visits they need, there are small ones which are fertilized in the bud with their own pollen.

Along the highway from July till October one encounters a slender weed on whose erect stem it

would seem as though a number of canary-yellow or purplish white moths had alighted for a moment's rest. These are the fragile, pretty flowers of the moth mullein, and they are worthy of a closer examination. The reddish or purplish center of the corolla suggests the probability of hidden nectar, while the pretty tufts of violet wool borne by the stamens are well fitted to protect it from the rain.

A little experience of the canny ways of these innocent-looking flowers leads one to ask the wherefore of every new feature.

The burr-marigold does its best to retrieve the family reputation for ugliness, and surrounds its dingy flowers with a circle of showy, golden rays which are strictly decorative, having neither pistils nor stamens, and leaving all the work of the household to the less attractive but more useful flowers. Their effect is pleasing, and late in the season the moist ditches along the waysides look as if sown with gold through the agency of this plant.

SOME STRANGE SEEDS.

THERE are a good many queer seeds in the world. Among them are to be found giants and pigmies, kinds hostile and beneficent to man, and a large variety of miscellaneous freaks.

The largest seed in the world is the so-called "double cocoanut"—the fruit of a species of palm which grows in the Seychelles Islands. It is as big as half-a-dozen ordinary cocoanuts put together, weighing seven or eight pounds and having a length of a foot. The common cocoanut is the next biggest seed that grows, while the seeds of some orchids are so tiny to be almost microscopic.

Another strange seed is that of a tree that is native to Cochin China and the Coromandel coast, though the tree is cultivated elsewhere for the sake of this very seed from which is obtained strychnine—that dreadful poison so valuable in medicine. The tree bears fruit that somewhat resembles an orange in appearance, the seeds being enveloped by the pulp. When dried they look like nothing so much as buttons, each one about the size of a penny. They contain such large quantities of strychnine, together with another deadly poison called "brucine," that one of them swallowed will kill a man. Quite as dangerous is the "poison nut" of India, likewise the seed of a tree, which the natives use for poisoning arrows. There is a little seed of a plant native to India that serves as a standard of weight. It is called the "carat." For thousands of years it has been used in this way, and to this day its equivalent is employed all over the world in reckoning the value of gems, and the fineness of gold. Whereas seeds of other kinds differ greatly in size and weight, one carat is so ex-

actly like another that the standard is practically invariable. Oddly enough, the castor-oil bean, or seed, is utilized in the same country for manufacture of gas, by which the railway trains are lighted. The gas is made from the "cake" left over from the pressing of the beans for oil.

Speaking of beans, the queerest perhaps are the so-called "sea-beans," which are thrown up in great quantities on the coast of Florida. There are many varieties of them, and one bears a curious ornament in the shape of a capital letter C neatly engraved on one side. It is just as if it were marked that way very carefully by the plant to which it belonged. Most people suppose that sea-beans grow at the bottom of the sea, but the fact is that they are the seeds of vines which flourish luxuriantly in the region bordering on the Caribbean Sea. They are developed in great pods, some of which are more than a yard in length, each holding a dozen or more of beans. When the ripened pods open, the beans drop into the streams, are carried to the sea, and are borne by the current of the Gulf Stream, which is very powerful, around the southern end of the Florida Peninsula, to be thrown up on the beach by the waves.

The devices adopted by nature for securing the planting and distribution of seeds are very interesting. Some seeds have wings, so that they may be carried away as far as possible in falling from the parent plant. Others like those of the milkweed and dandelion, may be said to be provided with balloons, inasmuch as they are made so light by feathery appendages that they are readily drawn up to great heights by warm currents of air. Astronomers used to mistake the floating seeds of the milkweed for meteors, until a knowing stargazer set his telescope at a near focus and was thus enabled to examine the floating vegetable germs that passed across the field of view. Certain burrs are seed-vessels, and are provided with tiny hooks in order that they may catch in the fur of animals and be carried afar.—*Friend for Boys and Girls.*

"Think, every morning when the sun peeps through

The dim leaf-latticed windows of the grove,
How jubilant the happy birds renew

Their old, melodious madrigals of love!

And when you think of this, remember, too,
'Tis always morning somewhere, and above
The awakening continent from shore to shore,
Somewhere the birds are singing evermore

"You call them thieves and pillagers, but know

They are the winged wardens of your farms,
Who from the cornfields drive the insidious foe,
And from your harvest keep a hundred harms;
Even the blackest of them all, the crow,

Renders good service as your man at arms,
Crushing the beetle in his coat of mail
And crying havoc on the slug and snail."

—From Longfellow's "Birds of Killingsworth."

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THE test of a "good time" demands that it leave one with a pleasant memory,—with nothing to regret and nothing of which he needs to be ashamed.

IN many respects this is a very suitable time for the fishing trip to which H. D. Michael is treating us. Since this is the only trip of the kind the majority of us will be able to take this season, we should not allow anything to interfere with our receiving all the knowledge and pleasure that are to be gotten from such experiences.

WITH all the advice that is given to those who would accumulate wealth, there is one essential thing to keep in mind: You must spend less money than you make; and to be sure that the balancing up will show this it is wise to make this the rule of every week, of every day. A systematic method of saving that calls for systematic habits of economy is a sure foundation for that competence that adds joy and contentment to the prospect of old age.

A FEW more fleeting vacation days and the care-free life of our boys and girls will be over. Grown people generally look upon the days of youth as all care-free, but this is not the case. The responsibilities and problems of life, especially school life, are as serious and vexing to them at the time as are the graver things of life a few years later. The fact that they themselves will recognize their insignificance after awhile does not lighten their burdens now. Let us remember this.

AT this writing we are working under the inspiration of some very good words that have come to our desk as to the value of the INGLENOOK. It is no little thing in our life as we plod on day after day, often

wondering about the outcome of our work, to be enlightened as to the magazine's influence in some one's life or home. We suggest to those who feel like speaking these good words that you pass them on to your neighbors and friends as well as to us. Their power for good will then be many times multiplied. If, on the other hand, you have a criticism to make, or an improvement to suggest, send that to us alone,—at least send it to us first.

THE reason some parents fail to understand their children or have any influence over them is because they have gotten out of touch with youth somewhere along the way; they have forgotten their own childhood. Remembering one's own early interests and longings is profitable not only because it will help one to make allowance for some of the actions of the children, but will put one in a position to give them the aid they need in choosing their pleasures as well as their occupations.

ANOTHER reason some children just growing up and in need of advice turn away from that given by their parents, is because they have no confidence in their parents' wisdom. They belong to the large number of what we call "spoiled children." From the time the children were two or three years old, under a mistaken notion of being "good" to them, the parents have surrendered to their wishes against their own better judgment. With such a bringing up, is it to be wondered at that little John and Mary, now exalted with the importance of youth, scorn the advice of their parents? If father's and mother's judgment or opinion was worth less consideration than theirs when they were yet little children is it worth considering at all now when they are almost grown? No one can question the reasonableness of the argument, and if parents have furnished the wrong premise it is in the nature of reaping what is sown that they should suffer the consequences, though the children generally suffer also.

"OTHERS."

SOME years ago at Christmas time General Booth of the Salvation Army desired to send a message clear around the globe to all the workers in that organization. There was no doubt in the good old man's mind that the idea would be productive of much good and yet it was necessary to consider the actual cost of such a message. In the first place it would have to be short. At the same time it should be something that would not only recall to the worker's mind the chief aim of the organization, but would act as a bugle call to deeper consecration and greater endeavor. And this is the message General Booth sent: "Others."

In general use the word seems very common—really

insignificant, but when we think of it in its connected sense, we will agree that it is as strong a word—as all-comprehending—as any that could have been used. While there are many organizations that lay claim to an active, practical exemplification of the principle contained in this simple message, the one to which it was addressed has perhaps, as a whole, as great a claim to it as any other. For this reason it would come to the workers addressed with particular force and meaning. By repeating the word to oneself with the thought of service in mind one can get a wonderful vision of the blessings of a life spent in lifting up fallen humanity.

In a study of the life and work and teaching of the Lord Jesus, the great Captain of our salvation, it is easy to see where the Salvation Army get their watchword. It is the central theme of the Gospel. Growth in the Christian life is nothing more nor less than growth away from self, growth in love and service and sacrifice for "others." True, the chief duty of man, in this world and in eternity, consists in love for God, in magnifying his name, but we can do this best, as Jesus himself teaches, by serving our fellow-men. "The Son of man came not to be ministered unto, but to minister, and to give his life a ransom for many." "Whosoever will be great among you, let him be your minister; and whosoever will be chief among you, let him be your servant." "Thou shalt love thy neighbor as thyself." There are many other scriptures, in the Gospels and in the epistles, which show clearly how essential to Christian life is service to others.

It is a characteristic of the world since the beginning of time that, one generation after another, it has sought for happiness. Solomon tells us to what lengths he went to find it, but his efforts were all in vain. Just as many people have argued in vain that the food they like should therefore be the most wholesome and best suited to their system, so Solomon and many before and after him have tried to secure true and lasting happiness by gratifying the senses. But happiness does not come in this way. The wise Solomon says it does not after a trial as thorough as it could well be, and many of us can bear testimony to the same fact. Happiness comes through service. "If ye know these things, happy are ye, if ye do them." The bodily senses must be held captive until the higher and spiritual faculties have given direction to our efforts, and then they may be able to give aid to our high endeavors and find their chief joy in such labors.

The spirit of service may not lead all of us to take up the work of the Salvation Army, but it will lead us to put "others" before self, wherever we are and whatever we do. It will lead us to have the mind of Christ, "who, existing in the form of God, counted

not the being on an equality with God a thing to be grasped, but emptied himself, taking the form of a servant, being made in the likeness of men; and being found in fashion as a man he humbled himself, becoming obedient even unto death, yea, the death of the cross." Service for others was the business of every day with Christ and it must be with us if we are his children.

TEN DEMANDMENTS OF A CHICAGO MANUFACTURER.

A CHICAGO man who has a large number of employees under him has posted up in the various departments of his establishment cards which bear the above caption and the following terse rules. These make it very plain what he does not expect of those who draw salaries from him:

Rule I. Don't lie—it wastes my time and yours. I'm sure to catch you in the end, and that the wrong end.

Rule II. Watch your work, not the clock. A long day's work makes a long day short, and a short day's work makes my face long.

Rule III. Give me more than I expect and I'll pay you more than you expect. I can afford to increase your pay if you increase my profits.

Rule IV. You owe so much to yourself that you can't afford to owe anybody else. Keep out of debt or keep out of my shop.

Rule V. Dishonesty is never an accident. Good men, like good women, can't see temptation when they meet it.

Rule VI. Mind your own business and in time you'll have a business of your own to mind.

Rule VII. Don't do anything here which hurts your self-respect. The employee who is willing to steal for me is capable of stealing from me.

Rule VIII. It's none of my business what you do at night. But if dissipation affects what you do the next day, and you do half as much as I demand, you'll last half as long as you hoped.

Rule IX. Don't tell me what I'd like to hear but what I ought to hear. I don't want a valet to my vanity, but I need one for my dollars.

Rule X. Don't kick if I kick—if you're worth while correcting, you're worth while keeping. I don't waste time cutting specks out of rotten apples.—*Exchange*.

All those who journey, soon or late
Must pass within the garden's gate;
Must kneel alone in darkness there,
And battle with some fierce despair.
God pity those who cannot say
"Not mine, but thine"; who only pray
"Let this cup pass," and cannot see
The purpose in Gethsemane.

—Ella Wheeler Wilcox.

THE HOME WORLD

ENGAGED TO BE MARRIED

ELIZABETH D. ROSENBERGER

JOYCE was only sixteen years old when she told her mother that she loved Harry Wolcott.

Her mother was an eminently practical woman, but she did not know how to guide her daughter's fancies; it was only the daughter's great need of a confidant that made her tell mother.

"Well, you can't get married before you are twenty," responded her mother. "An engagement is a solemn thing, just about the same as being married." And that was all she said.

Left to herself, Joyce did just the best she could as many other girls do. That fall Harry was going away to school. It is hard to say just why they thought an engagement must be entered into at this juncture, but the sacred promises were made. At school Harry met another girl whom he liked far better, but he never said anything of this in his letters to Joyce. When she was nineteen, she became acquainted with a man whom she soon learned to love, and bitterly regretted her engagement. Yet she continued writing to Harry as if nothing had occurred. When she was twenty-one, they were married. They were unhappy, disillusionment followed; then they told each other of their experiences. But it availed nothing now. Why were they not honest enough to confess before their marriage? Why was there no one to tell them that a broken engagement is not nearly so sad as a marriage which results in broken hearts?

A daughter needs her mother at this time; advise her, help her in every possible way, let her know that you understand and sympathize. Let her read such stories as "Faith Gartney's Girlhood," "A Story of Yesterdays," or "Esther Reid," all life stories of girls who like Ruth of olden days, loved and were married. If you give them only dull, preachy books, they will not care to read. On the other hand, there are many books which leave only evil impressions on a girl's mind; light, flippant and cynical, they give her wrong views of life. But the old romances of Scott and

Dickens make love and marriage the great central fact of life.

There is little good in locking the stable door after the horse is stolen. The thing which many girls need guarding against is an early engagement. The man a girl loves at sixteen is not always the type which appeals to her at twenty-one, when she has more taste and judgment to decide. To make home the center of happiness for her daughter is every good mother's endeavor. That means to leave the latch-string out for boys and girls and give them a real welcome when they come in to see her. There was no parental aloofness, no cold reserve calculated to drive the young people to some more congenial quarters in one home, and young people naturally gathered there to enjoy themselves. These young people felt that the parents were in full sympathy with their harmless pleasures and they strove to be worthy of their trust.

One home-loving mother found a serious problem before her. Alice was eighteen, she had taken a course in stenography, and had completed the high school course. Ralph, a neighbor's son, had often called on Alice, and the parents had sometimes spoken of a boy and girl attachment as not likely to prove lasting. Ralph was twenty-three and a good boy. He had no bad habits and was well spoken of, but he lacked ambition, while Alice was very anxious to get on in the world. He was of good family, so it was easy to get a place in a dry goods store at eight dollars a week, and with this he was content; apparently he made no effort to rise.

What should this mother do? She did not like to interfere, she did not like to appear in a mercenary light to her daughter. And besides, outspoken opposition might result in a secret marriage. The parents knew that their daughter had no idea of the actual value of money. With considerable tact they persuaded Alice to take a stenographer's position, at five dollars a week. She was to have all she earned, but that must suffice for her clothes and spending

money. At first the money seemed a large sum to her. Then she soon felt that she must do better work and secure a more remunerative position. And then she commenced to doubt the possibility of keeping up a home for two on eight dollars a week. The young man accused her of developing expensive tastes and ideas. Why not be contented, he asked her. As the weeks passed by Ralph found a sweet-faced, economical girl, who was far better suited to live in a cottage than Alice was. And Alice was quite content to see him go because she was in love with a young man who appreciated her ambitions and sympathized with her. The future looks bright for all. Alice's mother feels that her daughter is more likely to be happy with this young man than with Ralph. And Ralph wonders how he could ever have fancied Alice.

Where so much of weal or woe is at stake, it is our duty to be very careful. An early engagement may sometimes be the prelude of a happy marriage, but more often it is a mistake. We make sentiment and emotion the foundation of marriage, and far be it from us to belittle their importance. But we plead for more reason, more thinking, a clearer sense of honor, and with all these a greater love before entering upon an engagement.

CHILDREN'S LIES.

WHEN all treasures are tried truth is the best. But truth is not a child virtue. It is the supreme attainment of maturity.

Saying that truth is not a child virtue is not saying that we should ignore its cultivation in childhood, but rather that we should give more thought to teaching truth by reasonable methods and with an intelligent comprehension of the fact that it is not the child but a virtue so high that it demands struggle for its attainment.

The young child needs long practice and much exercise in telling the truth as well as unvarying truthfulness from those who deal with him.

It seems a great mistake to expect truth to come naturally and easily to young children. They must make a great many experiments in the use of language before they can employ it with accuracy.

A young child who cannot yet understand the obligations of truthfulness cannot be held morally accountable for his departure from the truth. All lies are not bad nor are all liars immoral.

G. Stanley Hall says: "The beginning of wisdom in treatment is to discriminate between good and bad lies."

There are a great many kinds of "lies" but most "lies" in classification fall readily under one of three heads.

First, the Imaginative lie. It is rather hard to call the imaginative lie a lie at all. It is often a well-

marked epoch when the young child first learns that he can imagine and state things which have no objective counterpart in his own life.

It is so closely related to the creative instinct which makes the poet and novelist and which, common among the peasantry of a nation, is responsible for folklore and mythology, that it is rather an intellectual activity misdirected than a moral obliquity.

A child who has strong imaginative power should not be branded as untruthful, but should be given something with which to feed his imagination outside of trivial everyday matters. We have stated times for our babies to imagine. We call it dreaming. Other times when we have a difficult story to read or task to perform we have each child imagine he is one of the other teachers in the building and address him by that teacher's name and often through the aid of his imagination he *will* make a better recitation. Children love to imagine. Out of imagination come some of the bad but far more of the good qualities of life and mind. These are the noble lies of poetry, art and idealism, but there pedagogic regulation must be wise.

In simple justice, the imaginative child should receive careful training in distinguishing between fancy and fact-training accuracy of all kinds. He is entitled to a training as sympathetic in accuracy of speech as would be due to a child who had some physical difficulty in correct enunciation. Again children live so much in the realm of imagination and are talked to so much in a fanciful, sportive vein, that some confusion must result. Sometimes what might happen is so vividly pictured in the mind of an imaginative child that it seems as real to him as what actually does happen.

In all good faith, though in mental confusion,—out of a bewildered mind rather than from an untrue heart,—comes the untruthful statement.

While we ought to make allowances for the imaginative child, whose difficulties are better understood now than in former days, a word of caution is also necessary with regard to the matter-of-fact child, the child who sees things exactly as they are—unrefracted through any mist of their possibilities and who consequently reports them with accuracy.

This child's truth telling is as unconscious as the other child's untruth. Do not mistake it for an attained virtue,—a deliberately chosen course of conduct. Unless he, too, is taught and trained to choose the truth, to value and reverence it, his clear head and exact tongue may, in later life, become the servants of a false heart.

Very imaginative children often do not know the difference between what they imagine and what they actually see. Their mental eye sees as vividly as their physical eye, and therefore they even believe

their own misstatements. Every attempt at contradiction only brings about a fresh assertion of the impossible, which to the child becomes more and more real as he hears himself affirming its existence.

It was so with the little boy who came rushing into the house, saying, "O mama, there is a lion on the front porch." The mother said, "No, Robert, you do not mean a lion." "Yes, it is a lion," and the more the mother contradicted her son the more he insisted it was a lion. She sent him up stairs to commune with God about telling such a falsehood. On his return down stairs, the fond mother said, "Robert, did you tell God about it?" "Yes, ma'am." "And what did God say?" "He said he thought it was a lion himself when he first looked at it."

Punishment is of no use at all in the attempt to regulate this fault. The child's large statements should be smiled at and passed over. In the meantime he should be encouraged in every possible way to get firm grasp of the actual world about him.

One great advantage, especially for a very young child, is the performance every day of some little act, which demands accuracy and close attention. For the rest, wait; this is one of the faults that disappears with age.

To control imagination and not eliminate it is what should be sought in the interests of the highest truthfulness.

Imagination is the divinest quality of man, for sympathy, above all moral qualities, is dependent upon this faculty. If we cannot imagine how we would feel under our neighbors' conditions, we cannot deeply sympathize with them.

The person of unimaginative mind sympathizes only with those whose experiences and habits are similar to his own. He never escapes from the narrow circle of his own personality.

But the man whose imagination has been kept flexible and ready from earliest childhood has within him the power of sympathizing with whatever is human, and even with creatures and things below the human level.

The second kind of lie is the "Lie of Evasion." The lie of evasion is a form of lying which seldom appears when the relations between teacher and pupil are absolutely friendly and open.

A teacher who is a close observer can almost always tell when a child is telling an untruth and what kind by the way he bows his head. When shame alone from telling a lie is disturbing a sensitive child, the head droops; but if with shame are commingled love and a desire for reconciliation, the head leans a little to one side as well as bending downward; and if the head is bowed but averted, the conquest is but half made; the lie is admitted but the heart is not won.

The degree to which the soul can express itself through the body varies of course with different chil-

dren. The child who is very desirous of approval may find it difficult to confess a fault, even when he is certain that the consequence of his offense will not be at all terrible. This is more difficult. It is clear that the child who lies merely to avoid punishment can be cured of that fault by removing from him the fear of punishment.

To this end, I sometimes say, "Don't you want to tell me all about it, so you can go back to your seat with the other boys and girls?" And he generally confesses at once and is dismissed. There is no need of any further punishment, for the chief object of punishment being to make him face his own fault and to see it as something ugly and disagreeable, that object is accomplished by a free and open confession and no further punishment is required.

But when the child in spite of such reassurance still continues to lie, both because he cannot bear to have you think him capable of wrongdoing, and because he is not willing to acknowledge to himself that he is capable of wrongdoing, the situation becomes more complex. All we can do is to urge upon him the superior beauty of frankness; to praise him and love him, especially when he does acknowledge a fault, thus leading him to see that the way to win our approval—that approval which he desires so intensely—is to face his own shortcomings with a steady eye and confess them unshrinkingly.

The third kind of lie is the "Politic Lie." The politic lie is, of course, the worst form of lying, because it is so unchildlike, and yet we occasionally find it in the first primary department.

This is the kind of fault that will grow with age; and grow with such rapidity that the teacher must set herself against it with all the force at her command.

The child who lies for policy's sake, in order to achieve some end by lying, is a child led into wrongdoing by his ardent desire to get something. Discover what that something is and help him to get it by more ethical means. If we point out the straight path and show the goal plainly in view at the end of it, he may be persuaded not to take the crooked path.

But occasionally there are natures that delight in crookedness even in early childhood. They would rather go about getting their heart's desire in some crooked, intricate, underhanded way than by the direct route. Such a fault is almost certain to be an inherited one; and here, a close study of the child's relatives will often help the teacher to make a good diagnosis and even suggest to her the course of treatment.

In an extreme case the teacher may disbelieve the child who lies, not merely disbelieving him when he is lying, but disbelieving him all the time no matter what he says. I never tried this treatment myself, but knew a mother who did. During the treatment, when her six-year-old boy would say, "I want a cookie," she would answer by saying, "How do I

know you want a cookie?—I cannot tell by what you say, for yesterday you told me you were going to Cramer's when you went to Black's."

She continued with that process until she made him see, without room for any further doubt, that the crooked paths that he loved did not lead to the goal his heart desired, but away from it. His words not being true to facts, had lost their value and no one around him listened to them. He is, as it were, rendered speechless, and his favorite means of getting his own way is thus made utterly valueless. Such a remedy is in truth a terrible one. While it is being administered the child suffers to the limit of his endurance; and it is only justifiable in an extreme case, and after the failure of all gentler means.

During the first few years of a child's life he says neither what is true nor what is false,—he merely talks. His talking is thinking aloud. The younger the child the fewer questions we should ask. It is better to seem all-knowing or remain ignorant. We apply a fiery trial to children when by our ill-concealed anger and the prospect of punishment after confession, we place them in the dangerous position of choosing whether they shall obey intuition or an idea. The simple savage is full of deceit both in words and actions. The peasant, under the influence of some trifling danger, will tell a lie; and yet we can require in a child, whom we have to educate, the last and noblest fruits of truth.

Richter says: "Truth as a conscious virtue and sacrifice; truth, which would offer even a bloody sacrifice to its word, as its word, is a God-like blossom on an earthly plant; therefore it is not the first but the last virtue, in order of time."

One of the German legends relates that the Christ-child presented to a dreaming child various noble characters as ideals. Great warriors, kingly rulers, noble statesmen, were thus brought before the little one, but only to his discouragement.

"I can be none of these," sadly thought the child. "They are all so mighty and wise." At last the Christ-child assumed the form of a gentle, loving, obedient child. To this the dreamer eagerly responded, "I can be that! I *must* be that!"

Shall we not take to heart the lesson which is so obvious in this little story? The ideal offered the child, if it is to win his allegiance, must be a child-like ideal that is within his realm of possibilities. When he has attained to a child's measure of attainment in the earlier virtues, we may hope that his unfolding ideal, growing ever grander and more beautiful, will enshrine itself in the example of him who said: "I am the way, the truth, and the life." And catching the inspiration born of divinity, lead at last, *even unto the Father*.—*Anna Kiester, in Ohio Educational Monthly.*

The Children's Corner

THE DANDELION FAMILY.

It is five o'clock in the morning—the dandelions are waking up. First the father wakens and calls: "Good-morning, grandma! Good-morning, grandpa!" Grandma Dandelion is very beautiful. Her hair is as white as snow, and so soft that if you touch it, it is quite spoiled. Grandpa's head is entirely bald, but he does not care; he is very happy indeed.

Mama wakens next, and begins to call the children; some of them do not wish to get up, but every dandelion is up by six o'clock. If you are up early you can watch them all waking—only the little fat babies do not waken—they are wrapped in green blankets, and sleep all the time; but just as soon as they are old enough to wear yellow dresses they rise promptly in the morning.

Children all love to pick dandelions, and no one ever says you must not. If you pick flowers in the garden, the gardener is very cross; so you are not allowed to. He knows how. He cuts them with a knife or scissors, and if you pick them he is afraid you will give them a jerk and spoil the plants.

In the early spring, before the flowers come, the dandelion leaves are good to eat when boiled. Have you not noticed people cutting them with sharp knives? After the flowers come the leaves are very large, and have grown too bitter to eat.

Do you know why there are so many dandelions? Just look at Grandma Dandelion's hair—it is full of brown hairpins. The wind blows so hard that she loses most of them; they are scattered all over the grass, and then the heavy rain comes and presses them into the ground, for they are really seeds. Next spring they will come up as new plants.

At evening the lonely shepherd in the mountain is taking the sheep to new pasture. After the sun goes down he is very tired, and as he sees the little dandelions going to sleep he knows it is eight o'clock; that is when all the dandelion children must go to bed.

The shepherd calls to the dog not to drive the sheep any further, and they lie down, glad to rest at last. When the shepherd has had his supper and fed the dog he sees Papa Dandelion going to sleep. He knows it is nine o'clock; no dandelion ever goes to bed later than that. The shepherd lies down on the ground, covers himself with his blanket, and goes to sleep too.

The dandelion grows in many countries and in city parks, as well as in lonely places. You see what a useful plant it is. The leaves are good for food before the flowers come. The flowers are little clocks for people who are far away from home and have no watches; and when the leaves and flowers have gone the root can be used as a medicine.—*The Circle.*

THE QUIET HOUR

THE PROGRESS OF HUMANITY.

RICHARD BRAUNSTEIN.

Text: Romans 8: 21.—The creature also shall be delivered from the bondage of corruption into the glorious liberty of the children of God.

THE creature mentioned in this strange text is humanity, in its state of subjection to ignorance, sin, and superstition, and the deliverance spoken of is the regeneration of the race through the redemption which is in our Lord. The story of humanity in its struggles for emancipation from the darkness of sin and slavery of superstition is a long and sad one, beginning back in the twilight of time. Before the first pages of its history had been written prehistoric traditions tell us of the earliest efforts by the fathers of the race to solve the great problem of being.

The great systems of Oriental religions were born of man's consciousness of his helplessness and subjected condition as an ignorant, suffering, and sinful creature, and his need of light to discover his way out of the darkness which shut him in on every side. "Darkness covered the earth, and gross darkness the people," is the description given by the prophet Isaiah of the condition of humanity. *Darkness* is the significant symbol of his moral and spiritual ignorance and bondage. Did you ever stop to think how darkness binds a man more effectively than chains? He dares not move; he fears to stir as he knows not what danger may lurk by his side. So humanity, through this moral and spiritual darkness which overshadowed the world, was "sitting in darkness and the shadow of death," ignorant of both its origin and destiny, without God in the world.

In this prison-house of darkness we hear him cry, "Oh, that I knew where I might find him!" the Mighty One who made the sun, moon, and stars, and gave me my being, and, as the psalmist expressed the same thought in one of his beautiful poems, "As the hart panteth after the water brooks, so panteth my soul after thee, O God!"

The first step out of this awful darkness of sin and utter misery and ignorance, was the effort of humanity to know and worship the great spirit through the great luminaries of heaven, as they shone upon the world by day and by night. This gave origin to the worship of the heavenly bodies, and especially to sun or fire worship, which unquestionably was the earliest form of worship among sinful men.

The second advanced step was the call of Abraham, when a more clear knowledge of the one true God was obtained, and the foundation of the Hebrew religion was laid in the midst of the gross idolatry of the nations round about them.

The third step was the deliverance of Israel from Egypt, and the giving of the law, through Moses, at the foot of Mount Sinai. This law, which is called The Ten Commandments, was the first *magna charta* of human rights and liberty that was ever given humanity. God, the infinite Sovereign of the universe, proclaims his authority as the great Ruler of the world, and all that therein is, and issues his command, which was to regulate the conduct of his creatures toward him as their Creator, and toward each other as fellow creatures. This *magna charta* is the cornerstone of every civilized government in the world.

It is impossible to overestimate the uplifting influence which the Hebrew people, through this great moral and civil charter, exerted upon the surrounding nations through their constant contact with them, as well as through their several captivities. The fourth step in the marvelous liberation of the creature from its bondage was the evolution of Christianity from Judaism, through the manifestation of Christ.

The greatest Teacher in the history of the race appears on the scene. His matchless maxims give new meaning to every letter of the law. His light of love drives back the darkness and widens the scope of human vision. His advent proved to be the bright and morning star, "yea, the very sun of righteousness." People who had been sitting in darkness saw this great light. He revealed truths that had never been discovered. God's love for men as his children was emphasized. The redemption of humanity, as the purpose of the Infinite Father, was brought forth. The lilies of the field and the sparrows on the housetop were made to preach the doctrine of God's love and care for sinful men. His beautiful beatitudes banished the curses of sin from the earth. He gave glorious glimpses of the coming of God's kingdom on earth, and the reign of universal righteousness when the creature shall be delivered from the bondage of corruption into the glorious liberty of the children of God. And through his glorious Gospel of peace on earth and good will toward men he has been beating back the blackness of the night of ignorance, super-

stition, oppression and tyranny ever since. The apostles of love and liberty have been going forth, in obedience to his divine command, from age to age until now, and he has more of them in the field of the world today than at any period in the history of the race. Some of these mighty sons of light have shined like stars of the first magnitude in the firmament of the church; others have wrought as mighty rulers of nations for the advancement of the rights and liberties of men in the civil realm.

Dormansville, N. Y.

GOD'S LOVE IS WITH YOU.

THEY who have long served God with care and diligence and yet find their life a hard struggle, with few bright passages, many disappointments, and never joy such as the penitent at once enters into, naturally feel some soreness that one step should bring a life-long sinner abreast of them. You may have been striving all your days to be useful, and making great sacrifices to further what you believe to be the cause of God, and yet you cannot point to any success; but suddenly a man converted yesterday takes your place, and all things seem to shape themselves to his hand, and the field that was a heartbreak to you is fertile to him. You have denied yourself every pleasure that you might know the happiness of communion with God, and you have not known it, but you see a banquet spread in God's presence for him who has till this hour been delighting in sin. You have had neither the riotous living nor the fatted calf. You have gone among the abandoned and neglected, and striven to enlighten and lift them; you have done violence to your own feelings that you might be helpful to others; and, so far as you can see, nothing has come of it. But another man, who has lived irregularly, who has not prepared himself for the work, who is untaught, imprudent, unsatisfactory, has the immediate joy of winning souls to God. Have you not been tempted to say, "Verily I have cleansed my heart in vain, and washed my hands in innocence"? All this may be needful to convince you that it is not service that wins God's love; that his love is with you now, and that your acceptance of it will make all that has seemed to you grievous to be light and happy. Take refuge from all failure and disappointment in the words, "Son, I am ever with thee, and all that I have is thine." Learn to find your joy in him, and you will be unable to think of any reward.—*From "The Parables of Our Lord," by Marcus Dodds, D. D.*

GOD'S OUT OF DOORS.

If flowers were merely beautiful in our eyes, they would still enchant us; but at times we are carried away by their fragrance. Colors have also their own eloquence; all things are possibly a symbol. But

scents are more penetrating, possibly because they are more mysterious, and although in the normal relations of life we must have palpable truths, the great motions of the soul have truth of another order for their principle, the essentially true, inaccessible notwithstanding in these our wavering ways.

There are two flowers which, in a sense, seem to bloom in silence and almost devoid of fragrance, but by which I am more attracted than I can say on account of their persistence. The recollections which they awake recall the past vividly, as if such bonds of time heralded happy days. These simple flowers are the field-barbel and the early Easter daisy, the meadow marguerite. The barbel is the flower of rural life. It must be seen in the liberty of natural leisure, amid wheatfields, farmyard sounds and crowing of cocks, by the footpaths of the old husbandmen. The sight of it might well lead to tears.

The violet and the meadow daisy are rivals. They bloom in the same season, with the same simplicity. At the first dawn of springtide we are captivated by the violet; the daisy wins our love year in and year out.

If I should reach old age, if, on a day, still thought-haunted, but ceasing from speech with men, there should be a friend at my side to receive my farewell to earth let my chair be set down on the short grass, may there be peaceful daisies in front of me, beneath the sun, under the vast sky, that in relinquishing this fleeting life I may recall something of the infinite illusion.—*De Senancour, "Obermann."*

WASTING THE MASTER'S GOODS.

ONE of the most reliable missionary authorities of the present day makes the following statement: "There is buried in jewelry, gold and silver plate in Christian homes, enough to build a fleet of 50,000 vessels, ballast them with Bibles and crowd them with missionaries, build a church in every destitute hamlet, and supply every living soul with the Gospel within a score of years. Only let God's fire come down and take possession of hearts and tongues, and the Gospel will wing its way like the beams of the morning!"

What a conglomerate mass the 32,000,000 church members or professing Christians of the United States must be in the eyes of him who searches the hearts! What an empty, meaningless, hypocritical sham their testimony must be when the offering for the evangelization of the world is counted and it is ascertained that it took ten of those professors to give one cent every working day for the salvation of the heathen! Taking into account that these offerings were made by a comparative few it is evident that millions never give a cent. Would it be a wonder if the Lord of the vineyard would let out the vineyard to others?—*Gospel Banner.*

ECHOES FROM EVERYWHERE

As a result of the new tariff bill zinc ore has advanced \$2 per ton and higher prices are looked for. With the increased demand many mines will be reopened.

Every farmer in Arkansas is urged by the Arkansas State Farmers' Union to sow enough wheat to supply his family during the year. This is for the purpose of protecting members from the effects of any possible future corner in wheat.

Because of the prevalence of scabies among sheep in Kentucky, Gov. Willson has been notified by Secretary of Agriculture Wilson the State will soon be quarantined. Dr. F. I. Eisenmen, State veterinarian, thinks this will compel county fiscal courts to act, the State having no control over the movement of sheep.

Realizing they were beaten the Japanese Higher Wage Association has declared the strike of their 6,000 sugar plantation laborers in Hawaii at an end. The planters yielded nothing. F. Makino, one of the leaders, now on trial for conspiracy, says the Japanese will try other methods to obtain a wage of \$1 a day, for which they struck.

Some details have lately been made public of the instrumental work on the Gunnison tunnel, recently completed by the government, which will bring some 200,000 acres of land under cultivation. The tunnel from entrance to entrance is six miles in length. The survey lines at the point of meeting differed 0.32 foot in level, 0.40 foot in alignment, and 0.86 foot in distance.

Hereafter bootleggers and operators of blind tigers in Kansas are to be treated by the federal revenue department in the same manner as "moonshiners" in the mountains are treated. Ten detectives from the United States secret service have been detailed to make arrests of all persons who have been convicted in the local courts of violating the Kansas prohibitory law.

President Taft and Emperor William, of Germany, have simultaneously promulgated a reciprocal patent treaty which will be of far-reaching importance to the commercial world. The effect of the treaty will be that American manufacturers will be relieved of the existing requirement that, in order to sell their products in Germany, they must manufacture them (upon the basis of patents) in Germany, which called for investments of large sums of money in maintaining duplicate plants. Inventors will greatly benefit from the fact that the treaty relieves them from the German restriction under which their patents have hitherto been forfeited if not actually worked in Germany, within three years. Under the new provision it will be sufficient to protect patents in both countries if they are used for manufacture in either.

The Etruria and the Umbria, steamships of the Cunard line, which first reduced the ocean record below six days and which, in their day, were the finest liners afloat, have gone in the discard as being out of date and are for sale at Birkenhead, England. The liners cost \$1,400,000 each and are of 8,120 tons gross displacement. But they eat up too much coal, using 450 tons a day, and the more economical turbiners and triple screw steamers have displaced them.

On August 15 the new anti-cigarette law of Missouri went into effect. Youths under 18 who smoke cigarettes are liable to a fine of \$10. Dealers or manufacturers who sell either the made cigarette or the makings of them are liable to a fine of from \$100 to \$500, half of the fine going to the informant. Through Mrs. F. H. Ingalls, president of the W. C. T. U., and Mrs. Edith Gibbs Chandler, State superintendent of the Anti-Narcotic League, efforts are being made to enforce the law to the letter.

Our government has sent out a request to all the governments which participated in the meeting of the International Opium Commission at Shanghai, last February, to send delegates to a second Opium Conference to be held at The Hague in the near future. The purpose of the conference is to secure international agreement for the control of the production and traffic in opium with a view to its complete suppression except for medicinal purposes. Our State Department is preparing a program for the discussion of the conference.

The city of Worcester, Mass., seems to be well pleased with the operation of prohibition laws within her precincts and has voted to try the plan again. Last year under the prohibition rule the arrests for drunkenness decreased from 3,924 to 1,843; the police courts showed a decided falling off in arrests for larceny, non-support, and for disturbing the peace; in the alcoholic ward of the city hospital there were but 144 patients, as against 274 in the previous year when the town was "wet"; there were only six deaths from alcohol last year, while during the one previous there were 30. In view of these facts the city feels justified in retaining the prohibition laws.

The French parliament has passed a law which provides that in transactions relative to diamonds, pearls, and precious stones, the term "metric carat" may be employed to designate a weight of 200 milligrammes (3.086 grains Troy), and prohibits the use of the word carat to designate any other weight. As many other governments are ready to enter into the reform and unification of the carat and have only been awaiting the initiative of France, it is reasonably certain that the metric carat of 200 milligrammes will, within a few months, be the only carat recognized by law in the majority of countries interested in the trade in gems.

An ordinance just passed in Java falls heavily upon Chinese secret societies. A fine of 100 guilders or three months' rigorous imprisonment is the penalty for every Chinaman found in possession of secret society documents or emblems or caught wearing the distinguishing marks of these organizations. Those who preside over the meetings of such societies, allow meetings to be held in their houses, or fail to inform the authorities incur similar penalties. The latter also fall upon Chinamen who recruit for these societies, supply them with money, or give help in any way.

The English blue book, just issued, shows that royal families are expensive luxuries. Besides the personal incomes of the king and queen, annuities are paid to the royal family which amount to \$515,000; the Duke of Connaught receiving the largest amount for any single individual, his annuity being \$125,000. The Prince of Wales gets \$100,000. Their majesties' privy purse was \$550,000. Salaries paid to the king's household and retired allowances amounted to \$630,000, and the expenses of the king's household were \$665,000. The royal bounty, alms, and special services amounted to \$60,000.

Although some of the express companies have furnished the Illinois State Railroad and Warehouse Commission with tariffs as called for several have refused to do so. Those supplying the information say they do not recognize the commission's authority to demand tariff rates charged for the transportation of property and money within the limits of the State. The Hepburn law makes express companies common carriers and Attorney General Stead has ruled that the companies must comply with the commission's orders. Despite this opinion several say they will not submit to the jurisdiction of the commission.

John Arbuckle, founder of Arbuckle Wrecking Company, is enthusiastic over his success in raising the collier *Nero* by the use of compressed air and believes the future salvage of ships depends on the continued use of air. He declares he can raise and bring into port sunken ships that cannot be raised in any other way. His process is to brace the decks of the stranded ships so that they will not blow off, seal up the hatches and then pump the vessel full of compressed air, which displaces the water and allows the vessel to float. Arbuckle declares the time will come very shortly when every liner will carry her own compressed air machinery.

Moving picture shows have been greatly damaged in Rome, and, indeed throughout Italy, by the action of the pope in forbidding the clergy of Rome to attend them. This inhibition has extended to the laity, not by papal or clerical order, but by lay inference that anything displeasing to the head of the church must be unfit for its followers. Italy has been regarded as one of the best paying fields for such shows. The business has flourished in all the cities, the small cost of admission (from 3 to 6 cents, according to seats) enabling the showmen to fill their halls at intervals of 20 minutes from noon to midnight. When the fad began the subjects were harmless and often amusing. With its growth the character changed, until tragic love scenes and violent murder became leading subjects. Police records of late have shown that much of the violence committed by criminals was to be traced to the influence of the realistic picture show horrors. This discovery prompted the pope's order, which bids fair to drive the business out of Italy.

It is understood that the Persian government has now offered Mohammed Ali, the former shah, an annual pension of \$75,000 on condition that he will surrender the jewels enumerated in the nationalist inventory or inform the government how he disposed of them. It is believed Mohammed Ali will accept this new offer, and his departure from Persia, probably for Russia, is expected soon.

The balloon *Sirius* has succeeded in flying over the Alps. The airship left Chamonix, France, Aug. 8, under the pilotage of M. Spelterine with three passengers and landed safely near Locarno at an altitude of 5,400 feet. The *Sirius* traversed Mount Blanc and soared over the Aiguille du Dru and the Aiguille Verte. The highest altitude attained was 18,373 feet. A successful balloon trip over the Alps was made in November, 1906, by two Italians in the balloon *Milano*, the greatest altitude being 20,500 feet.

Following the suggestion of George E. Barstow, president of the body, in his opening address, the National Irrigation Congress, now (Aug. 9) in session at Spokane, will probably pass resolutions asking the government to create a fund from which loans can be made to people who desire to settle on government irrigated lands but are too poor to make their first payments and support themselves while developing their farms. President Taft was unable to attend the congress, but he sent a telegram of regret and in it pledged his "earnest endeavor to further the cause of reclamation by irrigation in every part of the country within the jurisdiction of the federal government."

Owing to the general outcry against the law's delays in England, in which the judges themselves are joining, the prime minister has promised to appoint a commission to investigate the whole matter. The blame is not placed upon the judges, but the complaint is made that the number of judges has not kept pace with the growth of population and the increase of litigation incident to the complex conditions of modern life. There are now but sixteen judges on the king's bench, and they have to do practically all the work for England and Wales. This is about the same number that sat there a century ago, although the amount of litigation has more than doubled. The calendar in the king's bench is now about 1,000 cases behind, and the arrears are growing steadily.

Goods in bonded warehouses, without regard to the date when stored, will, when withdrawn for consumption, be subject to the rates of duty imposed under the new tariff law. A ruling to this effect was made Aug. 9 upon inquiries from the East concerning hides, and from the Pacific coast concerning Philippine cigars and tobacco. The Treasury Department holds that the hides may be admitted free of duty, and that the Filipino products may also be brought in without charge, taking the position that goods are not imported until withdrawn by and delivered to the consignee. The same ruling will, of course, apply to wines, silks, cotton goods and other articles upon which the duties have been increased. As the average rate of duty upon hides is \$1.50, and as there are thousands in bonded warehouses in the East, the saving in duty to the leather manufacturers and the loss on revenue to the government will be material. Treasury officials are greatly encouraged by the early signs of prosperity and business revival noted under the new law. Although Saturday (Aug. 7) was a half holiday the customs receipts that day exceeded \$1,000,000. They are predicting that before long the receipts will swell to such a degree that the deficit will disappear.

Among the Magazines

FRANCE FORCED TO ADOPT MODERN FORESTRY.

"France will be destroyed for lack of forests," cried one of her greatest statesmen, and the prophecy was very nearly fulfilled. Just fifty years have passed since unprecedented floods in the valley of the Loire called the attention of the government to the fact that the Central Plateau had been almost entirely denuded, that the fertile soil was being destroyed, the reservoiring effect of the forest lost, and a beginning made toward the creation of a desert in the heart of the nation.

Not only the Loire was affected; on the Pyrenees the protection of the Garonne was gone, and in Savoy that of the Rhone. The stripping away of the trees on the mountain sides of Savoy had released the mountain brooks and turned them into torrents. The binding roots rotted away, and tiny streams became gashes, continually widening to chasms. Literally the whole slope of the mountain began to slide down into the valley, impelled by an unrestrained deluge of water. The Rhone, always a swift stream, filled its bed with moving gravel and sand, and with unprecedented rapidity extended its delta out four miles into the deep water of the Mediterranean. Navigation was impeded or rendered impossible; villages which had grown wealthy on an orderly waterpower, awoke after a storm in the mountains to find their brook beyond control and their streets piled many feet deep in gravel and boulders.

The prospect of the continuation of such calamities aroused the whole people. The engineers, after experimentation, discovered that in many places masonry dams must be erected at short intervals, not in order to hold up the water, but to check the descent of the stream's bed itself. The reclamation is still going on; and in many parts of France public and private energy is being concentrated today on this work.

Three million acres of public forest and fifteen millions of private woods are now standing, but there still remain sixteen million acres absolutely barren, much of which must be conquered by bunchgrass before it can be planted in trees. France has learned her lesson. Her object now is twofold: to preserve her rivers and mountains by forestry, and to provide a domestic supply of timber. She is achieving both ends rapidly, and is finding that her utmost efforts are repaid promptly in actual cash returns.

I wish that those who have ruined the seaboard flats of Florida, Georgia, and the Carolinas could be transported to Gascony and made to understand what wonders can be wrought by the proper conducting of a turpentine forest. On the sea face of the sand ridges, which extend in unbroken whiteness for seventy-five to one hundred miles, bunchgrass is planted in regular rows, to hold the sand from drifting. On the top of the first ridge is a low wattle fence and a fire-break, and back of this a narrow belt of dwarfed and stunted trees, cut off four or five feet from the ground to make their branches

spread over wide areas. After one hundred yards of this, one comes to a more open forest of crooked and stunted maritime pine, and beyond this again to the great, free forest full of big trees ripe for cutting, and of smaller stuff ready either for bleeding or reproducing the big timber.

All of this forest is worked carefully on a scientific system; and during the very years when our reckless and ignorant methods have been destroying our southeast coast, these foresters of France have been developing a profitable and useful forest of this same maritime pine out of nothing.—John L. Mathews in August Everybody's.

WHO JOHN WOOLMAN WAS.

The surprise of Dr. Eliot's five-foot shelf of books is undoubtedly the "Journal of John Woolman." People are asking, "Who is John Woolman and what message has he for a twentieth-century mind seeking a cross-cut to culture?" It was perhaps vaguely known that Woolman was a Quaker and wrote a book much admired by Whittier and Charles Lamb. Now that his name has come in for a greater trial of fame the words of still others in his behalf are brought forward, among whom is William Ellery Channing, who is quoted to the effect that Woolman's book is "beyond comparison the sweetest and purest autobiography in the language." That literary free lance, Henry Crabb Robinson, contemporary with Charles Lamb, once wrote of him: "If one could venture to impute to his creed, and not to his personal character, the delightful frame of mind he exhibited, one would not hesitate to be a convert." Some facts in the life of the Quaker mystic may not come amiss, and these are given us by Mr. W. S. Archibald in the Boston Transcript, from which we quote:

"John Woolman was in trade a tailor, in religion a Quaker, and by his calling a preacher in the Society of Friends. He was born in Northampton, N. J., or 'West Jersey,' as he calls it in his journal, in 1720, just fourteen years after Ben Franklin was born, when George I was king, when Pope was the great poet, and when the colonies were fighting French and Indians. His boyhood was quite the same as that of other Quaker boys in the colony of West Jersey; hard work on the farm or 'plantation.' He was taught by his parents to read, he says, as soon as he was capable, and he had occasional schooling. His home was a family where he grew up in the simple piety and beautiful simplicity of the Friends.

"It is evident from the 'Journal' that his boyhood gave promise of that religious genius which makes his book so noticeably a record of a pure spirit. Between his sixteenth and eighteenth years, he confesses quite a change in his life, recording that his life was wantonness and his ways were ways of wickedness. This experience was probably no more than reaction, from which he recovered himself, and entered those habits of living and thinking which eventually led him to his spiritual distinction.

"When he was twenty-one he obtained permission from

his father to embark on his own business ventures. He began as clerk to the storekeeper in Mount Holly, five miles from Northampton. Here he lived all his life, earning his livelihood as a tailor, preaching in the meeting and visiting the society in other colonies. Two episodes may be noticed now as significant of his attitude toward two great questions—slavery and simplicity. His employer, who owned a negro woman, asked Woolman to write out a bill of sale. He did so reluctantly and under protest. This was the beginning of an opposition which occupied his whole life. The second episode was the increase in his business. He had started a store in connection with his tailoring trade, and 'the way to a large business appeared' open, but I felt a stop in my mind. Through the mercies of the Almighty I had in a good degree learned to be content with a plain way of living.' And he sold out his store and confined himself to his trade. It is perhaps not out of place to observe that his example is profitable to many now, if they only 'felt a stop in their mind.'

"When he was twenty-six he made his first religious visit to the Quakers in Virginia, Maryland and Carolina. This is significant, because for the first time he saw slavery on a large scale. 'Two things were remarkable to me in this journey: first in regard to my entertainment. When I ate, drank, and lodged free of cost with people who lived in ease on the hard labor of their slaves I felt uneasy; and as my mind was inward to the Lord, I found this uneasiness return upon me, at times, through the whole visit. Where the masters bore a good share of the burden, and lived frugally, so that their servants were well provided for, and their labor moderate, I felt more easy; but where they lived in a more costly way, and laid heavy burdens on their slaves, my exercise was often great, and I frequently had conversation in private concerning it. Secondly, this trade of importing slaves from their native country being much encouraged among them, and the white people and their children so generally living without much labor, was frequently the subject of my serious thoughts. I saw in these Southern provinces so many vices and corruptions, increased by this trade and this way of life, that it appeared to me as a dark gloominess hanging over the land; and though now many willingly run into it, yet in future the consequence will be grievous to posterity. I express it as it hath appeared to me not once or twice, but as a matter fixed on my mind.' On his return home from this journey he wrote down his observations on slavery; and published them in a pamphlet, which bears the imprint of Benjamin Franklin, 1754.

"In 1749 he married. What time he could spare from home and trade was now given to preaching, to active personal opposition to slavery, to journeys visiting Friends' meetings in New England, the South, and West Indies. His love for humanity led him on perilous journeys in the back settlements, and among the Indians. On May 1, 1772, 'having had drawings on his mind' as he would say, he set sail for England to visit the Friends there. It was characteristic that he sailed, not in the cabin, as invited, but in the steerage, in order to be with and help the 'poor sailors.' On June 8 he reached London. Everywhere in England he saw poverty and injustice, filth and crime, great contrasts with wealth and luxury, and he was oppressed with the wrong and woe. His last public labor was a testimony in the York meeting. He died October 7, 1772, from smallpox, and was buried in the Friends' burial ground in York."—Literary Digest.

GERMANY'S FINANCIAL STRAITS.

A consolidated imperial debt of 4,233,500,000 marks (more than one billion of dollars) involving an annual interest charge of 147,700,000 marks; a deficit of 184,800,000 marks in a twelve-month of profound peace, with the certain prospect of a shortage yet larger in the year to come; the floating of a loan of 320,000,000 marks, in part at the remarkable rate of 4 per cent; a summary call from the government for increased taxation to produce an additional revenue of 500,000,000 marks per year,—these are some of the big facts in the present-day financial situation of the most militant and the most progressive nation of Europe. They are not accidents. They are not the fruits of wastefulness or corruption. They are merely the inevitable concomitants of an attempt to launch, in an era of unparalleled international prodigality, a new and preponderating world-power.

The external aspects of the thirty-eight years of daring enterprise that has brought the German Empire to the dubious pass in which it today finds itself are familiar enough to everybody. In 1871 the Empire possessed no navy worthy of the name; today the Kaiser's fleet ranks second among the admiralities of Europe, and every move at aggrandizement is watched apprehensively by the premier naval power of the world. In 1871 Germany boasted not one square mile of outlying territory; today she is the mistress of a colonial empire comprising an estimated extent of 1,027,820 square miles (two-thirds the area of China) and a population of above twelve millions. The Empire maintains an army which is universally recognized as the world's most splendid fighting machine. It has built up an elaborate and costly system whereby it insures its citizens against sickness, accidents, unemployment, old age, and invalidity. It carries a formidable civil and military pension roll. And it has developed one of the most highly specialized corps of civil-service officials in the world.

The departure from the comparative frugality of the early days came about 1885, when Germany for the first time went over definitely to a policy of colonial and naval aggrandizement. By 1888 the yearly expenditure had risen to 740,000,000 marks; by 1898, to 1,380,000,000. In the decade 1899-1908 it rose to 2,432,000,000. And the budget for the current year contemplated originally an outlay of 2,865,400,000 marks. During the twenty years from 1888 to 1908, while the population of the Empire was increasing by 30 per cent, the imperial budget was augmented by 230 per cent. Part of this vast increase has been occasioned, of course, by the extension of the civil service and other inevitable demands of the sort, but a very large share of it has been in behalf of the army, the navy, and the colonies.

The navy, which in 1888 cost 53,000,000 marks, in 1890 cost 130,000,000; in 1900, somewhat under 200,000,000; in 1908, 330,000,000; the budget for 1909 stipulates 411,400,000; and from now until 1917, under current estimates, the establishment will involve an annual outlay of more than 400,000,000 marks. The colonies, which twenty-five years ago did not appear in the budget at all, cost, in 1898, 12,000,000 marks; in 1902-1907, an average of 50,000,000; and in 1908, 65,000,000. And yet for every mark expended on the navy almost four are expended upon the army, and seventeen or eighteen for every one expended on the colonies. In 1886-1890 the annual outlay for the military establishment was 376,000,000 marks; between 1904 and 1908 it rose from 647,400,000 to 854,300,000.

There has been likewise a heavy increase in accessory

expenditures; as, for example, the outlay for military and naval pensions, which in 1888 was 25,600,000 marks, but in 1908 had risen to 115,100,000. Since 1898 Germany has increased her expenditure on her army and navy together 25 per cent more than has Great Britain. The total annual cost of her land and sea defense is now 977,400,000 marks, without taking account of the 600,000 to 700,000 able-bodied men who are kept from profitable employment, representing in productive capacity as much as 1,500,000,000 marks per year. Such has come to be the scale on which the Empire carries out its constitutional obligation to the German people to assure them a fair measure of security nach aussen.—From "The Serious Condition of Germany's Finances," by Frederic Austin Ogg, in the American Review of Reviews for August.

TIE A KNOT THAT WILL HOLD FAST.

THE way you tuck the end of the string tells whether the knot will hold or not.

A great deal depends on how we do things. The hay rope needs a knot which will never give way. One man tries it. The team starts up with a load, bound for the top of the mow. Half way up the knot begins to slip,—down comes the whole thing. The end of the rope was not tucked under the right way.

Here comes another man. He smiles as he takes hold of the rope. Everybody gathers round him to see how he does it, for nobody doubts that his knot will hold. Why? Because when he does a thing it stays done. It was all in the way the ends of the rope were tucked.

Our life is made up of tying the ends of things together. Bits of time, free ends of opportunity, shreds of hope and fear, and dreams of great things,—we link them together somehow, and upon that "somehow" depends our success.

Now, here are the boys and girls of the farm. Stop a minute and think what you are doing for and with them. Will it be a knot that shall hold through all time? Or will the knot slip just at the wrong time and only disaster follow?

Away at the back end of the farm is a strip of fence that is apt to blow over when the wind comes hard. You know it. Last night for hours the trees racked under the gale, and you thought of that piece of fence back on the hill; if the cattle found it, they would be out before noon.

"Sam, my boy, you know the bit of fence up there that is so apt to go over in a high wind? I wish you would go up to see how it is this morning. I am pretty busy myself or we would go together."

And Sam's face is bright and cheery as he answers, "All right, father. I'll see to it!" You know that piece of fence will be done just as well as it possibly could be if you had gone yourself. Because Sam has learned from you just how you wish it done, how it ought to be done and how he should do it to keep father's confidence. In short, the knot which holds Sam and you together and which binds Sam to his

work is made right; the end is tucked under the right way. Love holds that knot fast,—love between you and Sam, and love for the work.

Listen to a man and catch the tone of his voice as he speaks to his boys and girls, and you can tell very nearly what will be the life of those young people tomorrow. Have you never been startled at the sound of your own voice as reflected in the tones of your own boys and girls?

This is a hurrying time of the year, we all get tired before night. There is hay to pitch and grain to be cut and put into the shock. It is late at night when the last chore is done and we come in. Now is the time to be watchful for the ends of the string! Be careful how you speak. Hold the ends of the knot firmly in hand, then there will be no slip of voice or word or deed. Then when the morning comes, the world will shine on a heart clean and pure from all thought of harsh or unkind words.

None of us who builds a road can tell who will travel that road. But we know that some one will travel that way, and we know, too, what will be in the hearts of the men and women who, by and by, will journey along the path we have cleared. "What a splendid road he made for us to walk in, did he not? How thankful we are that such a good man lived and thought of the folks who might some day journey this way!"

Have you thought that we are building roads all the time for some one who will be here when you and I have reached the end of our journey and gone to do other and better things? Some one will surely walk this way soon. How are we building our roads? So that the world will be glad we ever lived here? That is the only thing that really counts.

How are you tying the knots that hold you to your little world?—*Farm Journal*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—Catalpa Speciosa trees, two to four feet, \$1 per hundred, \$6 per M.; Blackberries, Black Raspberry Plants, \$5 per M.; Rhubarb Plants, \$1 per dozen or \$2.50 per hundred; Strawberries, \$3.60 per thousand.—Alva Y. Cathcart, Bristol, Ind.

WANTED—1,000 Sisters to send for sample of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Ill.

WANTED—Reliable brother to invest \$3,000 to \$4,000 in farm and dairy enterprise 200 miles from Chicago. Large dividends. Investment absolutely safe.—J. L. Care Inglenook.

Told at Twilight;

Or Bible Stories
That Never Grow
Old

By Elizabeth D. Rosenberger.

This book is written for boys and girls in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire for more Bible knowledge.

The book is beautifully illustrated. 151 pages.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

NEFF'S CORNER

I know you must be tired looking week after week to see what Neff has to say and so often finding the same thing. When I established Neff's Corner in the 'Nook I determined it should not become stale and now this is the very thing that's happened. I'm sorry, but really if you were here and were to try to keep up with me for a day you'd see the reason why. The real reason why I do not say more here is because I haven't time to stop and put it down. What's the use to advertise when you already have more business than you can attend to? And my chief reason now for stopping long enough to say this is to keep you from going to sleep over Neff's Corner. I expect to hire more work done hereafter and take more time at my desk. Be on the lookout for Neff's Corner. I expect to have something to say that you will want to know about.

But you ought to see us building houses in Clovis. I have a row of jobs two miles long. Here and there I go, delivering material, hiring men, figuring contracts, collecting rent, etc., etc., and not only I, but scores of others going on the same kind of a jump. The way Clovis grows is a wonder. P. H. Beery of Covington, Ohio, G. S. Myers, of Lena, Ill., E. M. Cobb, of Elgin, Ill., and others have been here recently and they all agree that it is a wonder. If you contemplate an investment, write

Your Children

speak in the language of the twentieth century. In school, they are taught the language of the present day. Is it natural then, that in their Bible study, they should be expected to understand the English of the seventeenth century? The

American Standard Bible

Edited by the American Revision Committee

is for you and your children. It is the Bible truth revealed in the clear, simple language of the twentieth century.

24-page Booklet Sent Free

This book tells about the previous translations of the Scriptures and shows how, by the growth, change and development of the English language in the past 300 years, the American Standard Bible became a real necessity. The booklet tells also of the thirty years of effort spent in producing the American Standard Bible and gives many endorsements from prominent clergymen and religious writers of all denominations, with names of colleges and institutions where it is used.

A postal will bring the booklet—write for it to-day
BRETHREN PUBLISHING HOUSE

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,

Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

Ho! for Canada

It is not the purpose of the CO-OPERATIVE COLONIZATION COMPANY to slacken interest in its Colony at EMPIRE, California. This colony is now well under way; colonists are moving in and are well pleased and the work is moving along satisfactorily. But as the policy of this company is,—“CHURCH EXTENSION BY COLONIZATION,” steps are being taken to locate a colony in the Northwest.

After considering the various sections offered for settlement, the Directors at a recent meeting decided to locate

*in the heart of the great wheat Belt
of Manitoba*

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its nearness to good markets,—only 56 miles from Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Manitoba.
6. The Low price of land, when quality and location is considered. These lands are now ready for settlement, are low in price and will soon be taken.

Join our Colony Number Two, secure a good farm in a prosperous section with good, near-by markets, excellent transportation facilities, where School and Church privileges are assured, and among people with whom you are acquainted. For fuller information, dates of Land Seekers' Excursions, etc., address:

Profit by the Experience of Others at Miami Ranch

Why hesitate! You can no longer doubt the advantages of living at Miami Ranch. There's no longer the least risk attached to an investment there. Scores of other good families have **proved** that it's all we claim it to be. They are all prospering and enjoying the kind of health that can be found only in the mountains of New Mexico.

Read what one of our settlers says regarding Miami Ranch—and he is no more enthusiastic than his neighbors are:

Farmers Development Company,
Miami, New Mexico.

Gentlemen:

A year ago my wife and I made a western trip through Texas, Colorado, Utah and New Mexico with a view to finding a desirable place to locate for my health and for investment, having been in the hardware business in Bellefontaine, Ohio, for 13 years in the firm of Osborn & Churchill.

I had heard of the Miami Valley located in Colfax County, New Mexico, which was opened up less than a year prior to my visit, by the Farmers Development Company. I was very much impressed with the present and future prospects of this beautiful valley. I made another visit last August and purchased 40 acres, several others purchasing like amounts at that time.

This community is composed of an intelligent and industrious class of people from the Middle States, largely from Ohio. I disposed of my business interests in Ohio and arrived here the 19th day of February, 1909, to make this my home. I find as I become better acquainted with this community, that it is the most perfect country I have had the pleasure of visiting. The health giving properties in the pure air and sunshine is acknowledged by the most prominent physicians to be the best in the United States.

I find for investment that one cannot make an error, as climatic conditions and location for fruit are ideal, and for general crops most excellent. Land is advancing because people are looking for improved farms as well as unimproved, which creates a demand for both.

I find my health already improving, having only been here two months.

There is an abundance of water to irrigate, having the best and most substantial reservoir in New Mexico, this company has spared no time or money to make it perfect. People are happy and contented. I can recommend this Valley to my friends feeling that I have done a good deed,

Respectfully,
(Signed) W. W. Osborn.

—Big Excursion September 7th—

With such convincing evidence as we have given you regarding the extraordinary advantages of a home at Miami Ranch, can you any longer resist the temptation of at least investigating our offer! Can you be contented where you are, knowing that you would be better off, in every way, somewhere else?

But we don't ask you to be rash. We don't want you to leave your present home until you have seen us and our land. We don't ask you to take our word. We want you to come out here and **see for yourself** the opportunities you are missing.

Get ready and catch the big excursion on the

Atchison, Topeka and Santa Fe for Miami Ranch, August 17th. The **round trip** is only \$30 from Chicago and \$25 from Kansas City.

Take a little vacation and run down here. You don't need to buy unless you want to—the trip itself will more than repay your fare. You couldn't take a more enjoyable trip if you spent four times the fare to our place.

Trout fishing, elk, deer and bear hunting, wild goose and duck shooting, mountain climbing, boating, swimming, beautiful scenery, clear skies, pure air, ideal weather and all that combines to make life one round of pleasure and health, you will find at Miami Ranch.

If you can't get away for this excursion write for our **FREE** booklet "Westward Ho!" But try to get down here while there are still some choice selections in our second and last opening. Don't let money matters stand in your way. We can arrange payments to suit your convenience.

FARMERS DEVELOPMENT CO., Springer, New Mexico

Revised Minutes

Contains the revised minutes of all the Annual Meetings up to and including 1896. Two hundred pages. Indexed under 1,200 subjects.

The Appendix.

This edition contains an appendix of almost one hundred pages, devoted to the minutes of the Conference held in 1897 and 1907 inclusive. A copy of this book should be in the hands of every minister and church worker in the Brotherhood. The book is printed on fine quality of paper and substantially bound in cloth

The Price.

Single copy, prepaid,\$1.00
Six copies to one address, prepaid, 5.00

One Copy Free.

Our price is very low, considering the size of the book, contents, and binding, but if you will dispose of five copies among your friends, and have same sent to one address, we will mail you one extra copy for your own use.

Records the Attendance, Punctuality, Bible Bringing, and Offering by classes and departments. Two pages for each of 52 Sundays, 8 pages for quarterly reports and 2 pages for yearly summary. Printed on ledger paper. Size, 5 1/4 x 7 1/2. Substantially bound. Limp cloth cover. Price, postpaid, 40 cents.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

FOLLOWING we give the Eleventh Report of the Bureau of Agriculture, Labor and Industry of the State of Montana for the year ending Nov. 30, 1908. One of the most substantial Irrigation projects in the State of Montana is located near Big Timber in Sweet Grass County, which will be settled in the very near future by the Church of the Brethren and their friends.

"The Big Timber project consists of 65,000 acres of land near the city of that name in Sweet Grass County. This was also one of the selections under the old commission and there were \$132,000 worth of bonds issued against the project. These bonds have been surrendered and destroyed. Under a new contract 28,500 acres of land have been reclaimed and will soon be placed on the market at \$50.00 an acre. The holdings are on the Yellowstone side of the watershed between that river and the Musselshell River. Eighteen thousand acres are first-class irrigable land suitable for intensive farming. The soil is in places a sandy loam, but mostly a deep fertile clay loam and generally underlaid with a clay-gravel subsoil. The water used for irrigating is absolutely free from alkali, and there is no alkali in the soil except in a few low spots. The lands lie from four to twenty miles from the city of Big Timber, and the same distance from the Northern Pacific Railroad. The climate is good and all kinds of crops mature to perfection in this locality.

"The water supply comes mainly from Sweet Grass Creek and Government measurements show that there is an abundant and never failing run-off for every acre in the project. The company also owns a large canal and water rights from Big Timber Creek which will be used on lands adjacent to that stream, besides two large and

convenient reservoirs on Otter Creek with a surveyed capacity of 31,000 acre feet of water. Fifty teams and one hundred and twenty-five men have been employed during the past summer on the north side of the river, and a two-mile tunnel is being driven from both ends on the south side. Expenditures for the season will aggregate \$200,000.

"Members of the State Board and others who have visited the site report the work as having been exceptionally well done, the soil deep and fertile and remarkably adapted for easy and thorough irrigation.

"As in all other Carey projects this land and water system will eventually pass into the ownership and management of those who settle upon and pay for it without any further expense than the initial price asked, \$50.00 an acre. This may be paid in installments so that it will be possible to make the land actually pay for itself, aside from the small first payment.

"The proximity of this project to the sugar factory at Billings—81 miles—makes it entirely practicable to raise sugar beets there for that market.

"It is confidently predicted that land under this ditch will meet with ready sale and rapid settlement and that a prosperous community will result."

No. 34.

CONCERNING NEW THOUGHT

RICHARD BRAUNSTEIN

ONE of the recent terms with which readers and thinkers have to juggle is what is called "New Thought." Is there such a thing, and if so, in what way is it new? Of what does it consist? Finally, what is its effect on the average Christian?

I. Is there any such thing as "new thought"?

Many of the germs of modern science and philosophy were latent in the teachings of the biblical writers, and in the systems of Heraclitus, Pythagoras, Plato, Aristotle and others of the ancients. Those principles especially, which are so much exploited to-day, had their early exposition in the works of Spinoza, Kant, Hegel, Locke, Bacon, Descartes, Leibnitz and Darwin. Some of our present useful arts were surpassed by the Egyptians millenniums before Christ. The social problems of intemperance, impurity, "graft," judicial corruption and commercial monopoly, were fought against by Amos and Isaiah. The decline of religion was bewailed on Assyrian cylinders several thousand years ago, just as it was in the days of Francis Wayland, and is today. Theologically the doctrine of the immanence of God, which has been made much of in the last century or two, was well hinted at by Paul in his Athenian sermon. Higher criticism did not begin with Strauss and Kuenen, Briggs and Cheyne, but with such as Celsus and Porphyry, in the early centuries. The modern doctrine of evolution, seems to have been forecast by Paul in his words, "The whole creation groaneth and travaileth in pain until now, waiting for the revealing of the sons of God." The most recent psychology teaches that the human spirit is capable of closer scrutiny than has yet been given it, and that it is subject to something like manipulation according to laws; but did not the apostle above quoted, also say, "The law of the spirit of life in Jesus Christ, hath made me free from the law of sin and death"? Is not this latter up to date? Ask any Christian psychologist, if surrender to Christ does not surpass hyp-

notism as a means of cure for drunkenness. Another very modern theory is that of the organic constitution of society; but our pioneer Paul wrote again: "We are members one of another." The modernness of Paul is quite interesting.

Thus, we see, that in general, much that is thought to be new is *not new*. Koheleth, the encyclopedic, studied and wrought, and ranged the world, and he had to say: "There is no new thing under the sun."

II. But what is there about modern thought that has called forth this epithet—"new"?

First, it is new in that it is "new" to those who previously were unfamiliar with it. When, decades ago, Da Guerre began to make sun-pictures, and later the modern camera was devised, these were "new things under the sun," and popular education received a tremendous impulse because of wide-spread illustration; yet, centuries before Leonardo da Vinci had invented the camera obscura. When we first submerged a submarine boat, this was a new thing under the water; but it is said that the Chinese laughed at our glee, because they had done the same thing two hundred years before. Many matters are *news*, and are therefore thought to be *new*, when in reality their newness is simply their popularization. When Dr. Drummond's book, "The Natural Law in the Spiritual World," came out, it was received with disfavor and he was criticised by his contemporaries. But now almost anything that Drummond wrote is acceptable in orthodox circles. D. L. Moody had a vision of wisdom not born of the schools, but worthy of them, when he locked arms with Henry Drummond. But the wisdom of Drummond, while much from above, was *not a little from men*.

Secondly, there is this that is new about modern thought: it is appreciative of certain larger underlying principles of investigation and methods of arranging thought, which were not until a few years ago in use. For example, the idea of universal progress, of the

biological nature of human progress; of social dynamics; of the approach to each other of the material and spiritual world, with interests identical.

Thirdly, there are many fresh detailed discoveries that are in a real sense new, like the use of ether waves in the X-rays, the wireless telegraph, etc.; the scope and power of the occult forces of the mind; the skill and accomplishments of ancient civilized peoples, long thought to have been barbarous.

III. In what does modern thought, as far as it can be said to be new, consist?

There can hardly be said to be any particular body of thought which you can set apart and of which you can say, "That is the 'new thought.'" All modern thinking is new. There is a new spirit which pervades the mental processes of every alert thinker. Primary in this is the conviction that we shall never fully know all here below, that we are to follow on to know, until that time when we shall "know as we are known."

A lady some time ago said she was very much interested in the "new thought." Desiring to learn what she had in mind, the person to whom she was speaking asked her what she meant. She did not seem to know; but it was soon learned, by a round-about way, that she had been a Swedenborgian, and was then a theosophist; two weeks later she joined the Christian Scientists. These ethical and philosophical expressions of belief she seemed to take as her objectives. She did not realize that the cardinal principles of them all had been held for ages, and by considerable numbers of people.

In the new spirit of thought the sciences which have contributed most, have been biology, psychology, sociology, philology and archæology. Applied especially to religious thought and work, the result has been something like this: The biological principle applied to the study of the Scriptures discloses the fact that they were not produced by a mechanical process, but were a record of living experience. Far from destroying the value of the Scriptures this discovery enhances it, for it vitalizes the Bible because we can trace for it a living pedigree. Or apply the principles of psychological sociology, to the church. "The sociologized church" then ministers to the providential needs of men today, not to those of the men of Padan-aram, Shiloh, Jerusalem, Antioch, Rome, Alexandria.

IV. What result will these modern phases of thought have upon evangelical faith and the Christian Church? This, I suppose, is the paramount question to our constituents.

Let us distinguish between the effect it may have and the effect it must needs have. It may have the effect of diverting attention from the older forms of thought and methods of work. Some persons will

be diverted to other sects and cults than those to which they originally adhered. In some cases doubts will arise and the usual process of evangelical regeneration be impeded; for it is said that "a little learning is a dangerous thing," and dabblers may not be able to digest their reading, nor have time to hew their way in a clear path through the woods. But these things occurred under the old system; and such a result need not be the inevitable one, especially if certain tests are applied. The writer believes that if they are so applied these tests will hold any honest, earnest thinker and believer in Christianity and the "Ancient of Days" true to his previous faith. The first test is one of the validity of seemingly new teachings. In using this test we are pragmatists. We ask, how does this knowledge, this theory, affect the redemptive experience of the thinker? Does it help him in the long run? If so, it is probable that this new thought is true. Does it make him love God more, do his duty better, and resist temptation more easily and successfully? Then, it is probably a thought from God. We must remember, however, that the result can be ascertained properly only after the lapse of a sufficient length of time. The other test is concerning the stability of the thinker during his period of inquiry and the restatement of his views, or appreciation of the new knowledge. What is there which will hold him firm to his God and his Christ while he is pondering and wondering and waiting? It will be his personal, devotional life. Let him *pray without ceasing*. Let him do the will of God as he sees it, and as the Bible states it. He will thence come to know in the end whether the new doctrines be of God or of men.

INHALATION TREATMENT FOR CONSUMPTION.

G. WILFORD ROBINSON.

INHALATION of medicated vapors in diseases of the lungs has always been a successful method of treatment. Many physicians have recognized the value of it. It has been the idea of many physicians for a long time that the only rational method of treatment for that disease was the inhalation method. It has been thought that if a germicide could be inhaled of such strength as to kill the germs without injuring the patient it would be a remedy par excellence for the curing of many cases of the great White Plague.

In view of this idea many forms of "inhalers," "atomizers" and "nebulizers" have been invented, many of which are a quack and used by some physicians who wish only to separate the suffering patient from his money.

But the method which we wish to describe in this article is the "inhalatorium" treatment of which we have a practical knowledge.

The inhalatorium cabinet is a scientific device

specially adapted for treating pulmonary tuberculosis and other diseases of the air passages. It is heartily indorsed by many leading physicians, medical boards and medical professors.

The inhalatorium is a metal-lined cabinet containing forty thousand cubic inches of air. The cabinet is connected to a steam boiler by pipes through which the steam passes from the boiler to the cabinet. There are several reservoirs on the cabinet in which the medicine is placed where it is vaporized by the steam passing through these reservoirs. The patient is seated in the cabinet and breathes this atmosphere, which is one part medication to fifty parts of air, for a short period of time under the eye of the physicians.

By this method vegetable and mineral oils are volatilized without condensation in ten to twenty seconds. This air is safely inhaled into the lungs and as it is a moist, warm air does not produce cough or distress the patient.

One of the drugs used in this treatment is creosote. Creosote has always been a favorite drug in the treatment of consumption. It is one of the best antiseptics known for the tubercle bacilli. It is germicidal but it cannot be given with much success internally because it soon ruins the digestion which is the most important function for the recovery of the diseased patient. But by the volatilization of the creosote the benefits of the drug can be secured without the derangement of the digestion. Another advantage is that it goes directly to the lungs where it is absorbed rapidly, while if it had to pass through the system only a small per cent would reach the lungs. So we see it is not a new medicine but only a new way to administer an old remedy.

It would seem that this method is especially adapted for the treatment of consumption, yet there are some physicians who are very conservative in the adoption of inhalation treatments. But ethical physicians have always been conservative in regard to new discoveries. They were so when Jenner discovered vaccination, also when Harvey discovered the circulation of the blood.

This treatment is being practiced by many leading physicians and sanatoriums over the land, and is gaining prestige among the medical fraternity.

The president of the American Congress of Tuberculosis has this to say of this treatment: "It is a perfect device for applying efficiently a well known and popular principle to the treatment of certain diseases. * * * It will supersede all methods of vaporizing and inhalatory devices."

GUNNY.

T. H. FERNALD.

GUNNY is a coarse, heavy goods which is used for wrapping bales of cotton, for bags, and for other purposes. It is made from the fiber of the *Carchorus* (jute) a plant which is raised extensively in Madras,

and other countries. Bags are made of it for carrying grain, rice, pepper, coffee and other articles for exportation. These bags are called gunny bags or gunny sacks.

The seeds of the jute plant are sown in April or May, and cut down very near to the ground while in blossom or just before. The tops are clipped off, and the stems made into bundles which are placed in tanks or ditches filled with water. These are covered with dirt or some heavy substance to keep the bundles under the water. While in these tanks the process is watched very carefully day by day until the fiber separates easily from the center which is woody. The soaking usually takes from eight to ten days. If allowed to remain too long the fiber decays. In drying the fiber generally becomes of a deeper color than it is naturally. When the fiber is ready to work the operator descends into the tank or ditch and taking ten or fifteen bundles strips off the bark (fiber), which he thoroughly washes, and by a quick, hard movement of the wrist separates and spreads the fibers over the water surface. This makes the fiber clean, after which it is hung over a bamboo framework to dry, where it becomes fine, long and silky. The short pieces and parts near the roots are held in the operator's hands during the washing and frequently have bark attached, and are the parts used for gunny sacks, or cloth, etc.

The cloth known as gunny, tat, choti, etc., is woven in different lengths and widths and is used by the natives for bedding, and also for bags, etc., and formerly, more than at present, every man, woman and child, during their spare moments could be seen weaving gunny cloth. On the eastern frontier, women are seen clothed in it, and the poorer classes use it for bed coverings. It is not an uncommon sight in the Malay Archipelago to see the poor Chinese coolies dressed in gunny cloth. The greatest and most important use to which it is put is the making of bags for packing rice, linseed, sugar, coffee, and cotton, and other products for shipment.

When this strong, serviceable material had become known the manufacture became very large, and large quantities of jute were imported into Dundee solely for making gunny bags, and cloth. The Indian hand-woven gunny cloth was the only competition the Dundee mills had for a long time, but the introduction of modern machinery into Bengal, the chief seat of the industry in India, has given that country great advantage and it now supplies vast quantities to Europe, Egypt, United States, China, and other countries. It has been stated that in the United States alone the average annual output of cotton is over 3,500,000 bales, each bale of which requires six yards of wrapping cloth, one-third of which is gunny cloth. This gives some idea of the immense quantities required each year, when we consider the amount used for other purposes.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXXI. In the Dead Sea Furnace.

THE hotel was not yet open and the only place for me to rest was in the caravansary or stable, where I threw myself, tired and sleepy, upon some straw bedding in a stall shared by a donkey. Here I merely rested until after sunup, the numberless fleas biting too much to give me a wink of sleep. While lying thus, almost covered by the straw, the fellow in charge came up to me, shook me and talked gibberish at me, meaning to say that I should go to the hotel if I wanted to sleep, and so pay for my lodgings.

At the Belle Vue Hotel I found entertainment, was kindly cared for and asked to stay as long as I liked. They heard my story of the night's perils and looked at me as if I had dropped down upon them from an aeroplane. Then I set out for the Jordan. I could hardly wait until I saw it. They told me it was four or five miles away. It looked but two. The nearer I approached it the more enthusiastically I hurried on. The forenoon sun was already scorching the sands shimmering in temulous heat-waves over the flat waste.

Of all the rivers on the earth, I most wanted to see this one. It was costing me a great exertion but the charms of my methods of travel paid me in full, with interest, and so the exertion I was putting forth served but to increase my delight when I fought my way through the thick brush and rushes growing near the bank, and came up right to the very edge of the stream whose history is the most sacred of all streams. There it was,—the Jordan River. As in most of my accomplishments on this

tour I stuck an imaginative "pin" of success in my tour, and hastily surveyed the past months and years of my life.

A company of French monks had gathered upon the bank of the river and were bathing their feet in the water, refusing to strip off and go in right, as I was doing. A little later they celebrated the Catholic mass under a tent and drove away to look from a safe distance at the Dead Sea.

Slowly I waded out into the water. It was the Jordan. Here was where Christ had been baptized and also where John had baptized, by means of his

disciples, thousands of believers. So I walked in slowly. The bottom was muddy in places, sandy in others, and in still others there was no bottom at all, for it was too deep! After trying the water thus, carefully, and finding it just like any other water, and the bathing properties just like those of the old swimmin' hole, I plunged in and swam about, but fearing to go far from the bank, not

Wilderness Between Fords of Jordan and Dead Sea.

because of the swiftness of the stream,—and it was very swift,—but simply in respect for what people had told me. They cautioned me about the danger from drowning in the Jordan, and so I heeded their counsel, staid close to land,—and being alone, took but little risk in being washed down the treacherous current.

I was surprised to find the channel so narrow in most places, being from two to ten rods across. I found the greatest variety of scenes here, all of them beautiful, and I caught six really fine views of the

river. In a small boat which I found tied to a tree I rowed myself across the river and touched the other side,—the land of Moab. But I hurried back again, almost afraid that something might happen to me or the boat so that I would have to stay in that dangerous mountain land.

In almost unbroken succession small trees of soft wood grow along the bank, sometimes reaching back a quarter of a mile, but usually hugging the bank, and dripping into the water their leafy branches. The water from the Jordan is fit to drink and so I took several big drinks from it as I bathed, and also filled my bottle so that when I reached the desert on my return I might have a drink or two in case of need.

For some miles I penetrated the dense woodland of underbrush and face-scratching branches. A big gray wolf crossed just ahead of me with a savage snap, passing into the thicket before I got my camera focused upon him. A half-naked, three-fourths mad and five-fifths wild Bedouin planted himself squarely in the way before me. He was armed for battle. Where his companions were I did not know, for one seldom is found here alone. A big revolver swung in a coarse woven belt, the only revolver I have seen in the Holy Land. Into a side path I quickly glanced, soon losing myself from him in the dense thicket, fearing, of course, that others of his kind might pop up at every turn.

It soon grew apparent to me that the danger here was too great for the quiet meditations of a lone tourist, and the most the scenery could offer me was its contour and color, without its spiritual atmosphere, the latter being frightened away by the grave dangers on every hand.

I picked my way along for five or six miles, exhilarated by the wild thrill of my environment with an ecstasy that made my old-time hunting trips in the woods at home tame down into foolish barnyard chases. There was no farmhouse in all the country, no windmill, no fences, no green meadows, no corn, no oats, no wheat, within sight. It was pure wilderness, abject wilderness, where John must have lived and preached long ago. The country, the people, the

animals were all wild and dangerous. Though I was sleepy it was not possible to lie down and sleep, and on the contrary I was forced to keep myself the most wide-awake possible.

On the second day at sunup I started for the Dead Sea. The dwarfed brown bushes jaggging the desert road were covered with yellow dust that went whirling in the slightest breeze in this rainless valley. My feet sank deeply into the hot sand, making the walk most tiresome and disagreeable, while the dust squirted out from under every step I took like smoke from burning embers. In the distance I saw the sea. It looked greenish blue and was very pretty, a bigger body of water than it looks like on the map.

Some logs lay upon the beach that was bare and bleak without a single clump of trees to break the monotony of flatness, or near-by hills or mountains to add splendor to the water. The wind was up and the little waves rolled in upon the beach that was shining with fine sand and small pebbles of a peculiar nature. I had bathed in the Jordan, now I must bathe in the Dead Sea. There was no human being in sight, none unless some one was living in a rude old shack some distance back from the beach and to the northwest of my chosen spot for bathing. Yes, some one lived in it, an old man and woman,

Bedouin, I suppose, who occupied this place for the benefit of tourists who might need their care.

There was great delight in floating on top of the water without any special effort to keep from sinking, but the pain the water gave me made me shriek aloud. Bitter and acrid and filled with poison, my eyes almost bled and I found it necessary to keep any water from entering them. Caught out on the sea in a storm a swimmer would have but little chance of getting to land. He might swim all night, but the waves beating over him would throw him into paroxysms of pain. Even in walking out into the water from the beach, the little waves would strike the ankles and legs like a board. I floated easily, lying on my back, or side, or face, and tried resting on the water, laying my head upon my crossed arms for a pillow, and found that in a calm I might have easily taken a refreshing nap in this way!

French Monks on Tour from France.

I tasted the water. It was not only salt, it was a whole stinking laboratory of foul smells and tastes, with something that went right through the tongue and mucous membrane as though it were paralyzing it. How dreadful to drown in this sea! I swam out far beyond wading depth, but I came back again very soon. When I came out again I noticed that my body was covered all over with oil or grease. I tried to wash it off, but every attempt only increased the disgusting sensation of being coated over with slimy oil. My hands were full and there was no grass on which I could wipe them. My hair,—great piston rods! It was

sticking up and out, and matted down, a thousand hairs all together, so that I could not comb it with my fingers. What was I to do? The Jordan was six miles away, for near the place where it empties into the Dead Sea the land is not passable, and the sea also backs up for some distance into the river, making it brackish and unfit for use.

As I stood thus, the oily condition increasing as the water evaporated from my body, the woman came with a pail of water, leaving it at a safe distance and went back into her shack. This proved to be fresh

(Continued on Page 840.)

FISHING WITH HOOKS, NETS, AND SEINES

H. D. MICHAEL

In Three Parts. Part Two.

To me it seems that of all the fish to be fished for in this western part of the United States, the kinds that hold the greatest attraction for the anglers are the salmon trout and mountain or speckled trout, often known as speckled beauties.

For these we will need an elaborate outfit, as sometimes we will want to fish with bait, sometimes with flies and also with spinners or trolls. We must get good light rods, silk lines, good reels and plenty of snelled hooks, *i. e.*, with leaders attached so as to be almost invisible under water, for these trout are very finicky about what they bite, being unlike the greedy set found in the bays and lower rivers where they seem to be very glad to bite most any bait you offer them.

Well, when we are ready, our wagons loaded with fishing tackle, camping outfits, provisions and a good-natured crowd, we will start out along one of the many streams that are known to offer good angling opportunities. Up along the stream we go, climbing hill after hill as we follow the river's course back toward the source along the prettiest flowered hillsides, rocky points, timbered mountains, towering high above us, and with the pure, fresh mountain air to breathe with its exhilarating effects, until we are almost charmed by the pretty little mountain valley we are just entering.

It is a notable fact that nearly all of these coast streams have a very nice little valley near their head waters that lured the first settlers back into the hills on account of their beauty and because of their offering such quick returns as soon as stocked, for they furnish such a large amount of the most succulent of grasses, that keep the stock the year round, especially along the Oregon Coast, with parts of the Washington

and California Coast valleys included. But now on our arrival at the head of this little valley, no difference which one we have chosen, as nearly all of them furnish good opportunities for angling, we will find ourselves where I, while quite young, often wondered if I would ever be,—at the end of the road.

Here we will make camp and prepare for a good time fishing tomorrow. Here under some of these large fir trees is an ideal place to camp, for fuel is near, the mountain stream rushes past and wild berries that will be a treat to some of us are found in profusion.

Now comes the novel experience of cooking over a camp fire, but after all is prepared and we have thanked our heavenly Father for all his provisions for us and for all that we are enjoying, we will find that our supper cooked over a camp fire tastes as delicious as any prepared in a place by a high salaried chef. We awake easily and begin preparations for the trip. While breakfast is being prepared, we cannot help noticing the difference in the air from that we are used to in our town and city homes. But now if we have all in readiness let's start toward our fishing grounds, for as I have said we are to the end of the road, but not up to our best fishing grounds.

This will be a rather hazardous undertaking for the ladies of the party accompanying us, nevertheless we will assist all we can in making it possible, for though it is rough and out in the mountain wilds it is such an enjoyable trip because of the beautiful scenes of nature.

First, we will start up the creek bed with large boulders and so rough we can hardly get along, but here we come to a place we must leave the bed of the

creek, for it narrows so that there is room for only the mad, rushing waters.

Here we come to vining maple thickets so dense that we must crawl through them. As we approach a place where the timber is not so thick, we find it a solid mass of thimble and salmon berry brush.

Now we encounter heavy timber and though there is less underbrush some will need help to get across the fallen monarchs of the forest as they lie there six to seven feet in diameter and all moss grown and fern covered.

But as we come back now to the charming mountain stream of clear, cool water, splashing and dashing as it goes onward, let us pause a moment and see what thoughts it brings to us.

To me it brings a most beautiful lesson with great force. Let us ponder it well. See how it goes rippling over the rocks, gurgling in glee as it seems ever rushing on to do the work given it by nature to do. True, it has beautiful surroundings and should enjoy them, but look, too, at its rough pathway; still it presses onward. Dam it up if you will, it will only break over, under, or around and fulfill its mission.

But now look at the contrast. How many of us people, creatures of God's creation, are seeing and using the beauties of life all around us? How many, despite all the obstructions before us, are pressing on to do the great and noble work left us to do by our Master Teacher, who always lived so near nature, studied it, and used it to such great advantage in his teaching and who must surely have enjoyed it?

The stream's mission seems to be fulfilled when it is lost in the great ocean. Jesus' mission on earth was finished when he gave his life to redeem us all, and our mission is not done till we have faithfully done what our hands find to do, small though it may be.

"Let us then, be up and doing,
With a heart for any fate,
Still achieving, still pursuing,
Learn to labor and to wait."

Then let us at least take one thought home with us and form it into a resolve that we will ever look for the pure, the beautiful and best in life and ever press on in our life's work, cheered by the thought that though sometimes life's pathway is dark and dreary we can find at least a few pleasant features and enjoy them to the fullest.

But here we are at last at our fishing grounds and how pretty the stream looks and how beautiful the day! We will surely be able to catch some fish on such an ideal day. Select your place and get your fishing rods jointed and the fly hooks arranged and when ready cast out and let us see what we can catch.

There, look! He rises. You can see his side glisten as he turns in the water, but, alas, he did not take hold. That shows, however, that there are some in there and as soon as we get used to it and catch onto the sleight

of casting and drawing our hooks right, we will begin pulling them out. For we must draw our flies up over the rippling water in a manner that appeals to their appetites, else we cannot expect to catch them.

But there they come out, one by one, as the fishermen and even some of the lady anglers have practiced this form of deception until they can deceive most any of the pretty trout.

We are doing so well that we will not need to try our trout spoons and trolls, but as it is getting late we had better stop for the day. We must start back in plenty of time, for if the shades of night catch us in this dense forest we would have to find pitchwood for torches and cautiously find our way back along the rough rocks and cliffs, or stop for our night's rest here in these dark woods where we might hear or see a panther (Rocky Mountain lion) at any time. However, we would not need to fear as long we kept our camp fire burning.

As we have started in time, though, we can get back to our camp and stay there another night or go to the home of some of the early settlers to enjoy their hospitality in the way-back valley, for it has been my observation that they are never lacking in their generosity toward anyone wishing a night's lodging.

We have not as yet gone out to one of the farthest inland lakes to try fishing there, where bass and carp, whitefish and suckers are caught, but we will have to forego that pleasure or another, so let us give up the going to the lakes and go down into the rivers and bays to get some of the larger fish,—the salmon.

We will need a rowboat for each two that are going, to make it more interesting, and then we will see which boat can make the largest haul, though it must be all good-natured rivalry. Then, too, a good line, from one hundred and fifty to three hundred feet long with two or three extra trolls or spinners, is needed.

In going to buy the trolls you will find quite a number of kinds, but my choice will be the kidney spoon, or a long, slim spoon or spinner, so called because the drawing them through the water causes them to spin and show their bright side which causes the salmon to strike at or bite them, though it has always been an unexplained mystery to me why they do it.

The naturalists in their study of them have always claimed that the salmon at this time are all traveling up the river and creeks to spawn, *i. e.*, deposit their eggs for the waters to hatch, and during that time are never known to eat, but it seems that they strike at the trolls for some reason or other. In our trolling for them we will find it fine sport and a paying sport as well if they strike good, but if not it will be just a nice boat ride.

At last we are out on the deep waters of the bay in our rowboats, so let's put out our troll and see if we can coax a salmon to strike. We must row steady

and not too fast and as long as we have no strike we can be commenting on the pretty shore scenes, water birds, etc.

Just look at that splashing and the salmon even jumping entirely out of the water in his wild dashes, for he has struck at our troll and is our fish if we can just manage now to land him.

Now he runs and takes nearly all of our line but turns in time for us to haul in some slack and after repeated runs he can be led up to our boat and with a careful strike with our gaff hook we have him fast and lift him into the boat.

See how pretty and bright he is. He has just lately

come in from the ocean. After being in fresh water for a few days his sides would have begun to turn red and his flesh would have faded to a lighter pink than it was and he would not have been so fat or of quite such a fine flavor. After repeating this experience as often as we can get the salmon to strike we will have to row back again and care for our fish.

On good days some boats get from one to fifteen salmon, ranging in weight from ten to twenty-five pounds. After a day's sport like this I believe we will have become tired of fishing with hooks in the various ways, so next week we can try fishing with nets and seines.

PRINCIPLES OF AGRICULTURE

JOHN H. NOWLAN

THE science of agriculture is being taught in many of our schools and the writer thinks very properly so. This is and will long continue to be an agricultural nation, therefore those who are to till the soil should have a knowledge of the soil with which they are to deal. Many of the boys and girls who are to be our farmers of the future will get no other education than what they get in the elementary schools. Are we as teachers doing our duty when we deny them the knowledge they need, while at the same time we instruct them in almost every other avenue of life?

Some may raise the objection that they are not prepared to teach it, but that is not a valid excuse. Much of the work may be experimental—in fact much of it is better taught that way.

The cost of the necessary material need not be great: much of it is to be found in the homes of the pupils. Two good books which I beg the editor's leave to mention are, "Agriculture for Beginners," Ginn and Co., Chicago, and "Elementary Agriculture," Row, Peterson and Co., Chicago. They are the two best *usable* texts I have ever seen and I think they should be in the library of every teacher in the rural schools, though he may not be even *attempting* to teach the subject.

By writing to the Secretary of Agriculture you can get farmers' bulletins and yearbook papers free. Also from the various State Experiment Stations. Send to the first-named place for Circular No. 2, which gives a complete list of all available matter.

Those mentioned in these articles I have found to be a mine of information. Send for all of them, read them carefully, and then early in your term of school send the names of the pupils with a request that copies be mailed to them. Don't ask for them to distribute yourself—you can get as many copies as you like but no two the same.

Soil. All vegetation depends upon the soil for its sustenance, hence that is a very good place to begin the study. Persons who have made a study of the earth believe that it was once solid rock. How, then, have these rocks become the soil of today? Among the soil-forming agents we find heat and cold in active operation today. Heated bodies contract on cooling and as the interior of the earth cooled the outer crust was broken by the contraction. Water collected in the fissures thus formed and dissolved the rock, or by freezing broke it into still finer pieces.

Rocks exposed to the elements gradually decay. This is known as weathering. Air and other gases unite with the elements of the rocks, thus bringing about a slow but no less sure disintegration. This dissolved rock is known as rock waste. The amount of rock waste produced depends much upon the climate, and the character of the rocks. Cleopatra's Needle which was brought from Egypt to New York was affected more by the first year it stood in America than by the three thousand years on Egyptian soil.

Weathering acts slowly, but in the course of the world's history has accomplished gigantic results. Some idea of the slowness of its action may be formed when we consider that it is estimated that it required 728,000 years to form thirty-nine inches of limestone soil.

Were these the only agencies producing soil it would be deposited where formed; but gravity, acting by means of winds and running water, keeps this waste ever on its way to the sea. Water and air penetrate deep into the earth and attack the solid rocks. The gases they carry attack the rock substance and by uniting with some of its elements form new compounds and liberate others. Examine a stone building and you will find it covered with a dull powder. This is the result of the air acting on the stone. Break open

a wayside stone. Note the difference in color of the outside and inside.

Look at any roadside brook just after a heavy rain and you will see small particles of soil and gravel being carried along. When you come to a place where the current is slower some of the soil will be dropped. Large rivers working in this way have worn down mountains and filled arms of the ocean.

Early in the world's history the streams were larger than today, and instead of bearing mud only large stones were rolled along and ground against each other on the rocky bed.

Examination of the soil shows that the Gulf of Mexico once reached to Cairo, Illinois, and all of the land below there has been deposited by the streams emptying into the Gulf.

Water has been a soil-forming as well as a soil-moving agent. Many things prove that much of North America was once buried under a vast sheet of ice. During that long winter all the moisture that fell was in the form of snow. Year after year it piled higher and higher, and then began slowly to slide south and west. Pressing with tremendous force on the rocks beneath it moved them from their positions or ground them finer and finer. Old valleys were filled and in some cases covered with hundreds of feet of rock waste. At last the ice-sheet (glacier) reached a spot where each summer melted what was brought down during the previous winter. From this melting ice gushed forth vast streams carrying sand and gravel to later be deposited in the places where the motion of the stream was checked.

Then the climate became warmer and the ice retreated farther and farther to the north. The rocks piled up by the streams decayed, forming the various clays and sands now found. The piles of material left now form hills or ridges unlike those formed since by the action of streams. In those hills you may often find stones flattened on one side. This is the result of being pushed along on the ice.

The apparently insignificant earthworm has been a great soil builder. Down deep in the earth, several feet he burrows, swallowing the earth as he goes. Coming to the top he drags down pieces of leaves into his burrow, where they decay. Thus has this humble creature in many instances been almost the sole soil builder in the sense we commonly use the term. These leaves decay and form a valuable addition to the soil, known as humus.

The roots of trees penetrate the crevices in the rocks and force them open wider and wider. The roots also secrete an acid which dissolves the rocks and assists the roots in their work.

The kind of soil depends on the character of the rocks from which it was formed. In sandstone regions we find sandy soil and in limestone localities, usually

find clay. The black soil of the bottom lands owes its color to the humus it contains. Loam is a mixture of humus, clay, and sand. It is called sandy loam or clayey loam as one or the other predominates.

The elements usually found in the soil are several, but the ones most likely ever to be exhausted are nitrogen, potash, and phosphoric acid, with the possible addition of lime.

Lime will readily dissolve in water and is found in almost all spring or well water.

Sodium supplies salt and soda.

Iron rust gives the soil a red or yellow color. If a little acid be added to the water it is easily dissolved.

The acids are useful to dissolve the plant food and may also be assimilated.

Phosphoric acid causes the grain to "fill" well—that is, to produce large, well-developed seeds.

Ammonia and the air yield nitrogen, which is responsible for the growth of the stalk and foliage of the plant. When all other conditions of heat, moisture, etc., are favorable it shows its lack in a sickly, yellow growth.

Sand adds stiffness to the plant.

Potash, obtained principally from wood ashes, is especially essential in the production of fruits, potatoes, and root crops.

If any one of these is absent the plant is not thrifty. If may be present but not in an available form, just as one may starve in sight of food that is out of reach.

NATURE STUDIES

A PLEA FOR THE FOREST.

LUELLA G. FOGELSANGER.

WHEN God created the world he caused abundant vegetation to grow upon the earth. By the loving care of an all-wise heavenly Father, man was thus cared for in many ways. From it he obtained food and shelter. But as man evolved into a higher and more complex state of civilization he needed lumber to carry on many of his enterprises, and so he began to cut down the forests so recklessly as to be almost criminal.

The savage believed it would offend the great spirit to change anything it had created, but the civilized man stepped up calmly with his scientific knowledge and constructive imagination and saw in the sturdy oak, the tough hickory, the slender willow, the flexible bamboo, and the rare mahogany, many possibilities which would add much to his ease and comfort. He felled these ruthlessly, regardless of their strength and beauty, until many forest lands appeared bare and desolate.

The forest is a gift direct from God and in wandering through its cool recesses and viewing its majestic beauty we can come close to God and hold sweet communion with him. By associating with these sturdy sons of the forest we learn of his love, his majesty, and his greatness. When God created man he placed him in the Garden of Eden, filled with beautiful trees. By his infinite wisdom he knew that a tree was indispensable to both man's physical and spiritual wants. We talk of what we owe to the trees in material blessings and the uses of trees in a commercial sense, but we cannot overlook the countless blessings our spiritual selves derive from these emblems of strength, of purity, and of greatness.

In the autumn when we pass over the rustling leaves we are awed by the general decay which greets our eyes, and we are caused to meditate deeply upon our own frailty, insignificance and our final departure from this life; and again when we look closer we may find hundreds and thousands of acorns nestling snugly beneath the leaves. These potentially contain a powerful, slumbering forest in embryonic form, and we truly feel like saying with the psalmist, "O Lord, how wondrous are thy works in all the earth." In the spring when the grand old oak confidently spreads his

arms and unfolds his tiny buds to the warm sunlight, and forms a cool shelter for man and beast, does it not fill us with hope, unselfishness, and kindness for our fellow-men?

Man is by nature a social animal and he is drawn to the city as by a magnet, yet the city man or woman misses the beauty and simplicity of associating with the inanimate things through which God breathes to us in messages of hope and love. They miss the grandeur of thought which can be had in the solitude of the forest alone with the twittering birds and rustling leaves. The straight, beautiful tree fulfills the design of its Creator far better than beings made after the likeness and image of God himself, for while they are groveling in the dust and mixing with sordid clay, the tree turns its leaves toward the sun, lifts its head toward heaven, and drinks in the moisture which God showers upon it, gratefully without a murmur. The tree offers no resistance to God and neither discards its blessings nor shirks its duties, but it grows and flourishes with its top lifted to heaven and its trunk firmly grounded and rooted to withstand all storms.

The great, staunch forest is man's defender and protector in many ways. It protects the country from destructive storms; it keeps the moisture in the ground and thus aids agriculture; it acts as a habitation for birds, that feed on insects and worms, thus aiding the farmer again; it prevents floods, as tree-covered soil drinks in water rapidly; it purifies the air by taking out the gases hurtful to man; and the roots purify the water in like manner; and it modifies the climate by checking the winds. But the forests are cut down rapidly and where once stood a large area of woodland now exists a region of undergrowth or productive fields. Everything must be turned into dollars and cents and we prefer to have our pockets filled, and our longing for the beautiful unsatisfied. The formalities of social life are so taxing that we long for silence and solitude and we then feel that God placed these beautiful trees and shrubs over our fair land for us, to teach us simplicity and purity of heart. Let us love and honor these noble trees to which Bryant paid such a fitting tribute.

"The groves were God's first temples. Ere man learned
To hew the shaft and lay the architrave,
And spread the roof above them; ere he framed
The lofty vault, to gather and roll back

The sound of anthems; in the darkling wood,
Amid the cool and silence, he knelt down,
And offered to the Mightiest solemn thanks
And supplication."

Elizabethtown, Pa.

WEST HILL NATURE CLUB.

ARMELIA L. COLWELL.

WHEN our club was organized we already had a neighborhood library of one hundred volumes which had been paid for by having socials at the different homes. Sometimes a regular supper was served, at other times ice cream and cake. We tried to have something a little different each evening, as to eatables and entertainment, and thus kept every one interested. The price charged for supper was ten cents for adults and five for children, so every one could afford to come, and we thought it a great benefit to the neighborhood socially. After paying for the books, we also bought an organ, and a flag for the schoolhouse in the same way.

There were books for all ages, from the children to the oldest ones,—all good books, such as "Black Beauty," "Beautiful Joe," "Dickey Downey," "Little Men," "Little Women," and others, and twenty small story books for the wee tots. You would be surprised how many have read these books in the nearly twenty years since they were bought. For the older ones we bought histories, lives of the Presidents and other great men. One particularly interesting is "Boots and Saddles," or the life of General Custer by his wife, E. B. Custer; "Ten Nights in a Barroom, and eight temperance books by the same author, T. S. Arthur, and several by Charles Dickens.

For convenience the books were left at the home of Mrs. Rich, she acting as librarian. The people can come for the books at any hour; all around it is better than having them locked in the schoolhouse, and opened at certain times.

When we organized our Band of Mercy, George T. Angell sent us some free literature which we put together and bound. He also sent us *Dumb Animals* free for one year, which we also bound. We have been taking the paper every year since, binding each year by itself. When we organized our Nature Club they sent us our lesson leaflets each month free from Cornell University. Also many bulletins on nature study free which we bound also.

The State agricultural department sent us a large number of bulletins on all subjects pertaining to agriculture and nature study. We also wrote to Washington, D. C., for the farmers' bulletins of which upwards of two hundred are sent out. These are very interesting, and valuable, as they give correct ideas and views in the raising of plants, and of the life and habits of many insects, snakes, birds and also the pest insects and how to get rid of them.

We also sent to the Smithsonian Institution at Washington and received their large book on insects, telling how to collect and preserve them.

We did not make any collection to send in, as Mrs. Rich did not like to catch the pretty butterflies and things and kill them nor wish the children to do so.

One of our boys, Levi, wrote a letter on wild flowers, and received one dollar as a prize. It was printed in a New York paper and a lady living in Newark, N. J., reading it, wrote Levi asking him to send her some arbutus and the plants of several wild flowers. She being somewhat of an invalid amused herself by having a wild garden in one side of her beautiful grounds; she was trying to get together all of the wild flowers that bloomed in the forest of her old home.

Levi and our club sent her many flowers, plants and pictures. We would take no money but let her pay all postage. She wished to do something more for us, and offered to send reading matter, and of course we said yes to that. But imagine our surprise and delight when we received a sugar-barrel full of books, papers and magazines, all of the very best, with even the freight paid.

Mrs. Rich said that would never do to be so much in debt. So just before Thanksgiving the barrel was again filled with nuts, popcorn, apples, and all the choice things to be found on the surrounding farms, and the freight paid by us. They were as much surprised and as pleased as we were. The lady said when her husband found the large hubbard squash, he nearly cried, and said, "Now I will have some squash pies like mother used to make."

The barrel has traveled over the road several times each way with the result that we have much good reading matter to loan, have given away much to the children for their very own, and sent to old people, invalids, shut-ins, and all that we find in need of reading, besides having plenty for all club members and their friends. In the barrels she sent us many beautiful pictures which have been used to decorate the schoolhouses, which is a great improvement. A man visiting one of the schools said, "Oh, why did not some one think to put shades to the windows, and hang pictures on the walls when I was a child? The memory of these bare walls and staring windows will haunt me all my life."

Yes, why not? It takes only little things to make a child happy, and remember that child will soon be a man.

Every community can get a library if they only set to work in earnest and then hang together, and persevere. And it truly pays; eternity alone will show how well.

Wellsburg, N.Y.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

It is a condition to be lamented, that simple, unadorned frankness marks one as either childish or green and "easy," and therefore to be looked down upon; while the one who is skilled at evasion is considered worldly-wise and therefore to be honored.

THE "I-forgot" excuse is about the most pernicious one the devil ever manufactured. In the majority of cases it is simply a veil, and a very transparent one at that, for downright indifference or neglect. More than that, the "forgetter" sees in it a safe refuge and therefore makes no effort to rid himself of the fault.

ALL of us ought to give more time to cultivating a spirit of gratitude,—gratitude to friends and to all those who contribute to the pleasant conditions of life and gratitude to the One who is the source of all good. This will not only sweeten life by giving us a wholesome feeling of dependence, but it will increase our sense of duty and thereby our service.

THE first article of the series referred to some time ago, on the "Principles of Agriculture," appears in this issue. The articles will appear regularly, in each issue of the magazine, until the series, which consists of eight papers, is completed. We believe these articles will be the means of increasing the interest of our readers in general in the subject discussed, and will be of special value to the wide-awake teachers of our rural schools who have realized the need of work along this line and are making some effort to meet it.

PEACE SENTIMENT.

IT is plain to many, and perhaps there is nothing wrong in our consuming a good deal of time and energy in exchanging congratulations over the fact,

that the peace sentiment is growing. However, a close study of present conditions and tendencies will come near convincing even the most optimistic that this sentiment is for the most part, a flabby, backboneless sort. Our progress on the peace road may be compared to a flight in an aeroplane, the latter being constructed out of the peace resolutions and expressions of good will, of which material there is sufficient to construct a whole line of such craft.

The pessimist is a very unpopular person these days and the writer does not pause in anticipation of any hand-clapping after making the above statements. For all that, sometimes we must not only *look* on the dark side, but we must meet it in a hand-to-hand struggle whether we will or no, and therefore some good may be received from sizing it up now and then. In the *Gospel Messenger*, issue Aug. 7, a writer gives us an outlook on this side of the peace question. It would be well for all to read the article and then renew our pledge of loyalty to and our endeavors in a cause that is so worthy and so precious to the one who came to the world as the Prince of Peace. The fact that the cause is, to all outward appearances, a losing one in this age, should only establish us the more firmly in it, knowing that its ultimate triumph will far outweigh all the efforts in its behalf have cost.

"DOES CAPITAL PUNISHMENT PREVENT CONVICTIONS?"

TAKING the affirmative side of this question, Mr. Maynard Shipley discusses the subject in the *American Law Review* for May-June. His discussion is surveyed in the *Review of Reviews* for August to which magazine we are indebted for the quotations here made. Mr. Shipley offers a number of "figures and opinions which tend to show that the sooner capital punishment is abolished altogether the sooner justice will come into her own." Among the opinions given is that of Henry Ward Beecher, that, "'while the fear of hanging does not deter men from crime the fear of inflicting death deters many a jury from finding a just verdict, and favors the escape of criminals.'"

Michigan abolished the death penalty in 1848, being the first State in the Union to pass such a law. In reply to an inquiry as to the results, Governor Austin Blair of that State said: "'Before the abolition of the death penalty murders were not unfrequent, but convictions were rarely or never obtained. . . . Convictions and punishment are now much more certain than before the change was made.'" He considers the law a success and a reform in the real sense of the word.

The writer then appeals to figures and a comparison, showing that "while in Michigan the percentage of convictions of persons indicted for murder was 28.2, in Massachusetts during the same period

the percentage was but 10." He also brings up Rhode Island where in 1852 they passed a law confining the death penalty to "condemned murderers who should attack their keepers," and announces that the convictions in murder trials in this State "were 65 per cent, as compared with 17 per cent in Massachusetts during the same period."

"The abolition of the death penalty in Wisconsin was largely due to 'the extreme difficulty experienced in securing convictions in murder trials . . . the great aversion of many to the taking of life rendering it almost impossible to obtain jurors from the more intelligent portion of the community.' Among nine States Wisconsin 'showed the highest proportion of convictions to prosecutions,—namely, 40.5 per cent. During the same period (three years) in Idaho, of twenty-one persons indicted for murder in the first degree, not a single one was convicted as charged.'" Mr. Shipley continues to pile up figures, showing how largely convictions for murder depend on the abolishing of the death penalty. In Maine with the abolishing of "capital punishment in 1876 the proportions of convictions rose from 15.4 per cent to 64.5 per cent." Since 1901 Colorado has a law which gives the jury the right to "decide in its verdict whether the penalty shall be life imprisonment or death by hanging," and since that time 50 per cent of the murder trials have ended in convictions. Kansas found the death penalty law unsatisfactory and has abolished it and only last year Ohio removed it from its statute books.

From the States which still retain the death penalty law Mr. Shipley quotes the opinions of a number of prominent men all in favor of abolishing it. Here are a few of them:

"Massachusetts,—Representative Thomas L. Davis, speaking for abolition, said: "A jury drawn on a murder trial is often so awed by the responsibility placed upon them that rather than render a verdict that will take the man's life, for fear there is a faint possibility that he is innocent, although they know that he isn't, will disagree or bring in a verdict of not guilty." Mr. William Lloyd Garrison said: "This horror of inflicting the death penalty makes juries violate their oaths."

"New York,—The late Edmund Clarence Stedman in 1869 said that "there was among jurymen and justices so strong a repugnance to taking human life that it had become doubly difficult to convict a prisoner on the charge of murder."

"Connecticut,—Prof. William B. Bailey, of Yale, wrote: "Courts of law are fallible, and the consciousness of this fallibility is ever present in the minds of juries. There are many cases in which a jury is unwilling to convict when death is to ensue when they might be more willing to sentence to life imprisonment.""

The question of capital punishment has not been as warmly discussed of late as at different times in the past, but it is evident from the above that the sentiment against it is growing and is bringing practical results. Slowly but surely, if not by direct means, then by indirect, we are coming to see the right in this as well as in other great questions.

"For right is right, since God is God,
And right the day must win;
To doubt would be disloyalty,
To falter would be sin."

BEVELED EDGES.

"YES, he has edges, but they're all beveled," was said of a man of positive opinions with suave manners.

A character so desirable combines two excellent features—features that are ordinarily exclusive of each other. For example, here is a man of decided views and strong convictions. His views are correct and his convictions are sound. Such a man is worth a good deal to society. But he would be of much greater value if he were not so insistent, overbearing, and sharp edged as to make himself unnecessarily disagreeable even to those who would like to stand with him. On the other hand, here is a man without edges. Peace at any price is his motto. He agrees with the last speaker. He votes with the crowd. It is not that he is absolutely unprincipled, but that he seems not to know where politeness shades off into insincerity. In view of these two extremes of crushing granite and plastic putty, it is a pleasant thing to find one who knows what he thinks, will not retreat from what he thinks, and is willing and eager to tell what he thinks, but who puts his thought persuasively instead of polemically. He does not prove his courage by provoking a fight, nor demonstrate his erectness by standing on other people's toes. He has edges but they are beveled.

Mark this, however, it is the man that is beveled, not the truth, at least not all truths. The Lord has put into our hearts and on our lips certain truths that are designed to pierce and cut, and no man has the right to blunt the point or edge of them. They are ministers of mercy. Like the surgeon's knife, they hurt to heal. But the man who speaks a painful truth may follow the apostolic counsel: "Speaking the truth in love." The woes that Jesus uttered may be read like fierce curses or may be read like the plaint of a breaking heart. Is not the latter their more probable tone? The most unwelcome truth may be proclaimed winningly, appealingly—will be so proclaimed if there is love in the heart of the speaker, without diminishing aught of its penetrating power. It is love that bevels the edges.—*Selected.*

THE HOME WORLD

M Y N E R V E S

J. F. STUDEBAKER, M. D.

THE writer will not venture to give an exposition on his own particular nerves. The subject is suggested by an attempt on the part of some lady patients to describe an indefinite illness of some duration, saying, "I think it is my nerves, doctor." Often the diagnosis is very good. It is almost universally true that women talk and work with undue stress and to a lesser extent the same is a fact about men. The old Roman statesman whose influence depended upon his flights of oratory would have lost his thronging audience, probably, if the women of Rome had been so versatile as the American woman.

All highly-organized animals are governed by a delicately-balanced nervous system, the best type of which is in man. That the building of this nervous system be a sound one it should have an early beginning in childhood without which the development of a sound citizen cannot be expected. The first thing is the proper and regular nutrition, for the infant is barely larger than its stomach. Regularity and self-control for future years begin right here. This plastic material is trusted to our judgment in childhood architecture, as teachers, parents, and physicians. The forces of heredity may do much in predetermination of the result but "education, wise guidance, and proper hygiene" are large factors in the ultimatum for good. "That it required a hundred years to make a gentleman and that the treatment of a hysterical patient should begin with his grandfather are only trite sayings pointing to the well recognized and far-reaching power of heredity," but this should not make us unconcerned about our responsibilities, thinking that with the birth of the child its destiny is predetermined. Its nervous system may be profoundly affected by discreet nurture through the fleeting and transforming days of childhood. Only tendencies are transmitted to a child, the evil ones to be repressed and the good to be encouraged and developed.

Nervous diseases very frequently have their foun-

dation in very early life; particularly those predisposed on account of inherited weaknesses contract them. For example, take children who have a history of nervous tendencies. These tender years do not respond kindly to the present system of education. It means a life of tension and they being crowded beyond their abilities are considered stupid, dull and indifferent, and they are coerced by an imprudent pedagogue who herself may be a tottering and ungovernable entity, worn-out, irritable and unsympathizing. The parents of these children, if attracted by the evening festivities, take them away from home to have irregular meals at bedtime hours. Such indiscretion has caused cases of chorea or St. Vitus' dance which careful hygiene would have avoided. No two children mature precisely alike and thus thoughtful and painstaking care varies for both.

It is now recognized that the healthy development of a nervous system is closely interwoven with the formation of character. "The basis of character is self-control" and its beginning is in childhood and its larger development in adolescence.

Not full control of appetites, passions and emotions is attained in childhood but the foundation laid on which the best attributes are built, trending to stable character or on which a lifelong trait may be established, leading to wreck and ruin. In childhood is the time for self-control to be taught and practiced, giving the glowing years a beautiful balance in this transcendent quality.

The child should not be without feeling, but should not fly hysterically into ecstasies of pleasure nor go at the least provocation into depths of grief. He must understand reasonable joy and bear pain with some degree of courage. Santa Claus has not always used the best judgment, for his approach has been marked with such anticipation and mental exhilaration that the wrought-up nervous system of the children is greatly depressed later on. Fear is a

feature to be ruled out. The best young soldier was not nourished on ghost stories. He was not taught, when a trembling boy, to see with his vivid imagination headless men riding on ebony steeds through wooded and darkened retreats by his home. He never was told to go in the stealthy hours of night into the near-by grove and stare five minutes into an opened jug and then look up quickly if he wished to see a blazing man with a flaming sword in his hand, a ghost who was accustomed to haunt those quarters, particularly on damp, cloudy nights. Deepened shadows cause objects to take on dreadful looking forms. Inanimate and even immovable things (without great power) become the most formidable and dangerous to the boy or girl who has learned to be afraid of the dark or to be left alone. No wonder they cover their heads when they go to bed. Fear certainly was not eliminated from negro children, for where is the African who would pass a cemetery at night alone or in company with a braver companion without a choking fluttering in his chest because of the snow-white ghosts he saw going breathlessly and silently through the city of the dead? Do you believe this nerve tension is conducive to self-control and poise?

The extremes of emotions should be cautiously guarded, the utmost joy and grief, for they have their dangers. Impulse should give way to reason. Children should not be expected to avoid the unpleasant and disagreeable but must face them to develop character and self-control which cannot be acquired without effort. This strengthens a growing nervous system. The kindergarten mixes work with play and so early teaches that work is pleasure and thus saves many a one later in life from nervous prostration which too often comes about on account of the humdrum and drudgery of routine habits.

The discipline of obedience is very valuable to a child, when learned in early years, in the acquiring of self-control. Many habits are learned in the first week of its existence. It can be taught to either sleep peacefully in its own little nest or to render an incongruous and discordant strain of music in the short striking hours, melodies too classical to be appreciated by the night floorwalker. A comfortable baby will sleep during regular intervals until it is taught the irregularities of infancy, thus impinging upon its nervous mechanism. **Teach** it self-control from the beginning.

The influence of heredity and the training of the youth having been briefly considered in the above, let us reflect a few moments on the sum total of a nervous system of an average American citizen. Added to the inherently impaired powers of resistance the high tension under which we are living, the body becomes easily disorganized. It is quite characteristic of the people of the temperate zone of North America

to live rapidly, irregularly and extravagantly, without relaxation and sufficient sleep, although actively engaged in business, taxed with responsibilities of the household or depleted by excessive mental application and the worry attendant upon responsibility. The greater, talented, the better educated and the more active suffer most. Women because of their weaker powers of resistance and "emotional irritability" are more susceptible than men to nervous exhaustion, particularly mothers, teachers and nurses. The greatest mental strain occurs between twenty-five and forty-five and thus becomes an important factor in middle life. Great excitement, fright and acute illnesses do much to undermine the nervous system.

Knowing that children are permitted to be crowded ahead of their age from one school grade into a higher one, realizing that many men spend forty years of business life with incessant activity, being aware that a large number of mothers bring up four or five children without any relaxation, and recognizing the fact that individuals are intoxicated with the whims of society, we are not in the least surprised at the numerous nervous break-downs. The student complains of inability to apply his mind and of difficulty in thinking. Both men and women say they are easily fatigued, more or less irritable and that they are compelled to force themselves to do the work previously done with ease and pleasure. Fatigue is a good safeguard to overwork and no one should try to overcome it by his will power for this is followed by prolonged weariness, restless nights, tired mornings, and later excessive anxiety about themselves, paying undue attention to trifling symptoms. They think they are afflicted with some disease (too often become the victims of quacks). They may even become morose with tendency to suicide.

Something has already been said concerning relaxation. We know too little about it. It has been well said that the best state of society is that in which there is some leisure for every man's work and some work for every man's leisure. Daily play in the open air builds up future assets for the school child. The Duke of Wellington when watching the boys in their sports on the playgrounds at Eton where he spent his younger days, remarked, "It was there that the battle of Waterloo was won."

In England the business men at the end of each week spend Saturday afternoon on the golf links and tennis courts. Such sport may be a bit lively for those over forty, providing they had not been initiated in early adult years. Some women (English) mentally engaged, walk four to six miles daily. The farmer needs rest from his physical labors and his relaxation is to be found in mental exercise. Housewives need a change of scene at regular intervals and should just be lazy, and have nothing else to do.

Prolonged effort may be wisely followed by a few weeks' or summer's vacation. The Englishman goes grouse hunting on the Scotch hills, some go to Switzerland to climb the Alps. Americans go to the lakes to fish or to the mountains to camp and hunt the big game. Roosevelt went to the Dark Continent. Although the trip is hazardous on account of tropical diseases and dangers, yet it will be a great rest appreciated by the only living ex-President.

There must be a limitation to mental application and physical exertion and the avoidance of worry and anxiety. Diversions and nervous hygiene in other ways will make life longer, happier, and more useful.

THE COMPLAINT-DESK FACE.

WE have heard much about the "bicycle face," the "automobile face," the "baseball face," but we have heard but little about the "complaint-desk face." That there is such a face is true from an incident related by a friend recently. Said he: "You know every department store of standing has a complaint desk. We have one in our store. About a year ago a young man was given this position. I remember well what a happy, cheerful countenance he had. His face even in repose wore a fascinating smile. I happened to see him the other night in passing out of the store, and I would hardly believe my own eyes. I had not seen him for almost a year, and what a change had come over his face. In place of a happy, cheerful countenance his face bore a morose, stern, harsh, austere, forbidding expression, and this all through complaints of customers." It takes but a short time to change a beautiful countenance when it has to face continually the ugly side of life. Some people may have reason to complain, but many of us complain from a mere habit of complaining. To live continually all the bright hours of the day in a complaining atmosphere will eventually so harden the delicate strings of our nature that they will become rigid and firm. The face is not one's self indeed, but it is an expression of an inward spirit. If the cords of the heart be so hardened that they give off a rasping sound, the face will soon register the discord within. The face is a book where men may read all the strange matters that pass within the soul. While the soul does not put all its goods in the shop window, yet the staple articles of exchange that do business in the soul are written on the countenance. If all is true what has been said, friend, let us have sympathy with the man at the "complaint desk." Do not register your "kick" unless you know you have a good one, and then "kick with your shoes off."—*Home Herald*.

ECONOMICAL GRAPE JUICE.

GRAPE juice is one of the most delightfully refreshing drinks, and it is not particularly expensive or

difficult to make. Although we buy our grapes the beverage does not cost us more than ten cents a quart, which is about one-fifth of what it costs in the stores, and we have the satisfaction of knowing exactly how it was prepared. One year we made twelve quarts from four varieties of grapes that cost us about \$1. 27, and another year three twenty-five cent baskets of Concord made eight quarts of liquid.

Concords are generally used, but the juice is dark in color and the flavor is very strong. The juice of Niagaras alone is colorless, while the Delaware juice has a muddy look. Out of fifteen variations, the following combinations were most to our liking: Catawba and Niagara; Catawba and Delaware; Catawba, Niagara, Concord, and Delaware; Delaware and Niagara; Delaware and Concord; Delaware, Concord and Niagara. Catawba alone was also good.

Pick the grapes from the stems, and to three quarts of fruit add one quart of water. Cook until the grapes are broken, then strain through cheesecloth and again through flannel. Add sugar (about one to two tea-cups of sugar to two gallons of juice), and boil. Be careful not to get it too sweet. Bottle the juice while it is hot and seal. Store in a dark place.

We very often make a first and second grade, using for the former the juice which runs through the straining cloth easily. To the remainder we add another quart of water and boil, and this we strain through the cheesecloth only. This juice will not keep for any length of time.—*The Garden Magazine*.

A SWEET CISTERN.

To prevent a cistern becoming foul from a natural accumulation of dust and soil that is washed from the roof, there should be a filter placed so that all water must pass through it before entering the reservoir. Decayed animal matter, droppings of birds, leaves, and other debris carried by the wind, are apt to lodge in the eaves-troughs, and wash down the spouts, and the water supply will thus be contaminated and unfit for use, even though it may not "smell." If the filter has been neglected, and the water is foul smelling, the cistern should be pumped dry, and the walls and bottom scrubbed clean, any leaks repaired, and alternate layers of gravel and charcoal, to a depth of six or eight inches laid over the bottom. The charcoal will absorb the foul gas which is usually generated, and the water will keep sweet longer. But the better way is to supply the omission, and put the filter of gravel and charcoal where the water must pass through it before entering the cistern.—*The Commoner*.

SELECTED RECIPES.

PEACH PUDDING—Put whole peeled peaches in the bottom of a buttered pudding dish, and pour over them

a batter made of one cupful of sugar, one cupful of milk, one egg, two tablespoonfuls of melted butter, two teaspoonfuls of baking powder and flour to make a drop batter. Spread it over the peaches and bake a rich brown. Turn upside down on a dish and serve with cream.

CORN AND TOMATOES—Cut a slice from the top of each large smooth tomato, scoop out the seeds, leaving the inside like a cup. Fill with grated corn seasoned with butter, pepper and salt, cover with the tops, pour a little water in a buttered pudding dish, set the stuffed tomatoes in, cover the dish and bake in a moderate oven for an hour.

GERMAN POTATO DUMPLINGS—Boil twelve medium sized potatoes and put through sieve while warm. When cold mix with them four well beaten eggs, salt, and enough flour to make quite stiff. Butter two slices of bread cut into cubes and brown in oven. Take a spoonful of the dough, pat out in the hand, put three or four cubes of bread in center, and roll into a ball, flour well on outside, drop in boiling salted water, cook twenty minutes.

BUTTER, BEANS AND NEW POTATOES.

Just before the potatoes are done remove from the fire and let cool; take one pint of butter beans cooked until tender, and cut into smaller pieces. When the potatoes are cold, chop rather coarsely. Arrange potatoes and beans in alternate layers in a dish, with bits of butter, pepper and salt; pour over this one cupful of cream and sprinkle over the top rolled crackers. Cover and set in the oven long enough to get thoroughly hot, then remove cover and brown slightly and serve."

TO KEEP BUTTER.

"INVERT a large flower pot, or any jar of unglazed earthenware over the dish which contains the butter and wrap the jar with a wet cloth. It will keep cool and hard in very warm weather."

A DIET LIST.

The rivers eat away their banks,
The tides devour the sand,
The morning sun drinks up the mists,
The ocean eats the land;
Taxes eat up a property,
And pride eats out the soul—
But moths the diet record hold,
Because they eat a hole!

—Unidentified.

"It is said that a few drops of oil of lavender on a sponge placed in a saucer of hot water will keep flies out of a room."

The Children's Corner

A SEED STORY.

A tiny brown seed all wrinkled and dry
Said: "Can there be use for such as I?"
As it lay side by side with its brothers there
Stowed away in the cupboard with thoughtful care.

"It is time I should plant my posies now,"
Said a sweet little girl with a sunny brow.
So the seeds were sunk in a loamy bed
And covered snugly right over each head.

"I am lost," thought the seed. "How could I grow
All buried deep in darkness so?"
But ere long the seed thrust down a root
And up through the soil sent a tender shoot.

Today it has brought us a fragrant flower
To lend its charm to this glad some hour.
So the seeds of good in our hearts deep sown,
May in blossoms of love to the world be shown.

—E. Gertrude Elderkin.

ILA.

LILLIAN WIRE.

WHEN it is time for papa to come home Ila seems to know it. She can not count the strokes of the clock, but as the sun drops lower and the hour of five is reached, she lisps: "Hood. Meet papa." Perhaps she guesses the time by mama's getting the tea at that hour every day.

At any rate, when papa is yet quite a little way off, before she can see him (as he has to pass some tall buildings he is hidden from her sight until quite near), she will open the door and patter down the walk, crying: "Meet papa, my papa, kiss papa."

And you may be sure that he is glad to see her coming. He catches the flutter of a little white gown as the child reaches the corner at the hotel. Very soon she is in her father's arms and rides gaily on his shoulder to the house.

Sometimes papa has a flower or an orange for mama and Ila. At least he has always for them a fond word and a kiss of greeting. He often says, "There is no place like home."

Ila thinks that her doll loves pictures. The little girl has a habit of showing Rosalie her picture-books and teaching her rhymes. Mama came into the sitting-room the other day and found her little daughter with pencil in hand reciting "Humpty Dumpty." Rosalie was propped upright on the sofa, her brown eyes wide open, but saying not a word.

THE QUIET HOUR

FEED MY LAMBS.

JAMES E. LEWIS.

Lord, I come to thee this evening;
Falling prostrate at thy feet,
Bringing lambs for my petition,
Lambs, dear Lord, that are so weak.
Thou hast gone and said to feed them,
But what if they will not eat?
Some are cold, and some are feeble,
Some have strayed through erring feet.
Lord, while traveling up the mountain,
Some have found the way too steep,
Others journey on rejoicing,
Praising God that they're his sheep.
Lord, I pray that ere the winter
Comes in all its blasting power,
These dear lambs will all be gathered
Where the wild storms never lower.
Yes, I now and well remember
How you sought those gone astray,
In your arms so kind and tender
Brought them back to endless day.
Lord, I pray that thou wilt guide me
O'er the mountains dark and cold,
Till I've found the lambs so tender,
Till they're safe within the fold.

"THOU THINKEST, LORD, OF ME."

EDGAR M. HOFFER.

It is a fact that God sees us always, and he never forgets us. Our friends make us trouble sometimes, and forget and forsake us now and then, but the Lord never will. No matter how long the day may seem, or how dark the night is, the Lord is with us. "Weeping may endure for a night, but joy cometh in the morning." Through tribulation, adversity, persecutions, the Lord will cheer and comfort us. It is said of a soldier, one dark night, as he was standing at a lonely place guarding the army, or keeping watch, that an enemy tried to shoot him down. The night was very dark and the soldier commenced singing these lines:

"All my trust on thee is staid,
All my help from thee I bring,
Cover my defenseless head
With the shadow of thy wing."

The enemy heard him sing, and he could not shoot him, so he left. This shows that God will deliver those that put their trust in him. God also thinks of the sinner that is far off in the mountains of sin.

A pirate was staying on the coast of Florida one day. He was a great sinner. He heard a dove sing. It seemed to him like a voice from the past, and it had such an effect on him that he decided on that spot, where no minister ever stood, that he would serve his Master. The Lord will deliver us every time, but we must have faith. We must trust him every day. As we pass through life we need a kind friend. Our loved ones leave us one by one, but the Lord will never forsake us.

"Amid the trials which I meet,
Amid the thorns that pierce my feet,
One thought remains supremely sweet,
Thou thinkest, Lord, of me."

If we could only see it better, how lovely God is and how kind. The Word of God says, "He careth for you." This is a beautiful thought to know that "the eternal God is our refuge, and underneath are the everlasting arms."

Elizabethtown, Pa.

CHURCH ETIQUETTE.

As long as there are churches, there will be a church etiquette, and very many who would not think for a moment of offending at a social function, do not seem at all concerned when attending a sacred service. The following rules form a good foundation:

1. If possible, be in time. You need at least five minutes, after coming, to get warm or cool, to compose your body and mind and to whisper a prayer before the service begins.

2. Never pass up the aisle during prayer or scripture reading. If you do, your presence will distract the minds of many in the audience.

3. Be devout in every attitude. All whispering should be studiously avoided. Find the hymn, and sing it if you can. Share the book with your neighbor. If in a strange church, conform to its customs of worship.

4. If the sermon has begun, take a seat near the door, no matter if you are "at home."

5. Be thoughtful for the comfort of others. Take the inside of the pew if you are the first to enter, and leave all vacant space at the end next to the aisle.

6. Speak a bright, cheery word to as many as possible at the close of the service. If you are a stranger, ask one of the ushers to introduce you to

the pastor or to some of the church officers. This will always insure you a hearty welcome.

7. Never put on your overcoat, overshoes, or wraps during the closing hymn, and do not make a rush for the door immediately after the benediction is pronounced. There should be no loud talking and jesting after the service is concluded. They are as much out of place at the house of God as at a house of mourning.—*Unidentified.*

LOVE TO GIVE.

PERHAPS no one in the past hundred years made a deeper study of giving money, than Mr. George Muller. People would often write him their experiences as to giving money, and from these letters he compiled the following points on giving:

1. It is best to begin when we have but little to give without waiting to be in easy circumstances, and that while we are poor we are to help the poor.

2. To always give by a regular system, and by a certain proportion, and not depend on sudden impulses or fits of generosity. Some of those who gave largely to his orphanage began when poor, giving five per cent or ten per cent, and increasing their proportion until they were able to give away one-half or three-quarters of all they made, and have enough left to live on.

3. That all true giving is to give to the Lord and not to man. We are to deal directly with God, and not be influenced by other people as to what we give, but to regard ourselves as God's special agents and to give just as if we were literally laying it in the hands of the Lord, and then our motives will be pure, and the act greatly blessed of God.

4. This will lead us to have great pleasure in giving, and it will be one of the greatest joys in our lives. A man wrote Mr. Muller sending him twenty dollars and saying that before he adopted the principle of giving regularly a certain proportion, he found little pleasure in giving, but since he began giving by system, and giving as directly to God, it had become a positive joy to give. Before that time it used to irritate him to be asked for money, but since then he never felt vexed with applications for help. In reality we never give away any money unless we enjoy it, for if the heart does not go nothing goes.—*Living Words.*

HOW TO CULTIVATE JOY.

THIS is one of the most important aspects of the case; for Christian cheerfulness is a temper that can be cultivated, and it is both our profit and duty to do so.

1. By all means try to keep in health. Much gloom is the fruit of depression of the body.

2. Cease to do evil. Abstain from all appearance of evil.

3. Have faith in God. Abide in Christ. Cherish the constant witness of the Holy Spirit.

4. Feed on the Word and live on some of the blessed promises.

5. Keep busy in legitimate work if you are able-bodied and in Christian service. No able-bodied man or woman can be happy in idleness nor in a mooding spiritual neglect. This is why so many nominal Christians, young or old, are dissatisfied, ill-at-ease and constantly seeking vanities. The stars we are told are forever "singing as they shine," and thus must our brightness come.

6. Do all you can to cheer others.

7. Mingle with the hopeful.

8. Do all you can, but don't undertake too much and then fuss and worry.

9. Sing often.

10. Keep your eye on the crown.—*Zion's Watchman.*

OPPORTUNITIES.

THE issues of life concentrate themselves into a few special points of opportunity. The success and failure of life depend upon whether these opportunities are grasped when they present themselves, or whether they are neglected and permitted to pass. Life's greatest opportunities are not like the great ships which sail from the chief ports of the world, which sail and come again, and sail at stated intervals from the same ports. The great chances touch once at the pier of our lives, throw out the planks of opportunity over which our feet may pass, ring their signal bells in our ears, and then sail out of the harbor and away into the eternal sea and never come again. The little chances linger and return, but the great chances come and go and never come again. . . . If with illumined sight we could look back over the lives of the people by whom we are surrounded, how many great and rich opportunities would we see that they have permitted to drift by them unimproved!—*J. T. McFarland.*

"ADORNING THE DOCTRINE."

THAT is a fine phrase of St. Paul. We ought so to live as to make religion look lovely. Some tolerably good people only succeed in making it appear disagreeable. The glory of the Gospel is enhanced and beautified by the ornament of a holy life. Doctrine is truth in the rough, the uncut diamond, the unpolished marble. The holy life is the diamond all aflame with light, as the result of the lapidary's skill; it is the marble touched to noble meaning by the genius of the sculptor. There is no life so lowly, no deed so humble, no duty so common, that it may not add a fringe of beauty to the wedding robe of the Bride of Christ.—*Northwestern Christian Advocate.*

ECHOES FROM EVERYWHERE

Germany has spent more for aviation than any other government.

The Legislature of New York has under consideration a bill prohibiting absolutely, traffic in the plumage of wild birds, whether the birds be killed or trapped in New York or elsewhere.

At last the tardy sea serpent has been heard from. He appeared off Cape Hatteras a few days ago, and seems to have picked up since last summer, for he is now reported to be 60 feet around the body, 80 feet long, and armed with fangs like sickles. He went slashing by a Norwegian steamer, apparently making a bee line for Cuban waters.

According to the report issued by the public printer at the government printing office, better work and more than ever is being produced at the big print shop, and the government has been saved half a million dollars. The whole plant during the past year has been operated at a cost of a little over \$5,704,000. More than half the savings results from a curtailment of the pay roll.

A bakery at Kerns, Switzerland, has installed a new electric oven, which is eight feet long by four feet wide, with a baking surface of three square yards, and will bake 100 pounds of bread at one time. The furnace has forty-two electrically-heated tubes arranged along the base. It requires about two hours to reach the baking heat.

That the southwest Texas onion growers have cleared over \$600,000 on this year's crop is now an established fact. Divided among about 500 growers this would give \$1,200 to each of them. Many of these, however, grow onions only on a very small scale, and for this reason the big growers must have done remarkably well this year.

Despite the warning of British boards of trade, several shiploads of British strikebreakers left Hull Aug. 11 for Sweden. The strikebreakers were told that they would incur heavy personal risks in going to Sweden and would find the doors of organized labor forever closed to them on their return to England, but the warning apparently dissuaded none.

Authority has been given by the War Office for the leasing of certain ground near Washington for use as a training ground for officers of the United States army in the use of flying machines. The first officers selected for instruction will be trained by the brothers Wright personally, and they in turn will teach others. A level tract of 163 acres almost free from trees has been chosen, so that the practice of beginners may be made at a height of 20 feet or less from the ground, eliminating as far as possible the danger of serious accident.

Consul John F. Jewel of Melbourne reports that the wool clip of Victoria for the 1908-09 season amounted to 68,930,200 pounds, a decrease as compared with the 1907-08 season of 10,189,772 pounds.

The American Civil Service Institute with headquarters at Washington has collapsed and two of its promoters have been arrested. It is alleged by the government that the whole thing has been operated to swindle people who are anxious to get government positions.

Tests are being made at Brant Rock, Mass., of the apparatus to be installed at the 1,000-foot tower to be erected at Washington. The Navy Department specifications require that it shall be sufficiently strong to send messages 3,000 miles and receive them from the same distance.

Twelve thousand Spaniards lost their lives in the recent revolution in Barcelona and other parts of Catalonia, according to the *Diario de Noticias*, which declares its figures are based on the most reliable estimates. The number included those killed in the actual fighting and hundreds who were either assassinated or executed during the ten days the trouble lasted. The *Diario de Noticias* says there is still grave danger of the revolution recurring and sweeping the entire country.

As a result of the earnest and self-sacrificing efforts of eminent German scientists who have sounded wide the alarm at the rising tide of intemperance in Germany, a powerful total abstinence movement is developing by leaps and bounds. In 1903, according to the best authorities in Germany, there were 35,000 members of the various temperance societies in Germany. This membership had increased to 55,000 in 1905, and according to the international *Monatsschrift*, there were 86,000 members in these same organizations in December, 1908. There are thousands of boys and girls enlisted in juvenile temperance societies.

By placing the last appeal of ex-President Castro to his country in the congressional archives, the committee to which had been referred his ex-presidential message put a damper on his ambitions. The message will not even appear in the newspapers. Castro left behind him in Venezuela \$5,000,000. This has all been taken away from him in some way or other. In fact, he has been despoiled in the same manner he held up others when he had the power. As his share of the cigarette trust Castro was given \$1,000,000 in shares. A few weeks ago the directors sold the \$5,000,000 concern to Senor Garcia Guerra for \$250,000, although the stock was then quoted at 25 per cent premium. Guerra reorganized the trust and Castro's \$50,000 was placed in a bank, where it was attached by individuals who claimed Castro was indebted to them.

Notice has been issued by President Taft to Secretary Nagel that if any of the census takers engage in any manner of politics they are to be dismissed. The President believes that except for voting census enumerators should be free from politics, national, State, or local. Senators and Representatives have been notified they must not appoint partisan political workers as census takers.

All records for salmon catches on the Pacific coast were beaten when Fraser River fishermen and gill-netters and purse seiners on Puget Sound were compelled to abandon their work because they could not dispose of their catch. In the Fraser River, Bellington Blaine and Anacortes canneries are 2,234,000 "sockeyes." Thousands of fish are going to waste, as it is impossible for the canneries to handle the full catch.

French landlords have started a movement for a concerted opposition to the bill providing penalty for refusing to rent apartments to families with children. The bill will be voted at the next meeting of the Parliament. If passed many owners of luxurious apartments built especially for childless families say they will suffer great loss. The bill provides a fine of from 25 to 50 francs for landlords who "argue the number of children for refusing to rent their apartments" and a doubling of the fine for continued offenses.

The first successful towing of canal boats by automobile was accomplished a few days ago on the Lehigh canal in Pennsylvania. Owing to the liability of the towline to snap in the effort to start, a seven-ton motor truck of 45 horsepower was equipped with spiral springs. Six barges with 800 tons of cargo were taken from Allentown to Bethlehem in an hour. Present lock capacity and speed, limitations considered, it is estimated that automobiles compared with mules will handle double the number of boats in half the time.

More than 500,000 acres of land formerly withdrawn in connection with various reclamation projects in California, Montana and Washington were again restored to the public domain subject to settlement in November. A statement to this effect was issued by the general land office. The actual process of restoration occurred on July 23, it being the policy of the interior department not to make public information as to withdrawals and restorations for at least two weeks after signing of the order by Secretary Ballinger or his assistants.

Many a visitor to San Francisco has paid a long-to-be-remembered visit to the Chinese quarters and then took a look into the opium dives, theaters, etc. But the Chinese Six Companies, which have an all-powerful influence over the Celestials in this country, have issued a mandate that these things must stop. This thing of putting the Chinese on exhibition, say the leaders of the Six Companies, hurts their reputation, and henceforth tourists are not to be admitted to the Chinese theaters and other places of amusement and gambling. For a long time the guides of Chinatown have fattened on this system, for they are enterprising fellows, who organized a whole system of shows by the Chinese. The opium smokers, blind paupers, singing children, and other curiosities were all hired at so much a week. The whole thing was a fake provided as a bait for the tourist.

A meeting in the air between Count Zeppelin and Orville Wright is being planned by German aeronauts as one of the features of Wright's forthcoming visit to Berlin. Wright is expected in Berlin the latter part of the month, by which time Count Zeppelin will have completed his newest airship, the Zeppelin III. It is planned to have the Count sail his ship from Friedrichshafen and for Wright to fly out in his aeroplane to meet him. The prospect of such a spectacle has aroused tremendous enthusiasm in aeronautic circles.

When Congress meets in December special attention will be given to conservation matters. It is felt certain that a public inquiry into the Ballinger-Pinchot differences will be ordered, as Congress will want reliable information on water power, coal lands and the like. When the Senate conservation was appointed it was regarded as an ornamental body. Now, however, it will become one of importance. Senator Dixon of Montana is chairman, and at least two or three of the Senators are hostile to the Pinchot policies.

Before sailing for Europe Aug. 10 with his sister, Catharine, Orville Wright announced that he and his brother, Wilbur, have perfected a device which will enable them to fly their aeroplane 1,000 miles without stopping. Orville said that the Wright machine can now carry fuel for a 25-hour flight and maintain a speed of 40 miles an hour. The aviator says that hereafter he will try for no more records, but will devote his time to perfecting his machine. He is confident that the aeroplane may be utilized within a short time for carrying mail, although a freight machine is in the distant future.

The loftiest chimney in the world was recently put into service at the large smelting works at Great Falls, Mont., where it will serve to carry off the gases from the greater part of the large plant. The chimney, which is built of brick, is 506 feet in height above the ground. It is 50 feet in diameter at the top, and increases gradually in diameter to the base. The flue includes a dust chamber in which vertically-hung wires serve to take out the dust from the smoke. The dust is removed from the wires by shaking mechanism and falls in hoppers in the floor, from which it is loaded into cars in a pit below.

An engineering feat which will rival the Flagler triumph of constructing a railroad from the Florida coast to Key West is now on foot in India. It is nothing less than the construction of a railway from the peninsula of Hindustan to the Island of Ceylon. The Indian railway system at present terminates at Muntapan, and from this point the new road is to extend. The route will pass along the numerous islands between the mainland and Ceylon, and where no islands afford a foundation a submerged reef will be utilized. The route will be about 50 miles long and all the marine gaps will be closed up with embankments. For the benefit of coasting vessels, which might have to make a long trip around Ceylon after the road is completed, a canal will be cut almost at right angles across one of the islands. The chief benefit which will be derived from the new means of transportation will be the facility with which the Ceylon tea growers will be able to get their product on the market. Furthermore, mail transportation from England will be made quicker to some of the cities of India.

Among the Magazines

THE CORPORATION TAX.

As finally accepted by the Conference Committee, the corporation tax will be at the rate of 1 per cent upon the net income of all business corporations. Excepted are those that have a net income of less than \$5,000 a year and certain classes of corporations whose primary object is not money-making. As finally shaped and adopted, this tax is inconsistent from the theoretical standpoint and open to some serious objections on the practical side. In point of theory, it is said by its inventors to be in the nature of an excise tax levied upon corporations as such, because corporations enjoy certain privileges and advantages that partnerships and private firms do not possess. But if this theoretical or legal point is the real basis of the impost, there can be no just ground for exempting from the burden of the tax all those corporations which, though enjoying the full privileges of the corporation laws, do not show on their balance sheets a net profit. It would be easy to find hundreds of instances in which two neighboring corporations having similar capitalization, similar opportunities, and perhaps even similar amounts of gross income have very different net earnings. Through different policies, or different methods of management, the one corporation yields a large net income and pays dividends, while the other seems not to be producing any net income at all and pays no dividends. Yet in reality the one is just as able to pay taxes as the other. There is no reason why the general conditions under which these two rival institutions do business should be made unlike by the taxing power. Taxation should be in the nature of one of the fundamental expenses of both of the competing corporations.

If the corporation tax is to be based at all upon income, it should be upon the gross receipts rather than upon that very uncertain and elusive quantity known as "net profits." We are not speaking now of the exemption of private firms and partnerships, but are discussing the corporation tax upon the theory of its framers that it is a tax upon the privilege of doing business in the corporate or joint-stock way. When the tax was under discussion in the Senate an amendment was proposed by Senator Clapp, of Minnesota, taxing the net incomes of so-called "holding companies," and it was adopted. The question at issue was whether if a railroad company, for example, was taxed upon its net income there should also be a tax levied upon the net income of a company holding the stock of that railway, regardless of what the original company paid. The question was raised whether or not this was to be regarded as "double taxation" and therefore wrong. Mr. Clapp's Senate amendment was afterward rejected in the Conference Committee. Yet Mr. Clapp was obviously right. For in neither case is the tax levied upon a company's stock, but on its net income; and it is absurd to attempt to trace from one company to another the

particular kind of property from which the income is derived.

Most certainly the holding companies,—which above all others are benefited by the peculiar privileges of incorporation,—ought to be taxed on the same principles as any other companies. And if, in progressive order,—as in fact has come to be the case in some instances, such as in the case of the New York traction companies,—there should be still further holding companies removed by two or three or four degrees from the original business, then each successive company should be taxed upon its income quite regardless of the source from which that income is derived. It is almost as ridiculous to exempt holding companies as it would be to try to create a partial exemption for a furniture manufacturing company on the ground that its materials had already been once taxed at the hands of a lumber company, which in turn might claim exemption on the ground that the timber had previously been taxed at the hands of a land company.—From "The Progress of the World," in the American Review of Reviews for August.

THE NEW TARIFF ACT.

The Dingley law has at last been replaced by a new tariff act, and the business world welcomes with a sense of relief the cessation of disturbing controversy and the establishment of a reasonably stable basis for production and commerce. All agree that the new tariff will promote prosperity by removing the last "psychological" obstacle to confident enterprise and healthy activity.

With regard to the virtues of the new act, one thing, at any rate, is perfectly clear and undeniable. Owing to President Taft's manly stand and effective efforts, and owing to the overwhelming support of those efforts by an aroused public sentiment, we have a tariff that is in several important respects vastly superior to the Senate bill and substantially superior to the House measure.

Of the last named, it is but fair to remember, even Democratic and independent "revenue tariff" newspapers of weight spoke very favorably. Some of these described it as "the best tariff the Republican party ever offered the country." True, when this praise was so freely given, certain "jokers" and defects in the measure had not been fully disclosed, but the broad fact remains that the Payne bill fulfilled in a number of directions the party and administration pledges of downward revision. The Aldrich substitute would have grossly violated those pledges, but from that calamity the President, with the aid of the alert and able "progressives," has saved the country.

The President frankly tells the people that the new tariff "is not a perfect tariff" nor "a complete compliance with the promises made"—if "strictly interpreted." This highly creditable statement justifies the progressives and "insurgents" who conscientiously voted against the bill even in the final division. Certainly the people had expected a more liberal act, and a more sub-

stantial revision downward of rates on necessities of life. But Rome was not built in a day, and "excesses" are not taken out of a complex tariff at one stroke. The reductions are many and far from trivial in several instances; the free list has received important additions, and a step has been taken toward protection without extortion. The right principles of revision, moreover, have been emphasized and made familiar, and public victories over special privilege and greed will be easier in the future, thanks to the grasp of the "difference in cost of production" test and to the limited provision for investigation and utilization of relevant data.

A year or two hence the tariff will be popularly judged by its fruits in preventing monopoly prices and lowering the cost of living. Meantime appreciation of the actual and potential results, of the benefits secured by the revision, should temper the criticisms of those who are disappointed because even greater benefits had been expected in the West.—Chicago Record-Herald.

THE TARIFF BILL.

In conversation at the beginning of last week with journalists and others at the White House, Mr. Taft set forth his views about tariff revision, clearly indicating his purpose to sign the bill then in conference, and incidentally criticising with some severity the attitude and methods of the insurgent Republican Senators. Reports of what he said were published in many papers, and the reports were substantially identical. We refer now to what seems to us to have been the most interesting and significant of his remarks, that the object sought in the revision should be to prevent a further advance of prices by combined producers farther than to cause a reduction of them. Holding this opinion, he may find it an easy matter to sign the bill which the conference committee reported. By similar reasoning he could convince himself that a re-enactment of the present tariff ought to be approved at the White House.

But the people of the United States did not desire a re-enactment of the Dingley tariff, nor did Mr. Taft in his public addresses before and after his election lead the people to believe that he favored a revision that would merely prevent an increase of prices. "The tariff ought to be lowered," he said. The Dingley rates "had become generally excessive." He declared that "revision in accordance with the pledge of the platform" would be, on the whole, "a substantial revision downward." We must be faithful to that pledge, or "suffer the consequences" which follow the breaking of a promise. Did any one who heard his speeches, or who read reports of them, understand that he desired, and that the platform demanded a revision that would not reduce prices, but only prevent them from rising?

It was in September that he said the Dingley rates had "become generally excessive." In October, at Fort Dodge, he explained that, under the normal operation of protection, the cost of producing was reduced, and that after a protective duty had been in force ten years it "ought to be reduced" because of the effect of it in cutting down the cost of production. But he must know that at the beginning of its term the Dingley tariff was too high for honest and reasonable protection, by the admission of the protectionists who made it. It was excessive even then, because they had made allowance in it for extensive reductions which were to be caused by treaties of reciprocity. A dozen such treaties were promptly negotiated under the direction of President McKinley, a loyal protectionist, but Mr. Aldrich and his

associates in the Senate would not accept them. And so the excessive rates continued in force, "serving no useful purpose," as Mr. Taft said in his letter of acceptance, "but offering a temptation to those who would monopolize production in this country." To this temptation many of them promptly yielded, at the same time selling their products in foreign countries at prices from 10 to 40 per cent below those which they exacted at home from their fellow-citizens who had given them excessive protection.

A great majority of our people desired a revision that would restrain the greed of these over-protected manufacturers. They did not seek the destruction or the crippling of any domestic industry. They were satisfied that enforcement of the doctrine of the Republican platform concerning the difference in costs of production, according to Mr. Taft's interpretation of that platform, would compel a reduction of extortionate prices, not by actual competition from abroad, but by the menace of such competition. The Republican insurgent Senators, as a rule, have merely shown their appreciation of and their sympathy with this popular desire. Mr. Dolliver, for example, a loyal protectionist, has not sought to break down the protective system. He has merely opposed the abuse of protection, attempting not only to prevent unwarranted increases of rates already "excessive," but also to introduce a little reform affecting the defective foundations on which these increases were to be built up.

If the revision that was promised was to be one that would merely keep prices from rising, the promise has not been broken by the greater part of the bill which the conference committee reported. In several schedules, however, notably the one relating to cotton goods, it invites higher prices and offers that temptation of which Mr. Taft spoke in his letter of acceptance. But if the promise was that rates "generally excessive" should be reduced, and with them the cost of living, which has risen by 30 or 40 per cent since the Dingley tariff was enacted, it has been broken, and the failure to keep it cannot be concealed by Mr. Payne's misleading table concerning this country's entire consumption of commodities, both domestic and imported.

It is true that the conference committee's bill was improved in spots by the President's influence, but he got only half of the free list upon which he originally insisted, and the effect of the reductions due to his attitude will be scarcely perceptible to the average consumer. Probably the relief given by them will be outweighed by the new burdens imposed in the cotton goods schedule alone for the benefit of Mr. Aldrich's friends. The reduction of the already low duty on shoes, which has been a leading subject of discussion, affects an industry in which it is well known that free competition prevails. The consumer would gladly exchange this reduction and the free listing of hides for a just revision of the duties on woolen and cotton goods and of rates that are abused by greedy combinations. As for the reduction in the iron and steel schedule, as a rule they will not be effective. We have Mr. Carnegie's testimony that the steel industry needs no protective duties whatever. Incidentally it may be mentioned that prices of steel products have been advancing during the last two weeks and that further increases are expected.—The Independent, August 5.

"An old librarian, unable to find his umbrella one evening when it was time to close, returned and looked anxiously for it in the card catalogue under the letter 'U.'"

IN THE DEAD SEA FURNACE.

(Continued from Page 822.)

water which she or some one else had carried for many miles to this spot so that travelers like myself might re-wash their greasy bodies after the Dead Sea bath.

At ten o'clock I started for the hotel at Jericho, six or seven miles away. The sun was like a ball of yellow, flaming fire. Its fierce rays reflected from the hot, dry sands and dust, dried up the fluid in my eyes and by its glare nearly blinded my sight. To prevent the sand from working into my shoes I removed them, when I found the heat too intense for the soles of my feet. For the first time in my life I danced an involuntary jig unprovoked by others, running at last and making high steps and long, so as to prolong the intervals between lighting in the sand and taking my feet up again. The heat became greater until, a half mile or so from the beach I stopped, looked back and decided that it would be death to go any farther ahead and that I had but slight chance of getting back to the little booth built for tourists near the shack of the natives. I was growing dizzy, and when the earth was about to leave off lying still and to begin to whirl about in fancy curves, I started for the beach, when, with a slight breeze in my face, I was enabled to reach it with the sands scorching my feet much as the grate from a dying furnace-fire. Here I lay, in this shady booth, until evening, having been served a little dinner at noon, and fresh water, by the woman in the shack,—and taking another plunge into the sea, with the surface entirely calm. As before, the water made me shriek in very pain, when it entered my eyes, or swept that portion of the body that had been chafed in walking.

Throughout the whole day I had lain secure in this booth, the fiery waves of heat trembling in long, quivering clouds of film upon the whole parched land, dotted near the river with scraggy bushes. Not a cloud came into the fiery sky.

Once more back at the Jordan I took another plunge into its fresh, sweet waters, washing off any remaining oil and salt, and drinking, as I bathed, huge draughts of the pure water that flows down from Mount Lebanon.

The next morning I walked back, alone, to Jerusalem, going up, now, and not down. Though it was daylight now, my knowledge of the dangers in the country was such that my fears were more now than they had been on my way down. Scarcely any one was on the road, however, and I reached Bethany without an incident.

In rounding the Mount of Olives, four big Arabs, wearing Moslem caps, met me. These had made up their mind to stop me and rob me. They called upon me to stop, to stand still and to give them my money. I walked up until quite close to them, then, when off

their guard, I leaped quickly to one side, and took to my heels, escaping their clutches and making them feel ridiculous when I stopped and turned around to laugh at them at a distance of a few hundred feet. They did not know whether to keep after me or to give up, but knowing that my feet were too tired and my joints too stiff from my long walks, to outrun them to Jerusalem, I walked on as fast as possible, without looking back.

It was just growing dark when I entered St. Stephen's gate among a lot of Bedouins and fellahin, going and coming. As I was perfectly safe now, inside the gates of the Holy City, I took my leisure to find my hotel, where a good supper, kind friends and a sweet bed free from fleas, awaited me.

Only then did I realize at what great pressure I had been living. I did not look like the same tourist. My face in the hotel mirror was wild, thin, nervous, terrifying. No wonder men gave up the chase. I would have been scared, myself. Dr. Selah Merrill, the consul, thought possibly I had met with foul play or that an accident of some kind had befallen me and told me he was about to send out a rescue party.

Every one in Jerusalem soon knew about my adventure, alone, and if tourists talked about it at the hotels and cafes and shops, much more did the natives themselves, who sat on street corners and raised the question as to whether my going down to Jericho alone and without paying for a guide or so, would not tempt other tourists to try the same inexpensive way of getting over the Holy Land. Many of them, seeing their livelihood endangered, regretted that I had not been more roughly treated.

For three days I was laid up at the Grand New Hotel, the heat and terrible excitement having been almost greater than my nerves would bear.

All Rights Reserved.

Jack—Hello, Tom, old man, got your new flat fitted up yet?

Tom—Not quite. Say, do you know where I can buy a folding toothbrush?—Boston Transcript.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—Catalpa Speciosa trees, two to four feet, \$1 per hundred, \$6 per M.; Blackberries, Black Raspberry Plants, \$5 per M.; Rhubarb Plants, \$1 per dozen or \$2.50 per hundred; Strawberries, \$3.60 per thousand.—Alva Y. Cathcart, Bristol, Ind.

WANTED—1,000 Sisters to send for sample of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Ill.

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

Read What Prof. Holden of Ames Agricultural College, Ames, Iowa, Has to Say:

"You may say for me that southern Idaho is **THE IDEAL PLACE FOR THE YOUNG MAN** who is looking to make a start in life. Every acre of irrigable land in this section is worth, in yield or income, three times as much as the best land in Illinois and Iowa. I am for Iowa, but if a man is to move, southern Idaho is the place to go, and for the young man, full of wonderful opportunities.

"The diversity of crops appealed to me as strongly as anything I saw. The irrigation farmer for instance, is not dependent upon any one crop. He doesn't have to wait until the end of the season to get his money because there is something seasonable and saleable at all times during the year. He raises fruit, wheat, alfalfa, oats, vegetables, hogs, cattle, sheep, in fact everything grown in the temperate zone.

"One man told me that he raised 18 bushels of clover seed on one acre of ground during the past year, and I found that the clover seed crop runs 8 to 15 bushels per acre.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

From the Ball Room to Hell

Is there any harm in dancing? There can be but one answer to this question, facts are facts.

This little book, written by an ex-dancing master, will give you more facts about dancing than can be obtained elsewhere. It places a dark picture before the dancer, and one that is very convincing. It explains the natural and necessary effects of modern waltzing and why

thousands of girls are ruined every year through its influence.

Our price, cloth,35 cents

Our price, paper,18 cents

(Postage extra, 5 cents.)

CRADLE ROLL BIRTHDAY POST CARDS

The phenomenal growth of the Cradle Roll Department of the Sunday School calls for constant activity on the part of the publisher to supply novelties and helps that will suit this peculiar field. Among the most useful helps are the birthday cards of which a new and beautiful line is just issued which may be mailed as post cards. The cards bear appropriate photographic reproductions embellished with exquisite floral designs and having greetings and verses in colored lettering; on the address side of the card is space that may be used for a personal message or invitation.

Form P. First Birthday—Boys.—A beautiful madonna with dainty decoration of trumpet border and lily of the valley.

Form Q. First Birthday—Girls.—Photograph of girl baby with border of snowdrops and colored leaves. One candle burns at top of card.

Form R. Second Birthday—Boys.—A bright boy's face with decoration of apple blossoms and golden bells.

Form S. Second Birthday—Girls.—A chubby two-year-old girl with pretty

background of violets and dainty lace.

Form T. Third Birthday—Boys.—A stalwart boy's figure in panel embellished with beautiful floral designs.

Form U. Third Birthday—Girls.—The girl's picture on this card is bordered with delicate grasses and pansies; three candles are burning on shelf.

The cards sell at the rate of 2 for 5 cents or 25 cents per dozen, postpaid. Order any one form or assorted.

Ask about our "One Dollar Cradle Roll Outfit."

NEFF'S CORNER

I know you must be tired looking week after week to see what Neff has to say and so often finding the same thing. When I established Neff's Corner in the 'Nook I determined it should not become stale and now this is the very thing that's happened. I'm sorry, but really if you were here and were to try to keep up with me for a day you'd see the reason why. The real reason why I do not say more here is because I haven't time to stop and put it down. What's the use to advertise when you already have more business than you can attend to? And my chief reason now for stopping long enough to say this is to keep you from going to sleep over Neff's Corner. I expect to hire more work done hereafter and take more time at my desk. Be on the lookout for Neff's Corner. I expect to have something to say that you will want to know about.

But you ought to see us building houses in Clovis. I have a row of jobs two miles long. Here and there I go, delivering material, hiring men, figuring contracts, collecting rent, etc., etc., and not only I, but scores of others going on the same kind of a jump. The way Clovis grows is a wonder. P. H. Beery of Covington, Ohio, G. S. Myers, of Lena, Ill., E. M. Cobb, of Elgin, Ill., and others have been here recently and they all agree that it is a wonder. If you contemplate an investment, write

JAMES M. NEFF,
Clovis, N. M.

Pastor's Pocket Record

Arranged by Rev.
Sylvanus Stall, D. D.

This record affords space for the recording of 63 church officers; 714 members; over 6,000 pastoral calls; 42 communion services; 126 baptisms; 84 marriages; 105 funerals; 273 sermons; 63 addresses; 168 new members, besides ten other departments.

Ministers will find this an excellent little volume to carry with them at all times. It contains nearly 200 pages and is bound in black leather, size 3½ x 5½ inches. Very convenient to carry in pocket.

Price, prepaid, only50 cents

OLIVE BRANCH OF PEACE

AND GOOD WILL TO MEN

Elders S. F. Sanger and D. Hays

An interesting history of what the Brethren and Mennonites endured
during the Civil War period because of their Anti-war principles.

"Upon the whole, the object in publishing this little volume especially
as it relates to the Civil War is threefold: 'First, to give a true and
faithful record of the sufferings and experiences of these Christian People.

"Second, to testify to God's goodness in protecting them.

"Third, to strengthen the faith of Christians who may yet be re-
quired to suffer persecution for the sake of Christ and his Gospel of good
will to men.'"

One of our agents reports: "I took 12 orders for the book in one
hour. It sells on its own merit." Ask for terms to agents.

Bound in cloth. Two hundred and thirty-two pages. Back and side
title stamped in gold. Illustrated. Do not fail to order a copy.

Price, postpaid,75 cents

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

Ho! for Canada

It is not the purpose of the CO-OPERATIVE COLONIZATION COMPANY to slacken interest in its Colony at EMPIRE, California. This colony is now well under way; colonists are moving in and are well pleased and the work is moving along satisfactorily. But as the policy of this company is,—“CHURCH EXTENSION BY COLONIZATION,” steps are being taken to locate a colony in the Northwest.

After considering the various sections offered for settlement, the Directors at a recent meeting decided to locate

Colony Number Two Near Portage la Prairie, Manitoba, Canada

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its nearness to good markets,—only 56 miles from Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Manitoba.
6. The Low price of land, when quality and location is considered. These lands are now ready for settlement, are low in price and will soon be taken.

Join our Colony Number Two, secure a good farm in a prosperous section with good, nearby markets, excellent transportation facilities, where School and Church privileges are assured, and among people with whom you are acquainted. For fuller information, dates of Land Seekers' Excursions, etc., address:

AT HALF PRICE WHILE THEY LAST

The Sunday-school Lesson Bible Chart for 1909 has been welcomed in thousands of homes, offices and schoolrooms as one of the most timely and helpful of all recent Sunday-school literature. It is a wall chart of 56 pages. One page for each of the 52 Sunday-school Lessons of the year, and 4 pages of splendid songs. Size of chart is 13x20-inches, and the type can be read at a distance of 10 or 15 feet.

Each page contains the full text of one of the lessons, the Golden Text, the Home Readings, Three Teaching Points, Subject and Scripture references. If hung on the wall at convenient place, it will stimulate Bible study, stir up new interest in the Sunday school and create a healthy spiritual atmosphere in the home.

We have less than 20 charts on hand which we will dispose of at one half the regular price. Order today. Only 25 cents each, postpaid.

Mr. Jonas R. Trimmer Writes of Miami Ranch

Mr. Trimmer is a man of far more than ordinary learning and experience, especially along irrigation lines. He expresses the sentiment of other representative citizens of Miami Valley.

Miami, New Mexico, May 25, 1909.

Farmers Development Company, Miami, N. M. Gentlemen:—

It was not until after I had traveled in many sections of the United States, especially in the arid and semi-arid portions of Texas and the Pacific Coast from Southern California to the Canadian North-west, that I decided to locate on Miami Ranch. I had spent some time in the Republics of Mexico and Guatemala as well, but for an all-around proposition I consider this section as good as any I have investigated.

The climate is ideal and healthful and soil fertility is A-1 and will produce most anything adapted to the Temperate Zone. I find the local markets far from being supplied, substantiated by the facts that produce, provisions and canned goods are nearly all shipped in from surrounding and other states.

Since I have located here and studied soil conditions, I find them remarkable. The centuries of action of the elements has eroded and washed from the mesasslopes vast amounts of rich humus and placed a deposit of from ten to fifteen feet upon the land I acquired. The soil composition is just sandy enough to make it pulverize and cultivate nicely, free from alkali and as to moisture retaining qualities it is marvelous.

Before locating, I studied the market question thoroughly, and situated as we are here, we will be able to compete with any section, raising similar products to those of Miami. Our altitude and climate brings our crops to maturity at a time when the vast section of country to our south and east are in the market for same, thus assuring unlimited demand.

Miami Valley suits me and judging from what has been accomplished here in a short period of time, I feel confident we will be flourishing with the older sections, especially where irrigation is practiced.

Miami is a proposition that the investor and homeseeker can feel safe on; we have the water, the first essential in a semi-arid country, our rights are perpetual, backed by legal government rights.

Your company is certainly giving fair treatment to settlers and are making both interests mutual and all that can be expected.

Thanking you for your hearty co-operation in the past and sincerely trusting for a continuance of same, I am

Very respectfully yours, (SIGNED) Jonas R. Trimmer.

Don't wait. Come and see. Excursions via Atchison, Topeka and Santa Fe Railway September 7 and September 21. \$30 from Chicago, \$25 from Kansas City, \$11.65 from Denver, to Springer, New Mexico. Write or wire us before starting.

THE INGLENOOK

Vol. XI.

August 31, 1909.

No. 35.

MY FIRST SCHOOL

JOHN W. WAYLAND

INASMUCH as the INGLENOOK is this year devoting a good deal of space to school life and school work, I have ventured, with the encouragement of the editor, to write this sketch of my experiences. The whole account must necessarily be very personal; and, even at the risk of being considered egotistical, I shall not spare the use of the pronoun, first person, singular, when it seems to fit in naturally. "We" shall not be charged with anything for which I alone was responsible.

It was about twenty years ago that I made my debut in the "ancient and honorable" profession of teaching. In July or August of that particular year I had attended the examinations at the county-seat, where, for the first time in my life, I wrote out answers to questions on the various subjects of study. So far as I now recall, I had never taken any sort of written examination before. The whole proceeding occupied the greater part of two days; a definite period of time, say from half an hour to an hour and a half, being allowed for each subject. It all was new to me then, and the apportionment of time seemed liberal enough, but in looking back now, after more experience, and after having had a few examinations that have consumed a whole day on one subject, I cannot help wondering a little at my early ability (?).

There were other interesting phases to that first examination. I remember distinctly that I walked practically all of the twelve miles, each way, between my old home and the county-seat. The days were long, as well as hot, in that season of the year; so that, rising at four o'clock on the morning of the first day, and eating a hasty breakfast that my mother prepared, I had ample time to walk the dozen miles and be on hand at the opening of the examinations at nine o'clock. The second evening I got away from town at three or four in the afternoon, and reached home before dark.

Then came the suspense of waiting for a report

from the county superintendent. A cousin of mine, who lived on an adjoining farm, and who had taken the examinations at another town, was also waiting to learn his fate. Many were our anxious conferences together. We tried by every known method to estimate the degree of probability or chance upon which we might base our hopes of getting a certificate.

I forget now which of us heard from the superintendent first; but one day I received from the postoffice a large envelope that I at once recognized as the one I had myself stamped and addressed a month or so before. I was almost afraid to open it; but finally I cut open one end with great care, and was much elated to find that it really contained a teacher's certificate. The grade was about as low as it dared be, but I nevertheless felt that I had not failed altogether.

Then came the final negotiations for a school. The country schools of my district at that time were open only five months in the year; and all the better places were secured in advance by the older teachers. There was one particular place that was notorious as the worst place in the county. The school there was always or nearly always given to a greenhorn or to one who had demonstrated his general unfitness at other places. This may explain in great measure why the particular school in question had a bad name. I was hoping that I might get another school to start with, but I didn't. The district board sent me to the place that was most dreaded by the novice. On the school register it was known as "Willow Grove"; but in the common speech of the surrounding country it was called by another name.

Willow Grove was about three miles and a half from my home. I lived on one high hill, and about a mile eastward was another; three miles further east was the mountain: the beautiful Massanutten Mountain, stretching along in a blue, even ridge against the sky line, in plain sight for fifty miles. Of all the mountains I have ever seen, none is so beautiful as

that one, the one of my earliest memories. About a mile from the mountain flows the river; and about half-way between the mountain and the river was the little log schoolhouse, where my first pedagogical experiments were to be made. I think it is still standing there; and it now holds a tender place in my heart, like the mountain that towers above it, and the sparkling, murmuring river that flows near at hand, in the valley.

About a week before the time for school to open for the winter, I borrowed a horse and rode across the country to the foot of the mountain, and going around to the homes of my patrons notified them that "on next Monday morning" school would begin. At the time appointed I was at the schoolhouse, and so were about fifteen or eighteen boys and girls, ranging in age from five years to fifteen or sixteen. A little later in the autumn a few older boys and girls came in. The date of opening was, I think, the 27th of October.

Now, the surprising thing in this story is that I had no notable adventures: at least, not in the schoolhouse. I was expecting all sorts of trouble, but it did not come. Not even a practical joke was attempted by the pupils or the young men of the neighborhood, so far as I know. One of my recent predecessors had had his life made miserable. For example, one night when he had a spellingbee a disturbance was made by some of the boys, who of course were near the door, and darted out as he went toward them. Being of a pugnacious disposition, he ran after them in the darkness some distance, much to his discomfiture; for the youngsters had prepared the way by driving stakes on opposite sides of the narrow path, and stretching across it pieces of strong twine called "tar rope," used for tying corn fodder. The result of the chase may be imagined with sufficient vividness, and need not be described.

Just why I was not visited with the usual persecutions would perhaps be difficult to explain, for the ringleaders of former years were still on hand. I found, however, that many of the parents and pupils had conceived the notion, whether justly or unjustly I cannot say, that some of the former teachers had maintained toward them a sort of snobbish attitude. This, of course, was keenly resented. The people were simple in their ways, living mainly in small houses with rude surroundings, wearing rough clothing and doing heavy labor with their hands, but they had at the same time a keen sense of justice and personal worth; and they soon detected any disposition toward them of disdain or superciliousness. They wanted to be credited at their true value, and were keenly appreciative of sympathy and earnest efforts for their welfare. I found them all good people, who welcomed me to their homes, showed me many favors, and became my permanent friends. In after years a

small church was built beside the old schoolhouse, and the place became noted as a center of zealous Christian endeavor. Some of the most desperate young fellows became leaders in the work of church and Sunday school and the one who had been counted the wildest of all was the mainstay of the little congregation at the time of his death, six or eight years ago. I do not speak of all this to imply in any degree that my work accomplished all or any of these results; I could name others who did much more; but I relate the circumstances in order to give an illustration of the real worth that is often to be found in unpromising surroundings, and in order to make an appeal to every young teacher, man or woman, for straightforward honesty and sincere sympathy in dealing with both children and their parents. Men and women, boys and girls, like to be respected and valued at their true worth; and they will often respond wonderfully under such treatment.

I had never taught school before, except as a substitute for a day or two; but I had some notions of what I ought to do and how I ought to do it. These notions, while they were crude enough, were not as bad as might have been expected from a youth of eighteen, who had never attended a normal school and who had never been a student in any sort of a school for more than six sessions of five months each. I had gathered some ideas from observation, as I saw my teachers conduct their classes and manage their schools; and I had done some reading in pedagogical literature. Page's "Theory and Practice," the "Blackstone of Pedagogy," was in my father's small bookcase, and I had read parts of it. I had subscribed for two or three pedagogical journals, published in New York, and had derived some benefit from studying them, though I realize now that often I failed to understand much that they contained.

One thing I did that none of my teachers had ever done, so far as I now recall: I gave each boy and girl a monthly report of work, deportment, and progress. I remember distinctly that I procured at some pains sheets of colored paper, of different hues, and used these in making the reports. With great pains I wrote them all out by hand, sometimes using a blue or red pencil to increase the artistic blending of colors. The children liked the bright effects, I suppose; and I, being not much more than a child, did not know how badly I was violating good taste. The nearest printing press was ten miles away, or I might have proceeded differently.

My nearest approach to adventure came on the road, rather on the river, as I went back and forth evening and morning between the school and my home. Since my mother was alone when I was away, it was necessary for me to be at home every night. During the first two months or so I rode horseback,

and forded the river. There were three fords that I could use. When the river was at its ordinary depth I would ride across at a narrow place where the water was deep and swift, since this was the shortest route; but when rains or melting snows flushed the stream I had to go farther around and zigzag across where the channel was broad and shallow. I carried, slung over my shoulder by a strap, one side of an old pair of deerskin saddle pockets. In this sort of knapsack, that I had rigged up myself, I stored my books, a small clock—I had no watch—my noonday lunch, and a small sack of oats, the contents of which I fed my horse at noon. I kept the horse in a shed several hundred yards from the schoolhouse.

About the end of December, came a heavy snow, one of the heaviest I have ever seen in Virginia; and the drifts completely filled the roads at many places to the top of the fences, where the roads ran east and west. The road across the hills and down into the river bottoms, by which I went to my school, was thus rendered impassable. Since it was not a public road, there was little chance of its being cleared until the melting of the snow. The surface of the drifts was solid and strong enough at most places to bear a man's weight; so I began walking. Some of my patrons, who lived near the river, would ferry me over morning and evening in their small boats.

Crossing in this fashion was sometimes rather exciting; for the river was often flush, and was sometimes filled with drift. Besides, the crossing place most used was just below an old dam, where the water was thrown up in a great turmoil of ripples. In this part of the current the prow of the boat always had to be turned almost directly upstream; then the force of the churning water, striking the side at a sharp angle, while the boatman paddled vigorously, would throw the craft quickly across into the calmer water near the bank. The first two or three times I was taken across in this way I was somewhat nervous, but I soon came to enjoy the violent rocking of the boat and the swish and swirl of the foaming water.

Pretty soon I made a boat for myself. One Saturday I got some pine boards of my uncle, and constructed the rough craft, completing it in one day. It was about fourteen feet long, three feet wide in the middle, two and a half feet at the stern, and about eight inches at the bow, with the bottom sloping up sharply to the front. As well as I remember, it was about ten inches deep. When it was finished, my cousin and I hitched a horse to one end and dragged it to the river on the top of the snow. For my crossing place I chose a point some distance below the old dam, where the water was wide and deep, and the current was ordinarily slow.

Nobody on that part of the river used double oars. Instead they used a short, broad paddle which served

equally well in propelling the boat and in bailing out water—when one knew how to handle it properly. I became very expert in a month or two in using the paddle, and think I must have hit upon the peculiar paddle stroke commonly used by the American Indians, by which the strokes are all delivered from one side of the boat without causing the boat to swerve from its course. I had always observed that men paddling boats would invariably change the paddle frequently from one side of the boat to the other, to keep upon the desired course; and that by this method time would be lost, not only in changing the paddle from right-hand to left-hand, and vice versa, but also in the concomitant zigzagging of the boat from side to side.

By a little experimenting I was able to sit or stand in the stern of the boat, and propel it directly upon any desired course by paddling all on one side. Each stroke ended by turning the paddle out of the water edgewise, while using it as a lever against the side of the boat. This stroke I found very satisfactory in every respect.

Having once begun walking and ferrying the river in my own boat, I kept it up the rest of the session. I got along without mishap, though one morning when the river was unusually flush I came near being carried down the stream by the current. I was finally able to land by catching the ends of some overhanging branches of trees. This was before I had learned much about controlling the boat. My long tramp across the hills morning and evening seemed an excellent tonic. I could, after a while, make the round trip of seven miles, with an interval of six hours spent mainly on my feet in the schoolroom, with scarcely any sense of fatigue. Never, so far as I know, have I enjoyed better health.

It is now doubtless time to bring this rambling sketch to a close. If boys or girls in school, or any young teacher struggling with difficulties, shall find anything in this early experience of mine to interest, entertain, or encourage, I shall be very glad indeed, and shall try to forget any possible charges of egotism that may be made against me. At the time of which I speak many of the experiences I have related seemed hardships; but now I have ceased to remember them in that character. As I was learning the improved paddle-stroke, I may have been learning to "paddle my canoe" in more ways than one; and as I was finding friends where I had expected to find hinderers of my work, I may have been learning a valuable lesson of life.

NEVER to tire, never to grow cold, to be patient, sympathetic, tender; to look for the budding flower and the opening heart; to hope always, like God; to love always—this is duty.—*Amiel*.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXXII.—Walking About Jerusalem.

"In those holy fields,
Over whose acres walked those blessed feet
Which fourteen hundred years ago
Were nailed
For our advantage,
To the bitter cross."

—Shakespeare.

In the Church of the Holy Sepulchre I went into the little tomb declared by the Roman Catholics and Greeks to be the tomb used by the Savior. I did not know at the time just what the Protestant Church thought about the tomb, and I allowed myself, under the stimulus of gaudy symbols, expensive ornamentation and music, to enter into the solemnity of the place, reverently sauntered about the underground part of the church, watching with great interest the quaint ceremony of the monks who marched down from the church above and went straight toward and up to the tomb, one or so entering and performing some sort of religious devotion on the inside. So much was I affected by the association of the thought of Christ's death, burial and resurrection near here, I could not but shed tears when I knelt within the tomb, and I found it a fountain of sacred thoughts that made my heart tender and my judgment of men more kind.

Before I left the church several things happened that led me to doubt the authenticity of the tomb. One was the rude manner in which I was accosted by one of the leader monks in charge. I stayed too long in the tomb to suit his fancy, or I was interrupting the solemn cortege of the pious monks. Or,—and I think this may have been the real cause,—I did not drop enough of coins into the alms box as I passed around. So he ordered me out of the tomb. It might

have been his great zeal that made him act roughly, but he should have known that the tomb, false or true, was doing me more good than it was doing the whole train of self-righteous monks of a past age who walked around in long brown gowns, carrying crosses and candles and looking like lost souls on the planet of Mars. If he

really believed it to be the real tomb, I think that my zeal for it would have found an echo in his own honest zeal and he would have been more tactful and considerate in getting me away so that the cowed monks might pass unbroken. He showed the wrong spirit, and I am confident that the spot, walled up and made to suit the people of the church who have fastened so many frauds upon a superstitious people, has been foisted upon the world by quacks.

Soon after, I visited the tomb called the Garden

The Turkish Soldier Is Here Included, with Mr. Spickler, with Shoes in Hand, Near Dome of the Rock.

tomb, outside of the city walls, near the Place of the Skull, in a real garden. "In the place of the crucifixion there was a garden, and in the garden a new sepulchre, wherein no man had yet lain. Here they laid him." The garden was enclosed by a rough board wall. At the wooden gate or door, too high for me to see over it, I knocked. The gardener himself opened the gate. He was keeping it in condition, and in order to defray this expense, a small charge is made of tourists. But so soon as he learned that I had started penniless on my tour he refused to take a single penny, though I offered him money, time and again. As if his very modesty shrunk from my camera, he slipped behind the small fig tree, crossing his hands in simple humility, so that we have only a partial view of his fine face. He believed. He believed that the tomb here was the real one. He was here, not

to defend it *from* the people, but to preserve it *for* them.

Then he showed me the tomb. Like a little child in guileless simplicity he pointed me inside.

With my cap in my hand, I passed into this tomb. There was no pomp or show visible. It was absolutely devoid of ornamentation or marks placed there by modern men to create wonder or to work upon the imagination. No blazonry of trumpet, candle or gilt in this tomb. That's why, for one reason, I believe it is the real one. The vault cut into the rocky wall must be about seven feet square, the right side below the little window up from the door being the place where the tomb had been hewn out for the repose of an adult. It was still unfinished, for you could plainly see where the workmen had left off cutting the stone. The Bible says it was a new tomb,—that no one had yet lain in it. Of course it was new. That's why the writers of that time knew so positively that no one had yet lain in it. They noticed that it was still unfinished, and if Christ had been laid in a tomb that was still being worked out of the rock, as this one plainly bears evidence in its unfinished portions, then everybody would at once know that it was a new tomb.

Here I also knelt, and while my religious fervor was calmer in its emotion, I really came away with the certain belief that Christ did lie right here, in this very spot, for a part of three days, as the Scriptures say. From this place I believe the Man of Glory came into his full heritage on the glad morning of the resurrection. But whether here or there, or somewhere else, it matters not to me. I know that he did do as the Bible tells us, and that is enough for my soul. Again, I add another point in argument for this tomb, and that is the fact that the stone shows great age. It has weathered for centuries. Besides, we know that the method of chiselling out the rock as here used was in use then, but is not in use now. Lastly, as to this sacred spot, for it is near the site of Golgotha, and is sacred whether the tomb or not, I noticed as I stood there alone on that quiet afternoon, that the very stone facing the tomb in which the Master might have rested, as if in great agony of grief had poured through its veins mineral discolora-

tions of purple, blue and crimson, the very rocks sweating great drops of blood as they cried out in agony of grief.

Jerusalem is a big city and its streets themselves are hard to find. A guide is therefore almost a necessity. The U. S. consul, Dr. Selah Merrill, furnished me a kawas or guide, and the Turkish Government a soldier, so that there were four of us in our party, three being required to show one man over the place. The man in citizen clothes is a temperance man belonging to the Mt. Zion temperance workers. He wore on this walk a red fez to show that he was a Christian, while the kawas, with richly upholstered jacket of heavy gold embroidery and flowing sleeves, wore a fez carrying a tassel, the tassel signifying that he was a Moslem. Children were

playing in the streets as we passed along over the same streets through which the Savior is said to have walked when he left the Judgment Hall. Awnings were stretched above the narrow streets to shield the shopkeepers from the burning afternoon sun.

It is good that we as a people have such a good consul in the most important city of the world. Dr. Merrill is a great Bible student, and his travels personally over the Holy Land, and his enormous collection of fine pictures showing every

phase of biblical custom as these may be seen today in the various seasons of the year and in the many different sections of the country, make him an ideal consul for the American student to the Holy Land. Besides being a great scholar he is a most sociable and wholesome friend, entering at once into the sympathies of the tourist.

The whole temple area is laid with flat stones, between which scraggy grass tries to grow. The temple is forever gone. Jesus said it would go. "Not one stone shall be left upon another." He was the one Man who knew exactly what he was talking about. With my own eyes I saw that his words were entirely fulfilled. There was no question about it. It is today a great waste, where no buildings of importance are to be seen,—none save the mosque. But it doesn't hurt anything. It says neither yes or no to the onmoving of history.

"Ye shall know the truth and the truth shall make you free." The truth came, Jesus the Man, the visible

Probable Tomb of the Savior.

church with free liberty to read and think without the meddling of prating priests, and so this went. Things always go when God gets through with them. Down by the big wall where the heavy, long stones lay like sleeping giants of despair, I saw the Jews, young and old, come to rave and tear their hair over a mistaken idea that the Master had not yet come, too stubborn, after two thousand years of persuasion, to believe that it was they who killed the very Man they now long to have come to their city to relieve it of the foreign devil.

With the old but imposing wall of Jerusalem as a background I jumped ahead of my three guides and caught them as they walked, nearing an old well that must have been used for thousands of years. Here the apostles doubtless had many a drink, and the Savior must have been standing near when he saw some one buy a drink of water from the water carrier,

or sought to draw, with difficulty, a drink from its depths. Seeing this he said, "Come unto me, and I will give you living waters, which if any man drink, he shall never thirst."

The curbing was worn away for many inches, and historians believe that the well was a favorite drinking place in the time of the glory of the great temple.

My guides next took me below the temple area where I was shown the stables of Solomon. The holes were still seen in the rock mangers, much worn, showing where Solomon probably tied some favorite steed, patting it, as he passed along through his great underground barn.

HOLMES, THE PHYSICIAN, AUTHOR AND POET

DALLAS B. KIRK

"Know old Cambridge? Hope you do.—
Born there? Don't say so! I was too."

—Holmes.

AUGUST 29, 1809, Oliver Wendell Holmes was born in Cambridge, Mass. His father, Dr. Abriel Holmes, was a clergyman and author of "A History of Cambridge." Sarah Wendell, daughter of Hon. Charles Wendell, was his mother. The Wendells were a Dutch family and likely the poet inherited his thrift, industry and caution from them.

His ancestry can easily be traced back to Mrs. Anna Bradstreet, first poet of the New World. Her book, on the title page of which she is called "The Tenth Muse," was published at London in 1650, being the first volume of original verse by an American. Other descendants of Mrs. Bradstreet are Channing, the two Danas and Wendell Phillips.

Young Oliver attended school in Cambridge from the age of ten until fifteen. He read much in his father's well-filled library. Later in life he said, "Books are the negative pictures of thought. . . . A scholar must shape his own shell." And Oliver did shape it well, as his after life proves it.

Holmes attended Andover Phillips Academy about one year. One of his classmates here was R. H. Dana, Jr., afterward author of "Two Years Before the Mast."

Holmes entered Harvard in 1825. He was joint author of "Poetical Illustrations of the Athenæum Gallery of Paintings," which was published in 1827. Also joint editor of "The Harbinger," published in 1833. He was graduated from Harvard University in 1829 when only twenty years old. While here he had contributed twenty-five poems to the *Collegian*, the college paper.

He started to study law but gave it up for the study of medicine. He spent from 1833-35 in Europe, continuing his medical studies.

His first collected edition of poems, forty-five in number, was published in 1836. "Old Ironsides," that lyric with the ring to it and a favorite of every patriotic schoolboy, was in the collection. This year Harvard made Holmes an M. D. Dr. Holmes was professor of anatomy and physiology in Dartmouth College, N. H., in 1839. He resigned two years later.

As author of the "Boylston Prize Dissertations" (1838) he won three medals.

Many pleasant hours Dr. Holmes spent in Boston with Sumner, Motley, Everett, and Daniel Webster.

June 16, 1840, Oliver Wendell Holmes married Miss Amelia Lee Jackson, daughter of Judge Charles Jackson of the Massachusetts Supreme Court. His first residence after marriage was at Boston, where he lived for about twenty years.

Three children were born to Dr. Holmes,—Edward, a lawyer, Amelia J., now Mrs. J. T. Sargeant of Beverly Farms, near Boston, and Oliver, Jr., also a lawyer. The latter was born in 1841, graduate of Harvard in April, 1861, and immediately joined the Fourth Infantry and went to the front. Was wounded in the battles of Ball's Bluff and Antietam. After the war he practiced law in Boston. Author of valuable law books. Professor of Harvard Law School and Justice in the Supreme Court of Massachusetts. You will see by this brief review of the junior Oliver that he is a credit to his father's name.

Holmes, Sr., was one of the founders of the *Atlantic Monthly* and a valued contributor for many years. Lowell was the first editor, but he thought Holmes was more fitted for the place. Emerson, Motley, Longfellow, and Norton were also among this famous group of writers for this magazine.

Dr. Holmes was given a chair in the Harvard Medical School in 1847. He held this place honorably for thirty-five years, resigning in 1882.

In 1852 Professor Holmes delivered a series of lectures on the "English Poets of the Nineteenth Century," such as Scott, Keats, Moore, Wordsworth, etc.

The Breakfast Table books were published from 1858 to 1873. "The Autocrat," leading the series, is the most noted. It beams with the author's sparkling wit, and contains his masterpiece in verse, "The Chambered Nautilus," with

"Its irised ceiling rent, its sunless crypt unsealed."

Also "Latter-Day Warnings" with,

"When berries, whortle, rasp, and straw,—
Grow bigger downward through the box,"

is a lesson which can easily be applied to the present century.

1861 first saw "Songs in Many Keys," also the romance of destiny, "Elsie Venner." While this weird New England story is fascinating it contains that peculiar smell from a physician's office. The plots are threadbare, but Elsie's trials and troubles show the author's theory of heredity as well as analyzing the condition and vast difference of mental states.

The class poem for 1854, "The Old Man's Dreams," is worth a careful study. "Songs of Many Seasons" appeared from 1862-74. The memoirs of Motley and Emerson are standard works. These were two of Holmes' best friends.

"The Guardian Angel" was issued in 1867. It does not rank even as high as "Elsie Venner." This, as well as nearly all of Holmes' books, was written to combat some theological dogma, and he ranks as a satirist rather than a novelist.

Dr. Holmes' scientific works appeared from 1838 until old age. He wrote poems about such noted, world-wide people as Shakespeare, Burns, Words-

worth, Grand Duke Alexis, Washington, Webster, Lincoln, Grant, Bryant, Longfellow, Lowell, Whittier and Harriet Beecher Stowe, author of "Uncle Tom's Cabin."

It has been said of Dr. Holmes' private library, that "it is rich in rare medical treatises and literary treasures." The student can easily find references to these books in nearly all of Holmes' works. When the author had passed his seventieth birthday, December, 1879, the publishers of the *Atlantic Monthly* gave a breakfast in honor of the Autocrat. H. O. Houghton and W. D. Howells presided. Almost every American author was present and those who could not be sent a letter of regret and congratulation. Dr. Holmes read "The Iron Gate," which ranks next to his masterpiece in its fine poetical description of old age with its,

"Youth longs, and manhood strives, but age remembers."

Other poems were read by Julia Ward Howe, author of "Battle Hymn of the Republic," Helen Hunt, Whittier, Trowbridge, Stedman and others.

The spring of 1882 was a sad one in Boston, as both Emerson and Longfellow then crossed the ocean of time. Holmes dedicated a masterly oration to each.

"A Hundred Days in Europe" was published after a visit there in 1886 and shows the ripe culture of its author.

His wit was of the pleasant sort and did not tire anyone.

In 1890 Dr. Holmes wrote these lines to Tennyson (England's poetic star of the Victorian age and only twenty-three days younger than himself): "I am proud of my birth year (1809) and humbled when I think of who are my coevals." Then he mentions briefly some facts concerning Darwin, Lord Houghton, Gladstone, Mendelssohn and ending with "and the Laureate whose 'jewels five words long'—many of them longer—sparkle in our memories."

He lived to the good old age of eighty-five, dying October 7, 1894, in reality being "The Last Leaf Upon the Tree."

Holmes lived in a brilliant intellectual epoch of American literature, which up to the present time still remains America's Golden Age.

He excelled as a writer of humorous poetry. His medical lectures were sometimes reprinted in the English papers. Other periodicals besides the *Atlantic Monthly* which published articles from his pen were, *New England Magazine*, *North American Review*, *International Review*, *Boston Medical and Surgical Journal*, etc.

A number of his poems have been set to music; such as, "Welcome to the Nations," "Hymn of Peace," "Evening Thought," "Angel of Peace," etc.

Rockton, Pa.

CLOSING VACATION DAYS.

G. WILFORD ROBINSON.

VACATION days are drawing to a close. To many of us they are the happiest of the year. They are to the small boy whose roving and daring nature seeks freedom—especially freedom from the rules of schoolmasters and the tedious task of books. To him it means liberty with all nature as his realm. Liberty to roam from morn till night, and his fearlessness in danger makes him the constant anxiety of his admiring parents.

He explores the hidden nooks, scales the lofty peaks, discovers the home of the bumblebee, and climbs the highest trees, which intrusion greatly excites Mother Squirrel who is alarmed for the safety of her children. He is conscious of his own prowess and astonishes you sometimes by the feats which he performs.

These are the days of joy which light up the boy-age with splendor; days which will be in after life fond reminiscences of the past. Aye, my boy, you are in the springtime of life. Play on, enjoy life and smile, for the time will come when cheerful spring will die into the heat of summer; summer into the frosts of autumn; and autumn into the cold rains of winter. The scorching rays of summer will soon begin to descend upon your flowery springtime. These things you do not know but time will reveal them unto you. So, like the springtime, these vacation days are passing into the busy days of school.

But now the scene has changed. The small boy is not the only one who has enjoyed freedom from the thralldom of teachers. To the college boy and girl these have been delightful days and pleasantly spent. And I might add, profitably spent, for along with the pleasures there has been a certain amount of toil and labor which insures the return of the student for another term. But to some it might seem as if it all had been toil and no pleasure. But the consciousness of victory shall be a pleasure at least. To those more fortunate there probably has been entire freedom, with the privilege of travel, reviewing old scenes and seeing new ones, and this has been the source of much knowledge and recuperation for the long hours of study which are before them.

— As these days are drawing to a close the student is dreaming of again meeting old schoolmates and teachers. The summer at home with loved ones has been a pleasant one and the thought of leaving this association is one of sadness to their minds. But the unseen influence of the home they will carry away with them.

But there will be some to whom the breaking of home-ties will be a new experience. These should have the sympathy and help of their fellow students. Some will stand this exposure and return the same

as before. But there are others to whom the absence of a parent's devotion and home affections will produce a shock which will last forever. There are chords of affection which a rude or unnatural tension will break, and break forever. Be careful then, scholar, how you treat your schoolmate.

When the vacation is over and you again return to the old familiar place, you will find that disappointments await you as well as surprises. There will be new acquaintances to be made as well as old ones to renew. When you look around among them you will find that there are some of your old friends who are missing.

"Where is Charlie?" "Where is Mary?" "Gone." What a feeling that word brings to you—"gone." Many times during the day it comes into your mind with the pang of an arrow—"gone." Your friends who have comforted and cherished you—they are gone. And as you journey onward without them you realize that life is like a bubble which soon bursts and passes away.

Vacation days are drawing to a close,—yes, they are almost GONE.

**PRINCIPLES OF AGRICULTURE.**

JOHN H. NOWLAN.

Chapter Two.—Treatment of Soil.

THE various kinds of soil are found mixed in various proportions. When the soil is left near the place of formation the change from one to another is often very abrupt. In the Blue Grass region of Kentucky the soil weathered from limestone is very fertile, while to the east and south the soil formed from sandstone is very poor.

On the other hand the transported soils possess a greater variety and are more suited to diversified crops.

Loamy soils are warm and will hold moisture well, hence are best for general farming.

Clay may be improved by the addition of vegetable matter, as this adds humus. This is also good for sand. In fact, if it were not for the expense barren, sandy spots could be thus reclaimed.

A repeated growing of any one crop or of those of a similar kind is apt to exhaust the soil by using all of the available plant food of one of the essential elements of the soil.

While plants may be starved, they may also be killed by too much food. You know that salt applied heavily will kill grass as well as will also other plant foods. Plants can live on a solution as small as one part solid food dissolved in one million parts of water, while more than one in a thousand kills them.

Salt, lime, or ashes applied heavily is one method of killing noxious weeds.

Jethro Tull was a successful farmer of England many years ago. Farmers were not careful in the

preparation of the seed bed but planted their crops carelessly, and harvested indifferent crops. He noticed that when the ground was carefully prepared and the crop well cultivated the yield was good. His explanation was that "tillage is manure." Since his time we have learned that though his methods were correct his reasoning was wrong.

Breaking the soil causes more air spaces, thus enabling the air to come in contact with more of the compounds of plant growth.

The chief agent in this work is carbonic acid, one of the waste products of the animal kingdom.

Deep plowing allows the air to penetrate deeper and thus bring more soil in contact with the carbonic acid in the air.

We see that plants in order to use the plant food must have moisture. The water enters at the roots, passes up the stem, and out through the leaves. You have perhaps seen the corn blades rolled up on a hot day. That is nature's method of checking the stream of water escaping from the plant and thus tide it over a dry spell.

As a usual thing enough water falls in a season to suffice for a crop if it were all available. But much of it runs off at once, and what remains is constantly evaporating. To conserve this moisture and give it to the plant as needed is the problem for the farmer. Moisture is next to temperature the controlling factor in the growth of plants.

Not only enough moisture, but properly distributed throughout the season. Plants may be injured in a season showing a high total rainfall by not having rain at the stage when most needed.

It should be the farmer's aim in all cases to conserve the moisture—in arid regions to lessen cost and labor of irrigation, and in humid regions to protect the crops against drouth.

How is this to be done? Subsoiling is one of the most important of these means. The Wisconsin Experiment Station thus states the benefits of subsoiling:

1. Increases storage capacity.
2. Increases rate at which water will sink into the soil.
3. Decreases rate at which water is brought back to the surface.

Subsoiling to be of any benefit should leave the ground loose. The soil is the storehouse on which the plants draw for water. The water sinks into the earth and as that at the surface is evaporated it rises because of the capillary attraction of the soil. To see how it is done take a small tube, for instance a broken thermometer, and place one end in a vessel of water. At once the water will rise in the tube. The smaller the tube the higher it will rise. This is the same principle that causes oil to rise in the wick of a lamp.

When water reaches the surface of the earth it evaporates. What we want is to prevent the evaporation and consequent loss of water. How can this be done? Nature has shown us how. When the ground is dry overturn a board, stone, or other object and you will find the ground beneath it moist. Why? Simply because the wind and sun could not reach the moisture brought to the surface.

But we can't cover our fields with boards and stones. No, but we can find something that will do just as well. When the little tubes through which the water rises are broken it must stop on its journey toward the surface. If we keep the surface covered with a layer of dust, a dust blanket, if you please, it will do just as well as if we covered it with boards.

While water is essential, it is possible to have too much water. Then the land should be drained. The benefits of drainage are many. Removing the water allows the air to penetrate deeper, the oxygen promotes decay, and thus prepares more plant food. The top soil is deepened. Deeper soil renders more plant food available. It improves the texture of the soil. The soil is more porous and the roots go deeper into the earth.

Soil that is dry is easier warmed and can be worked earlier. Germs grow and change the unavailable nitrogen into nitrates, which are available. As the roots go deeper they are better able to endure a drouth.

Sandy soil does not need drainage but with clay it is different.

On high ground the water sinks into the soil or runs off as surface water, but on low ground it is found at or near the surface. This is what is known as the water level. If the water level is at or near the surface the crop will "drown out." The plant uses water but it is capillary water and not the "free" water, just as a lamp does not use the free oil, but the oil that goes up to the flame by way of the wick.

All authorities agree that where the water level is low enough tile drains are best because of their permanency, cheapness in the long run, noninterference with cultivation, and aid in holding the fertility of the soil.

Bulletins. Much valuable information may be found in the bulletins mentioned in the previous article.

ALL that I have accomplished, or expect or hope to accomplish, has been and will be by that plodding, patient, persevering process of accretion which builds the ant heap particle by particle, thought by thought, fact by fact. If I was ever actuated by ambition, its highest and warmest aspiration reached no further than the hope to set before the young men of any country an example in employing those invaluable fragments of time called "odd moments."—*Elihu Burritt.*

NATURE STUDIES

DOWN BY THE RIVER.

MARTHA SHEPARD LIPPINCOTT.

I gaze on the river that peacefully flows
Through valleys around me, and nobody knows
The pleasure it gives me to watch the fine scene;
The river, whose banks are all shaded with green;

Where grasses and trees and the flowers repose,
And often we're finding the pretty wild rose.
My heart fills with rapture each time I behold
The mountains above, that are centuries old.

The river and mountains and blue sky above,
These are the surroundings to make the heart love
And feel all in tune with the beauty around;
For when in their presence sweet peace will be found.
Philadelphia, Pa.

A HAPPY FAMILY.

MAUD HAWKINS.

THE little animal known as the prairie dog, which inhabits the far western States, is a sprightly, sociable little fellow as far as his domestic relations are concerned, being quite willing to divide his habitation with other animals. For no sooner does he get his little home excavated than a rattlesnake will move in without as much as saying, "If you please" or making any stipulation as to rent. A prairie owl will next come to make his home with him without any written invitation. However, the little dog makes no objection to these strange members of his household, but seems to be satisfied with his lot and lives in peace and harmony with the world, with no evident desire of ejecting his tenants or moving out himself.

Torwanda, Pa.

BURIAL OF OLD PRAIRIE DOGS.

THE prairie dogs at the New York Zoo have a habit of killing off the old members of the colony or burying them alive, and, while there are forty or fifty pups born every year, the whole colony remains no more than fifty in number each year, and there has never been a dead prairie dog found. They dispatch the old members of the colony and bury them out of sight. These funeral obsequies are usually performed in the nighttime, but recently they took place in the daytime. Raymond L. Ditmars, curator of the zoo, thus describes the burial exercises:

"When I got to the dog village," Mr. Ditmars said,

in telling of the incident, "there was a big crowd standing near one end. I pushed my way to the fence and saw the prairie dogs scurrying about. Several were digging nervously in one corner of the corral. Nearby was another group vigorously attacking one of the older prairie dogs, which was not defending himself at all. I made inquiries and learned from several of those who had witnessed the earlier stages of the affair that the attack on the old dog had been going on for about five minutes. He was unable to stand up when I got there. Soon the attacking party left him and ran over to where the others were digging. They all pitched in and dug. In a few minutes they had a pretty large hole. They all stopped at once and several ran back to where the old dog was lying. The other dogs seemed on the point of attacking him again, but when they saw him crawling toward the hole they held back and waited. The old dog reached the edge of the hole and tumbled in, head first; then lay quietly at the bottom, looking up at the other dogs gathered around the edge. In a few seconds the villagers began to fill up the hole with dirt. All took part in this operation. The hole was soon filled and the old dog was covered with two feet of earth. The younger prairie dogs ran back and forth on the filled-in hole, apparently packing down the dirt."

Dr. Osler imitates the prairie dogs in his suggestion of chloroform for the aged. But our civilization has one of the best illustrations in its reverence for and tender treatment of the aged. In the heated competition of life the aged are often pushed from many of the callings by the ambitious young, but in the main old people are treated with tenderness and love. Nothing is more uncomely than ingratitude or neglect of aged relatives, and nothing more beautiful than the sympathy and support that loyal children and relatives give to their own aged.—*Christian Herald*.

AUTUMN'S GAY COLORS.

Now is the time to watch for striking changes in the plant world. Autumn is too full of interest to be a melancholy time, as some poets would have us believe. It is the season when the vegetable world prepares for its winter rest. Just before the trees and shrubs settle down for their long slumber many put on very gay colors, as if to cheer us for the temporary loss of

their bright foliage. The dark green of the oak turns to red or rich brown; the ash, the hickory, the beech, and the birch are tinged with saffron, and the maples are gorgeous in crimson and gold.

Once people thought that plants died when winter came on. Now we know better—the tall tree, the leafless bush, the flowering plants that on the coming of frost wither to the ground have a little bulb or rootlet in the earth which next season will send up a new stem with leaves and flowers. Even the plants that seem to die altogether scatter seeds about them that next year will spring up in their form almost where they stood. Nature knows nothing of death. There is change, long periods of rest, which unthinking persons call death, but the little plants know better, and so they put on their gayest colors, rejoicing that after a long season of hard work they are to sink to rest until the sunshine of another spring shall bid them awake. Look out for the first tree to put on its autumn livery. If you live in the country you will see that it will be either the sour gum tree or the swamp maple.

The swamp maple you may have noticed in the early spring when it showered its tiny red blossoms down on the head of every passer-by. Not less gorgeous than these flowers is the brilliant red which its leaves put on in early fall. Wherever there is wet land you will find these trees, their veins well nourished by the rich sap which flows up from its rootlets, deeply imbedded in the soft wet soil.

The sour gum tree, often called the pepperidge or the tupelo, has an oval leaf, not unlike that of the dogwood tree. It grows to a height of twenty or thirty feet. Its wood is very hard, and is used mostly for wheels, pulleys, etc. Its blue-black berries are a favorite fruit of the opossum, which often climbs the tree to get a feast, and is thereby captured by woodcraftsmen who know this taste of Master Possum. The leaves ripen sometimes as early as August.—*Exchange*.

THE GOLDEN BUG.

WHAT child, boy or girl, is there who does not know what a ladybug is?—that little round bug with glistening red wings spotted with black polka-dots. And what child who has not said,

"Ladybug, ladybug, fly away home;
Your house is afire, your children will burn"?

An old English writer says of this pretty insect: "It is one of those few highly favored among God's harmless creatures which superstition protects from wanton injury."

An effort to trace the source of the tender regard in which the ladybug is held by children in all the countries of Europe has ended in the belief that it is a relic of some ancient cult.

There are many different versions of the hymn which

is repeated to warn the little bug to fly away. In Lancashire, England, where the people speak a peculiar dialect, it runs:

"Gowdenbug, gowdenbug, fly away home;
Yar house is bahnt deown, an' yar children all gone."

The children there call it "gowdenbug" because that is their way of saying "goldenbug," which is their name for "ladybug."

There are places where this same little bug is called "ladycow," or "our lady's cow," and the children then say:

"Dowdycow, dowdycow, ride away heame;
Thy house is burnt, and thy bairns are taen;
And if thou means to save thy bairns,
Take thy wings and fly away."

Then there are other places where this bug is called "Bishop Barnabee," and the hymn says:

"Bishop, Bishop Barnabee,
Tell me when your wedding be.
If it be tomorrow day,
Take thy wings and fly away."

Or else:

"Bishop, Bishop Barnabee,
Tell me when thy wedding be.
If it be tomorrow day,
Take thy wings and fly away.
Fly to east, fly to west,
Fly to them that I love best."

Everywhere it is believed necessary to repeat one of these rhymes over three times, while the ladybug is held in the palm of the hand—the palm of a little girl's hand is thought to be best—and then it will heed the warning and fly away.

In other places this little bug bears the names of "ladybird," "ladybee," "Maybug," "golden-knop," and the "bishop-that-burneth."

It has been thought that there was some connection between this insect and cows, but neither from its habits nor from its history can this be traced. The word "Barnabee" is supposed to come from "barn-bee," because ladybugs gather in large numbers in barns to take their long winter's sleep. And the name "bishop" is thought to come from the robes worn in early times by the doctors of divinity at Oxford University, which were of scarlet velvet with black velvet sleeves and trimmings, and so were something like the coat of the ladybug.

One author has attempted to show that, because the ancient Egyptians revered all kinds of beetles, this one was taken by them as being especially for children, because it is so small, and so harmless and pretty and clean. It certainly never does any harm, and eats only the little bugs which kill plants and flowers; and children have always liked it, so that even the most mischievous boys have felt that they must never do anything to hurt this innocent little bug.—*The Circle*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THE man who talks about "the weather we used to have" is in danger of losing his audience. Any one who has lived through the summer of 1909 knows about as much on the subject of the weather as any old-timer is able to tell him.

THIS week Prof. J. W. Wayland is giving us a very interesting account of his experiences while teaching his first term of school. Many Inglenookers in reading it will recall their own experiences in starting out in the same field, and doubtless could recount them with much pleasure and benefit to the rest of our family. Come on, all ye pedagogues! What have these first experiences for the present day, seen through the light of a decade or two? Who will follow Professor Wayland with a reminiscence of that momentous first term of school?

AMERICAN SCHOOL PEACE LEAGUE.

THE American School Peace League which has for its object the creation and promotion of the peace sentiment among the students of our country, is this year offering two sets of three prizes of seventy-five, fifty and twenty-five dollars for the three best essays on one of the following subjects:

1. The United States the Exemplar of an Organized World.
2. The History of International Arbitration.
3. The History and Significance of the Two Hague Peace Conferences.
4. The Opportunity and Duty of the Schools in the International Peace Movement.
5. The Evolution of Patriotism.

One set of prizes is open to seniors in the normal schools in the United States, the other to seniors in the preparatory schools. The contest will close March 1, 1910, and the prizes will be awarded at the annual

meeting of the league in July, 1910. Mrs. Fannie Fern Andrews, secretary of the American School Peace League, 405 Marlborough Street, Boston, Mass., will gladly give information concerning the details of the prizes. It is to be hoped that those in charge of these schools throughout our land will give encouragement to their students to enter these contests and thus arouse interest in the subject.

NERVES.

WE hear much about people's nerves these days, especially about the terrible condition of the nerves due to this, that or the other thing connected with present-day life. We may do violence to the proprieties and break almost every commandment in the decalogue and a simple reference to "my nerves" will explain the whole thing and not only secure us immunity but a great deal of pity and petting besides. Because of the present popularity of "nerves" and the general familiarity of people with their peculiar nature, we here give a number of extracts from a lengthy article on the subject in the August *Metropolitan* by Hugo Munsterberg. The writer starts out by giving fully and clearly the situation today relating to the nerves and nervous diseases as it appears and as it is honestly looked upon by thousands of physicians and tens of thousands of patients. He mentions the symptoms of hurry and restlessness, the "overflow of useless movements from chewing gum to the ceaseless motion of the rocking chair," the demand for many vacations as compared to the few of past generations, the dependence for recreation on "tickling amusements," the inability to read anything except short, light stories, etc., etc. He also mentions a number of the remedies that have been tried and in many cases been found valuable in effecting cures, or at least partial cures, as it seems well-nigh impossible to effect an entire cure when one has once learned that he has such things as nerves.

Just when the reader has settled it in his mind that the writer is simply adding his testimony to that of thousands of others who have deplored the terrible condition of our nerves, he is startled by this plain statement: "I do not hesitate to claim that this story is imaginative from beginning to end." The author, however, recognizes the power of the imagination, and what may be taken as the reason why he writes at such length on a subject whose importance is largely due to the imagination is found in these words: "The case may be one in which the imagined disease will easily become the source of real organic trouble. If our time goes on thinking itself abnormally nervous, it may indeed finally become ill; and there are not a few indications that care is necessary."

Whether the author is really in earnest or whether he aims by "suggestion" to draw the people away

from their present tendency to adopt some form of nervous disease, he surely hits some of our weaknesses and imaginations some hard blows and gives us something sensible and wholesome to think about. We believe that he is honest and in earnest and that he offers strong proof toward establishing his belief that the whole story of our nervousness is founded on the imagination.

The first illusion mentioned is the physical exercise remedy that has been so eagerly seized as a cure for nervousness. While the author admits that moderate, occasional exercise is beneficial as well as enjoyable, he looks upon the one who considers his very life dependent on a goodly amount of dumb-bell swinging, lifting weights, trotting, etc., taken at regular intervals, as much enslaved as the morphinist who feels in despair and suffers if he cannot have his injection. "Of course, for certain purposes, it is desirable to develop the muscular forces of the body; then the physical exercise becomes labor. But as mere exercise and restoration, it is needless in moderation and harmful in strong doses."

The next evil attacked is the headache powders and sleeping drugs by which "a passing discomfort is too often removed at the expense of really healthy nerves. Still worse is the psychotherapy of dilettanti. It seems to me one of the best indications of the splendid nervous constitution of the nation that it has passed with so little serious harm through the millionfold attacks on its nervous system which the amateurish psychotherapists of every denomination have directed against it.

"The illusions are still queerer when our conditions of life are blamed as necessary causes of nervous exhaustion. Is it not the nearest aim of our much-advertised technical civilization that it saves our nerve energy?" Mr. Munsterberg then names a number of inventions designed to turn the rough, rocky road of our fathers into "a smooth, asphalt street over which there is really no difficulty in proceeding." While he admits that the "social life has become more manifold and the outer tension stronger," he meets this with the scientific psychologist's studies on the "relativity of mental states. Our attention, our feeling, our interest, our excitement never depend upon the mere amount of the stimulus," but "upon its relation to the background. If three voices are shouting, the noise becomes noticeably stronger when a third is added, but if thirty are heard, one more or even five more would not be heard: ten more would have to join to make a perceptible difference."

The author refers to another psychological fact,— "the mental adaption which slowly levels down even the strongest impressions," and cites the miller who does not hear the noise of his mill and our insensibility to the touch of our clothes.

"Moreover, while our modern life has become more manifold, its emotional strain is rather less severe than that of the past. Our life is less sentimental and more realistic and businesslike. No longer do we write the letters full of feeling which our grandfathers wrote: we of today dictate notes. We do not keep emotional diaries: instead, we subscribe to the clipping bureau. . . . Our growing tolerance works in the same manner. Conflicts are less embittered. On the whole we enjoy our disagreements and make pleasant after-dinner speeches out of them. This is no age for being especially nervous."

Continuing, the writer admits that the foregoing may be a condition for a different kind of nervousness. "Recent years have shown that many of the hysteric and psychasthenic disturbances are simply the result of a suppressed memory of disagreeable experiences," and this condition may be due to the businesslike soberness of our modern times which has taken away the chance for confession. Nevertheless he maintains "that neither our nervous system nor the surroundings of our life should be blamed for our tiredness and restlessness.

"But there is no need of going on showing the illusory ideas as to the causes of our general nervousness. We can take a straighter course and insist that this nervousness itself is an illusion. . . . It is arbitrary to see in the rush and hurry a sign of nervousness. It is practically a sign of lack of co-ordination, a certain remainder of untrained impulsiveness and disconnectedness of movements which, on the whole, begins to disappear, or at least to be pushed westward. The jerky movements, the chewing and rocking and putting the feet on the table will soon be overcome, just as the spitting has nearly disappeared from the Eastern cities.

"Of course the reports of the hospitals and of the doctors seem to speak with figures. But may it not be with our psychasthenias and neurasthenias as it was when appendicitis became fashionable?" The new disease did not grow at all, except in proportion as "all that which had been classed as general intestinal troubles decreased.

"Least of all ought we to measure the good or poor states of our national nerves by the complaints of tiredness. It is true there are persons who demand from their nerves more than hygienic life would allow because they are too little provided with the healthy feeling of fatigue which nature has arranged as a warning sign for the exhaustion of the nervous system. But incomparably larger is the number of those who have trained themselves to feel fatigue long before any exhaustion is threatening." The writer further adds weakness of voluntary attention and lack of thoroughness to the list of evils that aggravate our nerves.

THE HOME WORLD

THE PROPHECY OF GROWTH

HATTIE PRESTON RIDER

"THE lawn needs to be mowed this morning," said Mrs. Graham, "and the last sowing of radishes is full of purslane. Hadn't you better get at them while it is cool, Don?"

The fourteen-year-old boy in the Morris chair did not look up from his book, but a ghost of a frown wrinkled his smooth forehead.

"The grass is much easier cut while it is damp," his mother pursued, cheerily; "it will not take more than half an hour to clean out the radish bed. Then you can come back to your book. I know it is hard to leave, but one has so much more comfort reading, when there are no neglected tasks nagging at one's heels."

Don snuggled closer into the big chair, but he shut the book, keeping, however, a tentative finger in his place.

"That's always the way, when a fellow gets to an interesting place," he grumbled. "Just because I'm a boy, everybody has sixteen jobs ready for me, the minute they see me sitting down in peace!"

"Well, I think you may be excused from the other fourteen, this warm morning," his mother reassured him, pleasantly. But Don did not seem to appreciate either joke or reprieve. He sat with his chin sunk deep between his shoulders, and a lowering, almost sullen look in his blue-black eyes.

"It's just when I'm beginning to forget how miserable I feel, in some good story like this, that something always comes along to break me up and make me remember it again," he complained; and none but the keenest observer would have known that the gruffness of his tone was only an effort to disguise its unsteadiness. "But nobody cares, even if they did know it," he concluded, throwing out a desperate challenge.

Mrs. Graham sat down at once on the nearest chair, still in dusting-cap and apron, but tactfully out of line of the discontented face.

"Why, Don," she said, solicitously, "I did not know you felt poorly. What's the matter? Maybe you played ball a little too hard yesterday. Does your head ache?"

There was an extended silence before the lad made answer, and when it came, Mrs. Graham thanked the Source of her Wisdom a hundred thousand times over, that since his baby eyes first sought hers in unconscious recognition of their relationship, she had never failed to meet her child on the ground of honest sympathy. To the superficial view, however, there might have appeared something incongruous, at least, in connecting the thought of ill-health or weakness with the possessor of that splendid set of young muscles and finely-bronzed skin.

"My head doesn't ache and I'm not tired," Don answered, a great measure of the antagonism gone from his expression, "but I'm just—just *miserable* with homesickness."

"With *homesickness*?" his mother echoed, half puzzled. "Of course it can't be the common kind, for you are right here at home safe and sound, where everybody loves you. Couldn't you tell me a little bit more clearly what it feels like?"

A tinge of color crept into Don's brown cheek, but it was not of embarrassment. He was so used to "telling mother" everything.

"It feels just as though I couldn't bear to keep still a minute," he explained, hesitating a trifle for the right words. "When I'm reading about this fellow here of Henty's, galloping like mad away from the Indians, or zipping off on a mustang to bring in a bunch of steers that have got away from the herd, it makes me feel as if I were going too, and kind of works off the stretchy, lonesome feeling. Then, when I have to stop reading and am not doing anything, or at least anything interesting, or there isn't anything much happening, I feel just as if I wanted to rush off somewhere and find what's going on, or jump into

the river. Sometimes, it seems as if nobody cared how I felt, or even thought I had any feelings at all; and so I might just as well be dead or anywhere out of the way. I don't suppose you understand; but it makes me tired clear to the end of my toes and fingers."

The absurdity of such a confession from a boy who was the apple of his parents' eyes, tenderly reared and cared for, the center of a circle of loving friends, did not strike the mother even for an instant. She realized only what confession meant to him,—one that torture could not have wrung from a boy reared in a less sympathetic atmosphere. When she broke the pause, his head had dropped between his shoulders again, in weariness and discouragement that were at least genuine.

"Son," she said, gently, "I am sure I do understand, and you don't know how glad I am to have you tell me exactly how it is. Every one that is grown up has had more or less of those feelings, only, I sometimes think, older people forget, and when the younger ones are at the 'growing age,' do not stop to recall how they too felt then. It isn't that they do not care, but that they are too much interested in other things to stop and think. Do you get the idea, dear?"

The lad nodded, without speaking.

"Well; then there are the feelings themselves. A boy's body, when it is growing and developing to manhood, is just like the painting of a splendid picture. First, there is the outlining. Look at your fine large bones and muscles, dear, of which we are all so proud! But they are only the outline. It will be several years yet before they are filled out and hardened, so that your body is strong and complete. And this feeling of yours, which seems so strange and 'miserable,' is only the call of the undeveloped nerves for action and achievement, a sort of hunger to be and do the manly things *now* that are waiting for you somewhere, to be done when your mind and body are properly strengthened and equipped for them. The stirring things which you love to read about are no more splendid than what God has waiting for you somewhere, if only you have patience for this present necessary business of letting nature, which is simply God working, build up your body and get it perfectly ready."

Still the lad did not reply, but from where she sat, she saw a faint glow creep into his dull eyes.

"Like your gymnasium exercise, a little work such as you have been used to doing helps instead of hindering," she went on. "Plenty of sleep does wonders, too; I think, if you were to stretch out on the couch this very minute, and take a little nap, you would find the time well spent. But the greatest help of all, dear, comes from the right kind of thoughts. Now that you know your 'homesick' feeling to be only the call of your growing self for the good that God has await-

ing you just as soon as you are ready for it, there is nothing left about which to be unhappy. If the restlessness comes to you again, get rid of it by turning resolutely to thoughts of bright and happy things. The artist who would make a fine picture keeps his eye and his mind always on the perfect model. Thinking about strong and pure and perfect things helps our minds and bodies to grow strong and pure and perfect."

Without waiting for answer or comment, she rose and went quietly back to her dusting. A few minutes later, glancing into the sitting-room, she saw Don stretched full length on the couch, his face pillowed on his arm. It did not surprise her to discover that he was sleeping soundly. The nap lasted a full hour, till one of his mates came to ask him for a match in tennis.

"Sure thing I'll play, in just a little while," she heard Don's cheery voice answer, after a brief creaking of the couch-springs. "Get up the net and mark over the lines, will you? I've only to cut the lawn and to weed out that radish bed. It won't take long."

BAKIN' DAY.

Have you any smiles today?

Send me up a peck—

Kind that reaches all the way

Round behind your neck.

Send a dozen boxes of

Best assorted cheer;

Also twenty quarts of love—

Must be warm and clear.

Happy thoughts and pleasant words—

Mix 'em good and strong—

Kind to make you think of birds

Burstin' into song.

'Leven bars of kindness.

Free from flaw and chill;

And two dozen packages

Of the best good-will.

Send me all the charity

You can rightly spare,

And a box of sympathy—

Pizenness to care!

This is bakin' day, and I

Have a sort of plan

For to make a tasty pie

For my fellow-man.

—John Kendrick Bangs, in *Success Magazine*.

INFLUENCE OF MOTHERS.

I KNEW a woman who kept about thirteen cats, all half-starved. If she had lived in the city they would have died of starvation, but being in the country they caught occasional game. This woman kept a whip hanging on her kitchen wall and whipped them soundly whenever they ventured in the house wherein savory odors attracted them.

One day, being tired of a too persistent kitten which had not reached the half-dead state most of them were in, she rid herself of it and soon after was telling a neighbor about it. "I jist whipped it and whipped it until I knowed 'twould die and then stuffed it in a dirt hole." The astounded and disgusted neighbor said, "Why didn't you kill it to stop its suffering, or have some one of your sons shoot it?" "Oh," rejoined the other, "I couldn't done that—I don't b'lieve in killin' things—'taint accordin' to my belief." And yet she fully expects to go to heaven. She had allowed her boys in the past to tie cats to wagon wheels and then climb in the wagon and whip them without mercy, making believe they, too, were horses.

Is there anything the world needs so much as good mothers?

Another woman comes to mind who has all the advantages of city life, belongs to a church, and who has a really beautiful little girl. She was talking with a number of women one day when the conversation turned on cats. Several remarked how well they liked cats when this self-satisfied, smiling woman said she had tried to raise kittens several times but that her little girl choked and dragged them around so they always died. Upon one of us saying, "How horrible, can you not teach her different from that?" she only shrugged her plump shoulders and said, "Oh, sometimes I scold a little, but, then, I don't care." The child stood there listening—a spoiled darling, a mother of the future who will be as indifferent to suffering as her mother before her.

Why does the responsibility of motherhood rest so lightly on their shoulders and why are they not more really interested in justice to animals?

If every mother would train her children to be always kind and humane, in a short time the world might be reformed and we would have good men and women everywhere who could not be happy unless they were always just and considerate of the four-footed creation as well as of human beings.

Why are women so heartless?

When we see men abusing their poor faithful horses and other animals entrusted to them, we know how little their mothers cared about teaching them otherwise and realize how urgent is the need of good mothers.

A good person is one who is kind and just to everyone and everything and who tries to influence others to be so, and I care not what color that person may be or of what religion a follower or whether a follower of any, that person is good and is the world's greatest need today.—*Our Dumb Animals*.

OLIVES AND OLIVE OIL.

AMONG the changes that have taken place within the last decade in our American kitchens, the general

and increasing use of olive oil is one of the most marked.

There is, with a very large class of our people, a growing tendency to avoid as far as possible the use of medicines, and to seek to correct minor ailments by a careful study of the diet. In many cases a simple change of food works better than drugs. Indeed, a male scoffer has said that the cookbook is now made a matter of religion. Without irony, it may well be admitted that the whole subject of food in its relation to health demands consideration on the plane of duty.

Perhaps there never was a time when so much emphasis was laid upon the importance of a sound and vigorous physique. Efficiency is the watchword of the day, and nothing promotes efficiency more directly than a condition of high health and natural vigor. It cannot be a matter of indifference to any mother whether she is using the best means of building up the physical energies in her family through the best use of a wholesome and strengthening diet. In these days of high pressure, it is felt more and more strongly that the firm, well-balanced bodily health is the best basis for every kind of valuable work. For the immature boy or girl this whole question of food values and the influence of diet puts a vast power in the hands of the mother. All these things spell opportunity.

To the French and Italians, two nations preëminent in cooking, olive oil has long been an indispensable article of diet. Its uses are so numerous and its hygienic value esteemed so highly that it is practically an essential in general cooking. With us, its use in salad dressing has gradually extended, and its value in many cases of dyspepsia and digestive difficulties has led to a recognition of its importance as a regular feature in the diet. We are told that it is a common dietary shortcoming to eat lean meat in excess and to supply too little of the fatty or oily matter for the best working of the digestion. Pure olive oil is one of the very best forms in which this can be supplied. It has all the delicacy of a vegetable oil, and its agreeable and generally useful qualities make it extremely useful in various combinations. It is not only palatable as an ingredient in many fruit and vegetable salads, but with foreign cooks it is considered a requisite for many dishes of fish, eggs and vegetables. Then frying is invariably done in southern Europe in olive oil, the characteristic deep frying equally good for fish, bird, vegetable, or sweet. And it is one of the high merits of the oil that it does not retain flavors, like butter or lard, but the same oil can be used over and over again as long as it lasts for all these purposes indiscriminately.

Olive oil is a natural medicine for the skin, and helps to give a clear complexion when used either internally or externally. A tablespoonful taken before eating has great value in constipation, and is an easy remedy

for many little ills. It is useful in case of colds, and may be given safely and easily to babies and older children, a good substitute for castor oil.

Olives, pickled green, as we commonly know them in this country, have value as an appetizer, and heighten the flavors of various foods. They are acceptably chopped and added to various sauces and salads, and also pitted and stuffed in some cases, or cut in fancy shapes. Their use has grown constantly, as is plainly shown by the quantities imported. The taste has been called an artificial one, but perhaps that is true of other pickles. The liking once acquired, is usually a strong and lasting one.

It is more than ever before characteristic of the period that we draw for our daily household supplies upon the whole world. The swift communication and close contact commercially, which have made such progress within our remembrance, bring to us at moderate cost the best things of all countries. More and more this variety becomes the privilege of all. We eat the olives of southern Europe (or of southern California), we enjoy the varied fruits of the tropics, and we send the wheat of our own great Northwest to the wide world, from England to China. We feed all lands and are fed by them. What a change from the condition of our colonial ancestors, who raised pretty nearly everything that they consumed on their own land, grew their own wool and flax, and manufactured at home a very large share of their own clothing.—*The Country Gentleman*.

"APRICOT ICE—One can of apricots, one and a half cans of water (measured in same can), one and three-quarter cups of sugar, juice of three lemons; freeze. This will make enough ice for dinner and supper for six persons. In preparing the mixture run the apricots through a sieve, rejecting all hard particles. This makes a very tempting ice and an economical one."

The Children's Corner

CANARY BIRDS.

"I WONDER if my little girl knows anything about canary birds? Now that she has a beautiful bird of her very own she should learn a bit about them," said Mrs. Fairfield to her daughter, Dorothy, as she stood watching a charming yellow creature flit around in its handsome cage.

"Why, no, mama, I don't; I was wondering when my bird came where Uncle John bought it, and where such beautiful singers were found. Tell me about them, please."

"I've been reading about them," said mama, "and

as your bird came from Germany it will interest you, as it did me, to learn about the famous little village of Saint Andreasberg, where sixty thousand song birds are raised each year. Tyrol and the Hartz Mountains are the principal places for the raising of canaries, but the greatest number of fine birds come from this quaint town of Saint Andreasberg. Nearly every home adds to its income by raising a few birds, even the poorest people, with but one room. The cages are put high upon the wall, and are small wooden boxes. There are exhibitions and public displays of birds, just as in America we display fine stock.

"There are men who make a business of it, and as much as fifty thousand dollars is sometimes brought into the town through this source. The sweetest singers are rarely sold, but kept as singing masters for young birds. The prices are thirty-five and forty dollars for a single bird. Their melody is the sweetest in the world, soft trills that seem to fill their tiny throats. We do not often hear such singing. I learn that the poorest singers, with shrill, sharp tones or notes, are sold to Americans, who are not as critical as these music-loving Germans. A bird that clucks is considered worthless, and is at once banished.

"It is very funny to watch the birds in their domestic relations. The father bird is very pompous and self-important; when the mother bird hops off her nest he will at once give her a sharp peck, reminding her of her duty. The mother bird is sometimes very stupid about feeding her young. If the menu is hard-boiled eggs and bread, she will pick out the piece that suits her best and then feed her babies that, regardless of their weak digestion. The greatest care must be exercised with the young birds in their early stages. The bread must be flaky and soft.

"There are often one male and four females in one cage, and many domestic tragedies are enacted. Human nature and bird nature are much the same. There are selfish, vicious, jealous birds and sweet, kindly, gentle ones. The young families are given the closest attention until they are able to defend themselves. The cages are small, wooden boxes, high upon the walls, and the nests are soft, downy things of dry moss, lined with cotton. However, the birds make their nests according to their own ideas. When three weeks old the birds can leave their nests, and when six weeks old are placed in a cage in a dim light, near a fine singer, where they imitate his beautiful notes. They do not see their singing master, as any new thing distracts their attention. Their memories are remarkable. It is a charming study, this one of the singing birds of Saint Andreasberg, and I only wish, Dorothy, we might visit the place some day ourselves."

"And so do I, mama; I'm sure I prize my beautiful pet ever so much more since I have learned about the canaries of Germany."—*Baptist Boys and Girls*.

THE QUIET HOUR

WATER.

D. D. THOMAS.

"AND the Spirit of God moved upon the face of the great deep." One might question what composed the "great deep," the air above or the waters beneath, both or neither. The Bible writer leads so directly to the dividing of the waters that one can very naturally conclude that it must have been them. They lay a great expanse enveloping the earth as a garment, thick enough to be called a deep. Our old professor used to speak of the chemical elements as being married to form a compound, for instance hydrogen and oxygen to form water. That was one of the earliest weddings and the crude things that then existed so rejoiced at it that the dry earth was shaken by their thunder and immediately deluged. The earth was upheaved by the power from within and the great waters were thrown into troughs and the dry land stood out of the water. The waters were fenced away by the great fiat, "Hitherto shalt thou come and no farther." Why God should have created so much water may not be clear. The pure earth brought forth as it was directed, the flowers, the fruitage, as was needed. The created beings were fed and nourished to satiety. One can but think that none suffered where sin was not.

The glutton was not to overfeed nor scarcity to withhold. The healthful ways made the soul serene, the bright days made the heart happy. Tears were only wellsprings of joy and foolish words were not heard. God wanted to widen the sphere of man's usefulness, so he put him to the test. The most subtle beast of the field was let in and he failed. He believed a lie. If he could not trust his God surely his God would not be able to trust him. God's displeasure is to us a sin, whether it be in eating or drinking, in living or being, in thinking or willing. The wages of sin is death. Now there is great use for much water.

The river that ran into the garden became four rivers when it ran out before sin came. The garden was profusely replenished to supply both man and animal and the surplus ran out to take blessings to the entire earth. Adam and Eve were God's cradle care but withal the beggar without had no need. No question enters the mind as to what these were. God supplied them and farther than that we can find better

employment for our mind. The innocence of it all strikes one as very grand so far as the picture is open. The closed part was for a purpose and why should one peep behind the curtain?

It was Eve's curiosity that caused the fall; let us beware! No need is now to think upon things as they were only so as to get the lesson that he teaches in them. One can turn with a genuine relish to the condition of things now and note how far-reaching water is in its cleansing and life-giving power.

The waters are inclined to go constantly. If they cannot go any other way they go up as a vapor. The motion purifies them. But what God takes up in a vapor he sends down as a shower which purifies and nourishes. In stillness there is stagnation and in stagnation there is death. Now what do you think of a still Christian? Has not this pure element taught him that he should move? Let not the tears of penitence dry up in such a soul. Ah, but you see the waters flow and that is motion.

How much do the waters figure in the economy of grace! They saved Noah but destroyed the world. The world was all filth and God washed the filth away by the flood. He garners up the good to keep it from that which destroys. He was gracious to the world. He might have destroyed it by fire. The flood was a threat. God does not threaten very often. He pleads. He bestows mercy. The waters not only go up as vapor but climb up to purify and nourish living organisms. The showers cleanse it on the outside and from the roots the water goes to the limb, the branches, the twig, and the leaf. The life cannot come down so the water goes up. The environment of the plant life is too circumscribed to go out, so the water picks up the nourishment and carries it to it, cleansing as it goes. Water does not grow and develop but it shows strongly one evidence of life. Nutrition and reproduction, growth and motion are evidences of life. This is not to prove that water is living but to show how near it comes to it.

Then a sacred writer designates it "Living water." It is the most humble and among the most useful of servants. It is the servant of joy and sorrow in the tears we shed. It is the pledge of love given to a stranger. It is the token of brotherhood in the covenant. It is the element of cleansing everywhere.

One can wonder at it why water should take life at

all. But it can be seen that there is a strong tendency to save by that element, else the body would not be cast up as it is when a man is drowning. Then the effort might be regarded to be for a cleansing unto the burial, for so it shows forth a symbolical strength to cleanse the soul as God has decreed. He enters the new kingdom through the floods of death but he gives up his life willingly as the Incarnate God. It may be otherwise that he rise not again, the filth being beyond the power of the water to cleanse and he never walk in newness of life.

The greatest barrier between a human being and his God is his will. How many of the good things that God gives us are mountains in our way because our hearts are evil. God gave us our wills to help us to him but we will not go to him and thus remain in a desert land.

Do you recall when you went through the floods? When God seemed to have parted the waters for you, while you were dreading the chill of death which would bring forth the reaction to a higher life? "What matter," you said, "it is all for God's glory," and then it was all plain. The tears you shed helped to open the way, and what seemed to you to be the burden of a life of consecration was wafted away as a vapor, or may it not better be said, rolled in the grave in which Jesus lay and from which he rose to glory.

A RACE FOR THE PRIZE.

"Just what things must I give up?" To this the Bible answer is, that you must surrender everything that hinders your growth in grace. If certain practices, or an attendance upon certain places, hinders your spiritual progress, then be done with them! We are inclined to believe that church members slip into the theater oftener than in former times. They are not apt to come out holier than they went in; and their example helps to increase the tide towards the play-house door. Wherever there is a doubt in your mind in regard to an amusement, give your Master the benefit of the doubt, and stay out of it. Just on this doubtful territory it is that we see so many unhappy falls.

We also firmly believe that Christians ought to surrender very often their rights to lawful things; for by so doing they may remove stumbling-blocks out of the path of others, and strengthen their own graces. The Greek racer denied himself many lawful indulgences. So should a follower of Jesus whenever self-denial will increase his spiritual sinew. Too much is said in these days against "asceticism"; but the danger of the church does not lie in that direction. Satin cloaks are more in vogue than "hair shirts."

Daily food is a lawful indulgence. But fasting is sometimes profitable for both body and soul. Many luxuries of domestic life are lawful in themselves; to

give them up in order to have more money for benevolent uses, or in order to discourage social extravagances, is a dictate of pure Christianity. John Wesley had a right to own silver plate, yet he nobly refused to possess more than two or three silver spoons "while so many poor people were lacking bread." An excellent man in my congregation sold his carriage just as soon as he found that his horses were eating up his charity fund too fast. My friend in no ascetic. He is a very sensible and sunshiny Christian. If the same spirit which actuated him were more common in the church, there would be fewer luxurious equipages, fewer sumptuous evening parties; but there would be more missionaries in the West, and more Bibles in China and Japan. Self-indulgence lives under the clouds. Self-denial soars above them.—*Dr. Cuyler, in Evangelist.*

OUT OF TOUCH WITH YOUR LORD.

Only a smile, yes, only a smile,
That a woman o'erburdened with grief
Expected from you; 'twould have given relief,
For her heart ached sore the while.
But, weary and cheerless, she went away,
Because, as it happened that very day,
You were out of touch with your Lord.

Only a word, yes, only a word,
That the Spirit's small voice whispered, "Speak";
But the worker passed onward, unblessed and weak,
Whom you were meant to have stirred
To courage, devotion and love anew,
Because, when the message came to you,
You were out of touch with your Lord.

Only a note, yes, only a note,
To a friend in a distant land;
The Spirit said, "Write," but then you had planned
Some different work and you thought
It mattered little. You did not know
'Twould have saved a soul from sin and woe—
You were out of touch with your Lord.

Only a song, yes, only a song,
That the Spirit said, "Sing tonight;
Thy voice is thy Master's by purchased right."
But you thought, "Mid this motley throng,
I care not to sing of the City of God";
And the heart that your words might have reached grew
cold—

You were out of touch with your Lord.

Only a day, yes, only a day,
But oh! can you guess, my friend,
Where the influence reaches and where it will end
Of the hours that you frittered away?
The Master's command is "Abide in me";
And fruitless and vain will your service be
If out of touch with your Lord.

—Name of Author Unknown.

"If every person would be half as good as he expects his neighbor to be, what a heaven this world would be."

ECHOES FROM EVERYWHERE

Street car fares in Bordeaux, France, are less than two cents a ride, and working people pay only half of that between 5 and 6 o'clock in the morning and 6 to 7 o'clock at night.

Tectorium, a substitute for glass, is prepared by applying a varnish to a finely meshed iron wire fabric. The varnish consists of good linseed oil, in which the vertically hanging wire fabric is repeatedly dipped up to as many as twelve times.

A bitter war against the Standard Oil Company has resulted in another cut of 1 cent a gallon in the price of oil. This makes the lowest price for oil ever recorded in Scotland. It is probable that the trust will come back with an even greater reduction and that the war will not end until either the trust or the independents withdraw from the field.

Gen. Booth, head of the Salvation Army, is in danger of total blindness, on account of which he has been forced to abandon his evangelistic tour of the provinces. The General recently underwent an operation for cataract, but it failed to restore his failing sight and at present he has to be led around. His condition is growing worse and total blindness is threatened.

It has been found by the owner of a fishing boat at St. Abbs, Berwickshire, England, that a net dyed as nearly as possible the hue of the sea, instead of the traditional brown, results in a much better catch. The discovery was put to the test one night, when of a fleet of 65 fishing craft the boat with its nets dyed blue made by far the largest catch. The dye used is blue stone.

Wireless messages transmitted from the Glace Bay station in Canada have recently been picked up with some regularity by the Eiffel Tower receiving station in Paris, proving that transatlantic wireless communication is an accomplished fact. The Paris plant is in no way competing with commercial stations, being purely for military purposes, making no communication with places outside of France except the French African colonies.

The first world's shoe and leather fair opened in Boston is an industrial exhibition of great interest. America is fast becoming the world's shoemaker. Its shoe factories employ 149,924 operatives, who receive wages of \$69,000,000 annually and whose product is valued at above \$320,000,000. The concentration of the industry in Massachusetts is shown in the employment of upwards of 60,000 operatives in this manufacture, of whom one-third are women. Nearly 15 per cent of the entire population of Lynn is engaged in shoemaking. The output of American boots and shoes has nearly doubled in twenty-five years and the industry has gained new markets in England and on the continent.

There is enough radium in California to supply the world, according to a statement made by Dr. S. Wilkins, who has just returned from a trip of investigation along the McCloud River. Dr. Wilkins declares he found pitchblende in sufficient quantities to furnish all the radium the world could use in a century. The deposit is near the junction of the McCloud and Pitt Rivers. A party will be sent there to investigate further.

It is announced that Lieut. Shackleton will lecture in the United States and Canada, in order to earn enough money to pay the heavy indebtedness which he incurred on his last Antarctic expedition. The announcement is astonishing, as it was generally supposed that Lieut. Shackleton had been aided by his government. It is stated that the expedition was financed by a small group of Americans who lost their all in the last financial crisis.

Attorneys for 65 insurance companies doing business in Arkansas are busily preparing evidence to defend themselves in the greatest insurance war begun by the State. Suit has been filed with the Jackson Circuit Court at Newport by Prosecuting Attorney R. E. Jeffrey, asking the assessment of penalties aggregating \$65,000,000, a million from each company, and the cancellation and revocation of their licenses and their ousting from the State. It is alleged the companies are acting in violation of the Arkansas anti-trust law.

The Oberlin Association of Illinois, composed of former students of Oberlin College, is trying to enlist college and university men in the State to join in a movement against the Sunday saloon. In a circular which is being sent out attention is called to a statement of former President Eliot of Harvard University that lawlessness is rampant throughout the United States. The section in the Illinois criminal code providing that saloons shall not be open on Sunday is cited and college men are urged to join in a movement for the enforcement of this and all other laws.

Each State having the right to place statues of two of her favorite sons in the nation's hall of fame at the capitol in Washington, Virginia has just contributed her quota, the two favorites naturally being George Washington and Robert E. Lee. Both statues are done in bronze, that of Washington being a duplicate of Houdon's famous masterpiece now at the capitol in Richmond. It stands in the southeast end of the hall between the figures of Gen. Ethan Allen of Vermont and Gen. Peter Muhlenberg of Pennsylvania. The Lee statue was designed by Edward Valentine of Richmond, and represents the Confederate leader in the uniform of the South. It stands between the statues of Robert Fulton, inventor of the steamboat, and J. L. M. Curry, of Alabama. Formal ceremonies attending the unveiling of these works of art will be held later on.

Gov. Comer of Alabama has signed the resolution ratifying the income tax amendment to the constitution of the United States. Only two votes were cast against it, they being cast in the House.

The President's programme for his Chicago visit has been arranged and approved. He will lunch on September 16 as the guest of the Commercial Club; from there he will go to the Art Institute to inspect plans for the beautifying of Chicago. He will then be taken in charge by the Hamilton Club and attend a ball game later. Afterward he will be a guest at the Auditorium Annex, where he will make a short address and later occupy a box for a few minutes at the Auditorium, thence proceeding to a banquet given by the American Bankers' Association at the Auditorium. He will leave at 3 o'clock in the morning to continue his western trip.

The appearance of a disease, which has been diagnosed by the public health and marine hospital service as "pellagra" is being used as a basis for sensational articles attacking corn as a food. Pellagra is a disease common to European countries, where it is often caused by the use of moldy or otherwise spoiled corn. The public health service seems to have demonstrated that the strange malady commonly regarded as a skin disease is in fact pellagra. The service is not prepared to announce that the disease in every instance is due to the use of moldy or spoiled corn as food. In an asylum at Peoria and at other places in Illinois the disease has been found. It causes a peeling of the skin, and while not contagious, is wasting, and unless cured will exhaust the patient in time. Should it be discovered that sufficient grounds exist to issue a general warning against the use of moldy or otherwise spoiled corn that will be done, and the Department of Agriculture will coöperate to the extent of compelling the destruction of corn unfit for human consumption.

NERVES.

(Continued from Page 852.)

Summing up he says: "In order to cure the so-called nervousness of our time, the remedies ought to be adapted to these true evils. The dumb-bells and bromides are not enough. On the one side we need more training in self-discipline, in continuous effort, in voluntary attention, and in thoroughness; on the other more willingness of the men to share with the women the control of our cultural life, and to bring to it steadiness and persistence. This self-discipline will also eliminate many nuisances which, from a medical point of view, really interfere with nervous health."

THE GUNNISON TUNNEL.

EVERYBODY has heard of the famous Gunnison tunnel which, at the cost of over \$2,500,000, Uncle Sam has at last completed after the most difficult and dangerous operations in excavating and blasting known in the history of the country. Whilst, however, this wonderful piece of scientific work is known the wide-world over there are few, indeed, here or, for that

matter, in almost any part of the United States, who are acquainted with its history or with the dangers met or the perils surmounted by the brave men who conducted this work from its preliminary survey by Fellows of Denver to its successful outcome. Statistician Blanchard of the United States reclamation service, one of the ablest and hardest working of Uncle Sam's efficient officials at the national capital, knows all about the project; and tells the story of its survey attractively and in an informative way.

A few years ago 100,000 acres of desolation marked the presence of the Uncompahgre desert, in southwestern Colorado. The friendly Utes had cultivated the fertile lands near by, and by simply scratching the soil had produced grains and fruits in wonderful proportion. The lands were later opened to white settlers who rushed in en masse, and, for a few years, made fortunes out of the products of the soil. Many of them, however, were unprotected so far as water rights were concerned, and when seasons of drouth came with the accompanying scorching heat, vegetables and trees shriveled. One wide-awake and thoughtful farmer felt that the much-needed water could be diverted by a tunnel through the adjacent mountain and, after some trouble, he induced the State legislature to appropriate \$25,000 for a survey. That amount of money was scarcely sufficient to pay even for the preparations for a preliminary survey, and when it was spent the national government was appealed to. In his characteristic go-ahead fashion Uncle Sam started in and buckled down to work. How that work was done is thus graphically told by Statistician Blanchard:

"A small part of the 100,000 acres of the Uncompahgre desert proved fertile beyond all expectations," says Statistician Blanchard, "but in proving this the full capacity of Uncompahgre River had been reached. No more water was available, but there lay beyond the irrigated lands a principality of enormous potential wealth which it appeared must forever remain an unproductive desert if no additional water supply could be brought into the valley.

"Thirty miles eastward from the Uncompahgre flows the Gunnison River, a powerful stream, just the kind needed in the valley. Why not divert it for this purpose? 'A visionary scheme' would be the offhand verdict. The Gunnison along its stretch traverses a box canyon 3,000 feet deep. Surely no one could divert water under such circumstances.

"One day there came to the resident engineer of the reclamation service at Denver an order from Washington that read somewhat like this: 'Advise me if it is feasible to divert Gunnison to Uncompahgre valley by tunnel under Vernal Mesa. Signed Chief Engineer.'

"Let us diverge briefly to analyze this order. A

(Continued on Page 863.)

Among the Magazines

THE LURE OF THE CITY.

How can you explain, on any basis of reason, this fatal attraction which the big city holds out for people everywhere? It is inexplicable. In spite of all the real superiorities of country living and the artificiality and vice and misery of the crowded city life, the spell of the city prevails, making fools of young and old, and the trend of population is still cityward. It is getting to be a condition serious in its physical and moral aspects alike.

Boys have always wanted to leave the country for the town, and now the infection has spread to the girls. As soon as a country girl gets a little education, she wants to be off to work in the city. Her parents may be never so willing to give her a good home, but knowledge has made her restless and she feels that she must be off to assume her share in the world's joys and woes, no matter what the penalties may be. As for marriage, she would rather have a husband who will rent her a two-by-four, installment-furnished flat in a reeking city than one who can offer her a luxurious home in the country. Everything she reads is tinged with the roseate lure of city living and society ways. Trained nursing, which is one of the hardest callings there is, is by the pens of our magazine writers made romantic; "settlement work" in the slums is apotheosized, and even the teaching of a Sunday-school class of heathen Chinese is represented as an altruistic duty not without its picturesque features.

A girl who would not willingly lift her hand at home will jump eagerly for the chance to earn any amount from \$2 a week up, in a city department store, where every surrounding condition is bad. Her wages at best will hardly keep body and soul together, but she becomes "independent," and this seems to be valued beyond all else in the world, although it is but an illusory sort of independence which consists in standing up in packed street cars, going to and from work, jammed among a promiscuous assortment of humanity, breathing the fetid and disease-laden breath of the multitude, laboring all day subject to abuse and insult, and finally receiving as the only net result of the week's slavery a few hours on Sunday for some feverish sort of diversion in which the weekday woes may be forgotten.

Yes, it's inexplicable, but it's here, and it's robbing our rural districts of some of their best blood and adding all the time to the problems of the crowded city. Everywhere in the country districts the cry is that labor is scarce, while in the cities the demand is oversupplied, yet the current from the country to city never ceases. The city is a great ogress which entices wayfarers to her only to ruin and devour them. Charpentier, the French socialist composer, has pointed this moral in his splendid opera of "Louise," in which the fatal spell of Paris over its devotees is tragically brought out. No doubt a reaction away from the city and back to the country will in time take place; in fact, it already exists, but a terrible price in human lives will be paid before the full lesson is learned.—The Pathfinder.

SLEEP AND DIGESTION.

That a certain amount of digestible food taken just before going to bed induces restfulness and contributes to a quiet sleep is asserted by Dr. G. M. Niles, who discusses sleep in its relation to digestion in *The Journal of the American Medical Association*. Our quotations are from an abstract in *The Medical Record* (New York, July 10). Says this paper:

"As to the actual influence of sleep on digestion there is some conflict of opinion. . . . It is a well-known physiological fact that the elimination of carbon dioxide and absorption of oxygen are diminished during sleep, mainly because the muscles are less active. . . . While other secretions are diminished during sleep, this does not apply to those of the digestive apparatus. When the brain is alert, the reflexes on guard, and the voluntary muscles at work, each department of the human economy is calling for its quota of innervation and blood; these different departments are exacting their tribute from the constructive forces, and turning over to the excretory organs the products of combustion and waste. During this period the digestive department can draw only a 'working interest,' not being permitted to put away any appreciable surplus, until the day's activities are ended. Sleep stills the voluntary movements, decreases the carbon dioxide output, and makes the least demand on the involuntary vital mechanism. It is then that Nature, our industrious handmaiden, begins her constructive housekeeping. 'She does it in an orderly, coöperative way, following a regular method of work in repairing waste, actively forming new tissue, and giving just the proper amount of care and nourishment required of all parts, both mental and physical, in regular sequence.'"

The following general dietetic recommendations in relation to sleep are given by Dr. Niles:

"The young infant can not get too much sleep, and this is best attained by filling his stomach at stated intervals. Vigorous, growing children and those engaged in manual labor thrive on a full breakfast and dinner, these two meals containing most of the daily quota of protein. The supper may be plentiful in quantity, but should consist of such articles as bread, milk, cereals, eggs, fruit, etc., which do not unduly stimulate the nerve centers by their metabolic products. Soups, rich extracts, and solid proteins also cause the bladder to be filled with urine rich in waste products and very acid, this being a factor worth considering. Those who labor with their brains, or skilled artisans whose crafts demand mental tension and but little muscular effort, will find their efficiency best subserved by a light breakfast, a slightly more plentiful lunch, and at the close of the day's work a generous meal, provided that after it three to five waking hours are allowed, so that the psychic reflexes may have an opportunity to contribute their share to the processes of digestion."—Literary Digest.

THE GUNNISON TUNNEL.

(Continued from Page 861.)

tunnel under the Vernal Mesa, which is the name of the mountain through which Gunnison River has cut a narrow gash, would be at least five miles long from the canyon to the nearest opening in Uncompahgre valley.

"This meant the longest tunnel in the United States; not so amazing to the Denver office, if the location of both ends of the proposed tunnel were in known country, but no one had ever passed through it alive, and those who had attempted it and had returned were ready to demonstrate beyond all reasonable doubt that it was an impossibility.

"Now it is axiomatic in engineering work that if you are going to report upon the feasibility of a tunnel, you must determine the location of both ends by making careful measurements on the spot. Well, orders from Washington directed a report on feasibility.

"No one in the service seemed to think it anything unusual when 'Fellows of the Denver office' set his square jaw, quietly made his preparations, took along one assistant and went surveying down Gunnison canyon. It will be well to remember that in all those days of swimming, climbing, freezing, thawing and hunger he was not sliding through by the easiest path and taking the death-threatening places at a bound, but he was proceeding deliberately and surveying every foot.

"The next time you go down the street and see a well-dressed man running a level or a transit along the curb, or staking off the boundaries of a house lot, just notice his polished shoes, his neat notebook, his comfortable, easy attitude and his graceful signals to the rodman, and then think of 'Fellows of the Denver office' down in that roaring cavern, drenched to the skin, hanging on by ropes and squinting through a transit, because 'Washington' wanted to know if the tunnel were feasible.

"No man, so far as known, had ever gone through the canyon alive. Stoutly-built rafts of logs launched at the head of the canyon had emerged at its mouth smashed into kindling wood. It was the popular belief that no man could go down the canyon and live to tell of his experiences.

"With their instruments and provisions on an inflated rubber mattress, Fellows and his companion set forth on their expedition. There was hardly an hour of time while they were in the canyon that their lives were not in peril; there was not a minute that was not filled with heart-breaking hardships.

"It all ended by Fellows and his companion saving two things—their lives and their notebooks. Everything else went down with the flood. When the men emerged at Devil's Slide, weary, bruised and bleeding, friends who had been waiting to pick up

their mangled bodies hailed them as if they had returned from the dead.

"When Fellows sent his report to Washington there was in it no word of the perils and hardships of survey work in the roaring canyon. It was brief and to the point: 'Gunnison tunnel project is feasible.'

"Soon the order came from Washington: 'Complete surveys for construction.'

"The next man on the scene was J. W. McConnell, now constructing engineer of the Gunnison tunnel, and better known in the service as 'Gunnison-McConnell.' Folks out there sized him up as a shy sophomore; now, they take off their hats to him. They find fault with him for one thing, however, which is that 'he is not given to talk.'

"McConnell's orders could not be carried out by surveying through the canyon; they had to lower him down in there with ropes so that he might make a map of it, a real topographic map with contour lines, levels and bench marks as clear and easy to trace as the map of any section or ward of your own town. Then he established precise levels at both ends of the proposed tunnel.

"This was a heart-breaking job. Of course, the tunnel could not be built level, because it must carry water, and, moreover, it must carry just the amount of water needed over in the Uncompahgre valley. If it were built without sufficient slope from river to valley it would not carry enough water, while if it had too much slope it would carry too much water. And so McConnell ran levels up over the mountain to the valley, and back from the valley over the mountain to the bottom of the canyon, out and in, repeatedly checking his measurements each time, until he had just the slope required. The fact that he took his life in his hands a score of times each day did not bother 'Washington' in the least. 'Washington' was looking for a set of construction plans.

"But McConnell's job was just begun when he had established the slope levels. It was then necessary to measure the length of his tunnel down to the merest inch. You would probably measure off a house lot by running a hundred-foot tape along the boundaries, but that wouldn't do in this case. There is a hill 3,000 feet high between the ends of this tunnel, and the tunnel itself goes straight through. McConnell measured this hill by triangulation, a weird sort of expedient used by engineers who have studied and worked long enough to learn it, but even that was not sufficient for this purpose. The whole distance was 'slope-boarded' in addition.

"'Slope-boarding' is easy to understand. If you want to determine the horizontal distance between the head and the foot of a flight of stairs you would start at the top and measure the width of each tread, and, allowing for overhand, you would add the horizontal

distance. Now, McConnell and his crew did something similar to this. They had a long board scaled to a hair's breadth; just so long, no more and no less. In the middle of this board was set a spirit level, so that the measuring edge of the board could be set true. With a man at each end of the board and one in the middle to watch the spirit level they started from a precisely defined point at the top of the hill and measured down hill each way. One end of the board was placed on a point and the other end was directed along the route and raised or lowered until the middle man said 'level.'

"Then the man at the outer end would drop a plumb bob and mark the spot directly beneath the end of the board. Then the board would be reversed, the outer man would take the stake, and the stake man would drop the plumb bob. If the plumb bob did not hit the identical spot that it had marked before something was wrong, and the work would be begun all over again. Having agreed upon a precise distance, and marked it permanently, this new mark would be taken as a basis and the process repeated until the whole distance was covered.

"Imagine now, three men 'slope-boarding' down the steepest slate roof you ever saw. Of course, they would need rubber-soled shoes and ropes, just as 'Gunnison McConnell' and his men did, but you should remember in this connection that you never saw a slate roof as steep as the walls of Gunnison canyon; builders do not make them, nor do they perch their ridgepoles 3,000 feet above ground.

"McConnell prepared his plans, sent them to Washington, and in the course of time came back the order: 'Proceed to dig'; and McConnell started in to make the dirt fly with the same spirit and enthusiasm with which he prepared the plans."

The tunnel is cement-lined, and will have a carrying capacity of 1,300 cubic feet of water a second. It will connect directly with an elaborate system of canals and ditches, extending down the valley on both sides of the river.

To supplement Statistician Blanchard's statement it is proper that I should add that the Uncompahgre valley will be watered by the United States government through the Gunnison tunnel, which is six miles in length, and that in the Uncompahgre valley there are 150,000 acres for irrigation, of which 105,000 are deeded land; that about one-half of the balance has been taken by homesteaders, and the remainder has all been withdrawn from filing until the government is ready to deliver water. At that time, it is expected that a drawing will take place and the balance of the land will then be taken by homesteaders. The price of deeded land ranges from \$35 to \$60 per acre. This land generally has some water right, but not sufficient

to warrant the cultivation and raising of crops. However, it is subscribed for water which will be delivered through the tunnel. It is estimated that the water will cost from \$23 to \$35 an acre. This amount will be paid to the government in ten or more equal annual payments, without interest. Forty acres of irrigated land is considered a sufficient amount for a home for a family, and the government land yet to be taken, where it is all high-class land, has been limited to that number of acres.

The altitude of the valley is from 5,000 to 6,000 feet above sea level, and it is so sheltered by surrounding mountains as to prevent blizzards or cyclones. It is one of the best fruit districts in the entire West, and one of the principal industries is fruit raising. Other farm products grow very well in this valley, however. Alfalfa hay produces three crops and yields from five to seven tons per acre; grain, potatoes, sugar beets and garden produce grow abundantly there. The records show the best production of sugar beets in Colorado in this valley.

The valley contains about 20,000 population, and has three towns, Delta, Olathe and Montrose, Delta being the county seat of Delta County, and Montrose of Montrose County. This valley is a natural location for the hunter and the fisherman.

There is room for a great many enterprises among which are a sugar beet factory, one or more flouring mills, alfalfa meal mills, brick factories, cold storage plants, fruit box factories, several canning factories and evaporators and more farmers and orchardists. It is estimated that Delta and Montrose Counties will, this year, ship out 1,500 cars of fruit and 3,000 cars of sugar beets, for which the farmers will receive \$5 per ton on the car. There is also plenty of labor for anyone and at good prices.—*Woman's National Daily*.

"PERHAPS the greatest hero is the man who does his best and signally fails, yet is not embittered by his failure. A life here in which you fail of every end you seek, yet which disciplines you for a better life, is assuredly not a failure."

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED—1,000 Sisters to send for sample of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Ill.

FOLLOWING we give the Eleventh Report of the Bureau of Agriculture, Labor and Industry of the State of Montana for the year ending Nov. 30, 1908. One of the most substantial Irrigation projects in the State of Montana is located near Big Timber in Sweet Grass County, which will be settled in the very near future by the Church of the Brethren and their friends.

"The Big Timber project consists of 65,000 acres of land near the city of that name in Sweet Grass County. This was also one of the selections under the old commission and there were \$132,000 worth of bonds issued against the project. These bonds have been surrendered and destroyed. Under a new contract 28,500 acres of land have been reclaimed and will soon be placed on the market at \$50.00 an acre. The holdings are on the Yellowstone side of the watershed between that river and the Musselshell River. Eighteen thousand acres are first-class irrigable land suitable for intensive farming. The soil is in places a sandy loam, but mostly a deep fertile clay loam and generally underlaid with a clay-gravel subsoil. The water used for irrigating is absolutely free from alkali, and there is no alkali in the soil except in a few low spots. The lands lie from four to twenty miles from the city of Big Timber, and the same distance from the Northern Pacific Railroad. The climate is good and all kinds of crops mature to perfection in this locality.

"The water supply comes mainly from Sweet Grass Creek and Government measurements show that there is an abundant and never failing run-off for every acre in the project. The company also owns a large canal and water rights from Big Timber Creek which will be used on lands adjacent to that stream, besides two large and

convenient reservoirs on Otter Creek with a surveyed capacity of 31,000 acre feet of water. Fifty teams and one hundred and twenty-five men have been employed during the past summer on the north side of the river, and a two-mile tunnel is being driven from both ends on the south side. Expenditures for the season will aggregate \$200,000.

"Members of the State Board and others who have visited the site report the work as having been exceptionally well done, the soil deep and fertile and remarkably adapted for easy and thorough irrigation.

"As in all other Carey projects this land and water system will eventually pass into the ownership and management of those who settle upon and pay for it without any further expense than the initial price asked, \$50.00 an acre. This may be paid in installments so that it will be possible to make the land actually pay for itself, aside from the small first payment.

"The proximity of this project to the sugar factory at Billings—81 miles—makes it entirely practicable to raise sugar beets there for that market.

"It is confidently predicted that land under this ditch will meet with ready sale and rapid settlement and that a prosperous community will result."

Sunflower Stories and Lullabies

By Olive A. Smith.

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Bye Boat." One hundred pages of the most delightful

Children's Meetings, and How to Conduct Them. By Lucy J. Rider and Nellie M. Carman. With lessons, outlines, diagrams, music, and helpful suggestions. Introduction by Bishop J. H. Vincent. 9th thousand. 12mo. Cloth. Price, \$1.00.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.

"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

THE INGLENOOK

NEFF'S CORNER

I know you must be tired looking week after week to see what Neff has to say and so often finding the same thing. When I established Neff's Corner in the 'Nook I determined it should not become stale and now this is the very thing that's happened. I'm sorry, but really if you were here and were to try to keep up with me for a day you'd see the reason why. The real reason why I do not say more here is because I haven't time to stop and put it down. What's the use to advertise when you already have more business than you can attend to? And my chief reason now for stopping long enough to say this is to keep you from going to sleep over Neff's Corner. I expect to hire more work done hereafter and take more time at my desk. Be on the lookout for Neff's Corner. I expect to have something to say that you will want to know about.

But you ought to see us building houses in Clovis. I have a row of jobs two miles long. Here and there I go, delivering material, hiring men, figuring contracts, collecting rent, etc., etc., and not only I, but scores of others going on the same kind of a jump. The way Clovis grows is a wonder. P. H. Beery of Covington, Ohio, G. S. Myers, of Lena, Ill., E. M. Cobb, of Elgin, Ill., and others have been here recently and they all agree that it is a wonder. If you contemplate an investment, write

Battle of Gettysburg

made plain by Brother F. Williams. A drive of twenty-two miles over the field for \$1.00 each. Have been a Guide since July '63. Also Guide for autos. Send a card when you will come. Frank Williams, 312 York St., Gettysburg, Pa.

Farms for Sale

From \$40 to \$65 per acre. Colonizing and Locating Brethren people in Northern Indiana 100 miles east of Chicago along the Lake Shore Railroad. Land is cheap. Good and level and productive. Well improved, and Good Improvements. We have the best Market towns in Indiana. They pay good prices for all things raised. Best fishing point in all this country. The best of water. Good telephone service and R. F. D. Good schools. I have sold twenty-eight farms within the last year to mostly Brethren people. We have some over five hundred members in the Bristol District. There will be a street car line built through Bristol this summer and is nearly completed. Our crops are as follows: Corn, Wheat, Rye, Oats, Clover, and Timothy, and a fine country for potatoes, and vegetables of all kinds, and fruit. Through the month of July we shipped daily from 800 to 1,000 crates of berries. We have a large crop of Peaches, Apples, Plums, and Grapes. Our land is as productive as land that is selling in Illinois for \$125 per acre. Call and see what I have for sale and be convinced yourself. Write at once for 1909 Price List and full information.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

Price, each, postpaid, only

25 cts.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,

Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

Ho! for Canada

It is not the purpose of the CO-OPERATIVE COLONIZATION COMPANY to slacken interest in its Colony at EMPIRE, California. This colony is now well under way; colonists are moving in and are well pleased and the work is moving along satisfactorily. But as the policy of this company is,—“CHURCH EXTENSION BY COLONIZATION,” steps are being taken to locate a colony in the Northwest.

After considering the various sections offered for settlement, the Directors at a recent meeting decided to locate

Colony Number Two Near Portage la Prairie, Manitoba, Canada

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its nearness to good markets,—only 56 miles from Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Manitoba.
6. The Low price of land, when quality and location is considered. These lands are now ready for settlement, are low in price and will soon be taken.

Join our Colony Number Two, secure a good farm in a prosperous section with good, nearby markets, excellent transportation facilities, where School and Church privileges are assured, and among people with whom you are acquainted. For fuller information, dates of Land Seekers' Excursions, etc., address:

LITERARY ACTIVITY OF THE BRETHREN IN THE EIGHTEENTH CENTURY

Prof. John S. Flory, Ph D.

Every one who has read this book is ready to speak a word of commendation.

"I have read with much interest Prof. Flory's book, 'Literary Activity of the

Brethren in the Eighteenth Century.' It is, no doubt, one of the very best contributions to our historical literature that has yet appeared. The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every state-

ment. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author, —A Great Book."—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

"I wish to express my appreciation of 'Literary Activity of the Brethren in the Eighteenth Century,' by Prof. John S. Flory, Ph. D. I consider it a very valuable contribution to our church literature. The author is to be congratulated for the thorough treatment of his subject. His style is easy and attractive. It is a readable book and ought to find its way into many homes."—Prof. T. T. Myers, Juniata College, Huntingdon, Pa.

Life and Sermons of Elder James Quinter

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

Mr. Jonas R. Trimmer Writes of Miami Ranch

Mr. Trimmer is a man of far more than ordinary learning and experience, especially along irrigation lines. He expresses the sentiment of other representative citizens of Miami Valley.

Miami, New Mexico, May 25, 1909.

Farmers Development Company, Miami, N. M. Gentlemen:—

It was not until after I had traveled in many sections of the United States, especially in the arid and semi-arid portions of Texas and the Pacific Coast from Southern California to the Canadian North-west, that I decided to locate on Miami Ranch. I had spent some time in the Republics of Mexico and Guatemala as well, but for an all-around proposition I consider this section as good as any I have investigated.

The climate is ideal and healthful and soil fertility is A-1 and will produce most anything adapted to the Temperate Zone. I find the local markets far from being supplied, substantiated by the facts that produce, provisions and canned goods are nearly all shipped in from surrounding and other states.

Since I have located here and studied soil conditions, I find them remarkable. The centuries of action of the elements has eroded and washed from the mesasslopes vast amounts of rich humus and placed a deposit of from ten to fifteen feet upon the land I acquired. The soil composition is just sandy enough to make it pulverize and cultivate nicely, free from alkali and as to moisture retaining qualities it is marvelous.

Before locating, I studied the market question thoroughly, and situated as we are here, we will be able to compete with any section, raising similar products to those of Miami. Our altitude and climate brings our crops to maturity at a time when the vast section of country to our south and east are in the market for same, thus assuring unlimited demand.

Miami Valley suits me and judging from what has been accomplished here in a short period of time, I feel confident we will be flourishing with the older sections, especially where irrigation is practiced.

Miami is a proposition that the investor and homeseeker can feel safe on; we have the water, the first essential in a semi-arid country, our rights are perpetual, backed by legal government rights.

Your company is certainly giving fair treatment to settlers and are making both interests mutual and all that can be expected.

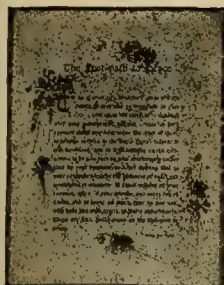

Thanking you for your hearty co-operation in the past and sincerely trusting for a continuance of same, I am

Very respectfully yours, (SIGNED) Jonas R. Trimmer.

Don't wait. Come and see. Excursions via Atchison, Topeka and Santa Fe Railway September 7 and September 21. \$30 from Chicago, \$25 from Kansas City, \$11.65 from Denver, to Springer, New Mexico. Write or wire us before starting.

Words of Help and Cheer

Only a faint idea of the beauty of these cards is conveyed by the accompanying illustration. The text matter is attractively arranged and printed on a hand-made three-ply ripple board and artistically decorated in water colors by hand in violets or clover as designated in list. A plain white envelope of antique paper to match, is furnished with each card. Size of each card, 7x9 inches. Order by number.

Price, postpaid, each,25 cents

1. The Foot-Path to Peace (Violets).—Henry Van Dyke.
- 1c. The Foot-Path to Peace (Clover).—Henry Van Dyke.
2. Opportunity (Violets).—John J. Ingalls.
3. Our Burden Bearer (Violets).—Phillips Brooks.
4. Crossing the Bar (Violets).—Alfred Tennyson.
5. My Symphony (Violets).—Wm. Henry Channing.
- 5c. My Symphony (Clover).—Wm. Henry Channing.
6. A Slumber Song (Violets).—Anonymous.

Brethren Publishing House, Elgin, Illinois

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.

"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

Farms for Sale

From \$40 to \$65 per acre. Colonizing and Locating Brethren people in Northern Indiana 100 miles east of Chicago along the Lake Shore Railroad. Land is cheap. Good and level and productive. Well improved, and Good Improvements. We have the best Market towns in Indiana. They pay good prices for all things raised. Best fishing point in all this country. The best of water. Good telephone service and R. F. D. Good schools. I have sold twenty-eight farms within the last year to mostly Brethren people. We have some over five hundred members in the Bristol District. There will be a street car line built through Bristol this summer and is nearly completed. Our crops are as follows: Corn, Wheat, Rye, Oats, Clover, and Timothy, and a fine country for potatoes, and vegetables of all kinds, and fruit. Through the month of July we shipped daily from 800 to 1,000 crates of berries. We have a large crop of Peaches, Apples, Plums, and Grapes. Our land is as productive as land that is selling in Illinois for \$125 per acre. Call and see what I have for sale and be convinced yourself. Write at once for 1909 Price List and full information.

M. H. MILLER, Bristol, Indiana

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

Read What Prof. Holden of Ames Agricultural College, Ames, Iowa, Has to Say:

"You may say for me that southern Idaho is THE IDEAL PLACE FOR THE YOUNG MAN who is looking to make a start in life. Every acre of irrigable land in this section is worth, in yield or income, three times as much as the best land in Illinois and Iowa. I am for Iowa, but if a man is to move, southern Idaho is the place to go, and for the young man, full of wonderful opportunities.

"The diversity of crops appealed to me as strongly as anything I saw. The irrigation farmer for instance, is not dependent upon any one crop. He doesn't have to wait until the end of the season to get his money because there is something seasonable and saleable at all times during the year. He raises fruit, wheat, alfalfa, oats, vegetables, hogs, cattle, sheep, in fact everything grown in the temperate zone.

"One man told me that he raised 18 bushels of clover seed on one acre of ground during the past year, and I found that the clover seed crop runs 8 to 15 bushels per acre.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

Homeseekers' Round Trip Rates in Effect on First and Third Tuesdays of Each Month During the Year From Chicago

Blackfoot, Idaho,	\$42.50	Mount'n Home, Idaho,	\$53.90
Boise, Idaho,	57.50	Nampa, Idaho,	57.20

No. 36.

SHAKESPEARE AND HIS ART

O. H. KIMMEL

WILLIAM SHAKESPEARE. He was a genius, an artist, a man of destiny. He added prestige to the English language just when it was needed most, he gave the vitals of a better and purer life to the English drama, and he established the high plane of the English literature. He did this so well that the Englishman began to take pride in his language, his literature and his drama. The influence too of the English tongue was broadened and more highly respected throughout the world as a result of the finish that Shakespeare gave it, and its power gradually began to creep into all parts of the world.

To himself Shakespeare was a different being from what he now seems to the English speaking world. In some way the people of our time generally feel Shakespeare to have been a peculiar, isolated, supreme artist, towering above the regulation man with nothing in common with him. To the people of his own time he was certainly nothing of this kind; he was no superhuman seer, no divine prophet whose utterances should edify and guide posterity. He was a man of his own time, only one of a considerable company of playwrights, whose work at the time seemed neither more nor less serious than that of any other man in the same profession. Nothing he wrote or did seemed to the commonplace man of his own time of so great a worth, and nothing but the lapse of time could have demonstrated the two or three things that he was capable of doing which separated him from the other writers of his day, and placed him in a plane where the stars of time shone upon him and gave him the first place in English literature.

Sometimes we think it strange that, in all these years since the days of Shakespeare with its advances in all lines of letters and science, no one has been able to rival Shakespeare in his work in letters. And really it is a marvel that our first great writer still holds place as first in the rank. But there are some reasons for this. The English language, up to the

time of Shakespeare was considered as a barbarous tongue, a vulgar tongue. The one who could overcome this must be capable of beautifying the language, and give this beauty recognition. This he did so well that no subsequent writer has been able to add to or even approach the beauty he put in his phrases. Then he lived in that eventful time in English history, that "Golden Age" when Elizabeth was on the throne. His literature belongs to the Elizabethan age, and the Elizabethan drama proves to have been one of the most completely typical phenomena in the whole history of fine arts. It was a time too for golden opportunities in letters, for it was the vital time for initiative action in all English endeavor. England had reached the time when it must put forth men equal to the occasion in all lines of endeavor if she is to even approach the leadership of nations that events are bringing toward her. The nation is emerging from an old life into a new and larger life. Her citizens are beginning to take great pride in her and in her possibilities as a nation. They are beginning to see and realize their needs, they are awaiting and asking for initiative action by their own people, and their own people must respond or they cannot succeed. They are ready to cast off the yoke of an accredited vulgar tongue, and they wish to be considered as polite and as well cultured as their cousins on the continent. Though they knew it not at the time, William Shakespeare was to lift them from this bondage, and they were to recognize him as the ultimate leader in English letters.

A great many different sides appear to the movements in the constructive world building about this time. Many men who are to remain prominent as long as time shall last come into prominence. In the sixth year of Elizabeth's reign William Shakespeare was baptized. This was eleven years after the birth of Spenser and three years after that of Bacon. He was ten years older than Ben Jonson and died eight years

after Milton was born. The student of English classics and English philosophy realizes how well these men seized the great opportunity before them, and how deeply they have moulded their teachings in English thought and traditions. These show the activity of the time in letters, and they show how carefully the Englishman thought and acted at this time when so much depended on deliberation and clear expression. Another comparison will show the activity of the world in which all live nations must take part if they are to remain or become prominent in the future events

of common prayer was written and in 1553 Popery was reëstablished in England. In 1555 and '56 Ridley and Cranmer were burned at the stake at Oxford, and in 1558 the English church was restored. Also in this year the great English triumph which put more on the shoulders of the Englishmen than many events combined was the destruction of the Spanish Armada. In 1611 King James' version of the Bible appeared. Thus we see that England, at this time, gave plenty for a man of letters to do. Crowded into one century were as many reform movements, as many great

Birthroom, Shakespeare House, Stratford.

of the world. They show the activities as they are moving society and religion and nations. Beginning one hundred years before the birth of Shakespeare, we witness Columbus discovering a new world in the interest of trade and commerce, we witness Balboa as he discovers the Pacific, Magellan as he sails around the world, and Vespucci as he gives a name to the new world. Before Shakespeare died Cortes has conquered Mexico, and the great Raleigh has planted a settlement at Roanoke Island. Nova Scotia has been settled, Jamestown has given fame to John Smith and Quebec has received the Frenchman.

And other events were succeeding themselves in rapid succession. In 1530 the English church was founded, in 1538 the monasteries were suppressed in England, in 1539 Cranmer's Bible appeared, and in 1546 Martin Luther died. In 1552 the English book

world-wide movements, as usually occur in many centuries. Hence it was an age of remarkable mental activity, and Shakespeare is the man who did the great work in letters in this "golden age" of opportunity, and gave supremacy to English letters. It is a great thought for the dreamer when he thinks that amid the happenings at home and abroad, when man triumphantly overcame semi-barbarism and oppression, when the supremacy of the sea had yielded to the art of navigation, when the wild lands of a new world had been found and were yielding up their wealth, and the savages of this land were submitting to the intrusions of the European, when joining with the elements, they had won prestige over the leading nation and turned the tide to the Anglo-Saxon by the destruction of the Spanish Armada, and when the essentials of their own civilization were growing magnificently on the smaller

possibility base of other years, when a new enlightenment was fairly springing upon them, bringing a greater day to all, I say it is a pleasant thought for the dreamer to realize that the nation produced the men at the right time to go out and win the laurels in letters, in art, in navigation, in apportionment of new lands, in war and peace and in all the endeavors of mankind until this people came forward and took first rank among the nations of the earth. Surely Shakespeare must have been a great genius, for even living in this age of opportunity his philosophy and his dreams must be the best of the language in order that they attract the world.

So Shakespeare appeared in the arena at the time when he was needed, he acted, he impressed his art so deeply upon the traditions of the English race that the lapse of time and the wear of centuries only polishes and brightens the imprint.

He was born and baptized at Straford on Avon, April 26, 1564. At the time of his birth his parents were looked upon as excellent people. Within four years after the birth of William, the father was Mayor of Stratford. But by 1577, records show that he became involved in debt and the family's prestige was lost. We know little of William until he reached his eighteenth year, and what is known or surmised of him before this time would not go to making a favorable report. Between eighteen and nineteen he was married to Anne Hathaway, a woman seven years his senior, and who ranked in society no higher than he. By February, 1585, three children were in the home, and within a year or so after this time William's father was in prison for debt, and the family was certainly destitute and in disgrace. We know very little of William's life through these trying years, but traditional report seems to chronicle that not the best of domestic bliss existed, and there is no proof that he overly exerted himself to supply the wants of the needy family. Some accounts go to show that he went to see plays, that he was apprenticed to a butcher, etc., etc., but none of these statements can be proven. Later years reveal the fact that William resented the disgraced position that the family had sunken into, and that he resolved to make opportunity to regain the old position, if possible. At any rate he left home one day, and his whereabouts were not known for a time. Afterwards it was revealed to his folks that he was in London holding horses at the theatre doors. Later he was an apprenticed play actor, and later a playwright. So strong was his desire to secure for his family its old position and to secure for himself a coat of arms, that he took this method of trying to excel in this undertaking. We know little of his first years in London, but in 1592 public reference is made concerning him there. In this year Robert Green, the dramatist, died. His last book contained a passage

which referred to Shakespeare, and quoted a line of Shakespeare's "Henry VI." So, as early as this date he must have written several plays. The passage reads:

"Yes, trust them not: for there is an upstart Crow, beautiful with our feathers that with his 'Tygers heart wrapt in a player's hide' suppose he is as well able to bumbast out a blanke verse as the best of you." The passage indicates the unfriendly feeling of Green, and perhaps the other old writers because of the rapid recognition that Shakespeare was gaining. He refers to him as the crow dressed in their feathers, which seems to insinuate that he copied his art from them, quite a natural feeling for one well up in an art and seeing an apprentice by his side rising rapidly. At any rate this shows that Shakespeare was gaining recognition as an actor and author by this time.

By the time he was twenty-nine years old his first published work appeared. This was "Venus and Adonis," a poem. This poem has been said to be one of Shakespeare's elaborate feats of phrase making, as elaborate phrasing was very popular at this stage of Elizabethan Literature. Soon after this appeared "Titus Adronicus," probably his first play. This was a tragedy very poorly put together. It was a story of blood, and gave expression to some almost inhuman bloodcurdling actions, but it plainly shows what was demanded by the theatre-going public when Shakespeare began his work. Shakespeare did not attempt to improve the stage all at once, and perhaps was not able to do so had he so desired, because he was still young and inexperienced himself, but as he grew and became more mature in the work himself, he gradually added those requisites that raised the standard of the drama until it became more pure, and represented the best of enlightenment.

By 1594 Shakespeare had gotten hold of the public and had become fairly well established in his work in London. Up to this time we have looked upon him as practically unknown, a poor man without influence striving to earn a living in the theatrical field. From now on we look upon him as a fairly well established man in his profession and rapidly rising in it. The idea that he was a genius did not dawn upon the people as yet,—in fact it took future generations to learn this,—but the public saw in this man the ability to write and stage plays that pleased and edified them and the people looked favorably upon him. So we see the young man who left his home with an ambition to excel is at the early age of thirty, fairly well along on the road to success.

In view of these facts it is significant to follow his movements now to see the influence brought to bear upon his family. By following the records we find the conveyance of land at Stratford, dated January 26, 1596, which describes John Shakespeare, William's father, as "yeoman." In the Herald's College, a

draft grant of arms later this same year, to this same John Shakespeare describes him as "gentleman." The word "gentleman" shows that the honor of the father is again restored, and from the fact that there is no possible source of income than from William it is to be seen that he is realizing what his ambition craved, and that he is using the money saved in his art, by restoring the lost honor of the family. And the record of his prosperity continues for some years. By Easter, 1597, he had purchased "New Place," a mansion and grounds in Stratford thereby becoming a land proprietor. Others of his works were published and by November that year his father filed a bill in chancery to recover the estate which he had mortgaged nineteen years before.

At Christmas that year William was honored by being permitted to play "Love's Labors Lost" before the Queen at Whitehall.

Within the next two or three years his acts of benevolence toward his family and his fellow townsmen had established him in the opinion of the Stratford people as a well to do and influential man of business and landholder and he was certainly clearly established as a poet and dramatist in London. He had been a busy man all these years but in the following year, 1600, he produced or published the following: "Romeo and Juliet," "As You Like It," "Henry V," "Much Ado About Nothing," "A Midsummer Night's Dream" and the "Merchant of Venice." In another year appeared "Twelfth Night," "The Merry Wives of Windsor," the first and second parts of "Henry VI" published, the "Revenge of Hamlet,"—Hamlet proper not being published until 1604. And so he writes his plays and poems and sonnets, he plays, he becomes stockholder in the Globe Theatre, and continues his great activities until about the year 1609. In this time he has revolutionized the English stage, he has added dignity and respect to it and has developed a real English drama, has written the greatest English in literature, has shown his philosophy of life, and at the age of forty-five retires to his palatial home at Stratford on Avon to spend the remainder of his days with his family. By the year 1600 he had reached the zenith of his power, and it was about this time that his great mind unfolded its greatest works to the world. And some of his works are wonderful. Where is there anything in literature outside of the inspired writings to excel "Hamlet," or "King John," or "Romeo and Juliet," or "Twelfth Night," or "Macbeth," or the "Sonnets"?

But this man's work is done. He retires from work at forty-five to reside as a gentleman at Stratford. But his activities have been too great to permit him to remain there long. The physical being is worn out, and at the early age of fifty-two years he dies.

And thus we summarize his life: At the age of

thirty he had become a recognized writer and actor. Before he was forty he had written the best of his productions, and at forty-five, after scarcely more than fifteen years of active service he retires, worn out with the pressure of hard work, but in that short period of time he has given us the language which has never been equaled, and which classes well with the best that has been produced in any language. His ambition in life was to restore the respect of his family name and to secure a coat of arms for himself. He did this, and perhaps never realized what his work to realize his own ambitions meant to the world. How this brings to mind his own words in "Twelfth Night": "Some are born great, some achieve greatness, and some have greatness thrust upon them." And again in Julius Cæsar:

"There is a tide in the affairs of men,
Which, taken at the flood, leads to fortune;
Omitted, all the voyage of their life
Is bounded in shallows and miseries."

A FEW STRAY THOUGHTS.

W. ARTHUR CABLE.

OBJECTS of correlativeness have a mysterious attraction for each other. And undoubtedly the law is manifested throughout the entire universe. Invisible chords of sympathy are forever swaying and weaving, centering, in a greater or less degree, their seaching clasps into a common unit.

My mind was drawn this morning to the fount of the literary world. The kingdom of literary talent took possession of my mind, and I thought:

Writers are born, not made. The bent is originally within the persons in question, and only needs development and culture, to be productive of the most wonderful results. Artificially-made monarchs of the literary kingdom are not to be found. Efforts to implant a germ which is not adaptable to its environments, which its surroundings are in no condition to receive, invariably terminate wrongly. There are other fields of labor, peculiarly fitted for just such a nucleus. The native plant will gain the goal.

Imagine Longfellow, if you will, undergoing untold agonies as to diction, figures, and the like, in the writing of his "Psalm of Life":

* * * * *

Life is real! Life is earnest!
And the grave is not its goal;
"Dust thou art, to dust returnest,"
Was not spoken of the soul.

* * * * *

In the world's broad field of battle,
In the bivouac of Life,
Be not like dumb, driven cattle;
Be a hero in the strife!

* * * * *

Lives of great men all remind us

We can make our lives sublime,
 And departing, leave behind us
 Footprints on the sands of time;
 Footprints that perhaps another,
 Sailing o'er life's solemn main,
 A forlorn and shipwrecked brother,
 Seeing, may take heart again.
 Let us, then, be up and doing,
 With a heart for any fate;
 Still achieving, still pursuing,
 Learn to labor and to wait.

Or how could Bryant, laboring under great mental stress, leave to his monumental honor such charming, bewitching expressions as are found in his "Thanatopsis":—

To him who in the love of nature holds
 Communion with her visible forms, she speaks
 A various language; for his gayer hours
 She has a voice of gladness, and a smile
 And eloquence of beauty, and she glides
 Into his darker musings, with a mild
 And healing sympathy, that steals away
 Their sharpness, ere he is aware.

Or again:

So live, that when thy summons comes to join
 The innumerable caravan, that moves
 To that mysterious realm, where each shall take
 His chamber in the silent halls of death,
 Thou go not, like the quarry-slave at night,
 Scourged to his dungeon, but sustained and soothed
 By an unfaltering trust, approach thy grave,
 Like one who wraps the drapery of his couch
 About him, and lies down to pleasant dreams.

Certainly, the purity, propriety, and precision of diction, the correct use of figures, etc., are necessarily important factors in the production of such eloquent literature, and yet the naturally born writer will, unaware and before he has acquired them as a part of his education, use those very elements, though in a crude form.

Indeed, to attain such masterful heights as have these men, requires much more than genius, and the production carries with it an untold amount of labor, but in consequence each word conveys a distinct and definite meaning; the omission of one word leaves a gigantic hollowness in the thought to be conveyed.

Scottville, Michigan.

FISHING WITH HOOKS, NETS, AND SEINES

H. D. MICHAEL

In Three Parts. Part Three.

Now for a night's fishing with a net to see how that goes and to get all the experience we can. I suppose all of our fishing party understand why I say a night's fishing. If not, it is for the reason that the fish can see the nets in the daytime and will go under, around or turn back instead of getting caught, so all gill-net fishing is done at night.

For that reason prepare well for keeping warm, as we will be most sure to get damp from sea fogs and from handling the net. The night will seem chilly ere morning dawns even though it is in the summer, for most salmon fishing along the coast of Oregon is done in the months of August and September. So look well to the amount and kind of clothing, and we may want a midnight lunch along and we are sure to need a large supply of patience unless the night is very favorable.

Then, too, we must have a good gasoline fishing boat and a net of fifty or sixty fathoms' length, according to the place we are going to fish. Now if there is a gasoline engineer in our crowd and one of us that understands the fishing part we may get a few fish instead of making a water haul as is often done.

Do you see that it is getting dusk and that the tide is nearly full? That means that we must be getting to our fishing grounds, so go aboard that we may get there to lay out our net and make the first drift just as the tide turns.

As we are now on the scene of action we must shut off the engine and get the oars into action to row across the channel while the most experienced man pays off the net. In doing that part we must be sure that the net is not tangled but is free to hold its upright position in the water.

Now as the net is out we must be patient and slowly drift with the slowly ebbing tide. But, look! See how that float line is dancing in the water, bobbing up and down, accompanied by a splashing of the water occasionally. That is the announcement of the catching of our first salmon or at least the first one near the surface where he can splash and notify us, though there may be others caught down near the lead line which is fastened to the lower side of the net to hold it perpendicular in the water. Now and then we see another splash which encourages us to think that we will have some meat, anyway.

Drifting, drifting, and drifting; it seems to be get-

ting tiresome to most of us, as our restlessness shows, so let us take in the net as we have drifted far enough for our first time.

There, what is that large spider doing in our net? Oh! no, it is a crab, so be careful that he does not get hold of you, or you will be pinched, sure. Here come some salmon at last,—bright, glistening-sided ones though not very large. Only about fourteen to twenty-five pounds each. They are known as Silver Side salmon. But look at that large one being pulled in so completely tangled in the net that we can hardly get it loose. That is a fine, large Royal Chinook, one of the highest-prized kinds because of their deep red flesh, fine flavor, and because of the fact that their bones cook soft easier than others, and for that reason they are better fitted for canning purposes. The Silver Side salmon are used more for cold storage purposes, as well as for smoking and to salt down.

But just look at that queer-looking fish being pulled in with the net now. It is such a dark, muddy, rough-looking specimen with such a long projecting nose and a short under jaw. You will find when dressing it that it has no bones,—not even a backbone, for it has only a cartilage instead, that is easily cut with a knife. Though it is about the weight of a salmon it is much longer and more nearly round. It is a sturgeon and a small one at that, as they grow to be one hundred and fifty to two hundred pound fish.

Well, there is the end of the net and a fine assortment we have. Now we must start the engine and get back up the bay to our place of starting to make another drift on this same ebb tide.

In laying out the net this time you can see a little touch of the hard life of the fisherman. The net is wet and cold, the night is chilly, dark and dreary, yet the fishermen must go ahead with their hard labor, never faltering, or their income will cease.

With the net out we are drifting again, but here comes a large steamer, for we can see her lights far down the bay. Be sure now that you show them our lights in the right position and give them the signal to pass on the right, since our net is to the left. To do this you must show them our red light to the left of our green light so that they can tell on which side of us our net lies. There they go steaming by,—a large ocean steamer lighted by electricity, and a pretty sight it is with the crew working away to be prepared for landing soon and the passengers out looking at those poor fishermen, as they term us, for the fisherman's life is known to be a hard, disagreeable one with constant exposure and risk of life.

Having drifted now as far as we deem best we can again take in our net, count our fish and be ready to make another drift as soon as the tide begins to flood, as it is now at about low slack water. Then we will

drift up stream with the tide which will seem a novelty to some of us.

Here we have been drifting and fishing, enjoying our night's experiences, but who can tell us where we have drifted? Heretofore we could see the beacon lights and shore lights fixed for vessels and fishermen, but where are they now? I dare say there is a shaky feeling creeping over some of the party, for the fog has become dense, shutting out the sight of either shore, stars, or our shore lights.

This is a water haze and the kind that has caused many a vessel to be wrecked because of the density of the fog, making it impossible to penetrate it but a short distance with even the strong search lights carried on large vessels. We have been drifting along fishing, all unconscious of where we were and now none can tell us our location, as to which part of the bay we are in, whether near one shore or the other. What shall we do? We must use our best judgment and cautiously make our way, lest we run into rocks, mud flats, or old jetty works. We can take soundings often, and, as our engine has a compressed air whistle attached, we can stop the engine, then blow the whistle and see which shore it strikes by the sound and thus find our way as best we can.

Here we are again close to our range lights so that we can see them, and now knowing our location we can run by our compass and feel more sure of landing near our right wharf. Now comes the home coming, for here is our dock in sight, as we have run within a few feet of it. Planting our feet once more on terra firma, we are glad for our experiences; also for our safe return.

The fish are to be cared for now, as we have a fine boat load, considering our chances and our having to come home a little earlier in the morning than we otherwise would. I suppose some of you will want the salmon cared for in different ways and I know I shall. Some we will salt down. These we only need to clean and slice down each side of the backbone, taking it out, then salt in a kit by just putting in a layer of fish, then one of salt until the kit is full and they will make their own brine. The ones to smoke we will only want to lay in salt for about twenty-four to forty-eight hours before hanging up to smoke. But the other way interests me also.

Some hesitate to eat salmon put up at the factories because of the stories told of its not being properly cleaned and cared for, but we can have some that will be just as delicious and that we can vouch for being clean. We only need to dress the fish properly, place in the common jars raw with seasoning but no water, as some suppose, and place into a boiler of cold water and after bringing to a boil, boil for four hours. We can then seal the cans and have canned salmon fit for

a king. The smoked salmon will also be a tempting dish when properly cured.

If this net fishing has not been on a large enough scale for some of us let us be spectators for a day at a seine fishing camp. I think that will satisfy us without taking part.

To prepare the seining grounds the river must be cleared of all brush and snags and the bank cleared also to permit of the seine being dragged up onto it so that the part remaining in the water is drawn to where it is but shallow. That part is often costly because of the amount of powder required to blow the stumps and snags into pieces small enough to handle; also because of the time required to do it.

After that is done and the seine the length of a city block or sometimes of two of them is on the ground the equipment is ready for fishing, if only a team is to be used to draw the seine. But the latest device is the donkey engine and if one is to be used it must also be installed, and then all one has to wait for is the fish. As soon as they are running in schools large enough to pay, the fishing commences.

There, see how they take the seine in the large seining boat and lay it out in a circle, enclosing as many fish as is possible.

Then watch them attach the lines from the donkey engine to the seine and commence to haul it in. Just see the fish splashing as the seine is drawn into the water of only two to four feet in depth. Now the fishermen wade out and commence killing them to take them out. That is the disagreeable part of this work, for often the men are wet from head to foot all day, and wading in water nearly all day long they expose themselves to all kinds of sickness, often contracting some sickness that drags them to their grave.

Large numbers of salmon are often caught at one haul when a large school of fish are in just the right position, but the record catch of the Lower Coquille River in southern Oregon may seem too large a fish story for some of you to believe when I tell you that ten thousand salmon were caught at one haul of the seine. I was not an eye-witness, but it was told me by those I could not doubt, after knowing of the conditions there in some of the most favorable years in the past when the whole river seems to have been one seething, rushing swarm of fishes. But that time seems to be past, as the salmon seem to be getting more scarce year after year.

In this now you may have seen some of the hard life of the fisherman, but far more of the bright than of the dark, as it is impossible for me to describe it in full. There is the exposure, the loss of sleep, the cold and wet to struggle with and the hard work it is also, for most of it is among the hardest of labor.

And now through all these fishing experiences how many of you have seen the fishing only? I dare say

none, for I believe that in your minds, like my own, thoughts have been revolving with the rapidity of the wheels of an old watch I used to own after I had removed the balance wheel.

I suppose some have thought of the fishermen on the Sea of Galilee called to be fishers of men. Some probably have thought they could not see why they were chosen or an inkling as to why. Think of the perseverance and undaunted courage required to be a successful fisherman and you will probably see a reason why the chosen ones were so persevering in spite of all hindrances, for they had long before learned to face dangers calmly and with a steady nerve.

Is it any wonder that men that would risk their life in such a hazardous calling would also die for the cause of Christ when he had given them that beautiful call, "Come up higher," and be fishers of men? Is it any wonder that Peter had such great stability and firmness after he had endured such hardships while fishing?

Ah! no. It has always seemed to me to give us more strength and firmness of character for every obstacle we meet if we only remain true to Christ's cause and with his help overcome all.

Then some may have thought of our condition when we had drifted with the tide until the gloom had settled around us and we were lost from our bearings. Think of how many are doing just that. Drifting, drifting on, heedless of our location until we awaken to a realization of the fact that the gloom is settling around us and we can no more see the light to guide us safely to our home. May we stop and take note of our bearings while the guiding light is still in plain view. "Turn ye, turn ye from your evil ways; for why will ye die?" (Ezek. 35:11.)

Pasco, Wash.

SOME EGGS THAT CANNOT HATCH.

J. HUGH HECKMAN.

It does not happen in most cases that from each egg of a nestful a chick is hatched. Generally one or more prove infertile. Likening the world of men's minds to a nest full of eggs, we may find therein countless expectations of which many are so ill-grounded as to be hopeless of realization. These are eggs that cannot hatch.

No one courts disappointment. It is desirable to avoid the paths which prove fond hopes forlorn. Youth is especially a period of anticipation, and then is there often the inability to discern clearly between the legitimate and otherwise in attaining desired ends. For this reason does youth need counsel and guidance that in strong imagination it may not forecast impossible conditions. Life does—and it ought—hold

forth bright prospects to the normal, healthy young person, and the work of parents and teachers becomes that of conserving youthful energy toward constructing air "castles" which are *plans* for real "castles."

The *Afterwhile* and *Tomorrow* are phantoms, rich in golden possibilities. Legitimate dreams concerning them belong to the individual who is actively engaged in the details of *today*. For him the future holds great things in store. The danger that attends a highly visionary brain is in the likelihood of passing the opportunities of the "commonplace" present while waiting for the "glories" of an uncertain time to come. These are eggs that never hatch. Neglecting the trifles of today discourages any prophecy of great things to come. The *Afterwhile* stands at the end of the path along which the moments of *Now* are leading.

Among the elements indicative of nobility of soul is that of *good intention*, but that in itself is not conclusive evidence. A common weakness is that of parading the good which we *intend* to do. The plan of allowing the good one *does* to speak for itself is much more praiseworthy. Saint Dorcas was mourned because of "almsdeeds which she *did*," rather than those which she was always *intending* to do. The passing of a wave of feeling over righteous intent creates a warm glow, but the intent not carried out entails weakness. Good intentions unproductive of good deeds are infertile eggs. Lack of development corrupts the life element present and deterioration results. We have all been told about the road that is paved with good intentions. To smile, to speak, to lend a hand—to *live* as we *intend*—will pave with good deeds the other road.

In all kingdoms under the jurisdiction of the Almighty there has been placed an immutable law which enlightens us with the thought that "whatsoever a man soweth, that shall be also reap." Many profess to discredit this principle in the moral and spiritual realms, even when admitting its desirability and truth in God's providence in nature. These delude themselves in the belief that a cause can bring other than the results natural to it. However unfortunate for the sower of evil, the inflexible rule holds true. The hope of escape is an egg barren of life germ. Sow an evil and you reap a disaster. We are today making the memories that will be ours to cherish or regret.

The spirit of acquisition is strong upon the human family. In the light of the multiplicity of things to be desired, this spirit is a wise provision in human nature. Between the desire and the acquisition lies the task of the acquiring, wherein lurks a danger. It is the inclination common to so many to believe, at least to act as if they so believed, that choice of methods in accomplishing fulfillment of desire is an indifferent matter. Not that there may not be diversity of method, but that all methods used in the acquisition

of honorable objects must be definable as honorable. Honorable methods in the attainment of noble purpose are those which naturally and logically lead up to the end toward which the purpose tends, and with which both the purpose and the end harmonize. For instance, the purpose to excel, the method of great labor and the end, excellence, all are in harmony with each other. Excellence is the natural consequence of purpose and effort. The shirker might rather have the adage read "There is excellence without great labor," but that egg cannot hatch. The law of honest service precedes the law of fair reward, and the honest aspirant will not expect to reach his goal without self-activity. Only those may claim the crown who have willingly accepted the cross.

There is no tragedy greater than that of a misspent life, wasted in harboring barren expectations. Turning about as it has upon the pivot of unrealities it has never really *lived*. This tragic sequel may be avoided by conformity of will and purpose to earnest actualities. Only that which is eternal is real.

EAST LAKE PARK.

M. M. WINESBURG.

As East Lake Park is the real show place in the vicinity of Birmingham, Ala., we took the motor and went out there one day, and as the park is probably ten miles from the city we had quite an interesting ride through the hills of "Alabamer,"—which is the native way of pronouncing the name.

On our way through the town from the north end to the east side, we could see all the sky-scraper buildings and the new terminal depot, and we also passed a huge blast furnace with its great piles of pig iron; then the motor line ran out among the hills. Along the car line were houses about all of the way; some of them were simply shacks. Colored people lived in them, and then again we would see a bunch of new houses built in among the forest trees where some enterprising real estate agent was booming a piece of land into a suburb. I saw two houses that might have been old timers, but the most of them were new and some had nice little yards, and gardens back of them. Back a piece, however, from the car line one caught glimpses of wooded hills and valleys that looked as if no one had ever cultivated them and no farms or farm houses were visible anywhere.

We passed through one small town and then more hills and glades and then into the little town of East Lake. The lake is a lovely little sheet of water about three-fourths of a mile long but not very wide. I think it was partly a natural lake in the first place and has been dredged out larger to make a pleasure resort. Out there one can see all classes of people walking around or lounging on the seats beneath the shade trees. All classes except the blacks and they are not allowed in there.

The park is the prettiest place I have seen since I have been in this city, for besides the lovely little lake there are many forest shades trees. Many of them are the sweet gum which has a beautiful five-pointed leaf. A toy railroad runs all the way around the lake and a toy engine pulls a string of toy cars each just large enough to hold two persons, and for ten cents one can ride around the lake in a toy car pulled by a toy engine; while the engineer seated on the tender looks bigger then the engine he runs.

Then for ten cents one can ride on the elevated

East Lake Park, Birmingham, Ala.

railroad, and cross the lake twice on the round trip, but if you want to take a skiff ride on the lake and fish at the same time, it costs twenty-five cents an hour; but if you don't fish it costs only a dime for each person in the skiff. There are of course other forms of amusement but I was not interested enough in them to investigate them, for they were only what one can see at any fair. It was the natural scenery that I was the most interested in, and the restless surging throng of humanity looking for a few moments of amusement and sweltering in the hot sun while they enjoyed the amusement.

In walking around through the crowd one could hear lots of the real southern vernacular used and by well garbed people too; such words as "you all" and "I sholy do." These expressions sound strange when one hears them for the first time, but one soon gets used to them and many of the people using these words may have been northern born; for when they hear these words spoken for any length of time they fall into the vernacular themselves. The day we were at East Lake it had been simply sweltering hot in the city but at the park it was right cool for on one side of the lake there is nothing but the deep cool woodland, and there was more breeze than in the city. Now, while it was pretty warm in Florida at this time last summer, yet I really believe it is warmer here in

Birmingham among the mountains than it was on the gulf coast last June.

Our trip back to the city was somewhat pleasanter than it had been going to the park, for it was evening and the sun had not so much force. Still the breeze seems to leave here with the sun and then everybody sits out on their porches to get whatever air there is going, and wherever a colored family lives the porch is their parlor and they seem to enjoy themselves in spite of the heat. But then the darky apparently gets all the enjoyment out of life that he can, for one

can hear them laughing somewhere about all of the time. They do about all of their work outside of their houses—or at least all that can be done on the outside even to bringing their food out on the porch or steps and eating it. Their favorite color must be white, for they dress their children in white and the women wear it at all times and places; they even do their housework and sometimes washing, all rigged out in white; and a white hat usually crowns their wool when they are dressed up and out on the street, and here some of the darkies surely do dress. They flutter along the

streets dressed out in silk and satin the same as their white sisters do.

Now, I often laugh to myself when I read some southern fiction in which the author always speaks of the dark-eyed and dark-haired southerner, when the truth is one finds as many fair-haired and blue or gray-eyed people in the South as anywhere else. Of course there are a good many people in the gulf coast cities that have dark eyes and hair but they are of either Spanish or French descent, and many of them not American born at all. But the real American southerners are as fair as the rest of the American people are in eyes and hair; probably they may be a little more sun-tanned, especially those that work out of doors, but still one does not sun-tan as badly here as they do in Florida; I have seen people there tanned almost brown.

"THERE are no new truths. We meet simply the old ones, which we have always known, in new garb. It takes a change of style to show off the real beauty of plain truth, hence the many forms of expression we give them or find them in."

If you have built castles in the air, your work need not be lost—that is where they should be; now put foundations under them.—*Thoreau*.

NATURE STUDIES

SEPTEMBER'S GIFTS.

M. E. S. CHARLES.

THIS month marks the consummation of the summer's toil; a change creeps over nature's face. All the hushed land slowly fills with royal splendor. We are wont to think of autumn as the saddest season of the year. But there is no time when nature is more lavish of her gifts of flowers, and fruit, and woodland beauty than this month.

From midsummer to midautumn the queen of our climbing shrubs is the trumpet creeper with its large pinnate leaves rivaling the emerald with their shade of green, and clusters of brilliant trumpet-shaped flowers growing at the tips of long, wiry branches. These are very attractive to the hummingbirds. Wherever the trumpet vine climbs with the help of its aerial rootlets, one is sure to see, sooner or later, the ruby-throat. The flowers are dependent upon him and the butterflies to fertilize their ovules, and he demands that his refreshments shall be reserved for him in a tube so deep or inaccessible that, when he calls, he will find all he desires notwithstanding the visits of many insects. The orange and red of these long tubes are irresistibly fascinating to him and insure his visits.

Belonging to the great Compositæ family of plants is the ironweed. While this is one of our worst weeds, it bears a flower of royal dye, purpling low meadows and moist soils with flat-topped thistle-like flower heads at the top of a rough branching stem. In the great contest forever going on among all plants as well as among all animals, this plant is well equipped for the battle. Many species of bumblebees, butterflies and other winged visitors do the work of fertilization so well that a medium-sized plant has been known, by actual count, to have borne over eighteen thousand seeds, each capable of becoming a fully developed ironweed. This plant may be called a beautiful pest, the beauty of which is often unappreciated by the farmer.

A very curious and pleasing plant which our grandmothers brought from England is "Bouncing Bet" (*Saponaria officinalis*). When it took root in America it had no respect for the narrow confines of a New England garden, but escaped to the roadsides and by its two modes of traveling, one by seeds, the other by underground stolons, it is now found throughout the territory between the Atlantic and Pacific Oceans. In

this plant usefulness and beauty are combined. The pinkish-white flowers are shaped like the old-fashioned garden pink, and possess a delicate odor. Its leaves and stems broken and rubbed in water make an excellent lather. It was a good substitute for soap to clean the immigrant's hands, brighten his face, or prepare his rough beard for shaving.

A conspicuous plant along streams, in damp places, by the roadsides, and the banks of ditches is the great blue lobelia. Its attractive bright, blue flowers are borne on a stalk from two to four feet high, somewhat branched. The five-lobed flower is split to the base on one side, as are the flowers of all the different species of lobelias. The flowers develop at the base of the spike first in July and gradually open out up the spike so those at the top do not open until in September. A succession of flowers is thus given, which are beautiful to look upon, but when handled they emit an unpleasant odor.

Much has been said and written about the cardinal flower, but not too much, for among all our wild flowers which bloom from August to October it ranks without a peer for brilliancy of color and gracefulness of form. This plant is a near relative of the blue lobelia, but does not possess its sturdy growth. But when one comes suddenly upon several plants growing close together amid tall grasses, their bright red penons contrast so vividly with the ever-present sneezeweed and the marigold that their purity and their beauty seem so enhanced by their surroundings that one feels the acme of beauty has been reached in this flower.

A very common plant that has a long succession of bloom is the toadflax, which children often call "butter-and-eggs." The blossoms are of an odd, two-lipped form, like those of the garden snapdragon, and each has a pointed spur or tail. They are bright yellow, all except the little pouting lips, which are orange-colored. By pressing gently at the corners of the mouth we can force the lips apart, and then we see that the stamens and pistil are well inside in a position corresponding to that of the tonsils, while the honey—to continue the comparison—is down the throat. The lips close firmly over the pollen and honey, and a small creeping insect is quite unable to force an entrance between them. The bee is the wished-for guest, to

whom all barriers yield. When she comes to call, she lights upon the lower lip, and her weight causes it to drop. Then she sees two bright golden bands running along the palate of the flower. They guide her attention to the mouth of a deep horn-shaped pocket, in which the honey is stored, and in order to reach it she must jostle the stamens, which stand directly in the way. Then she flies off, pollen-laden, to another toad-flax flower, while the lip, relieved of her weight, springs back, and closes as silently and as strangely as the door of rock did behind the departing Ali Baba.

PRINCIPLES OF AGRICULTURE.

JOHN H. NOWLAN.

Chapter III. Soil and Plants.

WHEN the country was new the forests were cleared and the land farmed till no longer productive. then more land was cleared. But even then they found that the land responded to proper treatment, as we learn from our histories. Squanto showed the people of Plymouth how to increase their crop of corn by planting a fish in each hill.

We are now at the end of our rope. We no longer have the new land, so we must maintain and improve the fertility of what we have left. We should cultivate to prevent, as much as possible, loss from washing; also to add humus and plant food. The last may be done by adding manure, by crop rotation, and plowing under leguminous crops.

Air is a compound mainly of two gases—oxygen and nitrogen. Oxygen is very active. It causes iron to rust, wood to decay, and fire to burn. Nitrogen on the other hand is an inactive gas and does not readily unite with other elements. It is so necessary for the growth of plants that it has been called plant bread. They, however, cannot use this free nitrogen. In the roots of certain plants are found small germs called bacteria. These plants are the legumes. Pull up a clover plant and on the roots you may find small knots about the size of a pin head. These knots, called tubercles, are the homes of the bacteria. They feed upon the free nitrogen and store it where the plant can use it.

If the farmer will grow legumes and at the same time feed all the grain and hay produced to be returned to the land in the form of manure he may even increase the fertility of his farm. He should also remember that the liquid manure is the most important as it contains almost all of the nitrogen.

In some cases he may not get enough barnyard fertilizer and must have recourse to commercial fertilizers. Their value lies in the fact that they contain the three most valuable plant foods.

Nitrogen is obtained from nitrate of soda, mined in Chile; ammonia sulphate, a by-product of gas works; dried blood and other slaughter house by-products; and from cottonseed meal.

Potash is found in unleached wood ashes, and is put on the market as muriate of potash, sulphate of potash, kainit, and other forms.

Phosphoric acid is obtained from rock taken from the mines of Tennessee, Florida, and Georgia; and also from bones. This rock is formed from the bones of ancient animals, which may be seen in the formations. The rock and bones are treated with sulphuric acid to render it available.

The plant takes its food by means of its small roots. Sprout some seeds in a germinator. You can then see the small hairlike roots near the tip, extending in every direction. These are the plant's feeding organs, the large roots serving to conduct the sap from the root hairs to the plant.

The reason plants wilt on being transplanted is because these hairs are broken and do not supply enough moisture. While new ones are forming water is evaporating from the leaves and the plant droops.

In cultivating large plants, such as corn, these roots are often torn off in large quantities. When the corn is large and you plow deep you can see many roots hanging to the shovels. Shallow cultivation answers all the requirements of tillage and preserves the roots.

Perhaps you have wondered how a young root which is very tender can penetrate the hard ground. It is often protected by a shield called a root-cap, which covers the tip, and it also secretes an acid which assists in dissolving the soil.

Nitrogen, we have seen, is necessary to plant growth and difficult to obtain. True, it is plentiful in the atmosphere but only a few plants can avail themselves of it. One form of it is nitric acid (HNO_3) formed in the soil by the decay of vegetable matter. It is also formed in the air by electricity, and scientists hope soon to be able to utilize the air as an unfailing source.

This acid combines with bases and forms nitrates, as nitrate of lime, nitrate of soda, or nitrate of potash, which are easily dissolved and absorbed by plant roots.

Many of us have seen wheat fields that produced from twenty-five to thirty-five bushels per acre. We have also seen wheat sown on the same land year after year till the yield was lowered to such a point that its production was no longer profitable. It is the same with corn or cotton. What is the trouble? The plant food, usually the nitrogen, has been exhausted and must be replenished. How? One way is to apply the nitrogen direct to the land. That may be an expensive way, for if there is no crop growing to utilize the nitrogen it may be washed away and lost.

Another way is by crop rotation. Different crops use different elements, and by planting some that avail themselves of the free nitrogen the soil is improved.

Work out a plan of crop rotation to suit your own land and locality.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

ONE of the slipperiest roads for the feet of mere human beings is that of self-conceit. And in common with some other slippery roads it presents a hard surface, without any rebound.

WE must think great thoughts before we can do great deeds. Every great accomplishment, every noble deed has been preceded by thoughts of like proportion and quality. It is simply the old story of things producing after their kind.

THE golden rod is flaunting its feathery plumes from the roadside and its side companion, the American aster, is adding its many rich tints to the same border. These and other unmistakable signs point to the approach of the "sear and yellow leaf," the season for which we are never quite prepared.

"TIME and tide wait for no one," is a saying that all, young and old, glibly repeat, but it is only when we have passed the half-way milestone of life that the truth really burns its way into our consciousness. Then not only the summer season, but every season, every day, passes too swiftly for the work that has been planned. After we have done *all* that we can and we find much left undone we may have one comfort still, that the little accomplished has been *well* done. Faithfulness is the real test of a life well spent, and faithfulness "in a few things" may win the reward, "well done."

WITH OUR READERS.

IN leafing through the pages of this issue one sees that the usual variety is offered the Nook's readers—variety enough for a fairly good meal. To be sure we do not serve up as wide variety as do many periodicals,

but then we are not aiming to do so. We aim to consider not only the digestive powers, but also the needs of the mental man and therefore we offer only plain, wholesome food.

First we have an interesting write-up of a well-known man,—a man about whose life and work we should all know something. Perhaps we could learn more from a volume on the subject, but not all of us have the time or opportunity to master a volume, and so we find this article exactly adapted to our needs. The "Stray Thoughts" that follow this article give us a little time for musing and when we rouse from that we are ready for our third and last fishing trip. When we come to "Some Eggs that Cannot Hatch" we should proceed slowly, for this method will greatly aid the process of assimilation. And we need to assimilate the thoughts here presented for they are real bone and sinew builders. The glimpse of Southland that follows is a sort of appetizer and prepares us for the further excursions into nature's realm that follow. Every one of us needs a generous helping from the "Right Use of Money" for we are all spendthrifts, more or less, in these days. The first subject under the Quiet Hour department will do to take away with us,—this and the poem selected by Anna Lesh, on the opposite page. Let us read this poem over two or three times, reading the spirit portrayed in it into our hearts to replace the selfish, grudging spirit of the world that so many of us cherish there.

IN SCHOOL.

AT the time when this issue of the INGLENOOK enters the homes of our land from the Atlantic to the Pacific, thousands of boys and girls will be excitedly recounting the experiences of the first days of a new term of school. Fathers and mothers will at this time get strange glimpses of "the teacher," as seen through the eyes of the children, but many of them will withhold judgment for awhile, knowing that the "wonder" will, after all, ascend or descend to the level of the average human being. But while the father and mother may maintain perfect composure in the face of these accounts of the strange doings at school, perhaps now and then endeavoring to guide the story in the right direction, the accounts should not be altogether suppressed. These are an evidence of interest in school affairs and rightly directed will be the means of helping scholar and parent and teacher.

The companion piece to this scene of the boys' and girls' return home, is that of their journey to the schoolhouse. One must depend on the imagination for the scene as a whole, as it is presented over our broad land, but it is none the less interesting and affecting. In the country east and south there are many attractive roads that lead to this center of education. Some

lead down a winding lane, over rumbling bridges, along the banks of clear, noisy streams and out on the white highway. Others have the appearance of saving time as well as distance by crossing clean, sunny meadows and deep, silent woods, where the attractions often hold the little traveler till after school is taken up. But the bunch of wild flowers or autumn leaves which he blushing proffers the teacher, or the story from nature which he is able to tell frees his record of discrediting marks and the time is saved after all by the long, short route.

In the West the road to school may be similar to the ones described or it may be a "bee line" over a level prairie where the youthful student is a horseman as well as a scholar and accomplishes a saving of time on the back of a faithful pony. In the cities the children march away to school over well-paved walks. At noon they rush home to hastily swallow the midday meal, thus securing many years' training in the habit characteristic of their fathers.

And so they march, country children, city children and all, back and forth, back and forth, here discovering new and beautiful things, there slowly building the imperishable temple of character, here learning the first lessons of duty to neighbors, there grasping the real meaning of home and the value of its blessings.

The home and the school are the two greatest institutions of the nation, the two that have the most to do with its welfare, and yet these two institutions are somehow strangely at variance. At least they do not work together as they might and as they should in the one cause which is so important to both. There is no understanding or concerted action and when there is a failure, instead of working together to discover the cause and remove it, each blames the other, thus making possible more and greater failures.

We believe the schools are growing in efficiency,—that the teachers are better trained and the schools better equipped for the work than in the past. What is needed is not only homes that are likewise an improvement over the homes of the past, but intelligent co-operation between the two. We speak of the boys and girls as being now in school, but they are in the home also, and for a much longer period than they are in school, and unless the parents and teachers have an understanding and work together the work of both will be greatly handicapped. Let us give the boys and girls the full benefit of the golden opportunity that is before them for growing up to be noble and useful men and women. See that the "road to school" is a pathway that leads to the highest plane of Christian citizenship.

LET'S PRETEND.

Let's pretend a little while,
That the world is managed right,

That there's little which is vile,
That there's much to give delight.

Let us hopefully pretend
That the luck we have is fair;
Let us put a sudden end
To the murmurs of despair.

Let's pretend just for today
That our hearts are free from woe,
That the wind blows just the way
We would like to have it blow.

Let's pretend that what we do
Is the work we like the best;
Let's pretend the scene we view
Is of all the loveliest.

Let's pretend we're satisfied,
Let's pretend we're brave and strong:
Maybe after we have tried
We can do it right along.

—S. E. Kiser.

A LEGEND OF HARVEST.

SELECTED BY ANNA LESH.

In ancient Israel, so say the seers,
Two brothers lived in peace—as brothers should,
And tilled that ground whereon in after years
King Solomon's illustrious temple stood.
A common heritage, each gave the field
His honest share of toil, and took therefrom
An equal portion of the summer's yield,
Nor grudged his part—nor held in doubt the sum.

But on the night the harvesting was done,
And all the corn lay heaped beneath the skies,
The elder kinsman sat in thought alone
And gently reasoned with himself this wise:—
"My brother is not strong, and suffered sore
Beneath the heat and burden of the day,
Lo, I will take some sheaves from out my store,
Unknown, and add to his across the way."

And, reasoning thus, he did; then found sweet sleep.
Not so, howe'er, the younger of the twain,
Who lay awake and said, "How can I keep
My great, full half of all this golden grain,
I, who am still but one, whilst he must feed
His wife and little children from his share!"
So that same night, to meet a greater need,
He, too, in secret did what he deemed fair.

Now, when at break of day both cheerily
Came forth to work—with greeting, name for name—
Each scarce concealed his wonderment to see
His separate stack of sheaves was still the same!
And when, next night, and next, in love, anew
These Jewish kinsmen gave by stealth their best—
But all in vain—behold the riddle grew
Exceeding strange and caused them much unrest:

Until at last its secret was revealed
To both at once (blest be the Hand that weaves
Such threads of chance) for half across their field
They met one night—each bent with heavy sheaves!
Ah, kinsmen true, no offering later laid
By Solomon upon the costliest shrine
Of this immortal ground, was better made
Than yours, nor gave to heaven a holier sign!
—Augustus Wight Bomberger, in *Youth's Companion*.

THE HOME WORLD

THE RIGHT USE OF MONEY

S. S. BLOUGH

A HALF century ago the amount of money in the hands of all classes of people did not equal that of today. Many young men reached their majority with practically no spending money. In those days an admonition on the proper use of money was not so necessary. There was not then the demand for money nor was there the opportunity for spending it that there is now. Today practically every one has money and whether much or little the demand is usually greater than the supply. There are a thousand and one places where those who have not cultivated the strictest habits of economy can get rid of their earnings. Money may be said to have wings and often flies away in a night. There are indeed many who are as "he that earneth wages to put it into a bag with holes." Hag. 1:6.

Money comes to us in three ways. We inherit it, it is given to us or we earn it. He who inherits a large amount considers himself fortunate, but the inheritance often proves a curse, resulting in his complete undoing. Many who earn their money have not cultivated habits of frugality, and it keeps slipping away without bringing proper returns, being spent for that which is entirely sinful and vicious. All the passing whims or crying desires of a carnal mind and appetite must be satisfied.

People frequently quote lightly and incorrectly, "Money is the root of all evil." This is not true. Money bears enough reproach without receiving more than its share. The fact that some can well curse the day when money came into their hands proves nothing for or against the benefits of money. A sordid love for money brings about more evil in its wake than can be here told, but when properly used it becomes a factor which produces incalculable good.

But truly, now, the proper use of money does become a vital question and increases in importance with thought. To those recognizing themselves as stewards unto God, this is a very live question which must

be solved now and the principle applied constantly. In Christ's parable, to lay up the pound in a napkin was condemned. It would thus seem that to hoard up money is wrong. The miser is an enemy to himself, his fellow-men and his God. What principle, then, shall guide us in keeping or parting with our money? One general rule at least seems good. Spend less than your income. It is wrong to make obligations when one has no possible way by which he can hope to meet them. To be reckless in the use of money, is characteristic of Americans. Being easily gained it is just as profusely flung away. Our young people become early addicted to this vice which ruins thousands yearly. This carelessness in spending often begins in childhood. The penny spent for candy or chewing gum every day or twice a day grows into five cents for the youth and the fifty cent or dollar box for the young man. Very frequently the child that has pennies for candy every day has none for Sunday school.

The many toys lavished upon children bring about discontent later in life. The extravagant young man is often he who in boyhood had all manner of toys. Parents seem to be responsible for their own spending and that of their children.

The young man who is careful of his income is often forced to bear the stigma of being penurious and is frequently called "tight." If he is trying to be a sincere steward unto God, he can afford to flaunt criticism to the wind. There is a sort of social ostracism which he may well carry. His morals are rather improved than hurt by it. How few, however, have the moral courage to stand firm under these conditions. All honor to him who has. Money is power. When used for service it is used beneficently as becomes our obligations. Not alone are prudence and economy embraced in the right use of money, but benevolence as well. Great gifts of benevolence, splendid institutions for the unfortunate, and little acts of charity, alike stand before God as monuments of our wisdom. "He that

giveth to the poor lendeth to the Lord." "No man liveth unto himself," neither is it intended that he should. He who never spends but for his own benefit or pleasure sees his money become a curse to him.

To sum up then, money is to be used. No one has a right to gain it by evil means or spend it for a vain or evil purpose. "Wherefore spend ye money for what is not bread?" Isa. 55:2. God gives us money only that we might use it for him. Where then do we gain the right to waste that which is his?

At all times then it becomes us to "lay up treasure in heaven" by its right use.

If the money which is wasted and worse than wasted were properly used, how soon might the whole world know the blessed Gospel, all earth's unfortunate ones be properly cared for, and everywhere and in many ways be erected monuments unto God because he has placed into our hands the "almighty dollar"!

Batavia, Ill.

"MOTHER TO CHILD."

Is there no way my life may save thine own a pain?

Is the love of a mother no possible gain?

No labor of Hercules—search for the grail—

No way for this wonderful to avail?

God in Heaven, O teach me.

My prayer has been answered; the pain thou must bear

Is the pain of the world's life which thy life must share.

Thou art one with the world—though

I love thee the best,

And to save thee from pain, I must save all the rest.

With God's help, I'll do it.

Thou art one with the rest; I must love thee in them!

Thou wilt sin with the rest, and thy mother must stem

The sin of the world. Thou wilt weep, and thy mother
must dry

The tears of the world lest her darling should cry.

I will do it, God helping.

And I stand not alone. I will gather a band

Of all loving mothers from land unto land;

Our children are part of the world—do you hear?

They are one with the world; we must hold them all dear.

Love all for our child's sake.

For the sake of my own, I must hasten to save

All the children of earth from the jail and the grave;

For so, and so only, I lighten the share

Of the pain of the world that my darling must bear.

Even so, and so only.

—Charlotte Perkins Stetson.

HEALTH HINTS.

THE climate inside of us has a great deal more to do with our health and happiness than the outside climate has.

A man is not likely to have the peace that passeth all understanding in his mind and at the same time have a war in his stomach that is beyond description.

A little food well masticated is worth more than a large quantity literally dumped into the stomach.

Professor Chittenden's experiments on the United States soldiers and students at Yale showed clearly that the average mortal eats two or three times too much proteid, or the beefsteak line of food, and is thereby filling his body with clinkers.

Ice-cold foods and drinks put a temporary injunction on digestive processes.

If the average man managed his business as ignorantly and as carelessly as he does his health he would soon go into bankruptcy.

Unfortunately in almost every community there is some tough old sinner who has inherited such a stock of physical energy that he can apparently violate every physical law with impunity. Such a man is a stumblingblock to all the young people in his neighborhood, as it encourages them in wrong doing.

David Starr Jordan says boys who smoke cigarettes are like wormy apples; they drop off before harvest time. They do not make failures in *after life* because they do not have any after life.

Billick was sentenced to be hung in Chicago on a certain day. He was supposed to have killed a family of six people. The Supreme Court affirmed the decision of the lower courts. A Catholic priest, his spiritual adviser, believed him to be innocent. He fairly roused the entire city. He held six great mass meetings in one day in behalf of the prisoner. He sent a delegation of fifteen people down to Springfield pleading with the Governor, and finally secured a postponement of the sentence. Why not become one-hundredth part as enthusiastic to save the lives of the thousands of people who we know are entirely innocent, but who are just as much under sentence of death from various preventable diseases?

We must return to nature, and like the prodigal's father she will meet us with outstretched arms a long way off. It is health that is catching, rather than disease.

Bedroom climate is responsible for more tuberculosis and other disorders than it is ordinarily given credit for. Man is not made with tuberculosis in his lungs any more than he is born with the multiplication table in his head. Both have to be acquired.

Dr. Evans, the Chicago health commissioner, recently said: "Four years ago the average life of the monkeys in Lincoln Park was fourteen months. They all died of consumption. Four years ago four of the poorest and most desperately sick monkeys were left out of doors. All those monkeys are living today. Now the animal house is ventilated and the temperature kept at fifty degrees, and consumption has disappeared. What we hope to do is to accomplish for ourselves in ten years what we have done for the monkeys in four."

When we are resting, only one-third of the blood in the body is in the muscles, while when we are

exercising two-thirds of it is in the muscles. There is no better way of relieving congestion of internal organs, and the benefit of active exercise remains a long time after it has been taken.

I put mustard plasters on the outside and take them off when they begin to raise blisters; but some people put more than that amount of mustard on a piece of juicy beefsteak and swallow it down on the inside and then wonder why their stomach is going into mutiny.

A short cold bath in the morning followed by vigorous friction assists to produce a good reaction, raises the level of mental activity. It increases the supply of bodily energy. It is a sort of fire alarm to every cell in the body. Those who cannot endure a general cold bath or have not the necessary facilities, by taking cold mitten friction can most admirably accomplish the same thing on the instalment plan.

The new recruits for our navy are generally drawn from the slum districts of our large cities, wizened, hollow-chested, spindling-looking fellows. After being put through the systematic exercises that are prescribed a few months later we find them looking like stocky athletes. How long will it be before we shall do as much for the boys that are to promote the peace and prosperity of the nation, as we are now doing for those who are to do our killing?

Deep breathing after meals promotes digestion. One has no appreciation of the benefit of this until he has tried it, and best of all it costs nothing to try it. Don't forget that Rockefeller has no corner on the air market. There is no fresh air trust.

God *grows* health while the doctor and nurse *cultivate* it. The invalid must coöperate to work out his own physical salvation.

Woe to the boy who never goes barefooted in the cold dew, and the child that never had a chance to go swimming. They will atone for it later in life by spending months in a sanitarium taking hot and cold foot baths and hot and cold sprays.

Peary did not catch cold when sleeping outdoors up at the North Pole. When he came back to Washington and ate civilized meals and breathed bedroom climate he caught a severe cold.

Flies that had been fed on tubercular sputum deposited three thousand tubercular bacilli for each fly speck. Three great means for the transmission of typhoid fever are fingers, food and flies, and the last are the most important. A housekeeper will spend a day rummaging over a bed for a bedbug and give little notice to the kitchen full of flies; yet the fly is a pestilential fellow.—*David Paulson, M. D., in Life-boat.*

THE CHILDREN.

AN old lady lay dying. Her youngest child had been dead twenty years. It was midnight when she

aroused from a prolonged stupor and inquired, "Is it night?" "Oh, yes, it is midnight," was the reply. "Are the children all in?" was her anxious inquiry. Then she closed her eyes and died. When on the verge of eternity she went back to the days when her children were young, and her mother instinct asserted itself in the question. "Are the children all in?" Ah, father, mother, of today, are your children all in, or are they permitted to spend their evenings in the streets? Are they all in the family circle each day for worship? Are they all in the public schools? Or are they kept out for trivial excuses or permitted to play truant? Are they all in the Sunday school, and so instructed and guided by parental precept and example that they will remain in it when they become men and women? Are they in the Young People's Society and learning to become active, efficient, delighted workers in the Lord's cause? Are they in the public congregation for worship and to listen to the preaching of the Word on Sunday morning? These, dear parents, are questions upon the proper answer to which depends the highest welfare of the dear children whom the Lord has given you. See to it with all possible diligence that the children are all in.—*Religious Telescope.*

VALUE OF PINEAPPLES.

THE medical value of pineapples has recently been the subject of considerable inquiry among physicians, and in Hawaii experiments have been made to determine something of these properties. It has been found that the fruit of the pineapple contains a digestive principle closely resembling pepsin in its action, and to this is probably due the beneficial results of the use of the fruit in certain forms of dyspepsia. On the casein of milk pineapple juice acts as a digestive in almost the same manner as rennet; and the action is also well illustrated by placing a thin piece of uncooked beef between two slices of fresh pineapple, where in the course of a few hours its character becomes completely changed. In diphtheritic sore throat and croup, pineapple juice has come to be very largely relied upon in countries where the fruit is common. The false membranes which cause the closing of the throat seem to be dissolved by the fruit acids, and relief is almost immediate.—*Southern California Practitioner.*

LEMON JUICE.

FEW people realize the value of lemons, which cannot be overestimated; in cases of fever, sore throat, or torpid liver the medicinal qualities are unexcelled: Two or three slices of lemon in a cupful of strong tea will cure a nervous headache. A teaspoonful of juice in a small cupful of black coffee will relieve a

bilious headache. The juice of half a lemon in a cupful of hot water taken on awakening in the morning is an excellent liver corrective and successful substitute for calomel and other alterative drugs. A dash of lemon juice in plain water makes a cleansing tooth wash, not only removing the tartar, but sweetening the breath. A lotion of lemon juice and rose water will remove tan and whiten the skin. Lemon juice with olive oil is far superior to vinegar for a salad dressing, equal parts used for blending. Lemon juice and loaf sugar are good for hoarseness.—*Oregon Journal*.

MAKE BELIEVE.

A GIRL was arranging the dining room for her mother. The knives, forks and spoons were not neatly placed and the tablecloth was crooked. This carelessness was an everyday occurrence, but the mother finally thought of a new plan of correcting it. She had the little girl remove every article from the table and she then said: "Now, Ethel, just imagine that the President of the United States is to dine here today. You know you would not have the table in this order." The little girl at once saw what was needed, and the table was faultlessly arranged. The next day some one else was an imaginary guest and this continued indefinitely until the child understood the importance of neatness. Better this than a cross word for carelessness.—*Selected*.

FRIED GREEN CORN.

SCORE the grains and cut from the cob, scrape out all corn milk. Brown enough butter in a porcelain pan to season the corn, place it in the pan, and salt and pepper and fry until the corn milk is cooked into the corn, then add a very small amount of water, place the pan in a pan of boiling water. Cover the corn with a lid and steam until done. Before serving add a dash of flour, a spoonful of sugar and a cup of rich cream, or enough to moisten the corn, and boil. This is a very rich and appetizing dish. The flour when cooked thickens the juice to a creamy paste.—*Woman's National Daily*.

The Children's Corner

WHY BEN WENT TO THE BABY CLASS.

HE did not look in the least like a baby as he started off to Sunday school in his trim blue suit and white necktie. And he did not feel like a baby, either. Why should he, when he had been going to school for two years and had brought home a good report card every month out of that time?

But there was a mischievous spirit in Ben that morning. He did not sing with the rest of the school, though his teacher found the place in the hymn-book for him. He took no part in the opening exercises, and the lesson was hardly begun before he started to whisper a long story to Herbert Joyce.

The patient teacher reproved him gently, and tried to interest him in what she was saying. But Ben would not be interested. He kept on talking, till the other boys could not pay good attention to their lessons, and it seemed as if the hour was likely to be wasted.

Just then the superintendent passed, and the teacher spoke to him. "Mr. Berry, what do you suppose can be the trouble with a boy who will not listen to the lesson and will not let the other boys listen, either?"

The superintendent looked at Ben. "If a boy acts in that way," he said, after a minute, "I think it must be because he is not quite old enough to have learned how to behave in a class like this. I know a better place for him."

He took the astonished Ben by the hand, and led him down to the baby class, where there were a lot of little fellows in kilts and curls. "I have brought you a new scholar, Miss May," said the superintendent. "This seems to be just the place for him."

The teacher smiled, as she made room for Ben, but her pleasant welcome could not lift the cloud from his spirits. His cheeks grew red and hot. It was all he could do to keep from crying. He, Ben Henleigh, the best scholar in the whole second grade, put into the same class with little boys, some of whom did not even go to kindergarten! He did not know how to bear the disgrace of it.

He hated to think of telling his mother what had happened, but he could not keep the uncomfortable secret. Out it came the minute he was in the house. "Just think, mama! they s'posed I b'longed to the baby class. And I'm seven, and my suit's the eight-year-old size."

Then he cried, and mama asked some questions. "Which is the thing to be most ashamed of, dear," she asked at length, when she understood it all, "to be thought a little boy who doesn't know just how to behave, or to be thought a big boy who will not do as well as he knows—a boy who is old enough to understand what is right, and yet chooses to do wrong?"

Ben looked bewildered. For a moment he thought hard.

"I guess it's worse to be big, and to act as if you was so little that you didn't know anything," he admitted at last, in a faint voice. "I never thought of that before."

And, what is better, he never forgot it.—*Happy Hours*.

THE QUIET HOUR

GOD'S GREAT LOVE.

T. H. FERNALD.

JESUS in his talk with Nicodemus refers to and declares to him the source of the grace that comes to man, in the atonement for his sins, and for the regeneration of his being. "For God so loved the world that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life." John 3: 16.

God so loved us that he gave us Jesus to redeem us from death and shed on us the Spirit's changing power, not that Jesus had to wring forgiveness and regeneration from the heart of the Father for us by his death, but that life was freely given for us.

We are saved because God loved us and yearned over us, as do earthly parents over their children, and he desired not that we be punished for our sins, but that we might be saved, not for arbitrary purposes or to gratify some loveless purpose. This is the very sweetness of it all, that "God so loved us." When the sinner turns his thoughts toward Jesus Christ, we should count on this; the eternal love in the Father's heart toward a lost world is but expressed in it.

There was nothing could save us but Jesus coming and voluntarily sacrificing himself for us, and nothing can prevent or hinder the salvation of a sinner who puts his trust in the "Only Begotten," since he has come and given himself for us.

God does not desire our condemnation, and so gave up all he had to turn it from us, but if we refuse to accept the only promise of his infinite love, wisdom and power, then there is nothing but that we must die in our sins. "Neither is there salvation in any other; for there is none other name under heaven given among men, whereby we must be saved." Acts 4: 12. If we lose our souls we must not say that God is hard and unmerciful; for God has in Christ provided both expiation and regeneration, for "whosoever" will may come. This is all through his great love for us.

Belfast, Me.

SOME THINGS TO FEAR.

FIRST: We ought to fear temptation. Temptation is not sin, but it opens the door through which one may pass by an act of the will to the violation of God's law. Temptation is dangerous, because we are apt to

trust in ourselves. "Let him that thinketh he standeth take heed lest he fall." When we are weak, then are we strong, for in our weakness we lean unto Christ. Any Christian is occupying at least a dangerous position when he feels that he is not an easy subject of temptation.

Temptation is to be feared because ordinarily men fail not where they are weakest but strongest. We guard the weak places in our character and fail to set a guard about the points of strength, and not infrequently it is true that men who have prided themselves upon their honesty for years have suddenly become dishonest, because they felt themselves so secure there that they failed to keep constantly watching for the assaults of the tempter.

Temptation is also to be feared because we may have failed to realize the presence of Christ and thereby fail to see the way of escape, when the devil with his insinuations is upon us. The inconsistent Christian is always blind to the presence of the Savior. One who neglects his prayer life and is indifferent to the study of God's Word; one who fails to make a quick confession of sin is sure to be blinded to the ever-living presence of Christ, and when temptation comes, he fails easily.

SECOND: We ought to fear sin. No one has yet reached a place in this world where he is freed from its awful power. If we say we have no sin, we deceive ourselves and the truth is not in us, but if we confess our sins, God is faithful and just to forgive us our sins and to cleanse us from all unrighteousness. Sin is the secret of every failure and the cause of almost every heartbreak. Sin has blackened the pages of history, both sacred and profane; sin still works without respect to persons in injuring character for time and for eternity.

There are two reasons, among many others, why sin should be feared. The first reason is that it begins in so small a way. Disobedience in the home on the part of a child may lead ultimately to destruction; failure to rule one's spirit will one day result in failure to take a city. A sinful imagination bears as its fruit an impure life. A disposition to look with indifference upon real questions of honesty may send one to a prison cell.

A young girl, a graduate of an eastern college, put

a revolver to her temple and sent her soul into the presence of her Maker. She was well born and highly educated, but in her student days she failed to rule her own spirit, and she died the death of an inebriate.

The second reason for fearing sin is found in the fact of its tremendous power. The minister of the Gospel, the missionary of the Cross, the boy living in the purest home, the girl surrounded by the most sacred influences, these are not free from the power of sin. It is too terrific for any of us to trifle with.

THIRD: We ought to fear being false with reference to the care of the gospel truth.

The Apostle Paul says: "I keep under my body lest having preached to others I myself should be disapproved." One may become disloyal to God's Word and unfaithful to God's Son and thus be set aside, and when the apostle writes his epistle to the Galatians he presents a curse upon all who preach any but the true Gospel and declare any but the whole truth. Let us fear lest we should be ourselves set aside.—*J. Wilbur Chapman, D. D.*

THE SALOON A ROBBER.

ONE Monday morning I had occasion to visit a bank. The receiving teller was doing business with a well-groomed gentleman at the window. As I waited my turn, I saw this man pass in a large pile of silver dollars, besides a big roll of bank-bills. I recognized the man as a liquor dealer in our city. The record was entered, and the man retired.

A little conversation with the teller, who abhorred the saloon, also revealed the fact that this keeper of a local saloon had just deposited two hundred dollars. "And," said the teller, "he probably took all this in on Saturday and Sunday!" This, despite the fact, that our "stringent license law," provided and enjoined, that no liquors should be sold on the Lord's Day!

The saloon is a robber! The transaction which I witnessed in that bank is only one of thousands of similar instances occurring all over this land.

This tendency to spend their week's pay at the saloon on their way home has led many corporations to change the workmen's pay-day from Saturday to Monday. I have known some wives of drinking men to go to the counting rooms and the moment their husbands were paid off, secure as large a portion as possible of the week's income, before the saloon robbers could lay hands on it. One visit to a saloon often uses up a whole week's pay.

A few days since I was visiting a friend in Boston. A drunken man, whom my friend knew, passed us. The man was a wreck, and was probably less than forty years old.

My friend said, "There goes a man who inherited a fine business, on one of the principal streets of this city; but in just a few years he ran that business through, and now works for five dollars a week!

are the dead which die in the Lord."—*Gospel Herald*. After paying his weekly lodging bill, he lives on the rest, living off the counters of the saloons." The liquor dealer had got all his property, and was drawing heavily on his small weekly earnings. Yes, the saloon is a robber.

While a pastor in Pennsylvania, it was carefully estimated, by a reliable student of social science, that the mineral income of that State at that time was seventy-six millions of dollars; while the liquor bill, the same year, reached the grand total of seventy-eight millions of dollars! This the readers will not fail to note, is two millions more than the valuation of the entire mineral income for that same year!

The presiding judge of Dauphin County (in which the State capital, Harrisburg, is situated) has stated that the county would do better to pension every licensed liquor dealer in the county with one thousand dollars a year, and have them retire from business, than to accept their license fees, and take the responsibility of paying the bills accruing (police, jail, court, relief, etc., etc.), from the annual license fees paid by said dealers!

One of the serious hindrances in temperance work is the conscienceless act of respectable (?) men who rent their property for saloon purposes. General John A. Dix held property in a certain city, and was informed by his agent, that he found it very difficult to rent the property for ordinary business purposes, but could readily rent it for a dramshop! Instant reply came from the General. In read, "I would rather my property should stand idle and empty for all time, than that it should be rented for such a purpose." Noble words; and yet every moral and religious man, every man wishing the welfare of his community, ought to be endowed with the same sentiments. Were this so, the work of redeeming this land from the drink-curse, would be greatly simplified.—*O. W. Scott.*

It has truthfully been said that our mourning for the dead is not so much a mourning for them as for ourselves. Especially is this true when the departed ones have died in the Lord. The widows who stood around Peter, showing the garments which Dorcas had made were distressed, not so much because of what had happened to Dorcas as because of what had happened to them. David did not wish his child's return. It was no advantage to Lazarus or Dorcas to be recalled from the grave to spend more time on earth, however great the advantage may have been to their friends. Though our associations on earth may be most blissful, they can not be as happy as the associations of the family of God in the land of pure delight. Though the departure of loved ones makes us feel indescribably sad, our only vital concern should be the question as to whether they had made their peace with God. "Blessed

ECHOES FROM EVERYWHERE

A pulse-counting watch has been invented for the use of physicians and nurses in London. The watch indicates, without mental calculation, the number of beats of the pulse in a minute.

The Postmaster General has given orders for the issuance of 50,000,000 new two-cent postage stamps in honor of the Hudson-Fulton celebration which is to be held in New York this fall.

About 15,000 tinselled or frosted postal cards are withdrawn from the mails every day and sent to the dead letter office, because the persons sending them fail to inclose them in sealed envelopes.

Oklahoma's broom corn crop this year is said to be better than that of any other part of the United States. C. Scott, living near El Reno, from eight acres harvested three tons of brush of the finest quality. In the vicinity of Lindsay \$150,000 worth of broom corn has been raised. Prices over the State range from \$60 to \$105 per ton.

Five arrests have been determined on as a result of the graft investigation at Montreal by the royal commission. The graft has cost the city millions of dollars. In the fire and police departments appointments and promotions were sold for \$200 each. Public contracts were awarded through a gobetween. On contracts aggregating \$660,000 the grafters got \$130,000.

In order to stop rebating which A. B. Stickney, long president of the Chicago Great Western, says still prevails, it is proposed by him that a uniform classification be adopted. Mr. Stickney would do away with all commodity rates and increase the number of class rates. He says large favored shippers secure rebates by refunds of alleged overcharges and damages.

Upholding the new law which provides that officials in Iowa may be removed for intoxication, Judge Byron Preston handed down an opinion ousting A. M. Henderson, mayor of Marengo. The case was prosecuted by Attorney General Byers. Henderson attacked the constitutionality of the law and said he never had been drunk on duty. The Court held that a mayor is always on duty.

The United States congressional waterways commission arrived in Berlin a few days ago and had a busy week. The members include Senators Burton, Gallinger, and Simmons, and Representatives Wagner, Stevens, Alexander, and Sparkman. The commissioners have firmly declined all invitations to social festivities, and have been putting in most of their time visiting the waterways near Berlin and grappling with the statistical material which the German authorities have been sending to their hotel by the bale.

Aug. 29, with all Berlin looking on, Count Zeppelin finished a remarkable flight of 450 miles, from Friedrichshafen to the former city in his airship, Zeppelin III. The Emperor and Empress witnessed the close of the flight and congratulated the count. At the same time Orville Wright was introduced to the Count by the Emperor, and the two men exchanged congratulations.

The British government, alarmed by the discovery of a number of well-developed cases of Asiatic cholera in Rotterdam, has begun the consideration of means of preventing the disease from reaching England. It is admitted that the task will be a difficult one in case the cholera gets a good start in Holland, owing to the enormous amount of Dutch-English shipping. Numerous Dutch ships daily visit nearly every English port.

A Dunfermline coal company recently proposed to supply bathing facilities for its employes, so they could go in and have a good bath and rub down before going home. This would seem an opportunity to jump at, inasmuch as a miner really has some opportunity to become a little soiled while digging out the bituminous, but the company reckoned without its host, for when the proposition was put up to the miners, they demurred, and many of them refused to take the bath according to the prescription of the heads of the coal company. Of 1,500 men but 250 said they would be glad to have the bathing facilities supplied.

The relative popularity and unpopularity of postal savings banks is significantly disclosed in several bound volumes of clippings from newspapers, periodicals and magazines on file in the office of the Postmaster General. Of the six large volumes on postal savings banks, four are filled with clippings favorable to them and the other two contain unfavorable comments. The proportions are the same in the matter of the parcels post—two to one in its favor. These clippings were ordered bound by former Postmaster General Meyer, and the store has not been added to or subtracted from since the advent of his successor, Mr. Hitchcock.

In a lecture before the tuberculosis exhibition, recently held in London, one of the scientists who addressed the assembled experts paid a high tribute to the salutary rules of ancient Judaism. He laid stress on the high value of the Jewish dietary laws, the observance of which, he asserted, resulted in good health and longevity. Modern science was only beginning to realize the value of what the Jews had practiced for thousands of years. The speaker considered Judaism as a complete textbook of hygiene. He counseled the Jews against the modern tendency to depart from the strict letter of their dietary laws, as through such neglect they were becoming less immune to disease than they had formerly been.

The Stockholm local street railroad company has gained a complete victory over those of its employees who joined the strikers at the beginning of this month. Now that the strike is a failure, the men have applied for their old places, but only a few of them, who formerly received the maximum wage, have been taken back at the minimum rate. They were compelled to furnish a bond guaranteeing their future loyalty to the company. On the other hand, the strikebreakers have been rewarded with the best-paying places.

As a result of the Swedish strike, the people of Sweden will not have the opportunity of seeing and hearing Count Leo Tolstoi, the great Russian apostle of liberty, this summer. Tolstoi made arrangements to attend the international peace congress which was to have met here shortly, but which has been postponed until next year on account of the strike. Tolstoi has almost completely recovered from his sickness of a few months ago and was really anxious to visit Stockholm and plead his cause before the congress.

A patent was granted to Mr. J. H. Cuntz on July 13 for a method of making wireless signals selectively audible by means of acoustic attachments. A tuning fork is magnetically associated with a mechanical interrupter in the sending circuits, by means of which the high-frequency wireless telegraph current is interrupted throughout each signal at a rate corresponding to the pitch of the tuning fork. An identical tuning fork magnetically associated with the receiving circuit gives forth an audible sound when the wireless signals are interrupted at a rate corresponding to its pitch, signals being heard only when the forks at both stations have equal pitches.

Very frequently in Germany there is to be seen a green bough sticking up from the roof of a newly-built house. The idea comes from away back in remote times when the people believed that every tree in the forest had an attendant spirit, just as the Greeks did, and that when the tree was killed the spirit became dispossessed of a habitation. So it was believed that the bough placed upon the roof of the new house would appease the spirit and keep it from doing any harm to the new building, and if it were allowed to remain there until the roof was complete, then the spell would be broken and the outraged supernatural could do no evil, but become reconciled. The custom holds in parts of Canada and France also.

Glenn H. Curtiss, who won the international aviation cup at Rheims, France, Aug. 28, making the fastest time ever recorded for an aeroplane (12.42 miles in 15:50 3-5), formerly lived at Hammondsport, N. Y., and there learned to fly through persistent experiments. His first successful flights with the June Bug were made a year ago. In July of this summer he made successful demonstrations at Morris Park and Hemsted Plains, near New York, for the New York Aeronautic Society. Like Henri Farman, the English aviator, he was a successful user of gasoline engines on the ground before applying them to the problem of flying, and once won a motorcycle race at Ormonde Beach, setting a record that has never since been equaled. The day following the international cup race Curtiss reduced his time for the 12.42 miles to 15:37 4-5.—Aug. 27 Henri Farman, a hitherto unknown

quantity in the aviation contests, broke the world's record for duration of flight and distance in a heavier-than-air machine and won the prize of \$10,000. His record is 111.78 miles in three hours.

Several St. Louis capitalists have purchased 200 acres of the Big Hill oil field in Texas. Experts say this is the largest known sulphur deposit in the United States. The sulphur deposit lies 1,000 feet under the surface. It is 40 feet in thickness and assays 85 per cent pure sulphur. A stock company with a capital stock of \$2,500,000 will be at once organized to operate the field.

To offset the Democratic plank in favor of a bank guaranty of deposits the Republicans adopted a resolution in favor of postal savings banks. President Taft will push this as an administration but will be vigorously opposed by Senator Aldrich and Speaker Cannon. It is charged that Speaker Cannon has packed the committee on postoffices and post roads against postal savings bank legislation.

Forty paper manufacturers, representing practically every company in Wisconsin, Michigan and Minnesota, gave a banquet at Appleton, Wis., recently in honor of G. Frank Steele of Port Edwards, special representative of the paper interests at Washington during the tariff bill fight. It is said they discussed an increase in the price of print paper in the near future. One manufacturer admitted that print paper prices would stiffen soon, but would not say that uniform action would be taken.

"What is whisky?" has been decided by a royal commission in Great Britain. The British experts say: "We are unable to recommend that the use of the word 'whisky' should be restricted to spirit manufactured by the pot still process. Our general conclusion is that 'whisky' is a spirit obtained by distillation from a mash of cereal grains saccharified by the distaste of malt, that such whisky is whisky as above defined, distilled in Scotland and that Irish whisky is whisky, as above defined, distilled in Ireland."

The county court at St. Louis has set October 18 for a mass meeting of farmers, to discuss a plan to build levees along the Missouri River to keep it in bounds during the flood season. Speakers have been arranged for who will discuss the construction and maintenance of levees. A plan to confine the river from Kansas City to its mouth will be presented. The meeting was called in response to requests from the farmers who have already formed several local organizations to study the question, and who desire to arouse greater interest in it.

On September 7 and 8 the Segregated Coal and Land Association of Oklahoma and the Governors of the Choctaw and Chickasaw nations and Senate officers will hold a convention at Colgate, Okla. The object of the meeting is to discuss the throwing open of 500,000 acres of fertile land in eastern Oklahoma. At present the title is vested in the government and none of the land, because of the mineral wealth, has been allotted to the Indians. It is expected Congress will be governed by the act of the convention and throw the land open to settlement. Seven counties are directly interested in the convention.

Among the Magazines

THE FLAG FOLLOWS THE MISSIONARY.

If commerce follows the flag, the flag follows the missionary. It is one of the facts of history. From the days when the lean Jesuits blazed the way in North America for the flag of France, till Livingstone opened the Dark Continent to European exploitation, the missionary has marched before the soldier; the prayerbook and the Bible have proved more powerful than the rifle and the machine gun.

Commerce, geography, and civilization alike owe the missionary a debt which they can never hope to repay. The exploration work of Livingstone is marked by rare precision and by a breadth of observation which will forever make it a monument to the name of the most intrepid traveler of the nineteenth century. It was Verbeck, a missionary to Japan, who carried the ideals of Western civilization to the empire of the Mikado before the ink on Perry's treaty was fairly dry, and gave the flowery kingdom its present system of education. William Carey, the great missionary to India, by a tremendous labor of translation served the interests of scholars and of commerce as well as of religion; and, going to India to preach salvation from sin, immediately set about abolishing the suttee—the custom of sacrificing the widow upon her husband's funeral pyre. It was the representations of American missionaries that induced Seward and his colleagues to bring about the purchase of Alaska.

If the clatter of American harvesters is heard today from one end of Asia Minor to the other; if the Esquimaux of Greenland and Alaska and Labrador vary their monotonous diet of fish and blubber with tinned meats from Chicago and Kansas City; if the natives of Equatoria insist on buying cotton sheeting that is stamped "American," and will take no other, our merchants and manufacturers, instead of praising the consul or the commercial traveler, may thank the American missionaries.

No matter in what direction you may turn your canoe or your caravan, you will find them preaching and teaching, living in native dress amid the filth of Manchurian villages, moving with the nomad tribes of the Sahara, or sleeping in the Indian wigwams of the far Northwest. When Younghusband, at the head of his punitive expedition, crossed the frontier of Tibet, he believed himself the first white person to enter that mysterious region—until, on his northward march, he was astounded to find a little American woman fearlessly carrying on her mission work within the border of the Forbidden Land. —E. Alexander Powell, in September Everybody's.

AMERICANS NEGLECT LANGUAGE.

Social and commercial seem to be the chief reasons for our indifference to foreign languages, but there is another reason why we are not ambitious to speak foreign languages well. As a people we do not as yet look

upon our own language as a thing sacred. We are notorious for our slovenly speech. Indeed, an American wishing to teach English abroad would do well not to mention his origin. Our lack of interest in spoken English is unfortunate. Of course it is only lack of interest. Most of us know right from wrong, at least we say that we do, but have not the time to take pains. This attitude is an interesting one in that it is so different from that of the Germans, the French and even the English, who take such a keen pride in their language that they would be ashamed not to speak it well. Good speech is with them a requisite in good society. It is, in other words, good form. Not so with us, though we are punctilious in some kinds of good form. We dress well, entertain handsomely at dinner, have automobiles, give box parties, etc., as if they were all that constituted good form. But our speech we neglect. By many Americans a person who pronounces well, uses good language and is interested in discussing the niceties of speech is regarded as a prig and a bore. Schoolteachers and even college professors often treat their language as they would an out-going suit and this without losing status in the communities in which they live. Nevertheless, a person who does not use his own language well will never go very far in a foreign tongue.—Forum for August.

DOMESTIC SERVICE.

If there were no social rivalries, the servant girl problem would be unimportant. If no woman desired to outshine any other woman in her social orbit, there would be so many domestic assistants on the market that professional housekeeping would be unprofitable.

Consider the situation for a moment. The women who do not employ maids are the ones who, as a rule, most need them. These are the women who have large families to minister unto. Such women, we all recognize, are not ordinarily financially situated so that they are able to employ household helpers.

The women who do have domestic assistants largely comprise the so-called middle and upper classes. These terms are absurd, but they serve to convey the idea. The latter require "servants" because they have large houses to care for and have a daily round of social duties to perform that occupy all of their time between a late rising and later retiring hour. In the intermediate "class" are a great many women who employ maids, not because they need them, but because they desire to be emancipated from "household slavery," which, in other words, is to say that they desire to "put up" what the Bowery lad would call "a good front." Many of these women have small families. Thousands of them are "unincumbered." Their household labors are not arduous—at least, not from the standpoint of the mother of 11 children who struggles along somehow without any assistance what-

ever—but they find that cooking meals and the other details of household management prevent them from enjoying absolute social freedom. Moreover, they imagine that doing their own household work lowers them in the estimation of their friends. There are many of this kind of women. It is they who keep up the price of domestic labor by creating a demand for it. What they need is not emancipation from "household slavery," but emancipation from false ideas. The great majority of them would be very much better off if they did all of their own work, save, perhaps, in some cases, the scrubbing and rug and carpet cleaning. And not only would they profit financially and otherwise, but so would their daughters, whom they now guard from the kitchen as if it were a pest-house, with the result that when these girls themselves become housekeepers they find they know very little about the work and that they are inclined to look on themselves as martyrs. The servant girl problem exists largely because of false ideas that are harmful to both employer and employe and that make menial work of what should be considered one of the most important of the professions.—*Woman's National Daily*.

A BARTENDER FOR EVERY TWO SCHOOL-TEACHERS.

"It is practically impossible to find a community in the United States," says Nathan C. Shaeffer, State superintendent of Pennsylvania, writing in the discussion of taxation as related to public education, published by the National Educational Association, "that does not spend more money for whiskey and tobacco than for education." The report of the United States Commissioner of Education, 1907, indicates (p. 525) that there are only twice as many schoolteachers as there are bartenders in the country. So while the aggregate amount spent for schools is large, the comparative amount is small. A few States, notably Ohio, make provision for the reimbursement of parents for the time of children in school. And eventually all the States must come to that plan. For the pitance that the child can earn is so little compared with the need of the State for that child's judgment formed by a trained mind in making public sentiment when he is grown, that it is folly to haggle over the expense account. If democracy is to go forward, it must begin to move in the schools of the country. Now as a people we can move quickly when we desire to move quickly. Within ten years there has been a complete change in the American mind about the treatment of defective children. We have stopped putting children in jail; the juvenile court has come into the judicial system of practically every American State. We do not count its cost, because we see its justice. The enlightened selfishness of the American people makes them regard investments in playgrounds, children's camps, recreation places on docks and piers, boys' farms and similar institutions for children, as profitable investments. And the enlightened selfishness of the people—their public altruism—must be awakened to the fact that the waste years of early adolescence of our American children constitute the greatest menace to the perpetuity of our institutions. The waste of those years is due to public selfishness. If the child leaves school for social reasons, because he does not feel that the school interests him, it is demonstrable that better schools—higher-priced teachers, teaching the rough, practical things which early adolescence instinctively longs for—will hold him. But that requires men teachers, and to hold men of the right sort, teaching must be made a

career, and for that pensions for teachers seem to be necessary unless salaries are greatly increased. (Parenthetically it might be said that there is no reason why men as adults should not pay the taxes required to pension the teacher who worked too cheaply to teach them as children.) If, on the other hand, the child is compelled to leave school because his parents cannot afford to keep him in school—for economic reasons, in short—then the public, having need of the child's adult judgment in the State, should reimburse the parents for their loss of the child's miserable wages, and so keep the child in school.—From "The Old Order Changeth," in *The American Magazine* for August.

AMERICANITIS—CAN IT BE CURED?

"Hurry is the devil," says an Arabian proverb. Although we understand that the Oriental has a constitutional prejudice against haste, it might be well for us to consider the above proverb seriously applied to ourselves as a nation. The morning paper gives us a daily list of deaths by suicide, apoplexy and insanity—men in the prime of life rushing into eternity, desperate because they are left behind in the race, or driven mad by the rush of the business world.

What is the matter? Is it the changing climate that stimulates the nervous system to abnormal activity? Is it the struggle for money? Is it the desire to emulate others, or is it habit?

A distinguished foreigner in writing his impressions of us says that we are not accomplishing anything more than if we were quiet; that we are doing it merely to give the impression of activity. We take ourselves too seriously. The woman who flutters about, creating confusion, is not the one who is doing the most work in the world.

Hurry means physical tension somewhere, and exhaustion afterward. Hurry suggests bad planning or careless execution. Hurry means loss of dignity and power. Hurry means fear, and fear is the greatest enemy to success.

Can we stop hurrying? Some answer that we must keep up with the procession or drop out entirely. Let us see if we can not conserve our strength, at least in small ways. Let us take thought and begin to reform. As tension expresses itself in bodily movements, we must first learn muscular control. Relaxation means letting go, and while we are learning to let go we are getting ourselves trained to take hold again when the time comes, for relaxation teaches far more than rest.

In vain, people try to attain a calm manner with a tense body. When we have relaxed the muscles at will we may easily become quiet in manner and peaceful in spirit. The bodily condition is the basis of real rest.

We will not hurry when we know the danger to the nervous system; when we realize fully that we gain power by working quietly; when we believe that we are living in eternity now.—Theodore Dreiser in the *Delineator* for September.

FOWLS AND FRUIT COMBINED.

MANY a person now situated on a large stock, grain, or truck farm is handicapped by heavy debts incurred by the considerable working capital necessary in operating these extensive farms. Thousands of dollars are invested in live-stock, implements, and machinery that are deteriorating each day, and in

many cases are cast aside as worn out before even paid for. It is to such unfortunate individuals who are struggling along to pay interest on borrowed capital that I will describe what I consider a more safe and sane method of earning a living on the farm. Compared with other branches of farming, a very small amount of capital is required, and the help question is eliminated from the business, which in itself is worth a good many dollars each year to the man who, in order to pay the men, has been compelled to deny himself and family all of the luxuries and many of the necessities of life.

Ten or twelve acres situated near a good market, which insures top prices for garden truck, fruit, and poultry, will keep one man out of mischief; but when looked after intelligently, will provide a good living from the start. A farm of this size can usually be purchased for from \$1,000 to \$2,000, and if without the necessary poultry buildings, these can be erected cheaply according to the owner's ideas. Our laying house is one hundred by ten feet, seven feet high in front and four feet in back. Sheathed with barn boards and roofed with cull shingles, it is a good, snug building for all that. The brooder house is forty by sixteen feet, and was originally a feed mill, which we tore down and rebuilt within fifty feet of the laying house. Half a dozen colony houses complete the poultry buildings, which have a capacity of 300 hens and 1,000 youngsters.

The coming season we expect to double the size of the laying house and add more colony houses. Three large incubators, having a capacity of one thousand eggs, are located in the cellar of the house, where the temperature is even and moist enough to insure good hatches. The brooder house is equipped with hot-air individual brooders, lined up side by side, facing the south. Each brooder stands back from the south wall eight feet, which affords a four by eight runway for each flock of chicks. This south wall is nearly solid glass, three feet high from the floor, which allows the chicks an ideal playground when the weather prohibits exercise in their outdoor runs.

From the brooder house the chicks are moved to colony houses situated in a young orchard adjacent to the former building. From there they finally move either to a different home as breeding stock, to the laying house, or in case of culls, to the fattening coops. We raise entirely thoroughbred poultry of the White Plymouth Rock, White Wyandotte, Buff Plymouth Rock, and Rhode Island Red breeds, good enough for the fancier to win prizes with, but here bred for egg production. It does not pay to fool with scrub stock, as good prices can be secured for breeding stock, and if any surplus, the poultry buyer will pay as much for a well-bred dressed fowl as for one of the variegated sort.

We are running this twelve-acre place primarily as a poultry farm, and our poultry comes first; but so well do trucking and raising fruit fit in with poultry rearing that nothing is slighted. We are continually putting out more apple and peach trees, and between these young trees are strawberries and vegetables, principally potatoes, tomatoes, sugar corn, lima beans, and cabbage. Although we bought one carload of manure this season for our truck, another season will see us well supplied with chicken manure, which, with that from our horse and cow, will be sufficient for our crops. We have previously bought an additional supply in order to get the land into a high state of fertility.

We set apple trees forty by forty feet, with a peach tree between each two apple trees. By the time the apple trees are in bearing, the peach trees will have outlived their usefulness and will be removed. Between these rows of trees are our strawberries and garden crops. In cultivating and fertilizing the latter, the trees get probably more of each than were they not in such good company.

To illustrate how we economize on room, sugar corn is planted in rows with young strawberry plants. Thus two crops are practically grown at the cost of one, and as the cornstalks are removed from the row before the plants send out runners, no harm is done in thus crowding the strawberries at the earlier period of their growth. With this combination of crops, one man can handle a ten-acre or twelve-acre farm nicely and make enough more from the garden truck, than if used for corn and other grain, to buy all his feed and make good wages for the extra labor entailed. He is receiving good money a greater part of the summer and fall for his fruit and vegetables, and when that part of his income vanishes, the early-hatched pullets begin to sing their little lay, which keeps the business running smoothly until another season. The proprietor can feel assured that while he may not be handling as much money as his more pretentious neighbor, neither is he encumbered with the expense and never-ceasing struggle to make sufficient from his extensive operations to meet his heavy obligations.
—R. J. Holliday, in *Country Gentleman*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

FOR SALE—An eight room house. Closets, Cement Cellar, Cistern, Well, Cement Walks, beautiful shade trees, including Evergreens. Barn 18x24—12 foot frame. Other necessary buildings. Three 25 ft. lots facing the S. W. Corner of McPherson, Brethren College Campus.—Address, J. C. Coover, McPherson, Kans., College Hill.

WANTED—1,000 Sisters to send for sample of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Ill.

FOLLOWING we give the Eleventh Report of the Bureau of Agriculture, Labor and Industry of the State of Montana for the year ending Nov. 30, 1908. One of the most substantial Irrigation projects in the State of Montana is located near Big Timber in Sweet Grass County, which will be settled in the very near future by the Church of the Brethren and their friends.

"The Big Timber project consists of 65,000 acres of land near the city of that name in Sweet Grass County. This was also one of the selections under the old commission and there were \$132,000 worth of bonds issued against the project. These bonds have been surrendered and destroyed. Under a new contract 28,500 acres of land have been reclaimed and will soon be placed on the market at \$50.00 an acre. The holdings are on the Yellowstone side of the watershed between that river and the Musselshell River. Eighteen thousand acres are first-class irrigable land suitable for intensive farming. The soil is in places a sandy loam, but mostly a deep fertile clay loam and generally underlaid with a clay-gravel subsoil. The water used for irrigating is absolutely free from alkali, and there is no alkali in the soil except in a few low spots. The lands lie from four to twenty miles from the city of Big Timber, and the same distance from the Northern Pacific Railroad. The climate is good and all kinds of crops mature to perfection in this locality.

"The water supply comes mainly from Sweet Grass Creek and Government measurements show that there is an abundant and never failing run-off for every acre in the project. The company also owns a large canal and water rights from Big Timber Creek which will be used on lands adjacent to that stream, besides two large and

convenient reservoirs on Otter Creek with a surveyed capacity of 31,000 acre feet of water. Fifty teams and one hundred and twenty-five men have been employed during the past summer on the north side of the river, and a two-mile tunnel is being driven from both ends on the south side. Expenditures for the season will aggregate \$200,000.

"Members of the State Board and others who have visited the site report the work as having been exceptionally well done, the soil deep and fertile and remarkably adapted for easy and thorough irrigation.

"As in all other Carey projects this land and water system will eventually pass into the ownership and management of those who settle upon and pay for it without any further expense than the initial price asked, \$50.00 an acre. This may be paid in installments so that it will be possible to make the land actually pay for itself, aside from the small first payment.

"The proximity of this project to the sugar factory at Billings—81 miles—makes it entirely practicable to raise sugar beets there for that market.

"It is confidently predicted that land under this ditch will meet with ready sale and rapid settlement and that a prosperous community will result."

THE INGLENOOK

ESCHATOLOGY, or the Doctrine of Final Things

By Eld. T. T. Myers

This little book presents in condensed form the substance of a series of eight lectures delivered before the students of Mt. Morris College, during its fourteenth Annual Bible Institute. In response to numerous and urgent requests from those who attended the Institute this book was brought out. The present edition is reduced to some 25 or 30 copies. The book formerly sold at 25 cents. While our stock holds out we offer them at
10 cents each postpaid.

Order to-day. To-morrow may be too late.

CRADLE ROLL BIRTHDAY POST CARDS

The phenomenal growth of the Cradle Roll Department of the Sunday School calls for constant activity on the part of the publisher to supply novelties and helps that will suit this peculiar field. Among the most useful helps are the birthday cards of which a new and beautiful line is just issued which may be mailed as post cards. The cards bear appropriate photographic reproductions embellished with exquisite floral designs and having greetings and verses in colored lettering; on the address side of the card is space that may be used for a personal message or invitation.

Form P. First Birthday—Boys.—A beautiful madonna with dainty decoration of trumpet border and lily of the valley.

Form Q. First Birthday—Girls.—Photograph of girl baby with border of snowdrops and colored leaves. One candle burns at top of card.

Form R. Second Birthday—Boys.—A bright boy's face with decoration of apple blossoms and golden bells.

Form S. Second Birthday—Girls.—A chubby two-year-old girl with pretty

background of violets and dainty lace.

Form T. Third Birthday—Boys.—A stalwart boy's figure in panel embellished with beautiful floral designs.

Form U. Third Birthday—Girls.—The girl's picture on this card is bordered with delicate grasses and pansies; three candles are burning on shelf.

The cards sell at the rate of 2 for 5 cents or 25 cents per dozen, postpaid. Order any one form or assorted.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

Two Centuries of the Church of the Brethren

This book contains the twenty addresses delivered at the Bicentennial Conference, Des Moines, Iowa, June 1908. The first large edition was soon exhausted and we have not been able to fill orders

for some time. The second edition is now ready and will be in demand, as several thousand of our readers neglected to purchase during the life of the first edition.

This new edition is printed on thin paper, making a volume about two-thirds the size of the former edition. Typographical errors have been corrected and the binding improved. Large, clear type, 400 pages.

The book is embellished with Twenty-five Full-page Photogravure Effect Portraits. These illustrations consist for the most part of portraits of the speakers who delivered the Bicentennial Addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

The book is a fitting souvenir of the Bicentennial year and should be found in every Brethren Home.

1909 AMERICAN PROHIBITION YEAR BOOK

Just from the press. Contains a whole library of valuable information gathered from the most reliable sources. This little book chronicles facts and analyzes doctrines. It attempts new deeds. It is designed to equip and fortify the friends of temperance and prohibition as never before. In abstinence, in economics, in legal aspects, in studies of legislation and its results, and of national resources and political action, and in its whole field it says the latest word.

Here are many hundreds of things which the people wish to know in connection with the present widespread agitation on the liquor traffic and its record.

History of the Brethren

By M. G. Brumbaugh.

This book is written from the most valuable early records, and gives a list of many early members in Europe and America with biographies of the leaders, analyzes the influences that led to Alexander Mack's action at Schwarzenau in forming the Brethren church, and contains a

description of the Ephrata Society movement. Profusely illustrated with fine engravings. The work is authentic, thoroughly reliable and intensely interesting, is well printed in clear type, and substantially bound. 559 pages.

NEFF'S CORNER

I left my business in Clovis in charge of a good foreman recently and went on a tour of investigation. Friends advised that I seek a winter climate better suited to my health. Besides I wanted to find some cheap land in a good climate and another suitable location to establish a missionary colony. There is not a Brethren mission in all the Republic of Mexico, but I have found a good place to start one near Culiacan, the capital of Sinaloa, about 35 miles from the Pacific Coast, a little north of the Tropic of Cancer in the same latitude with Key West, Florida. Here you can buy land with perpetual water right for irrigation, a good rich loam soil about 30 feet deep, for \$25.00 per acre, one fourth down and balance in one, two and three years at 6 per cent interest. You can buy tracts as small as ten acres, which would require a down payment of but \$62.50, and I believe it can be developed at little expense to where it will be worth \$500.00 per acre in three years. I bought 130 acres and had some reserved adjoining mine for a Brethren colony. The location is especially desirable, fronting on the railroad where a station and postoffice are promised as soon as we are ready for them. I want a number of you to buy adjoining me. I expect to locate there in November and everyone who can go with me at that time should write me at once. Literature giving full information sent on request.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,

Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

Ho! for Canada

It is not the purpose of the CO-OPERATIVE COLONIZATION COMPANY to slacken interest in its Colony at EMPIRE, California. This colony is now well under way; colonists are moving in and are well pleased and the work is moving along satisfactorily. But as the policy of this company is,—“CHURCH EXTENSION BY COLONIZATION,” steps are being taken to locate a colony in the Northwest.

After considering the various sections offered for settlement, the Directors at a recent meeting decided to locate

Colony Number Two Near Portage la Prairie, Manitoba, Canada

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its nearness to good markets,—only 56 miles from Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Manitoba.
6. The Low price of land, when quality and location is considered. These lands are now ready for settlement, are low in price and will soon be taken.

Join our Colony Number Two, secure a good farm in a prosperous section with good, nearby markets, excellent transportation facilities, where School and Church privileges are assured, and among people with whom you are acquainted. For fuller information, dates of Land Seekers' Excursions, etc., address:

PRACTICAL HELPS FOR RALLY DAY

NEW CELLULOID BOOKMARK

With the words "Rally Day" lithographed on one side of the bookmark; and with a reproduction of the Conquest and United States flags. These souvenirs may be given to members of the school as a constant reminder of the recipient's duties to and

Actual Size

privileges in the school. Many will use them in the Bible in connection with the daily readings and the study of the lesson. Each bookmark has a double silk cord and tassel. Price, 4 cents each; 40 cents a dozen, or \$3.00 a 100, postpaid.

NEW CELLULOID RALLY DAY BUTTON IN COLORS

1

2

3

Price of either numbers 1, 2 or 3, 20 cents a dozen; or \$1.50 a 100, postpaid.

RALLY DAY INVITATION IN WIRELESS TELEGRAM FORM

Contains a short, crisp, businesslike message, prepared in such a manner as to secure the presence of every teacher or officer, and pupil in addition to the parents and visitors. TELEGRAM FORMS, price, 40 cents a 100, postpaid. SPECIAL TELEGRAM FORM ENVELOPES. Price, 40 cents a 100, postpaid.

NEW CELLULOID FLAG PINS

These pins may be used to stimulate attendance on Rally Day. Distribute them in quantities to all members of the school who will promise to give one to each friend who agrees to attend the Rally Day services, wearing the pins. Organize all those who undertake to give out the pins into two divisions; then see which division succeeds in bringing out the largest number. Let one division use the Conquest flag pins, and the other the United States flag pins.

Price, 30 cents a dozen, or \$2.00 a 100, postpaid.

NEW ILLUSTRATED RALLY DAY INVITATION POST CARDS

For the use of Superintendents and Teachers
Designed to help increasing the attendance

to be sent previous to Rally Day to the members of every class or department, including the CRADLE ROLL AND HOME DEPARTMENT, and especially to those who have been irregular in attendance. Space is provided for filling in the date of Rally Day, and for the signature of the superintendent of any of the various departments, or of the teacher.

ORDER BY FORM AND LETTER.

FORM A. **Post Card**, with the reproduction of the Rally Day bookmark, in colors, containing a printed invitation; but without the name of Teacher or Superintendent, so that either could sign this card.

FORM B. **Post Card**, with the reproduction of Rally Day bookmark in colors. Without any printed matter whatever, so that you can have your own invitation printed on this form.

FORM C. **Plain Card**, same size as forms A and B, but not in Post Card Form. For distribution in the school or by messenger service. With the reproduction of the Rally Day bookmark in colors; containing the printed invitation; but without the

printed name of teacher or superintendent, so that either could sign this card.

FORM D. **Post Card**, Printed in colors, with an original design of an American boy Announcing Rally Day through the megaphone. The wording is brief and to the point; a space is left for the signature of the teacher or superintendent. This would be an excellent card to send to every member of the school, particularly to the Primary, Junior and Intermediate departments.

Price of either Form A, B, C or D, 60 cents a 100; \$2.75 for 500; or \$5.00 a 1,000, postpaid.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

Mr. Jonas R. Trimmer Writes of Miami Ranch

Mr. Trimmer is a man of far more than ordinary learning and experience, especially along irrigation lines. He expresses the sentiment of other representative citizens of Miami Valley.

Miami, New Mexico, May 25, 1909.

Farmers Development Company, Miami, N. M. Gentlemen:—

It was not until after I had traveled in many sections of the United States, especially in the arid and semi-arid portions of Texas and the Pacific Coast from Southern California to the Canadian North-west, that I decided to locate on Miami Ranch. I had spent some time in the Republics of Mexico and Guatemala as well, but for an all-around proposition I consider this section as good as any I have investigated.

The climate is ideal and healthful and soil fertility is A-1 and will produce most anything adapted to the Temperate Zone. I find the local markets far from being supplied, substantiated by the facts that produce, provisions and canned goods are nearly all shipped in from surrounding and other states.

Since I have located here and studied soil conditions, I find them remarkable. The centuries of action of the elements has eroded and washed from the mesasslopes vast amounts of rich humus and placed a deposit of from ten to fifteen feet upon the land I acquired. The soil composition is just sandy enough to make it pulverize and cultivate nicely, free from alkali and as to moisture retaining qualities it is marvelous.

Before locating, I studied the market question thoroughly, and situated as we are here, we will be able to compete with any section, raising similar products to those of Miami. Our altitude and climate brings our crops to maturity at a time when the vast section of country to our south and east are in the market for same, thus assuring unlimited demand.

Miami Valley suits me and judging from what has been accomplished here in a short period of time, I feel confident we will be flourishing with the older sections, especially where irrigation is practiced.

Miami is a proposition that the investor and homeseeker can feel safe on; we have the water, the first essential in a semi-arid country, our rights are perpetual, backed by legal government rights.

Your company is certainly giving fair treatment to settlers and are making both interests mutual and all that can be expected.

Thanking you for your hearty co-operation in the past and sincerely trusting for a continuance of same, I am

Very respectfully yours, (SIGNED) Jonas R. Trimmer.

Don't wait. Come and see. Excursions via Atchison, Topeka and Santa Fe Railway September 7 and September 21. \$30 from Chicago, \$25 from Kansas City, \$11.65 from Denver, to Springer, New Mexico. Write or wire us before starting.

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

Read What Prof. Holden of Ames Agricultural College, Ames, Iowa, Has to Say:

"You may say for me that southern Idaho is THE IDEAL PLACE FOR THE YOUNG MAN who is looking to make a start in life. Every acre of irrigable land in this section is worth, in yield or income, three times as much as the best land in Illinois and Iowa. I am for Iowa, but if a man is to move, southern Idaho is the place to go, and for the young man, full of wonderful opportunities.

"The diversity of crops appealed to me as strongly as anything I saw. The irrigation farmer for instance, is not dependent upon any one crop. He doesn't have to wait until the end of the season to get his money because there is something seasonable and saleable at all times during the year. He raises fruit, wheat, alfalfa, oats, vegetables, hogs, cattle, sheep, in fact everything grown in the temperate zone.

"One man told me that he raised 18 bushels of clover seed on one acre of ground during the past year, and I found that the clover seed crop runs 8 to 15 bushels per acre.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

THE CUBAN BUMBOAT

GRANT MAHAN

ENTERING the harbor at Havana one is surprised at the number of these boats. They are used for innumerable purposes, and under present conditions are really a necessity. All the transferring is done by lighters. And that is bad for business, for it adds unnecessarily to the expense of getting things into Cuba. An officer on one of the ships running from New Orleans to Havana told me that it cost them more to get goods from the steamer to the wharf in Havana than to carry them from New Orleans,* after they were loaded, into Havana harbor. It is to be hoped that the lighterage business will be done away before a great while. But quite often improvements do not come as soon as we should like to have them.

Of course these "bumboats" are often a convenience, and not a very large amount of lighterage is done in them. Once when we were sailing from Havana harbor, one of these boats brought out a man and his wife to sail with us; but the doctor had been there, made his inspection and passed on the ship. So these two people could not be added to the number of the passengers. They had to get their boat to take them back and wait for them while they hunted up the quarantine officer and got permission to go as they had planned. Fortunately for them, several lighters had to be unloaded, and the vessel was hours late in sailing. They returned on board shortly before we sailed. If the steamer had been loaded from the dock there would have been no such a delay, and late arrivals on board would have had to wait until the next sailing date.

Just how long the lighterage business will maintain its grip on Havana shipping, it is impossible to tell. It takes time to accomplish most things down here, and it is not good to expect to find American energy and push taking much of a hold on the activities of the island. Tropical countries are not noted for the energy of their inhabitants. Much of our boasted diligence is the result of necessity. If we did not need to hustle for the coal and clothing supply to carry us through

a northern winter, would all of us, or even a majority, be as eager for work as we are? This applies to those in the North. We who have been in the South for a winter or so cannot see any good reason to be quite as energetic as in former years. What's the use, when it is not at all necessary? Yet, to be sure, it takes more than a few years for one to grow accustomed to the slowness and delay which are so common among southern people.

But the boats under consideration, and others of the sailing kind, are indispensable. The time will come within a decade or so when launches will take the place of the uncertain sailboats, and people will be better contented and able to do their business in a business way. But now, especially along the coast where there is no port, there would be very little communication if it were not for these sailboats. They take passengers and mail and fruit to the ports, and they bring back whatever is needed. Sometimes they are very slow, and not infrequently men and women miss connection with train or steamer; but they are so much better than nothing that not to have them would be a calamity.

And this reminds us that we must not be too ready to speak or write disparagingly of things not up to our standard. The crude must come first. Without the sailboat Columbus would never have discovered America; and if America had not been discovered the world would be much behind its present stage of development—to say nothing of where or what we ourselves would be. Time brings changes, better methods of doing things; but these improvements cannot be had all over the world as soon as they are made. Some people are not ready for them—they have not yet reached the point where they really need them. It took the human race a long time to get ready for steam and electricity; and the next generation will probably consider us as slow as we do some of the unprogressive nations of today. The old must pass away and its

place be taken by something better. Yet we are loath to see some of the quaint things of early days depart. They are picturesque; and among such things is the Cuban bumboat. But we must lose all such as we go forward.

Omaja, Cuba.

H. A. BRANDT.

BONES are perhaps an uninteresting subject, and when it is said that they are the oldest and driest of bones you will doubtless think that the subject is trite indeed. The only defense offered is that the bones hereinafter discussed are very rare, in fact so rare that the men of science grow eloquent as they talk about them.

Of course when I heard that men were digging up the framework of elephants, tigers and even mastodons, and that within a few miles of where I live, I could not help but be interested and when an invitation came from Prof. J. Z. Gilbert of the Los Angeles High School to go out and visit this great graveyard of the mighty animals of the past the temptation was not to be resisted.

So it happened that one Monday morning of last July we took the electric car on the Santa Monica and Sawtelle line, got off at Rosemary, a little station just outside of the city limits of Los Angeles, and striking off northwest across the fields soon came to a little lake in the shelter of some blue gum trees. This little lake has an interesting history. It was first perhaps just a large depression in the ground where some of the oil from the great oil deposits of the neighborhood had forced itself up to the surface and mingling with the soil has formed a kind of asphalt. Many years ago a company began to dig up this oil and earth and ship it to Los Angeles to be used on the streets so that in time quite an excavation was made, but years of disuse have allowed the hole to fill with water and today when one stands on the banks of the old asphalt diggings it is a little lake, bristling with reeds, that meets our view. If one listens closely he will hear a bubbling of the water in the reeds but the water is not boiling, it is only the gas escaping from the ground in the bottom of the lake.

It was not until recently that the bones found imbedded in the banks of this lake were known to be extraordinary, but once the men of science heard that strange bones—bones of animals that one might expect to find in tropical Africa and not in southern California—were being dug up within a few miles of Los Angeles they very naturally were interested. The University of California soon appropriated money to begin systematic work on the grounds. But why let these rare treasures be carried away to distant parts of the State was the question that naturally came to Prof. J. Z. Gilbert of the Los Angeles High School,

and so it came about that at this instance influential men of Los Angeles were interested in the find and today Prof. J. Z. Gilbert is working a force of ten men in the interest of the Los Angeles High School and the Academy of Sciences.

I could scarcely realize as I stood on the banks of this little lake that beneath me lay a great burying ground of the past, where the bones of animals which long antedate the history of man lie in abundance. Here the elephant had trumpeted through the waste—here the buffalo had bellowed in rage as he mired in the asphalt sink, and the great saber-toothed tiger slept off the stupor of carnage and gluttony, and here had a multitude of strange birds and beasts of the long ago lived and died after their fashion.

The spirit of the hour came over me. I borrowed a shirt, trousers and a pair of shoes that had already seen hard service in the asphalt diggings and began to pick and dig with the enthusiasm of a scientist. What mattered if my hands were begrimed with oil and asphalt, here was a tooth, a claw, a bone, that, thanks to the preserving powers of the asphalt had lain in the earth for thousands of years! There lay a bone in the wall, what was it? With something of the zeal with which the gold seeker digs for his treasure as it begins to glance from the earth, so we dug for bones—just old bones in the muck and mire of the asphalt. But just as you were about to trace the outline of the find—perhaps the skull of a tiger with great saber teeth nine inches long in its upper jaws—you would strike another precious bone that must come out first, for you must know that these are the real bones that are found out here on the Rancho la Brea, though of necessity rather frail as a result of their long sleep in the earth.

And as I worked with anxious haste to uncover each new bone it was then that I could appreciate in some measure the feelings of the explorer as he enters an unknown sea or the scientist as he digs up the bones of the animals of long ago and reconstructs his fragmentary history of the age before man was. Some way or other those old dry bones were no longer only bones, but as those Ezekiel saw so these took on flesh and shape as in imagination the mind sought to build again the things and times that once have been.

188 Hastings St., Chicago, Ill.

WEED PESTS AS A BENEFIT.

H. D. MICHAEL.

SOME may wonder at the subject before me and think that surely weeds can not be a benefit. Nevertheless, I shall endeavor to prove that they are even a boon to mankind in many cases and only a blessing in disguise. Of course, I shall not include all, as that would be hard to prove.

True, they are often a great nuisance and cause the farmer an untold amount of labor with no direct returns and often none indirect, but often the cause is in not handling them in the right manner, and with them as with anything else they must be used right or no good can come from them, thus making what might have been a blessing only a curse.

Notice as the first instance that of the China Lettuce. Some years ago it sprang up in many places where it had hitherto been unknown and seemed to be gaining a foothold quite rapidly. Then many farmers were seen going round "long faced" as we term it, thinking the China Lettuce would take the country. Then there is another picture to keep in mind and that is the fact that then as well as now many of the places prized for their fertility and boasted of as being inexhaustible were fast losing their former fertility by being creamed, or in other words by being crowded to get all out of it that could be gotten and restoring none of the elements to compensate the loss.

On the appearance of the China Lettuce many thought the only way to do would be to raise cultivated crops, but it was soon found that stock relished it as well as grass. So another way was found. The ground could be and was seeded to meadow grass and pastured, thus raising more stock and returning to the soil the waste, enriching it and at the same time giving it a rest from the crops that were draining its strength. Then, after about three years it was found that the lettuce began to disappear, leaving the farms much better for its coming.

The revenue may have been reduced a little but look at the after effect. A few more years' creaming such as had been followed, with neither crop rotation nor fertilizers, would have left the land practically worthless, while in this way it was much improved.

Then look at the localities where Dog Fennel has come in all its pomp and flourishing greatness and it has, to my notion, improved the ground in nearly every instance where the farmer had the determination to keep it down and the backbone to stick to it and do so. Though it cannot be used as a forage crop, it will induce the farmers to plant crops that need cultivation and as it is a determined pest it will take enough cultivation so that the ground is left in a much improved condition after a few years of such usage.

Next let us notice the thistles, the sturdy old Bull Thistles and see what they have contributed to benefit us. There is one sure, easy, and quick way of killing them off, and that is by seeding the ground down to red clover, for thistles and clover do not agree and cannot live long together, and the clover is the victor.

As you probably well know, all the government experts, experiment stations, and agricultural papers of our land are trying to get the farmers to seed more land to clover to build up and improve the land instead

of permitting it to decline, and you can surely see at a glance that the thistle has helped us along the right road, even though it may have been against our wishes, and has had to stick us a little with its needles to get us to do it.

Next we will notice the lands in the semi-arid localities where scarcely any crop but wheat is raised, and where so little moisture falls (six to sixteen inches precipitation) that it becomes necessary to conserve all of it possible by summer fallowing each alternate year, and you can surely see the benefit coming from the weeds, for in the spring the summer fallow land becomes green with the Russian Thistles and other pests, making it necessary to disc or cut them down in some manner, and when cut into the soil or plowed under they return the life to the soil and furnish the much-needed humus for the following year's crop.

The weed and root fibres are in the soil to hold it from blowing in some localities while in others they keep it from packing. Newly irrigated lands find this same difficulty, that is the lack of humus and fibres to raise crops of all kinds the first year or two, but the detested weeds help add it as fast as they can, thus being of a benefit there.

Recently I overheard a conversation in which one man made the remark that unless certain counties fought and destroyed the weeds they would soon take the country. The other man replied, "It would bankrupt the counties to do that." This was in a wheat-raising belt where summer fallowing is necessary. Now on most of this land one cutting down of the weeds is sufficient to keep most of them at least from maturing, so let us figure its cost, also worth. With a common disc or a right lap disc (seeder attached) a man with four horses can cut from eight to ten acres per day, and at present wages that would mean about seventy-five cents per acre. Now say that you are adding just that much expense to the ordinary farming cost and see how we come out. That means less than a bushel of wheat at present prices, and who can doubt but that an extra bushel or more would be raised per acre with all the added humus and moisture saved that otherwise the weeds would have used to mature on. Now with the thought of future generations as well as ourselves in mind, associated with the present and future fertility of the soil, is it not possible that weeds can be made a great benefit?

Observations seem to prove it, if the weed pests are handled with that in view.

Pasco, Wash.

WE take care of our health, we lay up money, we make our roof tight, and our clothing sufficient, but who provides wisely that we shall not be wanting in the best property of all—friends?—*Ralph Waldo Emerson.*

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXXIII.—Egypt and Ceylon.

My walk over the Holy Land had been one of providential protection, and when I went aboard my steamer at Joppa for Egypt with a free pass in my pocket I believed more than ever that God was honoring me according to his promises in the Bible to those who believe in him and who seek to do his will. The steamer had set sail and evening was coming on. I was standing alone on deck, wondering where I would sleep, and where I would get my meal, when a sailor walked up to me and said:

"The captain wants to see you in the first cabin dining hall."

As I had done nothing worthy of death, to my knowledge, I walked down the deck, and with somewhat doubtful ideas as to the captain's intentions towards me, approached him as he stood at the door of the cabin.

He talked with me a few moments. Then he asked me in to the table. His wife was sitting at the right side of the end of the table, and her daughter next to her, farther down, while he occupied the end seat. Motioning to the chair at his left and opposite his wife and pretty daughter, he bade me be seated and to commence eating of the splendid meal that was being served them, and now also to me.

And so I was a *guest*.

My enthusiasm and gratitude were unbounded.

After the supper, or dinner as they call it on board, the captain chatted awhile and said as I left him to go to my quarters,—which were anywhere on deck not

in the way of anybody else,—that I should come down for my breakfast and for my other meals while en route to Egypt.

My face beamed with delight, for I caught a glimpse of my physiognomy from the fine French plate mirror as I left the cabin for the deck.

The sea was pretty rough and I began at once to look about for a lodging among the ropes and canvas.

It was just dark when the captain walked down the deck and saw me thus.

"Come with me," he said.

Being in an oriental country and on the sea, I

scarcely knew what to expect of the captain. Possibly he might have some work for me to do, or, like many other officials in strange lands, he might have suspicioned me as being one who needed watching, if nothing more severe than watching, and yet as I walked along with him I felt that he was about to give me a pleasant surprise. It is the pleasant surprises in life that count most for our happiness. Not the looked-for things, not the expected blessings, so much as the accidental and unearned

One of the Egyptian Clerks at the Bristol Hotel, Dressed in a Dress, Like a Woman, in the Lounging Room.

ones that give us happiness.

We went into his own private stateroom, or rooms, for there were several of them *en suite*.

"You may sleep here tonight and make yourself at home in my quarters, while I will go down into the ordinary staterooms with my wife and family."

I didn't thank him. I didn't smile. I didn't laugh. I just took it all with a puzzled expression, I suppose.

He was gone in an instant and I saw him no more until daylight at breakfast.

I sat in the soft cushioned chairs. I lay down upon the soft sofa. I sat in the study chair. I walked over the soft carpet. I rubbed my hand along the polished fittings. I looked into the compass, for there was the big ship's compass, and the magnetic needle, and the steering apparatus so far as it could be represented by electric push buttons, by levers, signalling apparatus, etc. I looked into the bathroom and at the clean white porcelain bathtub in which only the gallant captain and *myself* could ever bathe. On the table were magazines, nautical books and instruments. In cases by the side of the cabin were other tools and instruments of delicate manufacture, for only the captain to handle,—and “me.”

The captain's staterooms are always the best staterooms on board. They are the biggest, the best, and the finest located. Situated toward the front of the vessel on the high deck, he escapes the smells of the vessel, gets all the sea air going, and receives but little of the sickening roll that everyone else must suffer in the lower and smaller cabins. Such a cabin is worth about fifty dollars a day.

That's where I was, in the biggest, the best, the most luxurious. I do not know of a single name in history, of one single great man for whom the captain of a sea vessel was willing to vacate while under way, for anyone, however great, who had paid his regular passage first-class, and go down into a smaller and cheaper cabin.

But I had not paid any fare. And I was sailing from Joppa, too, from which Jonah sailed. It was costing me absolutely nothing, and I had the best on the boat, and better than any traveler, exceptional or otherwise, ever gets, at any price.

That night I turned on the electric light here and there about my rooms, enjoyed to the full the luxuries that were for me only to enjoy, and then, ready for sleep, crawled up between the pure white wool blankets of the captain's bed, snuggling there till morning.

Just think, I could have sent any kind of a signal down to the engineer,—to slow up, to reverse engines,

“Man overboard,” “Lower the boats,” “Fire on deck,” “Stop the vessel,” “Run half speed.” Why, I could have upset the boat. I had everything in my own hands. For the captain had “forsaken all and cleaved unto his wife.”

We landed at Port Said all too soon.

I hurried to the station to catch the first train to Cairo, for I had time enough to get down there and back again and thus see Egypt before the probable arrival of a big steamer for Ceylon and India.

At the station a gang of convicts were being put into the side-door cars that looked like grain bins, as the soldiers in white khaki, tight belted and armed with Winchesters, guarded them to their very heels. These criminals were being transferred to another prison, and I made a hurried study of their faces and clothes and actions so as to be able to recognize any such characters to be met with in my jaunts in that country.

Just as in our country, everybody standing about was peculiarly impressed at the sight of these convicts. They looked at them with the same kind of sad, morbid awe, as we look at such criminals, and I saw that the truism of the Bible was as applicable in that country as it is in our own, or anywhere else,—“The way of the transgressor is hard.” As for me, I said, “I'll try to be good.”

At Hotel Bristol I found the furnishings of the rooms and office

in keeping with the queer country. On the wall, ancient Egyptians,—masters and slaves of the time of the Pharaohs and of Moses,—were painted in almost life-size sketches. The meals were good and the quiet refinement of the hotel stood out in giant contrast to the crowded, narrow, tortuous and dirty streets outside.

A guide was found who took me across the river and then to the pyramids and the desert,—the great Libyan Desert.

Purposely I avoided taking any pictures of the pyramids. Everybody else coming here does that, so I took a picture of the sheik in charge of the pyramids and was taken myself, on a camel, with my camera, at some distance from the pyramids, on the desert sands themselves. Like great clouds of gray smoke, the simmering heat of the desert rolled over the vast ex-

Spickler in the Desert.

panse of hot sand and filled the air with a quiet sound that no one has ever heard with the ear, but which every tourist feels, in his body and in his soul.

I shuddered at the thought of my camel breaking off for the limitless desert with me on its high hump back, and no water, water, water, for days at a time, nothing to eat, and no one to see. Not a tree or a blade of grass in forty miles.

It made me dry and almost sick to think of it, for the sun was burning its rays through my clothing and my hands felt like blisters.

The fine-faced sheik of the greater pyramid set out ahead of me and with a lighted candle in his hand, and one in mine, led me through the tortuous and rather dangerous passageway to the interior, where the tomb

of the Pharaohs can still be seen. Once inside, I lay down in this big stone sarcophagus, just to see how Pharaoh must have felt when he as a corpse lay in it.

But I was afraid that I too might die and I jumped quickly out of it. The air in here was cool but rather stifling, for pure air can hardly reach this subterranean vault.

I was in the land of Joseph, the Dreamer.

A few days later a big French steamer sailed into port and when it steamed away again I was one of its happy passengers, having paid for my passage to Colombo, Ceylon, with money that I had earned along the way, or that had been given to me by friendly sympathizers.

ALCOHOLIC EFFECTS

DR. S. B. MILLER

IN the great prohibition wave that is sweeping over the country, public sentiment is crystallizing stronger than ever against alcohol in all its forms.

Scientific research is rapidly reaching more definite conclusions regarding the effect of alcohol on the body and especially as affecting the body's power of resistance to the inroads of various diseases.

While there are various factors affecting the bodily resistance, and there is considerable variation in even what may be considered normal cases, yet there is sufficient uniformity in regard to alcoholic tests as to warrant some very valuable deductions. Alcohol has a marked influence in reducing the vitality of the body forces so as to interfere with the natural power of the body to remedy ailments.

The most valuable asset of any internal medicine lies in increasing the power of the blood against disease germs, whereas experiments uniformly prove the administration of alcohol decreases the power of the blood against disease germs, in proportion to the amount of alcohol contained in the liquor administered.

Dr. Charles E. Stuart reports the following experiments: 1. Having first tested the resisting power as to the germs of tuberculosis and blood-poisoning of four persons who had been lifelong total abstainers, he then gave to each one two ounces of port wine. After drinking the wine, tests revealed in every case a perceptible decrease of the powers of resistance.

2. Having tested other persons for their power of resistance to the same two diseases, to one he gave an ounce of Scotch whiskey, and an hour later gave him another ounce of Scotch whiskey, and when re-

tested the resisting power was reduced ten per cent for tuberculosis and five per cent for pus germs.

To another one he gave an ounce of sherry wine, and an hour later another ounce of sherry wine, and when retested the power of resistance was lowered eleven per cent for tuberculosis and five per cent for pus germs.

To another he gave four ounces of champagne and retesting showed a decrease of power of resistance of nine per cent for tuberculosis and nineteen for pus germs. Many other experiments were performed giving practically the same result, proving conclusively that alcohol decreases the bodily powers of resistance in proportion to the amount of alcohol in the liquor.

Inasmuch as many drugs are largely alcohol, or preserved in alcohol, we should know that any drug thus taken as a stimulant decreases the patient's power of resistance. I quote briefly from Dr. Carrington's book, "Vitality, Fasting and Nutrition," and give excerpts and author to show the foolishness of administering alcoholic drugs as a food or stimulant.

1. Alcohol never imparts strength to the system. We frequently hear feeble persons saying they are "kept up" by stimulants. This means they are kept down, but the sensation deceives them and they attribute good to what is a persistent evil. Alcohol gives no potential power to the brain or muscle. Following its injection into the system it excites the mind, stimulates the muscle, uses up nerve force, but gives up nothing to take the place of what is destroyed or used up,—it leads to destruction.—Dr. B. W. Richardson.

All popular stimulants, and refreshing drugs have two distinct and opposite actions,—an immediate exaltation and a subsequent depression, always exceeding the exaltation, so the net result is a loss of vitality.—Dr. J. C. Jackson.

2. Alcohol does not aid, but hinders digestion: "Nothing more effectually hinders digestion than alcohol. Many hours and even a whole night after a debauch in wine the stomach may reject a part or whole of an undigested dinner. More instances of indigestion, gas in stomach and bowels, sour stomach, depression of mind and body are produced by alcohol than any other simple cause. Those who abstain from alcoholic stimulants have the best digestion."—Dr. Cheyne.

3. Alcohol does not warm, but cools the body: "Under the most favorable circumstances, the effect of alcohol will be to reduce the heat throughout the mass of the body. There will be a glow of warmth on the surface, thus cooling the body by giving up its heat, and leaves the body chilled, the products of combustion lessened, the nervous tone lowered, the muscular power reduced, the quickened heart tired, the excited brain infirm, and the mind depressed and enfeebled."—Dr. B. W. Richardson.

4. Alcohol is not and can not at any time be a food: "Alcohol passes through the system unchanged. Unless it is in some way altered, decomposed, diminished or changed it can impart nothing to the body and can not be used by the body. It can not supply the element of combustion nor formation of tissue; it is indigestible. It is taken into the system as alcohol, is carried through as alcohol, and is expelled from the system as alcohol. If a piece of potato, apple, bread, beef, or any article of food was expelled from the system as undigested, no one would think it served a good purpose in passing through the body. It is passing strange that medical men will confess that alcohol passes through the system unchanged and yet insist that it does something, imparts something."—Dr. R. T. Hall.

PROFANITY.

"The extent to which profanity is practiced by Americans (and one need only attach himself for a few minutes to groups of men congregating at some street corner, or elsewhere, to learn) is so alarming as to call for comment from the newspapers. The New Orleans *Times-Democrat* says: 'Unless something is done to check the evil, Americans must soon become known as the most foul-mouthed persons on earth.' The *Ohio State Journal* says: 'It is a very mean thing to swear—it is unkind, it is offensive, it is wicked, it is against all the rules of an intelligent and polite society. But there is an interesting study

in it. The more vicious a man is, the meaner he swears, and the higher he seeks for the subject of his imprecation. In his very passion he recognizes the existence of a Supreme Being, for, if he didn't, his devilish intent wouldn't be roused that way. Let him swear by the heathen gods or some imaginary trumpery, and his curses don't satisfy his bitterness. In this thing of profanity, the devil undermines his atheistical propaganda. He gives his whole case away. Every oath that he inspires shows that he is keeping up his old fight against God Almighty. He finds it a cheap way to fight, and so he does plenty of it. It is a wonder people don't see through him. It is a pleasure to note that the secular journals are taking up the crusade against swearing. Would that more took a hand in it.'"

Sad to say, some seem to think it smart.—*Selected.*

SUNSET IN THE FOREST.

RICHARD BRAUNSTEIN.

As sinks the sun to rest
In a heaven opened west,
The light wind softly whispers
To us ev'ning's vernal vespers.

A pall of myst'ry droops
Over yonder cloistered groups
Of vaulted trees—arches
Of some woodland temple.

Birches.

In a white-robed procession,
And sullen shadows of night,
Enhance a haunting impression
Of some unseen sylvan rite.

The murmurs of dark'ning water,
And echoes of insect laughter,
With odors of mists ascending,
Faint gleamings of day now ending.

All seemeth a symbol vast
Of a priestly age and past,
When medieval somberness
Held mind in slum'ring duress.

A MACHINE THAT SETS ORDINARY TYPE.

NEARLY everyone is more or less familiar with the type-setting machines that are in daily use in our large newspaper and printing offices, which cast the type from molten metal as the machine is operated. To build a machine which would set ready-made type has been the ambition of a number of inventors for some years past. The most recent solution of the problem is embodied in a machine invented by Mr. A. G. Baker, of Albion, Mich.

The machine has a capacity of setting ten lines of type per minute of ordinary column width, or technically speaking, ten thousand ems an hour, as against a record of six to seven thousand ems on the older machines.

The upright portion of the machine is called the magazine, and consists of ninety channels containing the different letters of the alphabet, punctuation marks, and other characters used in printing. Each channel is just wide enough to contain the character allotted to it without allowing it any more room than it requires to slide up and down easily. The channels are entirely independent of one another, so that any of them can be removed from the machine if desired without disturbing the others.

The first channel at the right is but eight inches long, while each succeeding one is one-eighth of an inch longer, so that the lower end of the magazine is inclined from right to left, the top being level.

The type is set by pressing the keys on the keyboard, as in other type-setting machines. When a key is pressed, it operates a plunger, which enters its corresponding channel from the rear, and pushes the lower piece of type out into the inclined guide plate in front, whence it is carried by gravity to the assembling point at the lower left-hand corner of the machine. The guide plate is so tilted that those characters which are farthest from the assembling point will travel fastest when released from the magazine, because of the greater inclination of the plate at that end, while those nearer travel more slowly. Consequently, all arrive at the assembling point at the same time. This enables one to operate the machine very rapidly without the danger of transposing letters.

As the letters reach the angle in the guide plate at the lower left-hand corner, a sort of escapement action, actuated by a spring concealed in the base, and operated by the depression of the keys, places them on their feet in line ready for removal at such time as may be desired.

One of the machine's most ingenious features is the distributing mechanism, which operates backward and forward across the top of the magazine, similar in action to the carriage of a typewriter. This part of the machine contains a number of channels, like those of the magazine, except that they are much shorter.

In each channel of the distributor a line of type is placed, and as the keys are pressed in the setting of a new form, the distributing device moves backward and forward one space at a time. At the top of each channel of the magazine, and extending about one-third of the way across the opening, are steel strips called "wards." Each ward has a number of protuberances upon its surface, corresponding in number and shape to the nicks on the side of each type character. The ward and its corresponding type character will fit each other perfectly, but neither will fit any other except its own counterpart. As the distributor moves across the top of the magazine, each piece of type is tested against the wards until it finds its corresponding ward, and falls into its own channel. In this way the type is distributed without any extra effort on the part of the operator, and coincident with the setting of a new form.

The machine has been designed to set all standard sizes and styles of type. Type having the same sized body, no matter what variation there may be in the face, may be used in the same machine indiscriminately but where there is a difference in the size of the body, adjustments have to be made in the machine to accommodate the change.

The fact that the machine requires no power for its operation, and no gas or other heat for melting metal, adapts it particularly well for the use of country newspapers, that have been unable heretofore to make use of the advantages offered by such machinery, owing to the lack of proper facilities.

The machine is most advantageously operated by two men, one setting the type and the other spacing the lines or justifying them, as it is commonly called.

All corrections in the proof are made from the ordinary case of type, as this requires less time than making the changes with the machine.—*Scientific American*.

BUSINESS AND STRONG DRINK.

THE employer virtually says to the workman: "You can drink what you please, when you please. But if you please to indulge in habits which would impair your efficiency and increase danger to your fellow-workmen and to my property, you must find work elsewhere." The attitude is practically the same as that of the banker who will not tolerate visits by any clerk or teller, however trusted and capable, to racetracks or gambling houses. The railroads almost without exception now prohibit employes from using intoxicants while off duty as well as on. The geniality of the old-time, hard-drinking commercial traveler no longer is deemed an asset by wholesale houses. Scientific salesmanship, as well as modern manufacture and transportation, demands more and more the elimination of drunkenness.—*Philadelphia North American*.

NATURE STUDIES

PRINCIPLES OF AGRICULTURE.

JOHN H. NOWLAN.

Chapter IV. Plants.

EXAMINE a piece of charcoal. You can see in it the form of the stick from which it was burned. This black part is carbon. All the veins of the original wood show in the charcoal. A very large part of a plant is carbon and every particle of it was taken in by the leaves of the plant.

A tree weighing eleven hundred pounds is estimated to have taken the carbon from sixteen million cubic yards of air. When you think of that you may suppose the carbon of the air is in danger of being exhausted.

The air of the world is estimated to contain 880 million tons of carbon. Besides, it is being replenished by the breath of all animals and by fires. One factory in Germany is estimated to give back to the air 2,640 tons of carbon daily.

Only plants having green in their leaves or stems can use this carbon and then only in the sunlight. The coloring matter of the leaves, chlorophyl, acting with sunlight, changes the carbon into starch and sugar. Some is used at once and some is stored for future use.

How does this food formed in the leaves get to all parts of the tree? There are two movements of sap—one from the roots up through the young wood, called sapwood, to the leaves, and one down from the leaves through the bark to the roots.

Root pruning stops the flow of sap to the leaves and they soon wither. On the other hand girdle the tree and they will not wither, as you have not interfered with their water supply. Later the roots will fail because of the failure of their food supply, and when they are unable to send the water to the leaves the leaves wither. A girdled tree may live till the end of the growing season.

The life history of the plant begins with the seed. A seed is really a small plant with nourishment to enable it to live while it is forming its roots.

The power of a seed to grow after a lapse of time varies greatly. Some, like parsnips, do not grow after the first year, while peas taken from the wrappings of an Egyptian mummy three thousand years old are said to have sprouted.

The conditions necessary to growth are moisture,

warmth, and oxygen. If one of these is deficient the plant will not do well.

What is the purpose of the flowers? "To look beautiful," says some one. True, they are beautiful, but that is not their purpose. They are a part of an endless chain. They are to produce more seeds, to make more plants, to produce more flowers, to make more seeds, *ad infinitum*. You know that the fruit of the plant produces the seed and the flower bears the fruit.

"But," says some one, "some plants produce seeds and never have any flowers at all." Every plant that produces seed first has flowers. The ear and the tassel of corn are its flowers, while such trees as the elm, ash, and maple have very small flowers.

The question may arise, "If flowers are so important to trees, how do they do their work?" Examine a blossom—plum, apple, bluebell, or squash for example. You will find first a circle of green leaves that covered the blossom when in the bud. Inside this is another circle of leaves giving the flower its color. These leaves may be separate as those of the apple, or may all be grown together as those of the bluebell. The green leaves are the sepals and the colored ones are the petals. Some blossoms have no sepals or petals at all, as the corn. Inside of the petals is a circle of thread-like parts, each with a knot on the free end. These are the stamens and when the flower is developed the knots will open and emit a yellow powder.

When you walk through a patch of camphor weeds in summer you know how the yellow dust collects on your shoes. This dust is the pollen, and the knot in which it grows is an anther.

In the center of the flower is a single part with the free end slightly enlarged and the other end much more enlarged. We call this the pistil. The tip is the stigma and the large part is the ovary. Cut the ovary open and you will see small round objects in it. These are the embryo seeds.

Some plants have the stamens and pistils in the same flower, as the apple. Some have them on different flowers on the same plant, as corn, while others have them on separate plants, as the sassafras and some strawberries.

The seeds will not develop unless the pollen falls upon the stigma. The pollen grain sends a small

thread-like body down to the embryo seeds in the ovary. This is called *fertilization*.

If the pollen falls upon the stigma of a related plant, the plant growing from the seed thus developed will partake of the qualities of both. These are called its parents. Sex in plants has been known for about two hundred years, but within the last few years great discoveries have been made in the possibilities within the grasp of the plant breeder.

How does the pollen get to the stigma? One way is by the wind, but that is a very wasteful method and requires much more pollen than is needed for fertilization. If you place a barrel in the yard it will catch but a small portion of the rain that falls. So a flower will catch only a small portion of the pollen shower.

Another method is by means of insects. When plants fit themselves for pollination by this means they do not supply as much pollen as before, and if insects fail to visit them they are helpless. To guard against this they resort to methods of attracting visitors. First they provide a sweet liquor or nectar in the bottom of the flower, in striving to reach which the insect carries pollen from one flower to another.

All successful merchants advertise their wares; so to let the insect world know that they have something for them they display a sign—either a showy color or a pleasing odor. This tells that they have either nectar for honey or pollen for beebread.

Cold, rainy weather at blossoming time may prevent the visits and thus injure the crop. Also crops grown in the house must be pollinated by hand. When the pollen from one plant falls upon the stigma of a flower on another plant it is called cross-pollination. This usually produces stronger seeds, that is, seeds that will produce a stronger plant.

This is sometimes done purposely by the gardener. To do this he first removes the anthers before they open. Then he covers the flower with a paper bag to prevent pollen reaching the stigma before he is ready. When the stigma is sufficiently developed he carries pollen to the stigma from the flower he has selected as the other parent, then re-bags. The seeds resulting from this work are carefully saved and planted next year.

Cross-pollination between two varieties of the same fruit produces a cross—as between two varieties of apples. When the parents are two distinct kinds the result is called a hybrid, as between an apple and a pear. By this means many new fruits have been placed on the market.

The most successful man along this line is Luther Burbank, some of his achievements being little short of the miraculous. His last triumph is the development of the thornless cactus.

WEST HILL NATURE CLUB.

ARMELIA L. COLWELL.

THE Nature Club, was not satisfied just to tend their gardens, but set out trees and flowers on the school-grounds, and also wished to do something to preserve the wild flowers, some of which are so eagerly sought by the city dwellers that in some localities they are nearly extinct.

One every farm here were wood lots, some small, some large. Our plan first was, Mrs. Rich said, to teach every one here, that when gathering wild flowers they should be carefully cut from the stems, and not pulled off, as is done oftentimes, pulling up the whole plant which is left to die. This is especially true of the trailing arbutus which has tough brown stems, and trail over the ground, catching in here, and there; and which many people pull up without regard to the future, only to get the flowers at the present time, which is all wrong. They should be carefully cut with knife, or scissors; this will not disturb the vines. In woods where this plan is carried out it grows luxuriantly and furnishes many blossoms each year. The arbutus does not adapt itself well to cultivation, and it seems best to protect it in its native haunts, the woods. And the same is true of many of the lovely wild flowers.

Mrs. Rich told the children they could each have a garden of wild flowers, with no cost except the time taken to remove them from their places in pasture, or woodland, to the garden. This can be done with little trouble. Each child tried some plants. Those who had the best success were those who gave each plant from field or forest a soil and conditions similar to those in which they originally grew. By this I mean that the shade-loving plants, as ferns and trilliums, should be afforded shelter from the sun and that those which grew in moist places, should if possible be again set in a place where they will not dry out. While those which are not particular as to the positions they occupy can be used any and everywhere.

In securing your shrubs and plants, aim to save all the roots you can and to disturb them as little as possible. Never allow them to become exposed to the sunshine or to become dry. A good plan is to take

a lot of paper and string with you and wrap each plant or tree if not too large and tie securely, thus keeping the native soil about the roots, also retaining the moisture. Do not make the mistake of selecting large shrubs, in your desire for immediate effect. Smaller ones will be more vigorous, and in a couple of years, will have gotten the start of the large ones.

In locating your plants, keep the tall-growing kinds to the rear, where they will serve as a background for those of lower growth, and finish in the foreground with the low-growing plants or ferns.

The flowers most used by the club for their gardens, were Jack-in-the pulpit, lady's slipper, both yellow and pink, violets, wild peas, bloodroot or Indian paint, lilies, three kinds grow here, hepaticas, columbines, azalea, trillium, bouncing Bet, goldenrod, balm or Indian's plume, black-eyed Susans, wild asters of several kinds and colors, and the oxeve daisies. Of trees, the maple, elm, willow, hemlock, pine, Norway and white, white birch, poplar, balsam, and spruce. Vines: bittersweet, woodbine and wild clematis. Sweet brier and wild rose are liked by some.

Many flowers were sent to New York City and other cities by the club, Uncle John sending us the names of teachers. Also small plants of the violets, hepaticas, arbutus, bloodroot and Jack-in-the-pulpit, which were used in the children's window gardens in the schools, many children seeing the beautiful flowers for the first time.

The plants were all sent by mail securely packed in wooden boxes, or grape baskets. Some clubs made a good deal of money sending wild flowers, and specimens, but our club only asked them to pay all postage, which they gladly did. We also sent collections of grain gathered just before it was ripe, wheat, oats, barley, rye, buckwheat, grasses, clovers, and millet. Many of the children in the large cities never saw the grain growing, and the teachers wished to have it for illustration.

The club under Mrs. Rich's direction sent many flowers each year to the sick and shutins. They especially enjoy the arbutus and azalea or Mayflower, and many years the club furnished the G. A. R. on Memorial Day over one hundred bouquets of wild flowers, mostly dogwoods and azaleas, which were always gratefully received.

It would be impossible to tell all that has been done by the club with the wild flowers. The members of the club themselves have learned many lessons. Mrs. Rich has tried to teach them all the names of the flowers, and never to just say a flower when speaking of them, but say a rose or violet. If one does not know their names, he should find out as soon as possible. The better one knows them the more he will love them.

God might have bade the earth bring forth
Enough for great and small,

The oak tree and the cedar tree,
Without a flower at all.

We might have had enough, enough
For every want of ours,
For luxury, medicine, and toil,
And yet have had no flowers.

Then wherefore, wherefore were they made,
All dyed with rainbow light,
All fashioned with supremest grace
Upspringing day and night?

To comfort man,—to whisper hope,
Whene'er his faith is dim,
For whoso careth for the flowers
Will care much more for him.

—Mary Howitt.

Wellsburg, N. Y.

THE COMPASS PLANT.

THE compass plant is a shrub with flowers made after the same pattern as the daisy. It grows in the prairies of a large part of North America, and is a trustworthy guide to hunters who are uncertain of their direction—hence its name.

The leaves are the part of the plants which act as signposts, and there are two peculiar things about them. To begin with, they are set on the stems with the tips pointing skyward, and the stalks toward the ground, so that one would speak of the leaf as having a *back* and a *front*. Now, as you know, the flowers seen in England nearly always have their leaves pointing from the stem outward, and we talk of their *upper* and *under* side.

The second curious thing about the compass plant is that all the leaves turn their broad, flat blades toward the east and west. Perhaps some of my readers have at some time pressed a plant between sheets of paper; if so, a growing compass shrub would at once make them think of a huge plant which had been laid in enormous sheets of paper and lightly pressed; because in each all the leaves are flattened one way.

Of course, if the broad part of the leaf faces east and west, the narrow edges must turn to the north and south, so that a glance at one of these shrubs keeps a traveler on his true course, even when his friend, the sun, fails him and retires behind the clouds.

There is a sort of lettuce also that grows in England—a wild one, not one that we eat—and is found on dry soil, which wears its leaves in exactly the same way, unmistakably marking out the points of the compass.—*Selected*.

MODERN nature study, according to leading exponents, is merely natural science for young folks; and your true teacher of nature study aims to be as accurate in opening the child's mind to the wonder and beauty of natural laws as he would attempt to be in presenting the results of original research before a body of his peers.—*Bird Lore*.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE
ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

THE man who apologizes for his occupation either has the wrong kind of business or is the wrong man for the place. In either case there should be a separation of the two. It is not only hard on a man to be engaged in work for which he needs to apologize, but it is hard on any honorable work to be in the hands of a man who makes apologies because of his position.

PICKING over dry bones may not be the uninteresting task which the thought at first suggests. Much depends on what sort of bones they are and whether the one who is doing the picking has a particular liking for that kind. In that case the work is intensely interesting. One of our contributors is telling us in this issue about some old bones that have proved very fascinating to him. Somehow in the telling he has transmitted their power of attraction and we believe all who read the article will be anxious to learn more about this collection of bones.

It is reported that numerous eggs of the dangerous tsetse fly—the insect which it is claimed carries the germs of the fatal sleeping sickness—have been found in the skins contributed to the Smithsonian Institution by former President Roosevelt. If this be true, the ardor with which scientists and others have defended the course of the mighty hunter in cutting a bloody swath through the fauna of Africa, may be somewhat dampened. When from the “valuable contribution to science” we deduct the ravages which this insect is capable of producing,—to say nothing of several other things that must be deducted in any event,—the result will very likely be a negative quantity. However, precautions are being taken to keep the eggs where harm may not come from them, and it is to be hoped that they will breed no calamity to disturb our peace or injure the hunter’s renown.

Now that the North Pole has been discovered and we have learned that it is nothing more than what reason and previous knowledge have led us to believe it to be, we may give our time wholly to the work in hand. Applying the present-day test to the discovery, —“What is it worth?”—we get no reply. Perhaps it is too early to make the calculation. However, we feel safe in forming the conclusion that it will be of no material benefit in helping us to adjust ourselves to the new tariff schedules. And when this is admitted it will be hard to get any one interested in the accomplishment. Besides, Dr. Cook runs the risk of incurring the ill will of the school children because of the addition of another history date to the already long list to be committed to memory.

THE NEGRO PROBLEM.

Not long ago it was the writer’s good fortune to be in a neighboring city on the day that Booker T. Washington was to deliver a Chautauqua address there and the chance opportunity to hear this well-known negro educator was taken advantage of. As a speaker and as a man of broad common-sense ideas he fully filled the high expectations which numerous reports had given us. No one can hear the man without being impressed with the thought of the mighty uplifting influence he is wielding among his people.

Mr. Washington looks the negro problem squarely in the face. He makes no effort to belittle it or evade it in any way. With equal honesty and fairness he acknowledges the weaknesses characteristic of his race. Doubtless these facts have had much to do with his marvelous accomplishments; these and the further fact that he has unbounded confidence in the adequacy of his plan to solve the negro problem. To be open and frank in the matter not only makes clear his own way toward high attainments, but it secures to him the help and sympathy of others and the power to help those who scarcely realize their need of help. To ignore the true conditions would deprive him of all this.

Booker T. Washington does not believe in the deportation or segregation propositions, mainly because there is no spot on the earth where the black man might be placed, with conditions favorable for advancement, that the white man would not come. Since the black man is here he thinks he may as well meet the white man in this land as in any other. Neither does Mr. Washington believe in the amalgamation idea. Since it takes one hundred per cent of good Anglo-Saxon blood to make a white man and only one per cent of negro blood to make a black (?) man, it is evident that this would be no solution of the problem from the white man’s standpoint.

The one thing that Mr. Washington insists on and the one to which he is giving his whole life, in order

that the negro's condition may be not only tolerable but honorable and deserving of respect, is that of making him useful—even necessary—to mankind. He fully believes that salvation for his race, as a race, will come alone through quiet, faithful, persistent effort, resulting in the highest efficiency in all lines that contribute to the prosperity and advancement of any people.

Already Mr. Washington is seeing encouraging results from the plan and he is living in hopes of a greater demonstration of its wisdom in the years to come. Following is what the *Chicago Record-Herald* has to say of this idea:

"What is called the negro problem in the United States has many phases and aspects, and some of them are still acute, but upon one thing all observers and thinkers, white or black, can agree. That is, that every step which the colored race takes toward efficiency, thrift, usefulness, service, is a step which counts toward the satisfactory solution of the highly complex 'problem.'

"Hostility and prejudice based on race or faith are most effectually combated by indirect, subtle means. Contention and controversy cannot be avoided, but an ounce of positive achievement for good is worth volumes of theoretical arguments in this workaday world. A negro farmer, a negro banker, a negro merchant, a negro druggist, a negro foreman, a negro builder, a negro architect, a negro educator, a negro musician, a negro lawyer—these are the 'arguments' which which must finally prevail.

"The wise teaching and practice of men like Booker T. Washington, exemplified most strikingly perhaps in the National Negro Business League, cannot fail to command support and admiration everywhere. Whatever else the negro in America may need in order to secure full recognition of his rights under the Constitution and laws, he certainly needs property, education, industry, development of his best faculties. And, for the benefit of whites and blacks alike, proper emphasis should always be placed on the material, intellectual and moral progress which the freed men of color have made in a few decades of opportunity, liberty and human dignity they have enjoyed in a limited degree. To some this course may seem 'humiliating,' but as a matter of fact there is no humiliation in looking reality in the face and dealing with nature as it is, and Booker T. Washington has deserved well of the whole country for preaching the gospel of work, of manliness, of discipline, of honorable ambition, to his race."

If in the next forty years the negro makes advancement proportionate to that made in the past forty years, unhindered by the many obstacles that blocked his way during this time, the white man, with hundreds of years of civilization back of him, will need to look well to his reputation, and especially to his ways. After

all, the test of usefulness must be applied to all whether white or black.

TEACHING PURITY.

PURITY is not born of ignorance, but impurity is. If the fathers and mothers of the United States could be brought to understand this truth, there would be a great deal less immorality in the world than there is today. Boys and girls are taught not to tell falsehoods, not to use profane language, not to yield to their temper, not to take what does not belong to them; in short, to conduct themselves as little ladies and gentlemen should. Parents who fail to instruct their children in these important matters are considered negligent; society does not approve of them. But how about the instruction of children concerning their physical nature? Is that attended to as it should be? Or, are boys and girls permitted to obtain this instruction away from home, among immoral and degrading influences? Can there be any doubt? Unfortunately, there can not. There are too many wrecks along the highway of life to leave any room for question as to whether or not parents are criminally neglecting this most important duty.

Any mother will confess that the little brain of the child has not long been busying itself with the things about it before the infant begins asking anxious questions regarding how it came into the world. But parents have been disinclined to answer this question fairly and honestly. For some reason that no one has ever satisfactorily explained, a stork myth has been invented to keep the naturally inquisitive child from ascertaining the truth. If that is not resorted to, other equally evasive and misleading answers take its place. The consequence is that sooner or later the child comes to believe that there is something immoral connected with this matter, something that it can not discuss even with its mother and father. But its curiosity is aroused, never to be satisfied until it has learned, somewhere and somehow, the facts that its parents will not reveal to it. Its knowledge, instead of being purely received, comes from snatches of conversation that are overheard on the street, from the mouths of immoral or thoughtless persons and from a half-hundred other equally impure sources. A subject that should be fully and carefully explained thus becomes tabooed in the family circle. The child, once it understands the situation, never again mentions the matter in the presence of its parents. The opportunity to influence the child aright is thus lost. Impurity, far too often, is born of the child's ignorance.—*Woman's National Daily*.

THOUGHTFULNESS for others, generosity, modesty, and self-respect are the qualities which make a real gentleman or lady, as distinguished from the veneered article which commonly goes by that name.—*Thomas Huxley*.

THE HOME WORLD

REBELLION OF THE CELLS OF THE BODY

O. G. BRUBAKER, M. D.

MAN's worst enemies are "they of his own household." Strenuous and successful warfare can be waged against a foreign foe, but to fight the rebels within our own borders dulls the spear and sickens the heart. To face the enemy from abroad carries with it the good will and flag of the entire country, but to face the traitor within divides our forces and paralyzes our nerve. A death-blow has been hurled so hard at smallpox, scarlet fever and diphtheria that they are unheard of save now and then in isolated or sporadic cases. An epidemic of these diseases is *almost* as rare as snowfall in June. Tuberculosis, that dread disease and plague, is rapidly succumbing to our superior means of warfare against the tubercular bacillus. In these diseases we have the advantage of fighting an enemy from the foreign land.

It is vastly different when we come to study cancer, that ghastly, crab-like tumorous growth which makes us shudder at the thought of our ever being a victim of its deadly attack. The sudden appearance; firm, hard consistency; agonizing pain which shoots out from it in all directions; its power to eat its way rapidly into all kinds of tissue, whether it be bone, muscle, nerve, brain or blood vessel and with absolutely no known cause for its occurrence, make such a malevolent picture that all of us pray that the Wise Father will intercede in our behalf and stay the hand of such a loathsome disease.

Very often the name of a disease or condition has little significance. The name of this malady, however, is rife with meaning: The Germans call it "krebs," in Latin and French it is called cancer while in Greek it is *carcinoma*, the name generally used by medical writers. All of these terms alike mean "crab," a ghastly flesh-eating parasite which literally eats its way into the flesh of the body. Quite a similarity is at

once manifest when you think of the hard mass being the body of the beast, the pain of its growth being the bite and the hard bands of scar tissue which radiate in various directions being its claws. At all events the simile is quite obvious.

For years scientists all over the world have been trying to solve the problem whether cancer is caused by a living germ, a veritable microscopic "crab," or whether it is due to abnormal cell proliferation. Time and again investigators have become enthusiastic over their findings, thinking most assuredly that to them belonged the honor of discovering the "germ of cancer." But up to the present time the results have been very disappointing, for no germ which can be proven to cause cancer has been isolated. It would be helpful indeed if such a find could be made, for most assuredly the cure would be forthcoming. While some of our most brainy experts still believe in the germ theory for cancer the weight of the evidence thus far is much against such a belief. So that most of our pathologists are coming to believe that this dread disease is a traitorous insurrection on the part of our own body cells, in other words, a "rebellion of the cells," as one great thinker has called it, the nature of the process being that of a revolt by a small group of cells.

In normal physiology all the cells, tissues and organs are subservient to the best interests of the whole. The stomach, for example, secretes the gastric juice not for its own use alone but that certain foods may be digested and built up into the body. The blood travels all over the body, bringing oxygen and food to every cell, not for the blood's sake alone, but for the good of the whole body. In cancer this law is utterly disregarded. Instead of serving the interests of the entire body it partakes of the elements of anarchy and not only kills the body but in doing so starves itself

to death—committing murder and suicide at the same time.

Everywhere throughout the human economy is found a tissue made of a characteristic flat cell called epithelial cells which are of the very highest type and are the chemical laboratories and ferment factories for the production of various secretions required by the body. These secretions range from the simple watery mucus of the mouth or the oily lubricant of the hair follicles to the complex gastric and pancreatic juices. These cells are of the most vital importance to the body and their revolt is dangerous in proportion. The appalling fact is that these cells are the rebels and traitors in cancer.

The course of the invasion may be briefly sketched as follows: After some forty, fifty, or sixty years of loyal service a small group of cells in a tubule of some gland, say of the breast or lip, begin to grow and increase in number. Soon the tubule is blocked, the tissues immediately surrounding the growth become swollen, congested and hard. In addition to this the cancer cells produce digestive ferments against the surrounding tissue and thus it begins eating its way into the vitals of the body. The gland is rapidly destroyed. If on the surface, a spreading ulcer develops, however, and scarcely is a tumor formed till it begins to break down with various results. If it be deep seated, as in the pancreas, the whole gland may be destroyed. If on the surface, a spreading ulcer develops, Ere this process goes far, a lymph channel or perchance a vein will be eaten into and some of the cancer cells are carried into the stream to the nearest filter—in most cases a lymph gland, or if in the blood stream may be carried to any organ of the body—at all events, lo! and behold, wherever they lodge a mass similar to the parent tumor develops. This is a most characteristic feature of cancer, that regardless of the kind of tissue in which the secondary tumors grow the cells will always resemble those of the parent tumor. For example, if a cancer of the pancreas is the origin of a tumor in the brain, the brain tumor will not be made up of brain cells but will be much like the cells of the pancreas and pancreatic juice will be poured out in the brain. Sooner or later the vital functions of one or more organs are so much interfered with that death ends the scene. About the only consolation there is to such a picture is the fact that there is no danger of infection from such a growth. From theoretical grounds as well as from practical experience we need have no fear of becoming infected with cancer on account of caring for or handling a cancerous patient. In other words, the cancer cell seems unable to live in any other body except the one in which it originated. In the care and treatment of the hundreds and thousands of cancer patients not one authentic case has been related where a physician, nurse or attend-

ant contracted the disease. Some surgeons, for example the late Professor Senn of Chicago, have inoculated themselves with cancer tissue from patients with absolutely no resulting growth. (I saw and examined Dr. Senn's finger in which several years previous he had ingrafted a piece of cancer taken from one of his many patients.) Hence we can disabuse our minds of any fear from the contagion of cancer. There is absolutely no ground for fearing that it will spread over the country like an infectious disease. And gruesome as the conditions are under which the patient suffers we need have no fear in caring for him. As Woods Hutchinson says, "The cancer problem, like the Kingdom of Heaven, is within ourselves."

As to the cause of cancer a great many things have been written and said. There is no specific cause and the contributing causes are legion. Scars, bruises, moles, inflammations, smoking, drinking alcoholic liquors, injuries, the decline of life, senility and hundreds of other more or less significant conditions are put down as helping to favor the beginning of a cancer. We may say that the better we care for our physical being the less likely are we to have cancer. This gives us a hint that all moles, scars, birthmarks, and warts which are in any way irritated by the clothing or movement of the body should be surgically removed, as tissues of this kind shows a decided tendency to develop into cancer. Chronic inflammations and lacerations in any part of the anatomy should be properly cared for. The mouth and teeth should be kept rigidly clean.

When once the diagnosis of cancer has been made what shall we do? Caustics, liniments, salves and all kinds of "patent" dope galore have been tried and all come far short of cure. X-ray, trypsin and radium have all been vaunted to the skies, but fail absolutely, for they like the pastes and ointments merely suppress the symptoms and allay the pain, leaving the cancer untouched or worse than before. The only kind of cancer that is cured by anything short of the knife is the so-called rodent ulcer which has no tendency to penetrate the deeper tissues. Put it down then that he who claims to cure cancer by any means short of removal by operation is either too ignorant to diagnose cancer or is bordering close to telling the untruth. Don't temporize by trying this, that and the other "cure" with so deadly a monster as cancer, when at the present time early and complete removal not only of the entire tumor but also of the tissues surrounding it saves at least forty-five to fifty per cent of the cases while other means can promise nothing. Shudder as we do at the thought of operation, the surgeon is the only one who at the present writing has any assurance of success. It is still more appalling when we consider the fact that we never know how soon after operation the deadly monster will break out anew. Surgeons and pathologists recognize this fact and are anxiously and

determinedly seeking for some other means of cure. Just now a new field seems to be opening. It has been noticed and recorded in many cases that the body develops a certain power of resistance against cancer. It has also been observed that hemorrhage from the tumor, the intervention of some other disease, starving the patient for a time, and other conditions which affect the health of the individual cause a marked retardation and sometimes a retrogression of the tumor mass. It is conceded by all that no cancer grows as rapidly as its own inherent power of growth would allow it if it were not impeded on the part of the body's resistance. Now if we can find some specific therapeutic means or other agency that will increase the resisting power of the body against cancer we have gone a long ways in its ultimate cure and extinction.

The body contains natural forces which tend to cause the healing of cancer and the possibilities of augmenting these forces are before us. Therefore, our attitude toward the cancer problem should be that of hopeful confidence.

ONLY ONE MOTHER.

You have only one mother, my boy,
Whose heart you can gladden with joy,
Or cause it to ache,
Till ready to break,
So cherish that mother, my boy.

You have only one mother who will
Stand by you thro' good and thro' ill,
And love you although
The world is your foe,
So care for that love ever still.

You have only one mother to pray
That in the good path you may stay,
Who for you won't spare
Self-sacrifice so rare,
So honor that mother alway.

You have only one mother to make
A home ever sweet for your sake,
Who toils day and night,
For you with delight,
To help her all pains ever take.

You have only one mother—just one;
Remember that always, my son;
None can do or will do
What she has for you;
What have you for her ever done?

—Unidentified.

HOME.

Go through the town any evening, and you will be surprised, if you have never given the matter any thought, at the number of boys and young men who make a practice of squandering their evenings, to say nothing about the days spent in the same manner. Squandering time is the sin of the age. As a rule, the idle, indolent boy goes to the bad. He may have all the elements necessary to make a first-class business or

professional man; but if he is not instructed or encouraged to form habits of industry, he will be a failure almost inevitably. There is wisdom in the Jewish proverb, "He who brings his son up without a trade, brings him up to be a thief." Prison statistics show that a large proportion of convicts never learned a trade till they learned one in prison.

There is one way this great evil of squandering time can be remedied, if not altogether obviated. Parents must take the matter in hand—must themselves set the example of industry and frugality, and must see that their children imitate the example, and that they have something to do. Make the home pleasant and attractive. If the boys love the street or the loafing place better than the home, you may rest assured that the home is wanting in some important particular. Provide the boys with interesting reading matter, and useful tools, and encourage them to employ their time in any harmless way that will keep them from idleness and profligacy. When you see a boy or a young man willing to trifle away a day, a month, or a year in doing the work of a disgusting street loafer, you may set it down that it would not take much to persuade that boy or that young man to become a full-fledged scoundrel.

It is well to teach the boys that no success comes from squandering time, and that the better class of people have about as high a regard for a real industrious thief as for an ignorant, idle loafer. It is in the power of most parents to regulate this matter and if they will do it, we shall see our army of trifling, loafing young men and boys diminish. Make the home what it should be, and you have done much toward assuring the future of our boys.

But if parents suffer their own minds to grovel continually in sties and stables, and see nothing higher in life than land and money, how can they lead their children on to useful lives, fruitful in noble words and deeds?—*H. L. Hastings.*

HIGH HEELS.

A CURSORY view of the customs of society, or of some neighborhoods, might convince one of the truth of the doctrine of depravity, or at least of the idea that many persons are apparently trying to do as much violence as possible to this physical organism so "fearfully and wonderfully made." This thought is naturally suggested by an acquaintance with so many of the prevailing customs and fashions of the present day, prominent among which, as illustrating prevailing follies, is the high-heel fashion. If a high heel is really necessary for ease in walking, the Creator would have placed a prominence on this part of the foot corresponding with the "hump" of the camel. But such a hump would now be regarded as a deformity, a malformation, if inside of the boot.

The most that we can claim in this respect is that

a broad, low heel may be of service in rapid walking, but experience and observation can but teach us that the heels worn by both sexes are a nuisance, if worn as the manufacturers intend. Many of these are so high and so small at the top that walking—naturally a fine exercise, among the best—generally becomes irksome, a task, and productive of very many deformities and ailments. It is not too much to say that most of the deformities of which so little is known in savage and barbarous life, such as corns, bunions, incurvation of the nails, sprained and deformed ankles, the misplacement and crooking of the toes, etc., are attributable to this cruel custom. Fashion is at best a cruel tyrant; but the whole history of her capricious rule does not exhibit a grosser violation of natural position. It crowds the foot forward into the boot, resting too much of the weight of the body on the forepart of the foot, crowding the toes into the front of the boot, of course chafing them and in a variety of ways deforming them and making business for a class of men now in demand, the chiropodists. Lameness, sprains, turned ankles and distortions in general, are the inevitable results, and most of the wearers of these know the fact—at least in some degree—yet these high heels are still tolerated; high heels *versus* brains. Custom rules, at least a certain class, compelling such to submit to arrant cruelty.—*Christian Monitor*.

SELECTED HELPS FOR THE HOME.

A POULTICE of fresh tea leaves moistened with water will cure a sty on the eyelid.

For earache, dissolve asafœtida in water; warm a few drops and drop in the ear; then cork the ear with wool.

Use fresh water. Water that has stood in an open dish over night should not be used for cooking or drinking, as it will have absorbed many foul gases.

Mix a little carbonate of soda with the water in which flowers are immersed, and it will preserve them for a fortnight. Common saltpetre is also a very good preservative.

The true physiological way of treating burns or scalds is to at once exclude the air. Cotton batting, flour, or scraped potato—anything that is suitable and convenient—may be used for the purpose.

To cure bunions, use pulverized saltpetre, and sweet-oil. Obtain at a druggist's five or six cents' worth of saltpetre; put into a bottle with sufficient olive oil to dissolve it; shake up well, and rub the inflamed joints night and morning, and more frequently if they are painful.

BUTTER AS MADE IN INDIA.

GHEE is used in India as is butter in American and European countries, and, in fact, is butter, so prepared

that it never grows stale, instances being known of its preservation for as long as 200 years.

In preparing ghee, butter is boiled until all the watery particles and curds have been thrown off by repeated skimmings. When the liquor is clear oil it is poured into a vessel to cool. When cooled it is in granulated form, and will keep for years without becoming rancid or of bad odor. Ghee has been found in deserted castles, where it must have been left more than two centuries ago.—*Mechanics*.

SHELLED BEANS.

ONE of our favorite uses for sour cream is with shelled beans. We use kidney or cranberry beans. Soak and cook as usual. When tender, pour off the water, add sour cream to thoroughly moisten, and simmer one-half hour. The alkali in the beans removes all sour taste from the cream and the resulting combination is particularly good.—*Selected*.

The Children's Corner

THIS BOY'S HEART WAS RIGHT.

"HERE, boy, let me have a paper."

"Can't."

"Why not? I heard you crying them loud enough to be heard at the city hall."

"Yes, but that was down 'tother block, ye know, where I hollered."

"What does that matter? Come, now, no fooling. I'm in a hurry."

"Couldn't sell you a paper on this here block, mister, cause it b'longs to Limpy. He's just up the furdest end now. You'll meet him."

"And who is Limpy? And why does he have this block?"

"Cos us other kids agreed to let him have it. Ye see it's a good run, 'count of the offices all along, and the poor chap is that lame he can't git around lively like the rest of us, so we agreed that the first one caught sellin' on his beat should be thrashed. See?"

"Yes, I see. You have a sort of brotherhood among yourselves?"

"Well, we're goin' to look out for a little cove what's lame anyhow."

"There comes Limpy now. He's a fortunate boy to have such friends."

The gentleman bought two papers of him, and went on his way down town, wondering how many men in business would refuse to sell their wares in order to give a weak, halting brother a chance in the field.—*Exchange*.

THE QUIET HOUR

WATCH.

R. A. NEDROW.

WATCH!—a word very frequently used, and so full of meaning that I fear we do not fully comprehend its magnitude.

Watch, when used as a verb, imperatively, embodies a world of meaning. Let us notice the volume of meaning that each letter of the word suggests: W-a-t-c-h watch. Watch what? W—*words*. How important it is that we watch the *words* we speak, for,

"A little word in kindness spoken,
A motion, or a tear
Has often healed a heart that's broken,
And made a friend sincere.
Then think it not an idle thing,
A pleasant word to speak,
The face you wear, the thoughts you bring,
A heart may heal or break."

How apt are the words of James: "If any man offend not in *word*, the same is a *perfect* man." How plainly did Jesus teach along this line when he said: "Every idle *word* that men shall speak, they shall give account thereof in the day of judgment. For by thy *words* thou shalt be justified, and by thy *words* thou shalt be condemned." Is it not highly important, therefore, that we watch our words?

A—*actions*. By our words we may deceive,—we may be able to speak fluently, and thereby leave a good impression, but *actions* speak louder than words. We tell more by what we do than by what we say. In our business dealings with our fellow-men we usually manifest our actions, sometimes to our own disadvantage.

Let us watch our *actions*, for we must render an account to God for the *deeds* done in our bodies.

T—*temper, thoughts, tongue*. These usually seem to travel together. It is the temper that gets us into a great deal of trouble. When it is watched properly, we need not fear so much the evil results of the tongue. Some one has wisely said, "When you are angry, before you speak, count ten. If you find you're angry still, count again." What a noble thing it would be if we possessed sufficient self-control to guard our thoughts, to be able to control our tempers so that there would be no danger of *saying* things which afterwards cause remorse, and *doing* things which often bring reproach upon ourselves and the family or church to

which we belong. Let us watch our *temper, thoughts* and *tongues*. How many heartaches have been the result of neglecting this great duty!

C—*companions,—character*. When I say watch your companions, I do not mean that you should watch them for the sake of finding fault, but that you may avoid evil associates; for a person is known by the *company* he keeps. If we are concerned about our *character*, we will endeavor to abstain from all appearance of evil. How often have I realized the value of a good character! Having this, we command the respect and win the confidence of all good thinking people and are indeed an exalted people because we are in possession of that which money cannot buy and yet be obtained by *watching*.

H—*habits*. *Habits* are the constituents of character therefore let us *watch* our *habits*; for "*habit* is a cable—we weave a thread of it each day and finally it becomes so strong that we cannot break it." We should begin early in life to watch our *habits* for it is then that we begin the formation of character. Nothing is more desirable than a good Christian character and *habits* of *truth, honesty, punctuality, and industry* should be formed that we may have full, rounded out characters whereby we may become a blessing to humanity.

"What I say unto you, I say unto all, *watch*."
Jones Mills, Pa.

SEEK THE BEST.

It is the privilege of the Christian to have the best. He should be satisfied with nothing less than the best thoughts, ideals, hopes, joys, aspirations, experiences. "All things are yours: and ye are Christ's, and Christ is God's"—was the wonderful declaration of the apostle. To be content with anything but the best that God has for us to enjoy is to dwell in the desert when we might be experiencing the delights of sea or mountain, or fertile valley.

One reason why so many good folks get so little out of the Christian life is their indifference to the higher possibilities of that life. Dr. Jowett, of Birmingham, remarks: "I am more and more persuaded that the growth of a Christian life can be measured by our increasing willingness to bring the divine to the common-

place, and to link the most ordinary want with the powers of his grace. But the pity is that so many people bring their merely material wants to the Lord, and they bring no higher craving. They seek the good, but are heedless about the better; or they seek the better and are unmindful of the best."

Material wants have an important place in God's program for his children. But it is not the first place. Things spiritual have the right of way. It is the duty of the Christian to "seek those things which are above." The higher life is the life spent in the higher quest, and in finding and enjoying the spiritual riches without which the soul is not and cannot be satisfied.—*The Epworth Herald*.

BEGIN THE DAY RIGHT.

Go not, my friend, into the dangerous world without prayer. You kneel down at night to pray, and drowsiness weighs down your eyelids; a hard day's work is a kind of excuse, and you shorten your prayer, and resign yourself softly to repose. The morning breaks, and it may be you rise late, and so your early devotions are not done, or are done with irregular haste. No watching unto prayer! wakefulness once more omitted; and now is that reparable? We solemnly believe not. There has been that done which cannot be undone. You have given up your prayer, and you will suffer for it. Temptation is before you, and you are not ready to meet it. There is a guilty feeling on the soul, and you linger at a distance from God. It is no marvel if that day in which you suffer drowsiness to interfere with prayer, be a day in which you shrink from duty. Moments of prayer intruded on by sloth cannot be made up. We may get experience, but we cannot get back the rich freshness and strength which were wrapped up in those moments.—*Frederick W. Robertson*.

THERE ARE TWO OF US.

"You'd better do as we want you to, or you will get into trouble," said the leader of a group of rather rough-looking boys to a smaller one, who stood pale and trembling before them. Through their leader they seemed to be demanding something of him.

"I can't do it," he said, his voice trembling a little, as he spoke, but his lips drawn firm, and his eyes steady and unwavering.

"What's the reason you can't? You will have to, I tell you. We are going to make you do it, whether you want to or not. We are all of us against you alone, and how are you going to help yourself?"

The boy that was beset with such overwhelming odds as this was silent for a moment, and then he looked the other in the eye and said:

"I can't do it; it's wrong, it's mean, and I can't do a

mean thing. I am not as much alone as you think I am, either. There are two of us and the other one has always been more than a match for all that have come against him."

"Two of you!" sneered the other boy, "and where's your partner, I'd like to know? Why doesn't he show up? He's a pretty fellow to leave you in the lurch. Much help you'll get from him! I guess you'll be used up before he comes."

"No, I shall not," answered the other boy quietly; "for he is here now. It is just as I told you; for there are two of us, and the other one is—God."

The leader of the rough boys started back in amazement. He had not expected such an answer as this. He looked for a moment into the determined face of the little fellow before him, and then casting a sheepish glance at his companions around him, he said:

"Come on, fellows; let him alone. There is no use fooling with such a chap as that."

And away they went leaving the younger boy triumphant.—*Wellspring*.

A PRAYER FOR ALL.

THERE was a peddler who carried his wares from house to house in Scotland. One day, while upon his errands, he entered a cottage where a noble lady was visiting its inmates. Some conversation ensued, when the lady rather haughtily inquired of the peddler:

"What! can you pray?"

"Well," said he, "I ken I can."

"Then kneel down at once," she cried, "and let me hear you."

Whereupon the man put his bag off his back, went upon his knees, and at once spoke thus to God:

"Oh, God, give me grace to need grace.

"Oh, God, give me grace to ask for grace when I am given to feel my need of grace.

"Oh, God, give me grace to receive grace when thou givest the grace I need.

"Oh, God, give me grace to show grace when I have received grace from thee, whether I get grace shown me or not."

We commend this prayer to every one who is endeavoring to walk through this world to the glory of God, as one of the most practically beautiful expressions of dependence on God ever uttered.—*The Gleaner*.

MARKS OF THE CHRISTIAN.

THE body is at last the tell-tale of the soul and bears the brand of its mastery. The consecrated Christian ought to be able to say with his Lord: "Behold my hands and my feet." Not by the Holy Supper alone do we show forth the Lord's death, but by the perpetual sacrament of living. By the marks of loving sacrifice, Christ and the Christlike thing are known.—*Northwestern Christian Advocate*.

ECHOES FROM EVERYWHERE

Under direction of Dr. A. T. Peters, a chemist of the University of Nebraska, hog cholera serum will be manufactured. The Illinois live stock commission has purchased 40 acres of land north of Springfield on which a new biological laboratory will be established.

Physicians connected with State institutions at Dunning and Elgin, Ill., say pellagra is a germ disease and does not necessarily come from corn. Dr. Bullock of Dunning says pellagra is found where there is no corn.

Permission has been granted postmasters of the third and fourth class to take 15 days' leave of absence to attend the National League of Postmasters of the United States to be held at Syracuse, N. Y., October 6, 7 and 8 next. Postmaster General Hitchcock is expected to deliver an address.

During aviation week at Rheims, France, manufacturers took orders for 52 aeroplanes. Manufacturers believe sportsmen in every country will soon buy aeroplanes. On the last day 200,000 paid admissions to the Aerodrome and 100,000 more witnessed the flights from the surrounding hills.

Many of the railways are arranging to employ telephones for train dispatching, the Northern Pacific having already 470 miles of telephone in service and 250 more projected, while the New York Central will have its whole route to Chicago under telephone control when 200 miles of equipment, in addition to the present 250 upon the Michigan Central, is complete.

Sept. 1 the news came from Lerwick, Shetland Islands, that Dr. Frederick Cook, of Brooklyn, New York, had discovered the North Pole April 21, 1908, and was at that time aboard a steamer bound for Copenhagen where he arrived Sept. 4. Dr. Cook had accompanied previous expeditions in search of the Pole and was well acquainted with the northern regions. His last and successful trip which was begun July, 1907, was a private one financed by himself and J. B. Bradley, a multimillionaire of New York.

An effort is to be made to stock the Hudson River as well as other northern rivers of the United States with sturgeon, a fish that once swarmed in their waters, but which has since been exterminated. The proposal comes from Mr. Horace G. Knowles, formerly American Minister to the Balkan States. Through Mr. Knowles' efforts the Roumanian government has promised a carload of sturgeon fry, some cans of young sterlet, and smaller food fish to populate our waters. The first consignment of several hundred thousand fry will probably be planted in the Delaware River. The native sturgeon have been all but exterminated by wastefulness.

Delegates C. E. Tholin and John E. Sandgren of the National Organization of Swedish Workers, who arrived in New York on August 24, for the purpose of collecting money for the strikers in Sweden and to explain the conditions there to American workmen have reported that the total amount raised by American sympathizers will probably reach \$225,000. They had expected to raise about \$50,000.

The wireless station on the Eiffel tower receives almost daily communication from New York, and often picks up messages from Canada. The present installation, which belongs to the war department, is only a temporary one. When a definite installation has been completed the service expects to talk regularly with New York without trouble.

In presence of farmers gathered at Oklahoma City from Colorado, Missouri, Oklahoma and Kansas, a demonstration was given of the new process of making alfalfa meal. The machine was placed in the field where the hay was being cut and the meal ground immediately. By grinding while green 98 per cent of nutrition is obtained, while by the drying process only 60 per cent is secured.

With the exception of the Chicago and Alton and Burlington, every railroad in Missouri is observing the new excess baggage law. Under the old law the rate for excess baggage was 16½ per cent per 100 pounds, while under the new law the rate is 12½ per cent. The Attorney General has telegraphed the two roads that unless they at once comply with the law's provisions he will proceed against them under the criminal statutes.

Six hundred tons of barnacles have been taken from the bottom of the armored cruiser South Dakota at the Mare Island navy yard, making the vessel's hull rise four and a half inches in the water. The barnacles fastened themselves to the ship's bottom during a recent trip to the South Sea Islands. Naval authorities were astonished on learning of the immense weight of the incumbrance, which interfered with the ship's speed.

A letter has been received at Berlin from Count Leo Tolstoi in which he promises to read a paper before the coming peace congress. In this letter, Count Tolstoi denounced in the most vigorous language at his command the cowardice of the Russian government for prosecuting his friends, Tchertkoff and Gussief, while afraid to touch the Count himself for fear of international indignation. These friends of Tolstoi were exiled for publishing his book, "Thou Shalt Do No Murder," in spite of orders of the government that the work should not be circulated in Russia. Gussief was Count Tolstoi's private secretary.

The London authorities being skeptical of the official statements regarding the cholera situation in Holland and other continental countries called up private investigators and were informed there are approximately 200 cases of cholera in Holland alone and that the disease has also reached eastern Austria and is threatening to spread to eastern Germany. There is danger, the investigators say, of a cholera epidemic in Holland. The number of cases there is increasing despite heroic efforts of the medical authorities to check it.

For the fiscal year ending June 30 the postoffice had a deficit of more than \$20,000,000, the largest ever known. As a result Postmaster General Hitchcock has informed President Taft that something must be done to reduce expenses. In 1908 the deficiency was \$16,000,000. The increase was due to extension of service and falling off in business. Forty experts are now at work in Washington examining the registry division, which each year shows a greater deficit. The Postmaster General thinks this division should be more than self-sustaining.

Importations of arms and ammunition are to be restricted in Cuba, according to regulations laid down by the Cuban government, and forwarded to the State Department by F. M. Dearing, United States charge d'affaires at Havana. It is provided that for the importation of arms, cartridges and shells, in addition to having license for their sale, it is required that authorization shall be obtained from the Cuban government before entering them from abroad. Importation of arms henceforth can only be made through the ports of Havana, Matanzas, Nuevitas, Trinidad and Santiago de Cuba. Arms considered weapons of war shall be deposited in the government armory, or government warehouses, to be withdrawn after obtaining permission from the government.

In connection with excavation of the great Roman camp at Caersus, Montgomeryshire, Wales, an exploring party has succeeded in opening up the western portion of the camp, unearthing a complete hot air system situate beneath the floors of the rooms. The floors were supported on a number of stone pillars two feet square and two feet high. Flues were laid beneath to carry the hot air from the furnace, and these have been found in an excellent state of preservation. Outside the huge rampart of clay the workmen have come across trenches which surrounded the camp. The granary has been opened up for its whole length and measures 93½ feet. This building was strongly built and was roofed with slabs of stone.

Since Collector Loeb took charge of the New York custom house on March 9 the collections on dutiable goods have amounted to more than the total collections during the entire year of 1907. From March 1 to August 1 duties to the amount of \$115,515,062.20 were handled, whereas the whole amount for the year 1907 was only \$111,548,697.55, showing an increase of \$3,667,365.65 in the collections. These figures cover both imports and duties on the baggage of incoming passengers. This result is surprising since this year is way behind 1907 in the matter of imports. Fines, penalties and forfeitures for the six months ending Sept. 1 amounted to \$998,900.88, while for the same period in 1907 they were only \$108,916.41. The total receipts for the months of July and August this year were \$40,748,804.85, an excess of \$11,483,776 over the same months of 1907.

Investigation by members of the department of botany at the University of Chicago have led them to an explanation of the effect upon plants of illuminating gas, which apparently causes them to wither and die. Not the gas, itself, but the ethylene which it carries has the deadly effect, according to Dr. William Crocker and Lee I. Knight. In the course of the investigations the theory that the constituent deadly to human beings was carbon monoxide also was verified.

Last year the high school students in Denver were barred from taking part in sports and from taking prizes. But this year the board of education decided that such ruling was too mild and something more must be done to discourage the fraternities. So they have issued the following ultimatum: "No pupil in the elementary or high schools in school district No. 1 in the city and county of Denver shall form or belong to any school fraternity, sorority or other secret organization. The superintendent and principals shall suspend any pupil who fails to comply with the provisions of this rule."

The most exacting penalties yet declared in legislation designed to promote purity and sanitation in food production and distribution have been made possible by the lawmaking body of Switzerland. The law became effective on July 1 and is being enforced to the letter. For the first offense of manufacturing or selling adulterated foodstuffs or for manufacturing or selling an imitation of pure food, the maker or dealer faces a jail sentence of one year, together with a fine of 2,000 francs, or approximately \$400. For a subsequent offense the punishment is two years in jail and a fine of 3,000 francs, or approximately \$600.

The convention at Winnipeg of the British Association for the Advancement of Science ended Sept. 1, and the delegates dispersed to their homes. The net result of the convention was summed up as follows: The utterance of a solemn warning to Canada that the recent invasion by rats of the prairie provinces constitutes a menace as serious as the plague which visited the Egyptians. The declaration that an agreement similar to the present seal agreement must be made to preserve the salmon species or the great salmon industries on the Pacific coast will soon become extinct. The utterance of a warning that the governments of the United States and Canada must adopt a law forcing farmers to put back into the soil a percentage of the chemical elements extracted annually or future generations will not have bread to eat.

Pressed on many sides to make prohibition permanent in Sweden, or at least to restrict liquor selling, the government has appointed a committee to investigate the prohibitionists' proposition with a view to determining how serious would be the loss to the state through a discontinuance of licensing under the existing Gothenburg system. After determining how much it will cost to continue the prohibition rule which has prevailed since the declaration of a general strike early in August, the committee is to look for other methods of raising a corresponding amount of revenue. In the event of a favorable report from this committee, other committees will be named to take up the sociological and medical aspects of the situation. The net results of the investigation will, if the government decides prohibition desirable, be laid before parliament. The liquor interests are putting up a hard fight.

Among the Magazines

PRICES AND TAXES.

In his interesting and suggestive "Memories," Francis Galton repeats the story told of a Cameron of Lochiel who, bivouacking with his son in the snow, noticed that the youth had rolled up a snowball to make a pillow. Kicking it away he sternly said: "No effeminacy, boy."

For the favored of fortune these are days of effeminacy and worse. Costly self-indulgence, vulgar display, freak dinners, barbaric feminine costumes invented for the sole purpose of raising the bills of milliners and dress-makers, these are de rigueur things among people who have been overtaken by a golden flood and have not yet learned how to float on it gracefully.

But for the massess of humanity there will be little chance for extravagance or effeminacy if the present tendency of prices and taxes continues. Both are going up out of all proportion to middle class and working class incomes. Bradstreet's announces that prices are now up to the highest recorded level, and it is certain that they will go higher. Gold is still the monetary standard of the civilized world, and the enormous production of gold in the last ten years has cut down the purchasing power of that beautiful gold dollar of the McKinley campaign nearly one-half. In other words, the consuming community has come to a practical experience of that "fifty-cent dollar" which was the political ogre of 1896.

As if this were not enough, each of the big nations has been imposing new taxes, and of course, in the good old orthodox way, for the most part. The well-to-do, who could pay taxes without distress, have an undisguised horror of assessment, but they can always see the reasonableness of imposing new burdens upon people of moderate means or of no means at all. Financial burdens encourage thrift, or, if they don't, they increase the proportion of the population that can't get ahead enough to cross the boundary which is supposed to separate wage-earners from that admirable and "independent" middle class, which is understood to be the substantial element in national life. This difficulty, as anybody can see, tends to maintain an ample supply of wage labor and to prevent wages from rising at an alarming rate to correspond with advancing prices. All of which is "nice" for the people that want to employ an army of wage workers and would dislike to see a "socialistic" policy adopted whereby their own assessment for the common good might be perceptibly increased.

It is the bold departure from the orthodox scheme of things which makes the new British policy so sensational and so interesting as an experiment to be watched. The idea of imposing taxes on people who are able to pay them and spending them for the well-being of the multitude is reprehensible and alarming to the conservative mind. If a nation once starts on such a course as that no fellow can predict how far it may go. It might even arrive at an attempt to establish something like equality before the law.

The Chancellor of the Exchequer may be said to have added insult to injury, when, in reply to the wrathful attacks of the property owners who wanted to know if he was trying to drive industry out of the United Kingdom for good and all, he asked his critics where industry would go to escape its impending doom. It would be good news for the human race if it could be announced that the new taxes taking effect in the nations of Continental Europe, and the new protective tariff in the United States, would in fact hit property as the British budget inevitably must. Unhappily they won't. They are of the orthodox kind. The new German taxes fall directly upon the "ultimate consumer." For example, ten boxes of matches which hitherto have cost ten cents in Germany will now cost six. In the same country coffee, which has been twenty-five cents a pound, will cost fifty cents. Tea is advanced forty per cent, tobacco twenty to twenty-five per cent., and beer a cent a glass. In the United States new taxation, as always, will fall upon the ultimate consumer, not directly but ultimately.

Whatever may happen in England, in the rest of the western world we are going to see for a long time to come not any tendency toward an equalizing of economic conditions and well-being. Under rising prices and rising taxes a marked increase of disparity will continue. The wealth of the wealthy will pile up. The deprivations and economies of the poor will afford them abundant exercise of the economic and moral virtues. Inasmuch as the poor and the relatively poor—the wage-earners and the middle class—greatly outnumber the inordinately rich, we suppose that it is legitimate to conclude that the present orthodox policy of taxation is maintained because the bearers of the burden fear that somehow or other they would go to the bad if, betrayed by a gleam of intelligence, they should shift it to other shoulders.

—The Independent.

WHY ARE WE SO LEAN?

The cartoonists habitually represent "Uncle Sam" as a tall, lean person, whereas "John Bull" is stout and hearty. That this distinction has a basis in fact, and that there are more lean Americans than fat ones, is the opinion of an editorial writer in Good Health (Battle Creek, August). Leanness, he says, is so much less incapacitating than obesity in its immediate effects, that it has received far less attention. This, he thinks, is unfortunate, for a decided deficiency in weight is of far greater moment than a slight excess. He goes on:

"A slight or even a considerable excess of fat generally means nothing more than that the individual has been accustomed to eating too much and exercising too little, whereas an inquiry into the habits of the man who is too lean generally shows that he is eating as much as he ought to eat and that he is not taking more exercise than is necessary for health. In fact, in by far the majority

of cases, it will be found that the lean man is exercising too little and that he is eating even more than the amount required to maintain an individual of his height at normal weight.

"This observation brings at once to light the fact that the import of leanness is a matter of much more serious import than overfatness. Chronic emaciation is, in fact, in by far the great majority of cases, a positive indication of disease, and one that should receive prompt and thoroughgoing attention. The lean man or woman who says, 'I can not gain an ounce of flesh, no matter how much I eat,' has good reason to feel concerned about his condition. There is evidently a serious defect in his nutritive processes. . . .

"Modern investigations have thrown great light upon this question. One of the most important facts established by modern inquiry is the relation of intestinal bacteria to this common though generally ignored condition of defective nutrition. Combe and others have called attention to the general presence of emaciation in connection with intestinal autointoxication. They have shown that the development of putrefactive processes in the intestine and particularly in the colon, which Metchnikoff and his school have so thoroughly studied and to which they attribute premature old age, arteriosclerosis, and a long list of ills through the poisons which are engendered, produce derangements in the activity of the liver and in the general metabolic processes whereby tissue-building is interfered with and emaciation is the natural result."

Meat, the writer goes on to say, is by no means the proper diet for a thin person, as is popularly supposed. Beefsteak and lean meat in general are quite incapable of increasing fat, and, in fact, a meat diet is the worst thing possible for a lean person, since flesh foods encourage the intestinal putrefactions to which leanness is very commonly due. To quote further:

"Meat contains the bacteria which produce putrefaction and at the same time furnishes the best possible material for promoting the growth of these parasitic organisms. . . . On the other hand, a fruit and farinaceous dietary consisting chiefly of fruits, nuts, and cereals, with care to include at each meal a certain amount of uncooked food-stuffs such as tomatoes, apples, or other fresh fruit, simple salads prepared with lemon-juice—not vinegar, which as everybody knows promotes leanness—and care to masticate the food thoroughly, are in the highest degree calculated to secure a gain of flesh.

"Starch is one of the most easily digested of all food-stuffs. It is quickly absorbed and easily converted into fat. The saccharin juices of fruits are also fattening. These are directly absorbed, requiring no digestive action. The easily digestible fats of nuts are also highly fattening. They are more easily digestible than animal fats and may be taken in larger quantity, being less likely to disturb digestion and promote intestinal autointoxication, two faults which are highly characteristic of animal fats.

"Thus a non-flesh regimen may be looked upon as almost a sine qua non for the putting on of flesh . . . [and] the diet should be made to consist as largely as possible of laxative foodstuffs. Fortunately those foodstuffs which are most highly laxative are also fattening. Most prominent in the list are to be found vegetable fats, natural sugars and acids, especially such as are found in figs, prunes, oranges, and other fresh fruits. If necessary, other natural means should be employed to secure intestinal activity."—Literary Digest.

CHARACTER-LEAKAGE.

The first step I have to suggest for training in self-control may, to the ambitious, seem trivial, but I have found it extremely practical.

The game of self-control is like that of golf—it takes many years of training and practice to accomplish even fair results. Only the genius becomes adept. But in any event, the aspirant for the long drive must first learn to hold the club.

I have become convinced that no one can achieve mental tranquillity who cannot learn to keep his body still,—to refrain from the habit movements called by Professor Wenley of Michigan University signs of "Character-leakage." Among these movements the most familiar are drumming and tapping with the fingers and toes, clearing the throat, and walking restlessly about. This is the sort of thing our mother taught us to avoid in childhood, but it did not make the impression it ought because we thought she was only trying her voice. If one can refrain from a single movement of this kind on the first day, he has begun to learn to "hold the club." The hand may be easily arrested, for example, on its way to massaging the countenance, by having in readiness this reminder: "Push not thy face!"

Elbert Hubbard says of a successful trainer, formerly of athletes, now of nervous invalids: "When he sits he does not cross his legs, play the devil's tattoo with his hands, twist his mustache, stroke his hair, scratch his nose, adjust his necktie, nor examine his fingernails. He completes his toilet in his room."

Some time when impatiently waiting for your train cease that restless pacing up and down, and try the following experiment: Stand at attention with your back against the wall, and say to yourself, "I will see how long I can stand in this position without moving hand or foot." Do not be afraid of attracting notice—no one will cast a glance in your direction; all are too preoccupied to note surroundings. If you succeed in becoming interested, you will find yourself rather disappointed than otherwise to have the experiment interrupted by the arrival of your train.—George Lincoln Walton, M. D., in September Lippincott's.

WARS STARTED BY TRIFLES.

THE Marquise de Fontenoy, in a recent statement published in the New York *Tribune*, gives some most interesting details of the great wars which have been started by trifles. The real causes of these wars were not, as the Marquise makes clear, the trifles, but the ill feelings and irritation which had been aroused by irresponsible politicians and certain sections of the press. The world will certainly some day be overwhelmed with shame at remembrance of the fact that such things as the following were ever allowed to result in the furies of conflict and the slaughter of men by tens of thousands. The Marquise says:

"Most of the great wars of the Old World have been started by mere trifles. That between Germany and France was brought about by a snappish remark of old Emperor William to the French Ambassador, Count Benedetti, at Ems, at a moment when it was believed that a satisfactory settlement of all differences between the two nations had been reached.

"Popular tradition attributes the Turko-Russian War to the blow of a Balkan blacksmith's hammer upon the head of an Ottoman tax collector.

"The famous War of Succession in the eighteenth century, which retarded the development of civilization, not only of Spain, but also of all Europe, for about a hundred years, resulted from a quarrel at the Court of Versailles about a glass of water.

"The most terrible and sanguinary war in the annals of China is known by the name of 'The Teapot War,' and was caused by the smashing of a valuable teapot belonging to a member of the reigning family while traveling in the northwestern provinces. More than a million lives were sacrificed in this conflict.

"Two of the minor states of Germany are on historic record as having gone to war in the thirteenth century to settle the momentous question as to the citizens of which monarchy could drink the most beer; while a bloody fight between Rome and Naples in the sixteenth century arose from a quarrel about a dog.

"Possibly the Moors might still be established in Spain had it not been for the theft of a Castilian lady's Sunday-go-to-meeting petticoat by a Moorish dandy, who imagined that it would look well on his own person, and who was stabbed for his act, his death giving rise to the war between the Cross and the Crescent in the Iberian peninsula which resulted in the expulsion from Europe of the Moorish creators of the Alhambra.

"The most terrible civil war in Afghanistan, which affected the whole of Central Asia, was caused by a petty quarrel about a pipe; and scores of other instances could be cited to show that when once two nations have been brought by specious means to such a condition of bitterness against one another that they may be described as being, in American parlance, 'on the ragged edge,' the slightest trifle suffices to start the fateful hostilities."—*Advocate of Peace.*

Between Whiles

A boarder complained to the proprietor of a Lanark hotel that he had found hair in the ice cream, hair in the honey and hair in the apple-sauce. "That is queer," said the proprietor. "The hair in the ice cream must have come from shaving the ice; the hair in the honey must have come from the comb; but I can't understand how the hair got in the apple sauce for I picked the apples myself and they were all Baldwins.

Some Fine Property.

Stranger (to Kansas City citizen)—"Those three corner lots of yours are fine property, captain."

Citizen (enthusiastically)—"Fine property? Why, great Scott, man, there ain't nothing like 'em west of the Illinois River! Two years from now they'll be in the heart of the

city, an' people will fairly howl for 'em. They ought to come under the head of jewelry, not real estate. If you want to buy that property, stranger, you've got to buy it by the inch."

Stranger—"I'm not buying property this morning. I'm the new tax assessor."

The citizen falls in a fit.

Up-to-Date.—Lady—"But poverty is no excuse for being dirty! Do you *never* wash your face?"

Tramp (with an injured air)—"Pardon me, Lady, but I've adopted this 'ere dry-cleanin' process as bein' more 'ealthy and 'i-geenic.'"—Punch.

"One way to make your wife's biscuits taste like mother's did is to buy a bucksaw and saw wood an hour before supper."

Reformed.—"My lazy son has at last decided on a profession that he thinks he'll like."

"Good. What has he chosen?"

"He wants to be a lineman for a wireless telegraph company."—Cleveland Leader.

Dead and Forgotten.

"Pa, what's a dead language?"

"The language in which baseball reports were written five years ago."

The Miraculous Box.

Luther Burbank, at a dinner in Santa Rosa, replied modestly with an anecdote to a eulogy of his new creation, the spineless cactus.

"Really, you know," said the plant wizard, "the spineless cactus is nothing like so marvelous as the strawberry box that the fashionable fruiterer of the East uses. That is a creation indeed!"

He smiled.

"A fashionable fruiterer," he said, "told his new boy one June morning to go to the back of his shop and fill a box with two-dollar grade strawberries for Mrs. Van Golde.

"The boy a moment later called from the rear.

"'Hey, there ain't enough berries here to fill this box.'

"The fruiterer hurried back himself. He looked at the box, then he sneered at the boy.

"'Why, you young greenhorn,' he said, 'you've got it upside down.'"—Washington Star.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—An eight room house. Closets, Cement Cellar, Cistern, Well, Cement Walks, beautiful shade trees, including Evergreens. Barn 18x24—12 foot frame. Other necessary buildings. Three 25 ft. lots facing the S. W. Corner of McPherson, Brethren College Campus.—Address, J. C. Coover, McPherson, Kans., College Hill.

WANTED—1,000 Sisters to send for sample of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Ill.

FOLLOWING we give the Eleventh Report of the Bureau of Agriculture, Labor and Industry of the State of Montana for the year ending Nov. 30, 1908. One of the most substantial Irrigation projects in the State of Montana is located near Big Timber in Sweet Grass County, which will be settled in the very near future by the Church of the Brethren and their friends.

"The Big Timber project consists of 65,000 acres of land near the city of that name in Sweet Grass County. This was also one of the selections under the old commission and there were \$132,000 worth of bonds issued against the project. These bonds have been surrendered and destroyed. Under a new contract 28,500 acres of land have been reclaimed and will soon be placed on the market at \$50.00 an acre. The holdings are on the Yellowstone side of the watershed between that river and the Musselshell River. Eighteen thousand acres are first-class irrigable land suitable for intensive farming. The soil is in places a sandy loam, but mostly a deep fertile clay loam and generally underlaid with a clay-gravel subsoil. The water used for irrigating is absolutely free from alkali, and there is no alkali in the soil except in a few low spots. The lands lie from four to twenty miles from the city of Big Timber, and the same distance from the Northern Pacific Railroad. The climate is good and all kinds of crops mature to perfection in this locality.

"The water supply comes mainly from Sweet Grass Creek and Government measurements show that there is an abundant and never failing runoff for every acre in the project. The company also owns a large canal and water rights from Big Timber Creek which will be used on lands adjacent to that stream, besides two large and

convenient reservoirs on Otter Creek with a surveyed capacity of 31,000 acre feet of water. Fifty teams and one hundred and twenty-five men have been employed during the past summer on the north side of the river, and a two-mile tunnel is being driven from both ends on the south side. Expenditures for the season will aggregate \$200,000.

"Members of the State Board and others who have visited the site report the work as having been exceptionally well done, the soil deep and fertile and remarkably adapted for easy and thorough irrigation.

"As in all other Carey projects this land and water system will eventually pass into the ownership and management of those who settle upon and pay for it without any further expense than the initial price asked, \$50.00 an acre. This may be paid in installments so that it will be possible to make the land actually pay for itself, aside from the small first payment.

"The proximity of this project to the sugar factory at Billings—81 miles—makes it entirely practicable to raise sugar beets there for that market.

"It is confidently predicted that land under this ditch will meet with ready sale and rapid settlement and that a prosperous community will result."

Full Particulars May be Obtained

The Saloon Under the Searchlight

By George R. Stuart.

A book of sixty-four pages. The best thing we have seen on this subject. A new book, dealing with an old question.

Simple, Practical and True.

"I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

Bright, Breezy—Not a Dull Line.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."—United Presbyterian.

Every minister of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village, town and city in the United States.

NEFF'S CORNER

So far as an investment in city property is concerned I am looking for nothing better than what we have in Clovis, but I have been looking for a real good proposition in way of agricultural lands, and I have found it on the Pacific coast of Old Mexico. Think of it! A winter without frost or fogs or clouds, a rich, deep alluvial soil with perpetual water right for irrigation for \$25 per acre, such land as sells in California at \$2,500 per acre, a soil and climate where you can grow three crops of corn per year, raise 40 bushels per acre each crop and find ready market for it at 50 cents to \$1 per bushel gold. Six good cuttings of alfalfa per year and a ready market at \$15 per ton. A fine country for raising hogs, cattle, horses, mules and poultry, and where you can grow your own oranges, bananas, pineapples, coconuts and other good things too numerous to name.

I expect to go early in November. I'd like to correspond with some teacher who would consider spending the winter in one of the most salubrious climates in the world and making expenses by teaching a private school in English. If you can go with us in November, if interested in excursion rates, or if you want printed matter descriptive of that country, write

Six Popular Periodicals

The lesson helps and weekly papers play an important part in the development of a strong, soul-saving Sunday school. You cannot afford to place an inferior Sunday-school Quarterly in the hands of your pupils. That's why we call your attention to our **SPLENDID SUNDAY-SCHOOL HELPS.**

Three Months Trial Free

Let us furnish you with all your Quarterlies and papers free for one quarter. Here are a half dozen Sunday-school helps that you should give a trial. Our introductory offer applies to one or all of the publications below

Brethren Teachers' Monthly

A manual of methods. Comprehensive comments on each lesson. Three or more copies to one address, 13 cents per quarter, or 48 cents per year. Single subscription, 50 cents per year.

Advanced Quarterly

For Intermediate and Adult classes. A popular lesson help. Single copy, 5 cents. Five or more copies to one address, 3 cents per quarter.

Juvenile Quarterly

The lesson clearly and forcefully presented for the Primary and Junior Pupils. Numerous illustrations. Single copy, 4 cents, five or more copies to one address, 2½ cents per quarter.

Our Young People

An illustrated 8-page weekly. Interesting, instructive and elevating. Single subscription, one year, 65 cents. Five or more copies to one address, 10 cents per quarter or 40 cents per year.

Our Boys and Girls

The best illustrated weekly for boys and girls. Choice stories, helpful poems and Bible incidents. Single subscription, per year, 50 cents. Five or more copies to one address, per quarter, 7½ cents per copy.

Children at Work

An attractive little paper for the little people of the Sunday school and home. Single subscriptions, per year, 20 cents. Five or more to one address, per quarter, 3 cents per copy.

If your school is not using these popular Sunday-school helps we will gladly allow you to use them for six months at half price. We could not afford to make this liberal offer if we did not feel quite sure that you will continue to use them for years to come.

Even though your school may be using five of our publications we will allow you to try the sixth one on our introductory terms. Ask for full particulars.

A sample copy of each publication sent on request.

Printed on ledger paper. Size, 5¼x7½. Substantially bound. Limp cloth cover. Price, postpaid, 40 cents.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition.

Redcliffe Realty Co., Ltd.

Minneapolis, Minn.

Gentlemen:

I am writing you on a subject that I think you will find of interest. I am writing you about a tract of land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised

derful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

For Further Particulars, Address:

REDCLIFFE REALTY CO., Ltd.,

430 Temple Court, Minneapolis, Minn.

Ho! for Canada

It is not the purpose of the CO-OPERATIVE COLONIZATION COMPANY to slacken interest in its Colony at EMPIRE, California. This colony is now well under way; colonists are moving in and are well pleased and the work is moving along satisfactorily. But as the policy of this company is,—“CHURCH EXTENSION BY COLONIZATION,” steps are being taken to locate a colony in the Northwest.

After considering the various sections offered for settlement, the Directors at a recent meeting decided to locate

Colony Number Two Near Portage la
Prairie, Manitoba, Canada

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its nearness to good markets,—only 56 miles from Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Manitoba.
6. The Low price of land, when quality and location is considered. These lands are now ready for settlement, are low in price and will soon be taken.

Join our Colony Number Two, secure a good farm in a prosperous section with good, nearby markets, excellent transportation facilities, where School and Church privileges are assured, and among people with whom you are acquainted. For fuller information, dates of Land Seekers' Excursions, etc., address:

Rare Ranch Bargain

IN ORDER TO CENTER OUR EFFORTS UPON THE DEVELOPMENT OF OUR TOWN OF MIAMI AND IRRIGATED LANDS IN MAIN PORTION OF MIAMI VALLEY, WE HAVE DECIDED TO OFFER FOR SALE OUR FAMOUS OLD RANCH HEADQUARTERS AWAY UNDER THE CURRENT PRICE OF SUCH LANDS IN THIS COUNTRY.

The ranch contains about 750 acres of fine, deep, rich agricultural land—forty acres reservoir water right from Farmers' Development Company mammoth irrigation reservoir, 20 acres alfalfa and natural hay land, about 100 acres in all under cultivation; natural hay land watered from floods and by underflow. A large portion of the balance could be placed under irrigation, but is capable of producing as good crops as any lands in the southwest through the natural rainfall. Entire tract fenced with substantial wire fences; crossed by three streams, one of which is the Rayado River. Abundance of fine water all over the tract for domestic purposes and for stock water. An ideal fancy sheep, cattle, mule or horse ranch.

Good well, large cistern, three substantial residences, large commissary house, two good stables, other out buildings and corrals.

Remember this land is a part of the famous MIAMI VALLEY, which is supplied with first-class church and school privileges, ideal climate, beautiful natural surroundings, the finest of people—in short the ranch is situated in the midst of an ideal home land.

\$11,000.00 FROM QUICK PURCHASER WILL TAKE ENTIRE TRACT WITH ALL IMPROVEMENTS, ONE-HALF CASH, BALANCE TO SUIT PURCHASER.

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

Read What Prof. Holden of Ames Agricultural College, Ames, Iowa, Has to Say:

"You may say for me that southern Idaho is THE IDEAL PLACE FOR THE YOUNG MAN who is looking to make a start in life. Every acre of irrigable land in this section is worth, in yield or income, three times as much as the best land in Illinois and Iowa. I am for Iowa, but if a man is to move, southern Idaho is the place to go, and for the young man, full of wonderful opportunities.

"The diversity of crops appealed to me as strongly as anything I saw. The irrigation farmer for instance, is not dependent upon any one crop. He doesn't have to wait until the end of the season to get his money because there is something seasonable and saleable at all times during the year. He raises fruit, wheat, alfalfa, oats, vegetables, hogs, cattle, sheep, in fact everything grown in the temperate zone.

"One man told me that he raised 18 bushels of clover seed on one acre of ground during the past year, and I found that the clover seed crop runs 8 to 15 bushels per acre.

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho."

ANOTHER AMERICAN PROBLEM

O. H. KIMMEL

In Two Parts. Part I.

FROM the time of the founding of the American Republic to the present day the most enduring public question has been the tariff question. This is the question that has caused political strife and dissension, more than any other of the momentous questions that have attracted the attention of our representatives in Congress. It is the question which, when brought before Congress, has always been settled temporarily, and with increased difficulty each time that the question has come up for consideration. It has never been settled satisfactorily to a large portion of our citizens, and as the interests of the nation increase, each settlement is, if anything, less satisfactory.

As time passes, and the nation grows in wealth and resources, and develops in all its interests, and as the interests of the world change and develop, the question becomes larger and larger and more difficult of solution. This is why the results of the most patient deliberations of an able Congress are not entirely satisfactory to the nation. The present Congress, just closed, has struggled manfully with this great question, and has acquitted itself as well as it could, and it has found the question far more perplexing than any Congress that has ever considered the tariff because of the new and intricate problems that came up for consideration.

In the consideration of this question the nation has been fortunate in having men in both branches of Congress who have a world-wide experience in the affairs of the world and who have an expert knowledge of this great question,—made expert by study and contact,—for men of ability and liberal learning who have for years been agents of the government, or who have served in some of the functions of the government, which work took them to Europe and the Orient and the islands of the sea where the intricate question of the world's trade came before them to claim their attention and consideration, are now in Congress where

their knowledge and experience is of greatest value to the nation. These men could give their ideas to the committees who were gravely considering the question, and thus be of inestimable worth to all concerned.

The country was also fortunate in having a chief executive who, from personal contact at home and abroad, knew well the task that he, through the call of the people, must lay before the American Congress. The question was not sifted out and brought to a settlement until a period of five and one-half months of time had elapsed. In this stormy time of deliberation and debate, Congress and the people became aware that new things were rising in the horizon, which would make a satisfactory settlement of the question at this time almost impossible. This newer epoch of the world's history now dawning presented the advance problems that it is soon to usher in. About the first sign of this that reached the people through the deliberations of Congress was the fact that the representatives of the great Democratic party were beginning to waver from their traditional stand in favor of a tariff for revenue only. They began to waver, and even favor the protective ideas of the party in power. This indicates to us that the tariff question has grown in proportions until it has become too large for a party question, and that it has become a great national question that will demand, in the future, the most careful consideration of the brainiest men of all parties, that it will no longer be a party question and that it will be taken out of politics. It will, however, be broader in its scope than it has ever been before, and it will mean much to us as a nation. The idea of protection will, from the ushering in of these new questions, not mean protection to American Manufacture, but also to American Commerce, American Merchants, American Labor and American Merchant Marine.

In order to explain why this great question has, in recent years, grown to be so momentous, we must look

out into the events of the world as they have transpired in the past twenty or twenty-five years, and relate these events to their effects upon the nations of the earth, especially the civilized nations—the powerful nations.

It has been the custom, since the founding of this government, for our statesmen to formulate our tariff schedules in such a way that American factories could compete with European factories and maintain a wage scale purely American. So long as only Europe was considered, and so long as our nation could consume the greater part of her products, there could be a reason for doubting the advisability of imposing high tariff rates, hence the two party ideas on this question. Two ideas were natural. In Europe much of the manufacturing remained in its primitive state, while in America the latest improved machinery was used, and if only Europe were considered, the question would, in all probability, remain one of party principle. But the new era now coming is changing this condition, and giving the question a new complexion.

Over on the other side of the world, along the Asiatic coast of the Pacific Ocean lies a great Island Empire. This Island Empire is located on a group of volcanic islands up and down the coast of Asia, and it is rapidly filling up with people. As only a small percentage of its territory will permit of cultivation, its fifty odd millions of people must begin to look out into other territory in which to send its surplus population. As these Japanese looked out into the islands adjacent, they looked favorably upon Korea, as a resting place for their emigrants. So they began going into Korea in great numbers. Because of this a very natural thing happened. The native Chinese inhabitants became restless, they appealed to the government at Peking and the Chinese government appealed to the Japanese government. But Japan was desperate, she had to be. She put on a brave front, and war—"The Yellow War,"—ensued. In this war Japan was victorious—the little Island Empire surprised the world by whipping the great and populous Chinese Empire. She would have taken possession of Korea but for the intervention of European powers. They stepped in and defeated Japan in her purpose.

Just here Japan showed her statesmanship. She, to all appearances was satisfied with the outcome, and became quiet, very quiet. But like the traditional Reuben who "keeps still and saws wood" she "sawed wood" too. She wondered why Europe should have the power to throttle her in her undertaking. She sent her best sons into Europe and America, some to school, some to the colleges, and military schools and naval academies, some to the factories and mills, and some into every line of endeavor, and instructed them, like Peter the Great, to learn the arts and ways of the

western world, and then come home and teach it to her people. So when she had her sons thoroughly "steeped" in the arts and civilization of the western world, she was ready to call them home.

Now, while she was engaged in doing this, she was busy in another undertaking, what a less brave people would have felt to be an impossible undertaking. She had again looked over the ground for emigration purposes, and finally decided to send her people to Manchuria. She felt that this was a very hazardous undertaking because of the claims of Russia, but trusting in her sons in the western world, and knowing her desperate straits for land she bravely undertook it. She relied in the belief that Russia had slumbered long, since the days of Peter the Great, and believing that her own people could, within a very short time, equip themselves with the safety appliances of western civilization, she kept going into Manchuria. All this time she was calling her sons home to teach her people the arts of the West. Her population was alert, awake and ready to learn. They, aided by the government built factories, built a merchant marine, built a navy and organized and drilled an army. By the time she had done this Russia was raving because of the Japanese invasion into Manchuria, and soon war was inevitable, and war came.

When this war came, the world was astounded to think that little Japan would dare to fight the great nation of Russia. But when Japan whipped Russia the world sat up and took notice. This event is of such recent happening that it is unnecessary to tell of it here, but it is well to speak of the significance of this great triumph for Japan. How did she do it? was the question of the world. How was such a thing possible for little, unresourceful Japan to go to war and defeat the largest and most resourceful nation on the face of the globe? But when we had faithfully looked into the question the reason was apparent. We learned that Japan had, in a few short years, possessed herself with the best arts of western civilization, and had become expert in using them. She had, in a measure, renounced her own civilization and had appropriated the arts of the civilization of the western world, a thing that no nation and no people have ever before done voluntarily. Then the question came to the world: How is it that a nation and a people as a whole can be induced to work so harmoniously in discarding their own practices that have been common to them from times traditional and take up the new arts of a civilization, new and largely unknown to the great masses of her citizenship? For an answer to this question the astounding fact came that Japan's government is the best organized and most effective government of any government in all the world. The Emperor and his advisers seek out what is the best for the nation and the people and they bring into execution

these things. The people, unlike the white races, have unlimited faith in the government, and always bow to the decrees of the government, and do it gracefully and effectually. Hence, when the wise men of this great

Island Empire decide that the newer and better arts of the western world are the things needed for the greater success of Japan as a nation the people believe in the wisdom of their leaders and rapidly fall into line.

UNCLE SAM'S "BIG STICK": WHAT IT COSTS

JOHN WOODARD

THE United States has never been a military nation like Germany. We Americans take pride in the fact that our energies are almost exclusively devoted to peaceful pursuits. We pity the English and Germans who are burdened by large armies and navies. But, while we are quietly patting ourselves on the back and congratulating ourselves that we are not like the nations across the sea, Congress is, at the same time, steadily increasing the appropriations for army and navy purposes. Other misguided patriots are urging them to go ahead. A large standing army, a bigger navy, is the cry. If this keeps up very long, we will soon be in as bad a condition as the European nations. In fact, we are not so very far behind at present.

The appropriations made by the last Congress for war preparations were enormous. Over ninety-five millions for the support of the army, over one hundred and twenty-two millions for the naval service, the Indian service received over nine millions and a slightly larger sum was given for forts and fortifications, and a little less than a million for the Military Academy. Just think of it, about two hundred and thirty-six million dollars to overawe other nations and keep them from making war on us! Rather a costly "big stick," isn't it? Besides this, we must add over one hundred and sixty millions for pensions, the interest we are paying on former wars. This raises the taxes for war purposes up to three hundred and ninety-six millions. The total appropriations of this Congress, for all purposes, amounted to a little less than six hundred and twenty-eight millions. Over sixty per cent of the expenditures were for war purposes and less than forty per cent for all other purposes, including maintenance of the government and the support of the operations of the Department of Agriculture.

How much more good this three hundred million would do if used for constructive instead of destructive work! How many schoolhouses it would build, how many colleges and universities! If it were used to reclaim desert and swamp land, it would result in a vast increase in the nation's wealth. There are many ways in which it could be used to make the people more intelligent and prosperous, but we prefer to spend it for

a "big stick." The big battleships which cost from five to ten million dollars a piece soon become worthless. In one or two decades they are fit only for the scrap heap. Besides this, there is the waste in taking soldiers and sailors from productive industries. They produce absolutely nothing and yet the nations must support them.

"Well, what's the difference?" some one says, "I don't have to pay the bill." Let us see. Who *does* pay the bill? It doesn't come out of direct taxes. If it did, the people would object. It comes out of the customs and excises and the manufacturer and importer pay the duties and add the amount to the price of the goods. So the man who drinks the whiskey pays the excise duty on whiskey and the one who uses imported goods pays the tariff on the goods. So, after all, the people pay the tax just the same as they would if it were a direct tax. But the most of the people do not know that they are paying the tax. They don't even give it a thought. That is the advantage of a tariff. It is easy to collect and the people do not object. But the people pay more than the tariff. About three-fourths of the goods on which there is a tariff are produced in this country. These goods are sold at just as high a price as the imported goods. So we pay a tariff on the domestic goods as well as on the imported. The government gets the tariff on the imported goods, and the manufacturers get the tariff on the domestic goods. But we consume three times as much of the domestic goods as of the imported, so we pay the manufacturers three times as much tariff as we pay the government. Is that fair? Well, what are we going to do about it? How are we going to get the three hundred millions for war purposes? The people would object to a direct tax and the judges have declared an income tax unconstitutional. Suppose we throw away the "big stick" and then we will not need the tax. Can we do it? Not all at once, but we can whittle off a little at a time and, perhaps, finally whittle it away entirely. To do this, we must conduct a campaign of education. We must teach people that war is unnecessary and show them that the United States can get along without fighting.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXXIV.

WE sailed through the long Suez Canal, then across the Red Sea where the waters once parted for the oncoming hosts of the Israelites, only to come together again in time to drown all of the pursuing enemy.

In the Indian Ocean I saw more flying fish than I ever dreamed were in all of the sea. They were flying all around our boat, some of them flying across the prow of the vessel, and so skillful were many of them, and so like birds, that they flew a half mile before dropping into the water. Though they were many, my eyes never tired at seeing them, so strange are they,—fish with wings, and birds that swim through the ocean and live there, the two so strangely united in the one as to make a most interesting and fascinating study of animal science.

One day a Chinaman came up from the big refrigerator of the boat,—for Chinamen were employed on the vessel,—and asked me to

follow him. I followed him, not because he asked me to do so, but because I believed that he had something that I wanted. Away down at the very bottom of the boat, five or six stories down, we entered a huge cellar-like room with high ceiling, as cold as ice. It was the ship's refrigerator. In here the Chinaman had been preparing several huge freezers for ice cream and sherbet, and when these were ready to churn, we brought them outside, closed the thick doors to keep

the cold air in and the warm air out, and sat down to our tasks in an alleyway near by.

From the very first I understood that I was to receive no pay in cash for my work, and so whenever I looked at the cream to see if it had been frozen into good ice cream, I had to taste it, of course, to see if it was all right. When it was ready, we took the insides out and whatever ices and ice cream adhered to these went to me, besides some additional dishes of the real stuff from the inside. When I came up on deck again I had eaten fully a quart of delicious ice cream and I

felt like a refrigerator myself.

The climate is very hot, but I am in the most fascinating place of my tour. It is more like paradise than anything I had conceived before of that place. I do not much blame the American tourist here who recently went insane in this country and thought he was Adam in the Garden of Eden and that his wife was Eve. A man could remain normally minded and still

The Grave Is Being Digged While the Mourners Wait. The Queer Hearse Sits at the End of the Line.

believe that here at last was Eden. The gorgeous palms, rising everywhere, of all kinds and shapes and sizes, some of them thick and short, some of them slender and long, and all of them tinged with the most delicate of pretty greens, with the bower-like homes, the big lawns filled with strange looking and scented plants and flowers, make the eyes bright with admiration for creation. The very streets on which I rode my wheel were artistically tinted in a quiet but de-

lightful red, for the clay has something in it to give it the color that every artist admires.

It was my first glimpse of Hindoo-land, although Ceylon is only a little island lying near the mainland of India. Countless throngs were coming and going on the streets. There were no sidewalks about town but everybody took to the streets. And they moved so rapidly, so unlike London. So different from Rome, where the people stop and stand and look and wonder where they will go next. Life, life, life, life everywhere, and moving incessantly and brightly, for every man had either a red or a blue parasol, or wore brightly-colored pieces of cloth, or none at all.

Each country has its peculiar thrill for the tourist in strange sights and sounds. This is the climax thus far. I am in a wonderful country where nobody knows me and where not the slightest thing I see around me is like anything I ever saw before.

Big bare-legged men, with only a breechcloth, run wildly about pulling behind them two-wheeled buggies they call rickshaws in which one or more people ride. It is laughable to see one man pulling another about the city, for it seems as if they are only playing like children.

In the first picture above I discovered a funeral procession, headed by a band of natives, the corpse, a woman, being carried in a sitting posture on the shoulders of four young men. This woman was the wife of a man who followed, carrying his little child, behind all the others. The hearse or chariot thus containing the body of the woman was covered all over with cloth and flowers, while strings of popcorn hung from the four corners. The native band was of young men of sixteen to eighteen years of age, young men who were handsome and athletic. These danced in a circle, playing their various rude instruments of music as they did so, and singing or yelling at intervals.

I was so struck with the oddness of the procession that I followed the funeral, which was already out in the country, to the jungle graveyard.

Though I had just landed I had no great fear from

the natives, for the loveliness and softness of the scenery and atmosphere made me believe in everybody. Yet as I was the only European or one in the funeral who looked so different, the eyes of all were upon me, and I wondered whether or not outsiders were given the privilege of being present in such a scene as this. By gestures and signs, I learned that it was all right for me and that I was welcome.

The men took their turn in digging the grave to a depth of about five feet, and when I wanted to take a picture of any part of the proceedings I had but to give the slightest hint when every last one of the party would move this way or that way, at my suggestion. Think of a stranger coming over from India to America and following a procession to one of our country graveyards, and then, with all the authority of a king, and more, assuming charge of the program, and acting

as master of ceremonies, breaking in on the service, interrupting the speaker and taking a half dozen different photographs of the burial scene, and be treated as the "whole thing"! That is impossible to think of here. But it happened there. Why? That is a *heathen* country. "Their idols are silver and gold, the work of men's hands. . .

They that make them are like unto them, so is every one that trusteth

Then Two Men Took Up the Body and Carefully Laid It into the Grave Wrapped in Much Cloth. There Was No "Rough Box" or Coffin. The Husband, with Long Hair and Breechcloth, Stands Stooping Near the Grave, While a Third Native in the Grave Is Ready to Receive the Body.

in them."

Though the boat I came in on was still unloading its passengers, I was able to take my cue from this country scene, to which place my good wheel had so easily brought me over the perfect roads, that my relation with the natives here and in India would be about the same everywhere as it had been here.

They called me "master," and so I was. I was master, because for hundreds of years my ancestors had been following the Master of life, or if not following him, had been hanging on to the gospel chariot drawn by others, and so while not noble enough to admit it, were basking in the sunshine of a Christian civilization that these wretched natives knew little or nothing of.

After the grave was digged a fire was made by the grave and some incense and fruits burned. Then the house in which the corpse was borne was carried, empty, to the grave, and with one man at each end of the grave holding the house or box, it was swung back and forth over the grave, a number of times, then tossed to the opposite side from which it had been brought up. I was standing so close to the grave, looking in and at the men who were doing this, they called out something to me which I did not understand. Then they yelled more impatiently. But I didn't know what they were saying, and so rather than do the wrong thing I stood still. They were trying to tell me to get out of the way. They wanted to throw the thing they were swinging over the grave and let it land right where I was standing. Well, they threw it, and it struck me, but it was hardly their fault, and I did not feel that it was my fault. Some of the "friends" and "mourners" smiled, but the officials looked "kinder" mad at me, and I got a little scared and moved back, then went up again when they had deposited the body in the grave. A relative of the woman then jumped into the grave and found the wrist and fingers of the woman from which he removed several rings and ornaments. A few pennies were then tossed in on the body and some candy and fruit, when the grave was filled up, much as it is in our country.

By this time some of the bolder natives came forward to me and my wheel and were inquisitive. In everything they were polite and gentle, and though many of them looked fiercely brutal and all were nearly black as negroes, I rode back to the city that afternoon wild with raptures over my sight-seeing in the land of strange idols.

At supper that evening, three waiters, old men in long white dresses, with hair done up on the top of their heads exactly like a woman, waited upon me at the table in the big dining hall of the Grand Hotel of Colombo, where I ate my first curry and rice, and wanted more, and where pepsin was served me in its pure state. The pepsin was a melon just like our muskmelon,—oblong, and eaten in the same way,—that is like ours, and most delicious. No matter how much I ate, or how indigestible, I always found that on eating a half of one of these pepsin melons immediately after my meal, my food was instantly digested. It was like chewing a thousand sticks of pepsin gum at once, only the pepsin melon was a thousand times better. These pepsin melons grow here on trees, about the size of peach trees, only the trees are more the shape of a chokecherry tree, with but little top to them.

All Rights Reserved.

THERE is no time like the present for achievement.

HINTS FOR THE JOURNALIST.

G. WILFORD ROBINSON.

THE best size of paper for copy is about six by nine inches. Write lengthwise and be sure to indent your paragraphs.

Have your copy typewritten if possible. Otherwise write with ink in a legible hand. Illegible copy is an imposition upon the editor and a puzzle to the compositor.

Write your copy clearly. Editors dislike dim writing.

Don't be stingy with your paper. Leave a margin of about one inch at top and bottom of page, and about one-half inch at left-hand side.

Be sure to number your pages. Put the folio figure in middle at top of page.

Try to get about the same number of words on all the pages so the editor can estimate the length of your article. But what is better, count your words and put number in top, right-hand corner of the first page.

Draw a dash under the end of your article to show that there is no more to follow.

Send your sheets in flat. Folding makes them inconvenient to handle. Never roll your sheets.

If a letter to the editor is enclosed it should be on a separate sheet and very brief. Don't urge the editor to buy your article. His position depends upon the merit of the articles he prints.

If you wish your copy returned enclose stamps for postage.

If your article is to be illustrated leave a space in the manuscript and write the word "cut."

Do not use abbreviations. Spell your words out and it will save the editor the trouble of semicircling.

If you have canceled a word, or sentence, and afterwards wish to restore it, put a line of dots under it and write in the margin "stet," which means, "Let it stand."

When writing in a dialect that you wish printed as written write in margin "Follow copy."

Divide words only at end of syllables, and avoid dividing a word at the bottom of a page.

One line drawn under a word shows that it is to be set in *italics*, two lines, SMALL CAPS, and three lines, CAPS.

If you have in your copy some hard name, or unusual word, better spell it out so typesetter will not make mistake.

Never write on both sides of the sheet—not even if you have to use a new sheet for the last half dozen words.

Don't use hard and obsolete words; express your idea clearly, and stop when you are through. A clear and easy style gains success best in journalism.

Every office has rules of its own regarding punctua-

tion, italics and capitalization. The editor will change your copy according to the style of the office.

Follow these rules and you will save the editor from using so many blue pencils.

POOR PEOPLE.

J. I. MILLER.

THERE are poor people and poor people everywhere, no end to them. In thinking over this subject I have often been made to wonder how many classes of poor people there are. We will not say anything about the poor in our large cities, from the fact we have never had any experience along that line and know nothing about it. We shall speak only of the poor in the country and villages. The first class of poor that attracts our attention most is the extravagant poor. They usually have large families and about nine times out of every ten are lazy and shiftless.

I was once told that a poor man with a herd of small children told his neighbor that "his wife had never sewed on a button for him in her life," and she was a large, strong woman, too. I wonder what a man wants with that kind of a wife. If I had one like that I would be ashamed to tell it. The woman that raises a flock of children, especially girls, and is too trifling to sew on a button and patch wearing apparel and teach her children to do work of that kind, is not worthy of the name WOMAN and should never take the responsibility of motherhood on herself. When the mother of a poor family will not sew on buttons and patches but as soon as garments get torn throws them aside and goes to the store and buys new ones, there is no better way in the world to stay poor and keep the husband's "nose on the grindstone" as long as he is able to work.

Stephen H. Girard once said: "When I see a man with neatly-patched clothes and children with patches on their clothes, no matter how many, so the work is neatly executed, I know that man has an industrious wife and the children an industrious mother."

Then there are what we might call the independent poor. They raise families that are only half clad and half fed, and often when the children get large and old enough to work they want to go and work away from home as there is not enough at home to keep them busy half of the time, but oh my, how the parents, especially the father, will revolt, and won't let them go, preferring to bring them up in laziness. Supposing such a father or mother should be taken away by death and the children have to be cared for by some one else, they might see hard times before they would learn to work. But in the event the children should grow up untaught to work and must go to do for themselves, what then?

Young men who are looking for life companions,

"helpmeets," are not looking among that class of girls and they become a drug on the market, and when they do marry must take whom they can get and that is usually some lazy nobody that is rejected by the better class of girls. Then the boys from such families are refused by all the best society, and they likewise are left to the mercy of some lazy women who are their equals and they get married, rear another family just like their father's and so history repeats itself without end.

We remember once a man went fishing, made a good catch, and stopping at a poor man's house that had a large family, he offered the man some fish. The children stood expectant by, but the man declined the offer by saying he had not time to dress them. The first man went home and an hour later went to the store and found the busy man that had no time to dress a mess of fish holding down a drygoods box, and taking part in the gossip of the day, and when night came he went home to a supper which was perhaps little more than nothing. Wonder what a woman wants with a man like that. There are lots of poor people who are so on account of misfortune overtaking them over which they had no control and they are to be pitied indeed.

Roanoke, La., Aug. 15.

THE WIND MAKES THE WEATHER.

WIND is the force of atmosphere or air in motion. The force of the wind is produced by the weight of the atmosphere set in motion by solar heat. The atmosphere or air is a fluid, a little different in composition from water and much lighter in weight. As the temperature of the air lowers the weight increases. The colder the air becomes the less capable it is to contain moistures or the humidity which produces the rain. A rising temperature increases the capacity of the atmosphere, by expansion, to take up moisture and to retain it. This warm and vapor-laden air only gives up its burden of moisture when coming in contact with the colder air, high above the earth or with wind currents, coming from an opposite direction.

It must be remembered that in our latitude or in the north temperate zone the warm and hot winds come from a southerly direction and the cool or cold winds come from a northerly source. We stated in the title of this article that the "wind makes the weather," which means the changeable and shifting currents of wind which move on the surface of the earth. These shifting winds often carry light fog clouds which move with and are carried by them. Above this disturbing and variable air motion on the earth's surface is another wind current which invariably moves from a westerly and in an easterly direction. Upon this upper current are carried the rain and storm clouds which necessarily come from a westerly direction, also. All rain

clouds move in an easterly direction, regardless of the direction the wind may blow, on the earth's surface.

The great oceans and seas which lie along the equator furnish the water and moisture which are poured out over the great continents spread alongside to make them productive and habitable. Under the force of the solar heat in those tropical countries, evaporation goes on rapidly and while those great reservoirs of water are giving up their contents they are replenished by the innumerable rivers which return the surplus, after the forests and fields of the earth have been watered.

It is now evident from what has been stated, that only a southerly wind is capable of producing conditions favorable to rain. A south wind is warm and is then able to take up and retain the moisture and it comes from a country where evaporation is rapid.

Southeast and southwest winds, we include in the term southerly. A southeast wind is the most certain to bring rain. In fact it never fails if it blows for twenty-four hours continuously at a speed of at least twenty miles an hour. A south wind is certain to bring storm but requires a little longer time and more force of current to insure conditions favorable to precipitation. A southwest wind usually produces precipitation, if it prevails for two or three days with considerable force, say from twenty to thirty miles per hour.

A northeast wind is the driest wind that blows and is noticeable owing to its prevalence or continuance for many days in succession. It must not be forgotten however that continued and soaking rains sometimes occur in a northeast wind. These rains seldom prevail beyond twenty-four hours and stop much sooner if the cooling reaches the minimum temperature, or a point at which the warmth begins to rise.

Currents of air moving in a southerly direction always cause expansion and an increased capacity for retaining the little humidity left, while southerly winds moving in a northerly direction naturally meet the cooling conditions which cause precipitation from an over-charged atmosphere.

Many people carry umbrellas because the sky is obscured by clouds, while a clear sky and a south wind are often surer signs of rain, than is dark, gloomy weather. Much is gained by observing meteorological conditions made manifest in the direction and force of the wind, in the temperature, the appearance of the sky and other manifestations, not easily explained. With a high southerly wind and temperature and a clear sky, the foliage of trees and other vegetation loses moisture rapidly by evaporation and wilt or droop, though many trees owing to loss of sap, show the under side of the leaves which rise by force of the wind and which gives the foliage a white appearance. These indications with others are a pretty sure sign of a storm. Aquatic fowls will mimic in playful mood on dry land all actions per-

formed in water; and domestic animals will manifest the same joyful pleasure, breathing the humid atmosphere of the approaching storm.

The Weather Bureau officials do not base their predictions of climatic changes upon conclusions derived from a study of the natural laws governing the weather problem. The Signal Service at Washington only hoists its flag of warning of the approach of something which has already taken place a long way off. The moving atmospheric conditions of high or low barometric pressure, temperature and force of the wind are announced to the central office by telegraph. The movement of these conditions is always from a westerly direction and if the forces are positive in high winds the government authorities predict with approximate correctness. If the winds are passive or moderate in force, predictions made by the Weather Bureau often go wide of the mark.

In fact, predictions based on observation of local atmospheric conditions if carefully studied, are a much safer problem upon which to base a conjecture, than to say that a storm located one or two thousand miles distant will arrive at a given point within a stated time. Much depends upon the force of the southerly wind which precedes to produce the storm and if high, reaction takes place with similar force from a westerly direction, in wind and heavy rainfall. If the wind is light and variable, precipitation also will be light and uncertain.

Light winds are generally local and variable. The high winds are the prevailing winds and move in the same direction over a large extent of country and are favorable to stormy weather.—*Milton George, in Glenwood Boy.*

WHAT IS A KNOT?

IN referring to the speed of vessels, we speak of the number of knots traveled. A knot is a measure of speed, not of distance, and the term comes from the old method of finding the speed of a vessel by means of a three-cornered piece of wood with a weight attached to one side to hold it upright in the water. To each corner was fastened a cord and to the junction of these cords was attached the log line. This log and line with a small sandglass completed the apparatus for reckoning a vessel's speed. The log, when dropped into the water, remained where it fell. The log line was divided off by knots, the distance between the knots being the same fractional part of a nautical mile as the time measured by the sandglass was of an hour. Therefore the number of knots which ran out in the time measured by the sandglass represented the number of nautical miles an hour that the vessel was running. For example, if six knots ran out during the time, the vessel's speed was said to be six knots.—*Scientific American.*

NATURE STUDIES

HOW THE WOODPECKER KNOWS.

"How does he know where to dig his hole,
The woodpecker there, on the elm tree bole?
How does he know what kind of a limb
To use for a drum, or to burrow in?
How does he find where the young grubs grow?—
I'd like to know."

The woodpecker flew to a maple limb,
And drummed a tattoo that was fun for him,
"No breakfast here! It's too hard for that,"
He said, as down on his tail he sat,
"Just listen to this: rrrr rat-tat-tat."

Away to the pear tree, out of sight,
With a cheery call and a jumping flight!
He hopped around till he found a stub.
"Ah, here's the place to look for a grub!
'Tis moist and dead—rrrr rub-dub-dub."

To a branch of the apple tree Downy hied,
And hung by his toes on the under side.
"Twill be sunny here in this hollow trunk;
It's dry and soft, with a heart of punk.
Just the place for a nest!—rrrr runk-tunk-tunk."

"I see," said the boy, "just a tap or two,
Then listen, as any bright boy might do.
You can tell ripe melons and garden stuff
In the very same way—it's easy enough."

—Youth's Companion.

PRINCIPLES OF AGRICULTURE.

JOHN H. NOWLAN.

Chapter V.—Propagation of Plants and Farm Crops.

WHEN the farmer has a plant he looks upon with favor he wishes to propagate it. There are two ways by which he can do this: by small pieces cut from the parent plant, and by seeds.

Many plants, as for example the grape and those cultivated for the flowers only, as the geranium, are easily grown from cuttings. Care should be taken in the selection of the cuttings or slips, as a good plant cannot be grown from a weak bud.

The part of the plant used varies—in some cases portions of the leaf being used. As the part of the plant, size of cutting, and depth of planting depend on the plant used you will be more apt to succeed if you consult some one acquainted with the particular one you wish to propagate.

Another method is known as layering. A bough is bent down and covered with earth. When the buried

bud develops roots the stem is cut. The blackberry and gooseberry often form layers naturally and the strawberry develops runners which root themselves.

Some do not develop roots readily and such are propagated by grafting or budding; articles on these subjects having been published in previous issues of the INGLENOOK.

The Irish potato is an underground stem and the usual way of reproducing them is really a kind of cutting. The eye is the bud from which we develop the new plant. As it will be like the parent, seedmen select their seed potatoes in the field. It is not enough to know that the potato used is large, for it may have been the only one in the hill. It is equally as important, if not more so, that the hill from which it is taken be a prolific one. Small potatoes are often undeveloped and yet make a fine crop, while large ones may produce only a few large ones.

In some plants, however, you may see a bud that differs from all the others. If the branch growing from it is superior to the others do not let it be lost, as you may get a valuable new plant. For instance, if you see a branch of a grapevine that has finer fruit than the remainder of the vine, make a cutting from it. Should a branch of that be superior, repeat the process, and so on till you have secured a vine that is better than the original. This is one method by which we get new varieties.

Some plants do not "come true to seed." The seeds from such are sometimes planted and among the many plants sometimes one will be valuable, while all the others, perhaps thousands, will resemble their wild ancestors. The unusual products of bud variation are called sports, and the same term is sometimes applied to seed variants.

Other plants "come true" very accurately. Such may be improved by care. Often in a field some plants may be found that are better than the average, while some will be poorer. If all grow together till the harvest and the planter then selects his seed from the crop he will plant some of each; and as the inferior usually outnumber the better ones his crop will soon "run out."

If, on the other hand, seed from the better ones be saved and used as the foundation of a breeding plat the stock will be improved. The selection must not be

made because of superior grain only, but from the standard of the perfect plant. Repeated selection of the plants nearest the ideal will in a few generations fix the variety and it will come true.

It was by the saving of the three beardless heads in a field of bearded wheat that Abraham Fulz originated the variety now bearing his name.

Many changes have been made in the crops in their transition from a wild to a cultivated state. The number of cultivated plants is very large and is being added to from year to year by the discovery of hitherto almost unknown plants; yet the greater portion of the cultivated area of the world is occupied by only a few.

The most valuable crop and the one that occupies the greatest area is the grass crop. In this are included all grasses and clovers used for pasture or for hay. Next in order are corn, wheat, cotton, oats, potatoes, and tobacco.

To be successful with a crop the environments must be the best. Mainly, these are soil and climate. Two plants may succeed in the same climate but may require a different soil. Thus we have tobacco soils, corn soils, and so forth.

The farmer should study his farm and plant crops to suit the soil or bring the soil to a state to suit the crop he wishes to plant.

Cotton is sometimes classed as a product of the eastern continent but it was cultivated in widely-separated regions of America when this continent was discovered. It was originally a perennial tropical plant but makes its best yield in the temperate regions. It is a deep feeder, but as only the lint is sold from the land if the residue is returned to the soil it is not an exhaustive crop.

Tobacco is strictly an American crop. It is one of the most exhaustive crops known, and is influenced by its surroundings more than any other crop known.

Wheat is one of the earliest domesticated plants, and is still one of the chief crops of the temperate zone.

There are many varieties of wheat: some are bearded; some smooth; some are winter and others spring. The variety to be used depends upon the climate. In some parts of our country where the rainfall is scanty durum wheat, a new variety to this country, is being grown.

In the wheatfield is a good place to study the needs of the soil. If the stem is short, nitrogen is lacking; but on the other hand if the straw makes a rank growth and the heads are poorly filled, phosphoric acid and potash are lacking.

Corn is another American crop and disputes with cotton for the title of "king." Many of you no doubt saw the statue of King Cotton at the Louisiana Purchase Exposition. At the same place was shown the pyramid of corn grown by the farmer boys of Illinois, and which called forth comments from newspapers as

far away as Australia and New Zealand. It is at least king of cereals and is used by more human beings than any other grain except rice; also it is extending its kingdom to lands unknown. When we consider the animal life it supports we readily admit it to be the chief cereal.

THE THURINGIAN FOREST.

LUELLA G. FOGELSANGER.

OUR government could learn some valuable lessons from the Germans in the preservation of our great forests. The Germans take particular pride in their great forests, one of which I will speak of in particular. This one is called the Thuringian Forest. It is one of the most beautiful, best known, most frequently visited, and most loved of all parts of the German Empire. The range of hills is about seventy miles long and from eight to twenty-five miles wide, and is almost entirely covered with forests of pine, birch, spruce, fir, beech, etc. This mountain range incloses many romantic valleys and glens. Villages and little cities nestle in the valleys, beautiful streams wind their way around the hills, and begin their journey to the sea; and in the midst of these forests are found some of the most charming watering places in all Europe.

The German teachers take the children for trips through this beautiful forest and teach them many valuable lessons fresh from nature. The country is also rich in historic interest and many intensely interesting lessons in history are taught as the teacher points out in the distance the ruins of some old castle, and tells the story of some illustrious landgrave or margrave of the twelfth or thirteenth century.

The government carefully preserves these forests, cuts roads and footpaths through them, and intelligently protects the wild game and fish. Foresters, educated at the school of Forestry in Eisenach, are placed in charge of this great tract to enforce the law, remove the dead trees and underbrush, and plant new trees, study the insect life to prevent destruction, and act as gamekeepers and guardians of these beneficent gifts of Nature. It is one of the most beautiful and

well-kept forests in the world. Besides the government care, there is a great association of citizens whose members are found in every city and village whose duty it is to assist in providing means for the protection and preservation of the beautiful land which God has given to them, and also to exercise an oversight of those who have charge of this noble forest.

May the time soon come when we as Americans shall respond to the voice of Nature and protect more of our great, beautiful forests, that our glorious land may remain beautiful as it was when God gave it.

Shippensburg, Pa.

HOW SPIDERS CLEAN HOUSE.

LIKE all careful housekeepers, Mrs. Spider has her cleaning days, but, unlike other careful housekeepers, she wears her fine clothes when she works.

Maybe you have seen her all rigged out in her yellow and black velvet gown, sweeping and dusting her web, but just remember she is not as extravagant as she seems. Clothes never bother her. She doesn't have to go to a dressmaker when she needs a new gown. She has only to step out of her old one, and lo! just under it is a fresh one already made and a perfect fit.

No, Mrs. Spider is not extravagant. She is very economical in fact, for, instead of throwing aside her old dresses, she rolls them into a ball and eats them.

There are no old clothes men in the spider world.

Well, to tell about Mrs. Spider's house-cleaning. She has neither brushes nor brooms nor dusters, so she begins her work by raising one of her eight claws and giving her house a shake that reaches to every corner. She is careful, however, not to injure it, but she makes the dust fly. When this is done to her satisfaction, she looks her web over, first from the top, then from the bottom, and then from both sides. If the walls sag, or are the least bit broken, she rolls them into a ball, and eats them, just as she does her old clothes. Then she replaces them by new ones.

When everything is in thorough order she sits down for a rest and to make her own toilet, and to watch for her prey.—*Selected.*

THE BUSY CHIMNEY SWALLOW.

BEFORE all parts of the country were settled the chimney swift resorted to hollow trees for rest, shelter and nesting. But now it seldom occupies any other retreat than a chimney. The sight of swifts pausing in their flight over the chimney-tops, to throw up wings, and drop into the flue with a noise like distant thunder, is a familiar one. In the autumn, when flocking preparatory to the southward migration, I have seen assemblages at dusk drop into some selected chimney in a steady stream, until thousands must have been cling-

ing inside, occupying every available inch of brick surface. Even to this day they are known to occasionally revert to their ancient custom and use some large hollow tree for a roost. Such roosts are said to have been seen very recently.

They return to us about the last of April, but do not lay their eggs, ordinarily, until July. During June they may be seen darting over the tops of dead trees, pausing hardly an instant in their flight as they wrench off the twig, which is carried down the chimney and stuck to the brick wall with a gummy saliva the female swift exudes until the curious basket-like structure has been completed, and then four or five elongated pure white eggs are laid. The brood, and the old birds in feeding them, make considerable disturbance, but they make amends by killing off the mosquitoes and the flies.—*Outing Magazine.*

LARGEST OLIVE RANCH IN THE WORLD.

VERY few eastern people, comparatively, know that the largest olive ranch in the world is located within 25 miles of Los Angeles, Cal.

This wonderful orchard, situated at Sylmar, is ten times larger than the biggest olive ranch in Spain. There are over 120,000 olive-bearing trees, and they average 50 pounds of olives to the tree. The Sylmar ranch consists of 12,000 acres, and each acre contains 110 trees, which produce 2,000 gallons of olives each season. This quantity of fruit makes 250 gallons of pure olive oil—valued at \$2 per gallon—thus equaling \$500 per acre profit.

The olive wood is highly prized by cabinet makers, as it is very hard and takes a high polish. The Italians consider an olive orchard as a perpetual source of wealth, as the older it grows the more valuable it becomes. The trees are supposed to live about 4,000 years, under favorable conditions. There are some olive trees now on the Mount of Olives, in Palestine, which are computed to be not less than 3,000 years old.

The olive industry has been growing steadily in California since its first introduction by the early Spanish mission fathers; and the olive culture in that State can never be overdone, since the olive can be produced on the American continent with any degree of success only in central and southern California, New Mexico, and Arizona.—*Scientific American.*

THE largest known species of orchids grows in Ceylon. The leaves measure up to ten feet in length, and a single plant will have as many as 3,000 blossoms in one year.

NATURE is busy mixing her colors for the richest paintings of the season. The "laying in" process is already under way and soon we shall see the pictures in perfection.

THE INGLENOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

"WHERE there's a will there's a way," as a rule, and the way always harmonizes with the will. If in the former one seeks happiness and satisfaction the latter must be of the kind that makes for only such results.

WE get the greatest enjoyment out of those things that are honestly paid for and enjoyment of the highest kind out of those things paid for from our own labor. Toil has many rewards for the faithful worker and not the least of them is the joy of ownership.

IN this issue O. H. Kimmel lays the ground argument for an intelligent discussion of a problem that is just now occupying the attention of a majority of the people of our land. We all need to know all there is to be known about it, and we can best secure this knowledge through open and unprejudiced minds.

WE were mistaken in thinking that people would not be greatly interested in the discovery of the North Pole. However, much of the interest is due to the fact that the Pole has again been discovered,—this time by Commander Robert E. Peary, who has spent years in the effort, and who expresses doubt in Dr. Cook's claims. Whatever good may result from the discovery is likely to receive scant attention for some time because of the contention between the friends of the two men. Commander Peary "nailed the stars and stripes to the North Pole" April 6, 1909, nearly a year after Dr. Cook had stood on the same spot, which has been eagerly sought by civilized men for three hundred years. To come to sharp contention over the rights of discovery in the case of some portion of the earth that is inhabitable and that would add material wealth to the world, while not Christian, would seem to have

some degree of reason in it, but to contend over a portion of our planet that is as desolate and void of real value as is the North Pole region seems little short of childish. But men will go to great lengths for the sake of a name, even though that name rests on achievements that exert no influence toward a better world and better people.

DARIUS GREEN is having his innings now. Rapid progress is being made in the heavier-than-air-machines, almost every day witnessing some improvement or new accomplishment. Only a few years ago the joker found a big field and many amused listeners when he leveled his guns on the would-be "man-bird," but his mouth is shut now and he is afraid to open it, for his guns are likely to be turned against himself. And so it goes. If you just keep abreast of the crowd you are all right,—apparently harmless anyhow,—but if you get a little ahead or drop out, no matter if common sense justifies the dropping out, people will lift their eyebrows or point to their foreheads and smile. But who are the people, anyhow? Experience proves, as in the above case, that their judgment is often at fault. So let us pursue our way regardless of what "they" say.

RECOVERING FROM VACATION.

"IT requires fully two weeks for me to get down to solid work again after vacation," said a young man recently who attends one of our colleges. So far as their influence extends over one's work he does not believe that vacations are the wonderful recuperative power they are generally considered to be. More than this he does not believe they are altogether harmless in their influence upon one's regular occupation.

In both these opinions the young man voiced the belief we have held for some time and to which we have given expression at different times in these pages. We do not believe a vacation is a bad thing in every respect,—unless it is spent in a bad way,—but we do not believe its good effects have any appreciable influence over one's regular work. Let one take a vacation for the sake of visiting friends, or for the purpose of seeing certain parts of the country and he will most likely find much to pay him for the time thus spent. But if he takes two or more weeks off for the purpose of recuperating, when no disease or illness has a hold on him, and in order that he may increase his efficiency in his work, in the majority of cases he will be disappointed.

We do not wish to be understood as advocating the ceaseless grind. Far from it. Rather, we advocate a daily turning aside from one's regular occupation into other channels of thought and action especially attractive to the worker. But let us correct the expression, "ceaseless grind." It is not found in the

vocabulary of the earnest, faithful worker who finds the joy in his work that every one should find. And both figuratively and literally there can be no ceaseless grind where one provides himself with recreative work in which he can spend some time every day.

We have no thought that the preaching of this plan will have any direct, perceptible influence on even that portion of the army of vacationists that belongs to the INGLENOOK family, but if we can set our readers to thinking on the subject something worthy the effort shall be accomplished, and if along with the thinking some regular and systematic work is laid out that is calculated to divert the mind and invigorate the faculties for greater effort in one's principal calling, we shall be richly rewarded.

"THE SUMMER IS ENDED."

"WHILE the earth remaineth, seed time and harvest, and cold and heat, and summer and winter, and day and night shall not cease." This is one of the promises that has comforted men through all the years of the postdiluvian age. Resting in this promise, men have laid great plans, have perfected means, for pushing out into every line of progress, that depended wholly on the truth of the above words. And they have not been disappointed. Through all the years the great clock of the universe has counted off every change announced at the beginning of time with an accuracy which man has never been able to duplicate.

But while we can rely fully on the regular return of the seasons, there is not the least encouragement to be found for the one who delays taking advantage of each season in its turn. It is this fact that called forth the expression—a wail of remorse—which we have used for our subject. "To everything there is a season," but when the season is past the opportunity for doing that thing is gone.

Just now many of us are repeating the words of our subject with a great deal of regret. We are thinking of material things,—of the fruit or flowers that are not ours because we did not take advantage of sowing time, of various plans that need to be laid in their season if they are to bring the natural results. "The summer is ended" and our harvest is scant because we sowed sparingly. "The summer is ended" and we have failed to carry out our plans for getting out often into God's out-of-doors where are numberless opportunities for learning to know him better. "The summer is ended" and we have let slip the single opportunity for entertaining a friend who has few joys in this life.

Yes, there are many reasons for the ache in the heart that causes us to draw our breath quickly in thinking over the months that have been snatched from us forever. But many, many times sadder than any feeling these thoughts can call up is the one that

first gave voice to the words, "The harvest is past, the summer is ended, and we are not saved." Each year brings a return of the sowing season and in some degree we have a chance to make up for what we failed to do during a previous season. But in many things,—and these the most vital to our lasting happiness,—there is only one season in a lifetime, only one opportunity. May we recognize it and use it wisely when it comes!

THE AFTERGLOW.

How hushed the air is. All the world is still;
The winds have ceased their winging;
Faintly I hear the tinkle of a rill,
And distant cowbells ringing.

How bright the sky is! 'Tis the afterglow,
That depth of rose,
Floods all the west, and, duplicate, below,
Reddens the silvery Sandy where it flows.

The shoreward birches, mirrowed in the flood,
Are touched with tints of fire;
The leaping rapids quicken the blood
Of passionate Day's desire.

Soon to the primrose by the river's brim
The sphinx moth comes;
The veery chants her weird, mysterious hymn,
And Twilight comes.

Over the shadowed stream the bats are flying,
With eerie sweep and swoop;
The nighthawks through the mellow dusk are plying
With dive and hollow whoop.

Over the hills I hear the herd-call ringing,
"Co' Bos! Co' Bos!! Co' Bos!!!"
In fancy, see the barefoot boy a-swinging
The upland knolls across.

And soon the hollow rumble and the rattle
Of teams across the bridge;
The drumbeat of old Gus, who dreams of battle,
Like echo, from the ridge.

Come the clear, mellow hum of hive-bee, homing
Swift through the painted gloom;
And on the dew-breath of the summer gloaming,
The smell of clover bloom.

Still in the western sky the glory lingers
With softer radiance bright,
For there the Twilight, with her dusky fingers,
Still holds the torch alight.

Till paler fades the dim, fenestral glory,
Into the gloom and gray,
And Evening, crooning o'er the old, old story,
Sings to the sleeping Day.

—New York Herald.

"THE way of doing a favor is half the deed. If you try to help another, adorn the deed with grace and pleasantness. Let the other see that your kindness is real, expresses your true purpose."

THE habit of viewing things cheerfully and thinking about life hopefully may be made to grow up in us like any other habit.—*Samuel Smiles.*

THE HOME WORLD

A FAMILY MISUNDERSTANDING

ELIZABETH D. ROSENBERGER

THERE is just one little thing I wanted to speak about in good time. Not that I fear that one of you will object, but then it is well to make sure. Aunt Polly intended the four-tester beadstead for me," and Mrs. Lavina Swartley delicately wiped her eyes with a black-bordered handkerchief. "You all know it used to belong to Grandfather Kepler and I have a room all ready for it."

The foregoing remark was made in the first cab following the remains of Aunt Polly Kepler to the cemetery. The mourners had been talking over the last illness of Uncle Isaac who had been buried just two years before; and of the lovable traits of Aunt Polly who had devoted herself to her numerous nieces and nephews unreservedly, never having had any children of her own. But Mrs. Lavina Swartley was not prepared for the protests which came from the other occupants of the cab. "Aunt Polly's tester bedstead? Why, I am sure she must have intended that for us," said Mrs. Emma Kline; "our Mary was named for her and she always said Mary should have something handsome for bearing her name."

There was another occupant of the carriage, an old lady who had been weeping silently during this drive to the cemetery, but she was roused at last to a knowledge of passing events. In a voice trembling with emotion she said: "I don't see what you all can be thinking about! Here am I, the only sister of Polly's; ain't it reasonable to suppose that she wanted me to have that tester bedstead?"

"Aunt Kitty, where in the world could you put that bed in your little house?" asked Mrs. Lavina Swartley, excitedly.

"Why, it'll go nicely in my south bedroom if I take all the other furniture out. I haven't got long for this world—I'll be seventy-eight on my next birthday—and I am sure Polly would want me to have the bedstead while I stay in this world;" and Aunt Kitty put her

handkerchief to her eyes, for the procession had almost reached the cemetery by this time.

"Well!" exclaimed Mrs. Lavina Swartley.

"I never expected this!" said Mrs. Emma Kline.

And then the cab stopped at the Kepler family lot, where all the family were buried, and Aunt Polly was reverently laid away to rest. The mourners returned to the carriages and started back to Aunt Polly's home.

Mrs. Lavina Swartley drew her veil closely about her, and sat in the corner of the cab as far from Mrs. Emma Kline as possible. "I am sorry that there is a difference of opinion as to the one who should have the tester bedstead. I can not easily give up my claim, I wish to warn you," said Mrs. Emma Kline.

"I have had some old fashioned wall-paper made to order for my spare room so that it would harmonize with Aunt Polly's tester bedstead," said Mrs. Lavina Swartley with great dignity.

"I wisht that I'd 'a' had Polly send the bedstead to my house before she died," said Aunt Kitty with streaming eyes.

In the carriage just behind, the conversation had been of a very different nature. The generally peaceable disposition of the Kepler family was the topic of all-absorbing interest. "They have never had a family quarrel, always come together every Thanksgiving and never have any small grievances to relate to their friends about each other; of course there will be no trouble about Aunt Polly's will,—they will agree to whatever she says," said Uncle Henry.

The carriages drew up before Aunt Polly's cottage, and the mourners went into the house. They followed the old-time custom of reading the will directly after the funeral. Accordingly all were assembled for that purpose. Aunt Polly had not a large estate, and she remembered them all even to the third generation, and there was no fault found with any of her numerous bequests,—all were satisfied with the will.

But when Aunt Kitty said, "I want the big tester bedstead, I know Polly would give it to me if she was here to say who should take it," Mrs. Lavina said with freezing dignity, "You have no greater claim on it than I have. Aunt Polly said the bed was just the thing for our spare room which we are now fitting up with colonial furniture."

Mrs. Emma Kline looked angry but said nothing and they left Aunt Polly's house without the customary goodbys. Each of the three was determined to have that bed if strategy could effect anything and all felt afraid of Mrs. Lavina, who was one of the wealthiest women of the village.

There was more quarreling over several little things; it seemed as if the spirit of dissatisfaction had come to other members of this family. Two of the nieces quarreled over the possession of a vase of wax flowers which neither really cared for. "I would put it in a closet out of sight," said one niece, "but I do not want Maria to have it, I have as good a right to it as she has."

And when all Aunt Polly's household articles had been divided among her heirs it was hard to find a more bitter family, one toward another, than the Kepler family. And there stood the large tester bedstead with its valance and high posts all alone in the house after everything else had been disposed of, like a very genius of strife and ill feeling.

But one day something happened. An old lady came into the lawyer's office and handed him a note. He read it through and then glanced at her suspiciously, and yet hopefully. "Who are you?" he asked.

"You can get any of the Keplers to identify me; they'll remember me, Lavina or Emma or Aunt Kitty, and one of them'll know me."

"Well, you call here at this office at one o'clock this afternoon. And I am very glad you have come. I see my way clear towards settling up Aunt Polly's estate at last."

At one o'clock the several heirs were assembled in the lawyer's office and the old lady walked in. As she threw back her veil, Mrs. Lavina was visibly perturbed, while Mrs. Emma exclaimed "Why, Aunt Ellan, when in the world did you get here?"

"I haven't been very far away, only in Lititz" (a small city about thirty miles distant), "but I was kind of anxious to see how you all would get the tester bedstead, for Aunt Polly had told me that some of you was a-hinting for it and as it was made by my husband she wanted me to have it back again, and here is a letter she wrote about it."

Consternation was depicted on every countenance there, when the lawyer read: "Dear Ellan:—I always wanted you to have my tester bedstead, but I see that the other nieces are casting covetous eyes upon it. I sincerely wish I had a bed apiece for them but as it is, you have the best claim on this one."

Mrs. Lavina was the first to recover from her surprise. "I am sure you are quite welcome to it, Ellan," she said, "since it does not belong to the Kepler side of the family, I do not want it, I am very glad to have found this out in time." And she sailed majestically from the room.

"Why didn't you come sooner and get the old bed?" said Mrs. Emma, spitefully.

"I've been sick," answered Ellan, briefly.

"You can finish settling up the estate now but you can't heal up the hard feelings that was made by that bedstead," said Aunt Kitty. But some way the habit of being peaceable and loving helped the Kepler family to get over their trouble far more speedily than is usually the case. And today Mrs. Lavina laughs at the remembrance of the old bedstead. "I have a far prettier one and I don't see why I ever wanted that one," she exclaimed one day to Mrs. Emma. "I am glad the thing was settled peaceably at last," answered Mrs. Emma, and she echoed the sentiments of all the Keplers.

AN EVENING LULLABY

RICHARD BRAUNSTEIN

Round, open, violet eyes,
Filled with mute surprise,
Oft by tears impearled,
What seest thou in space;
Or is thy little world
Found in thy mother's face?

The little arms outpress,
Pleading their helplessness.
The gray-hooded years roll on
Fulfilling the mystery of life,

Then shall I lean upon,
Those arms in closing strife.

But now upon my breast
Shall be thy own warm nest,
Thou fledgeling, caught in time's mesh,
Thou flower of future to unfold,
Thou bud of Christ's sweet flesh!

Slowly the eyelids close
Like petals of a rose,
When from the mantle's fold

Eve shakes her purple dust,
And through the veiling gold
The eye of love is thrust.

See! to the lips there creeps
A smile that gently sleeps.
Thine angel bends o'er thee
In arch his plumed wings,
Guarding so tenderly,
More soft than mist he sings,
"Sleep, baby, sleep."

BETTER UNSAID.

"How tired you are, Esmerald! It even gets into your poor foot; you limp more tonight." These words, uttered "tenderly," a well-known modern writer puts into the mouth of a young wife who is essaying to soothe her husband, a physician, after his exacting day's work. It is needless to say that he is not soothed. "He rises and walks irritably through the room." One can hardly wonder, for we have here, surely, an extreme example of tactlessness.

"I always stand up for you," asseverates a school girl to another in a burst of friendliness. "I was not aware that I needed standing up for," was the cool response. The first speaker's feelings are hurt, the second speaker's "rubbed the wrong way." Where lies the trouble? Merely in the lack of tact again.

"Do you get any more work to do than you used to?" inquired an acquaintance of a young writer in the tone one uses at the bedside of a sick friend. "First let me ask you," was the quick response, "does the doctor give you any more medicine than he used to?" The acquaintance was nonplused. She could not see the point. Can you?

"How funny you look in your new hat!" "It seems to me you have to work so hard for everything you learn." "What matter if you are homely if you only do your best?" People who say such things without malice, but with a "hearty good will," have no idea that they are in the slightest degree remiss in that subtle quality—tact. Do you see it? Or are you, perchance, unfortunately like them, lacking in this essential?—*Exchange*.

**A WARBLER'S STORY.**

I AM only a wee Warbler, and my coat of feathers is gray, like the twigs and reeds I live amongst. The story I am going to tell you isn't about myself—it's about a pair of robin-chats I loved very dearly.

Oh! how happy those two were—not a care, not a sorrow. They were happy, really and truly happy, with their little cosy home and their unselfish passionate love for each other. All day long they flitted backwards and forwards, only lingering at the nest long enough to drop a fat grub into the gaping mouth of one of the little featherless babes. Everywhere that loving pair searched for grubs, worms, flies, caterpillars, beetles, and the other insects which are such a pest to our gardeners and our farmers.

My heart aches, and I grow cold and shudder when I think of it. One day when I was hunting for grubs for my own little children, three laughing, happy, thoughtless boys came along, when suddenly one said, "I say, Jack, look at that bird with a worm in its mouth." Jack looked, and next instant pulled out, from his pocket, a thing called a "sling" or "catal-pult." He quickly took aim, and next instant I heard

a gasping noise near me. I looked, and oh! horror! I saw my friend the robin-chat swaying to and fro in agony. He essayed to fly, but tumbling over, he fell to the ground, his little breast rising and falling in agonizing gasps. He called for his mate, once, twice. The brutal boy rushed forward to secure his prize, and I fled in mortal terror.

When night came and he did not return, his mate grew very restless. She called loud and long, but no answering call came. Tired and exhausted she crouched over her babies—poor little orphans. At dawn I could hear her piteous, plaintive cries all over the park, calling and seeking, but alas! in vain, for her loving mate had been wantonly and cruelly murdered, and his wings and his tail were being preserved to adorn the hat of the slayer's sister.

Hard and desperately did that mother robin-chat work to provide enough food for her hungry children, but the task was too great, besides her heart was slowly and surely breaking—she was pining for her mate whom she loved dearer than life. On the third evening after the tragedy I knew the end was approaching for her eyes were dim, her feathers ruffled, and her wings drooped. She sat on the nest beside her children and feebly chirped, in a heart-breaking way, whilst the youngsters craned their long slender necks up to her, and gaped for food.

During the night I heard her calling, calling, piteously and long for her mate. The calls died away into a murmur; then I heard a flutter, the rustling of leaves, and the thud of something falling on the ground. Next morning I saw her dead body lying on the earth, cold and stiff.

All that day the orphan children chirped and chirped—but alas! they called in vain for both mother and father were dead. Their cries grew feebler. Whenever there was a rustle in the leaves they eagerly craned their necks and gaped their jaws to receive the accustomed morsel. Slowly but surely starvation gripped them, and they died one by one, until all had perished miserably—of starvation, brought about by the hand of a wanton, thoughtless boy.—*Our Dumb Animals*.

**SELECTED RECIPES AND HELPS.**

ROCKS.—This is a cooky which calls for one and a half cups of seeded raisins, one and a half cups of sugar, one scant cup of butter, three eggs, a pinch of salt, one pound English walnuts (one pound in the shells); remove shells and break kernels into small pieces, one teaspoonful of soda dissolved in the least bit of boiling water and three cups of sifted flour. The dough should be stiff and difficult to beat, and when dropped from a spoon each cake should stand firm and not flatten out in the pan. Grease the pans and bake in a hot oven.

WHEN salt corrodes the tops of salt shakers, wash the parts and rub briskly with precipitated whiting. This is whiting over which water is poured and the settled chalk when dried is used as a polish which does the work nicely and will not scratch the silver.

WHEN the corners of rugs insist on curling upward, the next wash day take some thick flour starch, mix with it a good quantity of gelatine and apply this to the back of the rug and work the mixture into the backing. When partially dry, cover with a cloth and press with a hot iron. It will make the corners firm and, what is more, they will remain so.

THERE is more speedy relief from hot wet cloths than the dry heat from a hot water bottle, but it is a tedious task to keep cloths hot. If you wring a soft cloth out of warm water and place it over a hot water bag filled with hot water, it will cause a steaming cloth which gives almost instant relief to severe attacks of earache, toothache or neuralgia. It is quite an improvement over the dry heat.

GREEN CORN OMLET.—Cut and scrape the corn from four large ears of green sweet corn, mix with four well-beaten eggs, two tablespoonfuls of cream and salt and pepper. Put a tablespoonful of butter into a frying pan and heat, then pour in the mixture; shake and tip the pan till it is evenly cooked, then roll and serve at once on a hot platter.

FOR re-silvering mirrors, pour upon a sheet of tin-foil three drams of quicksilver, allowing this quantity to a square foot of the foil. Rub with a piece of buckskin (or chamois skin) until the foil becomes brilliant. Place the glass to be renovated upon a table face downward, lay the foil on the damaged part of the glass, place a sheet of paper over the foil, put on it a block of wood having a flat surface, and lay a weight on it to press it down tightly. Let it remain in this position a few hours, and the foil will adhere to the glass."

The Children's Corner

AN ORIGINAL FABLE.

As life wears on, one often fails to see the benefits which are the outcome of present drudgery. This fable shows that labor, though sometimes weary and monotonous, has its ultimate reward.

"Put the young horse in plough," said the farmer; and very much pleased he was to be in a team with Dobbin and the gray mare. It was a long field, and gaily he walked across it, his nose upon Dobbin's haunches, having hard work to keep at so slow a pace.

"Where are we going now?" he said, when he got to the top. "This is very pleasant."

"Back again," said Dobbin.

"What for?" said the young horse, rather surprised; but Dobbin had gone to sleep, for he could plough as well asleep as awake.

"What are we going back for?" he asked, turning round to the old gray mare.

"Keep on," said the gray mare, "or we shall never get to the bottom, and you'll have the whip at your heels."

"Very odd indeed," said the young horse, who thought he had had enough of it, and was not sorry he was coming to the bottom of the field. Great was his astonishment when Dobbin, just opening his eyes, again turned, and proceeded at the same pace up the field again.

"How long is this going on?" asked the young horse.

Dobbin just glanced across the field as his eyes closed, and fell asleep again, as he began to calculate how long it would take to plough it.

"How long *will* this go on?" he asked turning to the gray mare.

"Keep up, I tell you," she said, "or you'll have me on your heels."

When the top came, and another turn, and the bottom, and another turn, the poor young horse was in despair; he grew quite dizzy, and was glad, like Dobbin, to shut his eyes, that he might get rid of the sight of the same ground so continually.

"Well," he said, when the gears were taken off, "if this is your ploughing, I hope I shall have no more of it." But his hopes were vain; for many days he ploughed, till he got—not reconciled to it—but tired of complaining of the weary, monotonous work.

In the hard winter, when comfortably housed in the warm stable, he cried out to Dobbin, as he was eating some delicious oats, "I say, Dobbin, this is better than ploughing; do you remember that field? I hope I shall never have anything to do with that business again. What in the world could be the use of walking up a field just for the sake of walking down again? It's enough to make one laugh to think of it."

"How do you like your oats?" said Dobbin.

"Delicious!" said the young horse.

"Then please to remember, if there were no ploughing, there would be no oats."—*Our Dumb Animals*.

THE QUIET HOUR

PRAYER.

I do not undertake to say
That literal answers 'come from heaven,
But I know this—that when I pray,
A comfort, a support is given
That helps me rise o'er earthly things
As larks soar on airy wings.

In vain the wise philosopher
Points out to me my fabric's flaws,
In vain the scientists aver
That "all things are controlled by laws."
My life has taught me day by day
That it availeth much to pray.

I do not stop to reason out
The why and how. I do not care,
Since I know this, that when I doubt,
Life seems a blackness of despair,
The world a tomb, and when I trust,
Sweet blossoms spring up in the dust.

Since I know in the darkest hour,
If I lift my soul up in prayer,
Some sympathetic loving Power
Sends hope and comfort to me there.
Since balm is sent to ease my pain,
What need to argue or explain?

Prayer has a sweet refining grace,
It educates the soul and heart.
It lends a luster to the face,
And by its elevating art
It gives the mind an inner sight
That brings it near the Infinite.

From our gross selves it helps us rise
To something which we yet may be.
And so I ask not to be wise,
If thus my faith is lost to me,
Faith that with angels' voice and touch,
Says, "Pray, for prayer availeth much."

—Selected.

PERFECT PEACE.

CLARENCE E. SCHROCK.

ONE evening at the close of a very busy day, Jesus, accompanied by his disciples, got into a boat and started across the Sea of Galilee. As they sailed out across the water, a storm gathered, the wind arose, and the waves beat high and into the boat. No wonder the disciples became frightened as the boat was rapidly filling with water. It was then they thought of Jesus being in the ship and began looking for him and found him in the stern asleep. They immediately awoke him and no doubt very quickly and anxiously said to him,

"Master, carest thou not that we perish?" And Jesus rebuked the wind and said unto the sea, "Peace, be still," and the wind ceased and there was a great calm.

Jesus then reproved the disciples for their fear and lack of faith. After all they had no cause to fear, for Jesus, who has power to calm the mightiest storm, was with them.

Even so with us, as we sail o'er life's rough sea, if we take Jesus with us we have nothing to fear. For he can calm the storms, dispel our fears and bring sweet peace into our lives. As we go on through life we meet many difficulties, trials, sorrows and things we cannot understand. The storms gather, the dark clouds conceal the brightness, the thunder roars and if we are not very careful we become afraid and disheartened.

But even in times of deepest sorrow, or greatest trials, we have a refuge, one to whom we can flee for help. O dear fellow-Christian, when your way seems darkest, the storms of life most violent, do not give up, do not become discouraged, do not lose hope and let the winds toss your hither and thither, but with a firm faith and trust, come to Jesus, tell him all your cares, for he really cares for you. He alone can understand all and fully sympathize with you. Come to him and ask him to calm the storms, and grant you peace. And he will scatter the darkness and dispel your fears and whisper quietly and tenderly those soothing words, "Peace, be still."

We cannot have perfect peace of mind and quiet calmness of soul, unless we trust wholly in Jesus. There is a deep peace that comes into our lives, if we surrender them entirely into the Master's hands, striving ever to fully do his will, obeying his commands and trusting in his promises, that cannot be obtained any other way. He alone can give perfect peace. Let us trust him fully. Let us have more faith in him. Let us consecrate our lives wholly to his service and work earnestly for him until he says, "It is enough." Then earth's struggles will be o'er and Jesus will call us home to the perfect peace of heaven.

Whitten, Iowa.

SACRIFICE for Christ is one of the strongest proofs of faith in him; and one of the most influential means of spreading his religion.—*Zion's Watchman*.

TEN WAYS OF PRAYING.

1. THE formal way—when prayer is a mere form of words, with little or no heart; or when it is simply due to the force of habit which has lost its real motive power.

2. The hurried way—hastening through it as a disagreeable and irksome duty—a duty indeed, but not a delight, and to be dismissed as quickly as may be.

3. The selfish way—when the real motive is to consume the coveted blessing upon ourselves—in some way to promote our own selfish advantage or pleasure.

4. The impulsive way—praying as the feeling prompts, and when we feel so inclined—without any definite plan of prayer in our lives, or devout habit.

5. The faithless way—with no real dependence on the promises of God, or confident expectation of receiving what we ask or seek.

6. On the contrary, there is the thoughtful way, seeking to meditate upon God and intelligently understand both the nature of prayer and the good we seek.

7. The earnest way—with the attention of the mind and the desire of the heart absorbed in asking, with a determination to persevere.

8. The trustful way—coming in the spirit of a child, first believing that God's promises justify prayer, and then that we are coming to the Father, both able and willing.

9. The consistent way—that is, living as we pray, and so walking with God as to be in the way of blessing, and by fellowship with God inviting it.

10. The spiritual way—so cultivating acquaintance with the Holy Spirit that he can and does breathe in us first the desires we breathe in prayer.

It is easy to see why we so often fail, and how we may succeed.—*Missionary Review.*

GETTING ABOVE PRIDE.

MORTAL man doesn't know exactly why he should be proud. He knows he is. There is a sense in which high regard for one's self and his work is not only permissible but necessary.—The bad element of pride is to be unduly puffed up over accomplishment or possession. One of this kind is never capable of treating other people in a civil manner. He stands on a pedestal higher than some, in imagination or in fact, and keeps an eye of contempt turned toward those he thinks beneath him. Doubtless they are far more on a higher plane than he occupies; but looking at these does not add much fuel to the fire of his pride, so he turns his head the other way.

The proud feeling is always nursed by comparison of self with somebody believed to be lower than self. The difference in possessions or in position is a pretty good index of the amount of pride in such a life. But there is such a thing as rising above pride, of getting

beyond the place of envy. The young man starting to college envies the one who is just getting through. After he has reached the freshman year, he may have a good stock of educational pride of his own when he looks down upon the preparatory student. By the time a college course has passed into history by three or four years, the graduate is no longer proud of his diploma. Of course its possession gives him a certain kind of satisfaction, but being proud of having completed a college course, using pride in the puffed up sense, is a sure evidence that the man touched his studies very lightly. He who has gone deep enough into his textbooks to ascertain what they mean, as well as what they say, is humiliated rather than proud when he looks at his accomplishments. After a man has passed the position at which pride is supposed to reach its zenith he is a man of better sense.

The Wright brothers are now under the gaze of the entire world. Those who know them best know they are entirely devoid of pride in its general meaning. In fact they are among the commonest of all in life and in conduct. This is genuine worth and real exaltation. They are beyond the place where pride takes root. Kepler, and Newton, and Edison, and Jenner, and Harvey, and Howe, and Whitney, and Morse are great men in the estimation of everybody, but they were small in their own minds. They do not need pride to pass at a self-assessed value. The proud man of today is not current in the public mind at his desired value, and consequently tries to puff himself up to meet his self-inflated worth. He should remember that all that cometh is vanity. He should see that earthly fame will disappear like a morning mist, that the gap of social distinction will soon be closed, and that a man can take no more wealth out of a world that he brought into it. Then he will have reached a place to which pride cannot come.—*Religious Telescope.*

WHY DON'T YOU GO TO CHURCH?

YOU are "too tired to go to church." That's sheer nonsense. There isn't a place on this continent so restful as the church. You are going to lie around the house all day; doze in a hammock; loll in a rocking chair; go to sleep over a book. That isn't resting; that's loafing. Tell yourself, honestly—did you ever in your life see a loafer who looked rested? Did you ever see a loafer who didn't look tired all the time? The people who try to rest are always tired. Resting is the hardest work in the world when you make work of it. Two hours in church, two hours in the quiet; the music, the sermon, the reading, the uplift which comes from the new channels into which your mind is led, will rest you more physically, morally, intellectually, than all the day spent in trying to rest. Why don't you go to church?—*Bob Burdette.*

ECHOES FROM EVERYWHERE

The first crop of cotton ever raised in California is now being harvested. About 1,500 acres were planted as an experiment, and so satisfactory are the results that it is predicted that cotton will become one of the staple products of the Imperial Valley.

The woman astronomer at Harvard, Mrs. Wilhelmina Patten Flemming, who is the head of the photographic department, has discovered the largest meteor ever noted by any observatory in the world. This meteor is five times larger than the largest previously photographed.

In order to compete more effectively with the gas company, which lets kitchen and other stoves, the municipal electric light plant of Aberdeen, Scotland, has laid in a stock of electric heating and cooking apparatus, which it proposes to offer for hire at proportionately low rates.

On August 12 Michael Lawless of St. Louis was stabbed in a fight and taken to the city hospital, where Dr. W. G. C. Kirchner took twelve stitches in his heart. Lawless is now able to sit up, and when an X-ray examination shows his ribs have healed up he will be dismissed. Statistics do not record a patient similarly treated who survived.

Cable messages received at New York from Paris, London and Berlin indicate that the rival claims of Cook and Peary are being made the subject of international controversy in Europe. In Germany and Denmark the feeling is entirely pro-Cook. France is remaining neutral and demanding proof from both Cook and Peary, while English scientists as a whole refuse to accept Cook's story and hail Peary as a hero. German scientists, on the other hand, are equally loud in denouncing Peary for his charges, and in declaring that Cook, as the first man to reach the pole, should receive all the honor.

Unlike conditions prevailing in the case of most catastrophes the loss of life and material damage caused by the floods in northern Mexico were greatly underestimated in the first reports. This, no doubt, is due to the isolation caused by the fury of the Santa Catarina River. Miles and miles of telegraph and telephone lines were simply wiped out and hundreds of miles of railroad track have been as completely destroyed as if they had never existed. It is improbable that the number of lives lost will ever be fixed accurately, even within a thousand. In Monterey alone between 6,000 and 7,500 people are missing, while in the villages along the banks of the Santa Catarina River the deaths are estimated at from 1,800 to 2,500. The loss of property in Monterey is not less than \$18,000,000. The damage done by the floods to the railroad will exceed \$2,750,000, and at least \$5,000,000 has been lost by the destruction of crops and the drowning of cattle.

A hearing will be held at the Department of Agriculture on Sept. 30 by the board of food and drug inspection, respecting the weight or volume of prepared packages of foods and drugs. It has been found that the weight and volume of such packages often is lower than that stated on the labels.

A gas-driven street car is now under construction in Philadelphia, which is to be tested on the line of the Metropolitan Street Railway Company of New York in competition with the electric cars of the company. It will be driven by two 4-cylinder motors, each of 24-horsepower. These will be water-cooled, and piping will be led from the motor jackets around the interior of the car to heat the latter during winter service.

The claim of the Orinoco Corporation against the Venezuelan government has been settled. Venezuela will pay the company \$385,000 in eight annual installments. The settlement was signed Sept. 9 by W. W. Russell, the American minister, who thus scored another triumph for American diplomacy. The Orinoco Corporation relinquishes all its rights under the Fitzgerald concession to Venezuela. A controversy of twenty-six years' standing is thus brought to a close.

Double the amount of corn was exported from the United States in August over that month a year ago, while less than one-half of the amount of wheat and a little more than one-half the amount of wheat flour was exported as compared with August a year ago, according to a statement of the bureau of statistics of the Department of Commerce and Labor. There was a decrease of more than \$10,000,000 in the value of exports of domestic breadstuffs, meat and dairy products, food animals, cotton and mineral oils from the United States this August over August a year ago, and a decrease of \$94,000,000 for the eight months ending Aug. 31 over the corresponding period of last year.

A bronze statue of Secretary of War William H. Seward, the "father of Alaska," who bought for a trifling sum the richest colonial possession of Russia, was unveiled Sept. 10 on the lawn in front of the Seward mansion on Seward Avenue at the Alaska Yukon Pacific Exposition. The mansion, copied after the Seward home in Auburn, N. Y., is New York's building at the fair. Secretary Seward said that a generation would pass before his purchase of Alaska was appreciated. His son, General William H. Seward of Auburn, N. Y., delivered the oration at the unveiling and his grandson was present. The statue, which is to stand permanently in the grounds of the University of Washington, was cast in Paris, and exhibited in the Paris Salon. The figure is nine feet in height and rests on a pedestal ten feet high. On the pedestal are engraved Seward's memorable words, "Let us make the treaty tonight."

The soja bean, which is such a mainstay of the Japanese and Chinese diet, it is found can be made to yield a kind of artificial vegetable milk. The process is a recent Japanese discovery. The beans are soaked, boiled soft in water, and by special treatment reduced to a liquid state closely resembling cow's milk. The new preparation is especially useful in hot countries, where it is difficult to keep cow's milk.

Marconi, the wireless telegraph inventor, is now trying to get the British government interested in a scheme which he has worked out for linking the British Empire around the world with wireless stations. His first plan is to establish 11 stations between England and Australia, the stations being placed at England, Malta, Cairo, Aden, Bombay, Colombo, Singapore, Perth, Adelaide, Sydney, and Wellington, in New Zealand.

The express companies charge such high rates for transporting and delivering documents of great value that one concern recently found it feasible to do the work itself. It had more than \$16,000,000 worth of bonds in the West to send to New York, but the rate was so high by express that it found it cheaper to charter a special train and hire two competent detectives to attend one of the managers, who promptly delivered the bonds.

Prof. Charles Richet of Paris has devised a means for purifying the air in rooms. According to press dispatches, his apparatus is an air filter which mechanically sterilizes air. Very fine drops of glycerine are scattered along the walls of a cylinder containing a suction fan. Each particle of air drawn in by the fan is freighted with glycerine, and hence tends to drop, thereby carrying with it the germs, dust, and microbes with which it may be laden.

The Swedish federation of labor has finally called off the general strike which has been causing so much trouble for several months. The strikers had declared that they would never give in, but the government had energetically protected those who wanted to work, and at length the strike leaders, who were largely anarchists and other political agitators, found themselves without either jobs or supporters and decided it was best to declare the war on industry at an end.

The postoffice department has given the contract for more than three billion new postal cards to the government printing office at Washington. This card is to be made of better, though lighter material. It will be more suited to writing, but neater, more ornamental, possess snappiness, and will cost the government less than the ones which it has had prepared heretofore. The government has to pay all transportation charges on the postal cards, and as the new ones will be a great deal lighter than the old ones, there will be a saving of about 13 per cent to the department in weight.

The new rulers in Persia are determined not to be bothered with their old enemies, and all the principal officers of the old government have been sentenced into exile; or, if they prefer, they can have their heads taken off. The deposed Shah says that rather than be sent out of his dear country he will seek the protection of religion and become a wandering dervish. He is naturally much incensed at England and Russia for setting him off his throne—but then, he should have behaved better. Ahmed Mirza, the new boy Shah, has very little actual authority, being subject to the "advice" of the council.

A human hair of average thickness can support a load of 6¼ ounces, and the average number of hairs on the head is about 30,000. A woman's long hair has a total tensile strength of more than five tons, and this strength can be increased one-third by twisting the hair. The ancients made practical use of the strength of human hair. The cords of the Roman catapults were made of the hair of slaves, and it is recorded that the free women of Carthage offered their luxuriant tresses for the same use when their city was besieged by the Romans.

Glenn H. Curtiss, the American aviator who won the international cup at Rheims, added further honors to his brilliant record by capturing the grand prize in the aviation meet at Brescia, Italy. Curtiss made his flight for the grand prize Sept. 11, covering fifty kilometers (31.05 miles), or five times around the course, in 49 minutes, 24 seconds. His share of the \$10,000 prize is \$6,000. Rougier, the French aviator, also competed for the grand prize, making a flight of fifty kilometers in 1 hour, 10 minutes, 18 seconds. He was awarded the second prize. Curtiss also won the prize for quick starting, his time being 8 1-5 seconds. Leblanc was second in this contest in 9 3-5 seconds.

An important report has just been made by the British lunacy commission. This report is to the effect that, so far as the figures show, the ratio of insanity in the British Isles has increased 250 per cent in the last 50 years. The excessive use of strong tea, which breaks down the nervous system, is assigned as one of the main reasons for the increase. Life is becoming more strenuous at all points and the strain on people constantly becoming more severe. The use of alcoholic drinks, the commission says, accounts for one-fifth of the total number of insane. Better methods of caring for the insane and feeble-minded are suggested, including the separation of mild cases in villages or colonies of their own.

Canada claims all land directly north of the American continent as far as the pole upon which it would be possible to nail a flag. This position will be taken, it is semi-officially stated, in reply to a question asked in the British House of Commons as to the ownership of the north pole, soon after the result of Cook's and Peary's explorations became known. The question was referred to Canada for reply. Canada's answer in effect will be that all the territory between the North American boundary and the north pole must be recognized as Canada's hinterland. The islands, it is maintained, have been formally taken possession of by Captain Bernier, Canada's arctic explorer, who is now lost in the far north.

The first drawing under the new Cuban national lottery was held this week. Great excitement over the matter prevailed among the people, the tickets soon being all sold. The Latin peoples are all devoted to lotteries, having been accustomed for centuries to spend a regular part of their earnings on them. Though the Cuban government tried, at the urgent suggestion of the United States, to discourage them, it was found that many private ones were still being conducted, and the government decided that it would be better to have an established public lottery, conducted fairly by the government, than a host of these catchpenny affairs. The laws in the United States forbid the sending of lottery matter of any sort through the mails, and the Cuban and U. S. governments will work together to keep tickets of the new lottery from being sold in American territory.

Among the Magazines

FINDING THE WAY BY INSTINCT.

The explanation of the readiness with which certain animals, birds, and insects find their way home from great distances, has always bothered naturalists, and they are not yet agreed upon it. Some seem inclined to believe that only the ordinary senses are involved, though with unusual acuteness, while others postulate a special "sense of direction," whose mechanism they can not very well explain. A writer in *Cosmos* (Paris, July 24) quotes some recent observations in the Sahara to show that man may possess a similar faculty. He says:

"It is well known that from distances of $1\frac{1}{2}$ to 2 miles, the bee will return directly to its hive. Mr. Gaston Bonnier has recently shown that this remarkable sense of direction depends neither on the sight nor on the smell of the bee.

"This sense has also, in certain cases, existed in man. In support of this affirmation, Mr. V. Cornetz describes, in the *Revue des Idées*, some observations made on a Saharan chasseur of the tribe of the Adaras.

"The faculty of orientation of the chasseur was exercised very surely, but only when he was required to indicate, at great distances, the direction of places where he had often gone, and particularly that of his home, Ghelitia, even when he was in the open Tunisian areg (region of great dunes) in the midst of a group of dunes, without possible sight of landmarks. The error in the indicated direction seldom exceeded 5 to 6 degrees; if the party returned directly to Ghelitia, the chasseur always kept his direction remarkably well; Mr. Cornetz says that he could not have done better himself aided by compass and chart. Like the homing bee, the Adari chasseur had the sense of orientation that enabled him to return home. In other respects this semi-nomad, who possessed in a very high degree an instinct so useful in the desert, was of infantile intelligence, and was regarded in his tribe as mentally inferior.

"Other Saharans and shepherds possess to a variable degree the same faculties of instinctive orientation. It is not so with merchants and horsemen of the oases, who only traverse the desert in caravans. In the evening the Saharans say these: 'You beldi (city-dwellers) there; if you leave the camp, don't lose sight of the fire, if you do, we shall have to look for you!' A current bit of pleasantry is to lead a beldi out of sight of the camp-fire and let him wander about in the night; it is an extraordinary chance if he finds the fire alone. A French beldi, or rather a good peasant, an orderly in an African regiment, who had strayed away in broad daylight, walked here and there, and became so confused that he was found seated on the ground, in despair, only about 400 yards away from the morning's halting-place.

"In the case of the Saharan, it can not be pretended that he is guided by sight or hearing. In the sandy plain... the horizon is often not more than a hundred feet away, be-

cause of the thousands of little sand-heaps about four feet high, formed by accumulation against tufts of grass.

"Mr. Cornetz made the following experiment: He left the bivouac in the company of a Saharan after the halt. The camels remained in camp. After proceeding about an hour, going to and fro and making many turns, he asked his companion to return. The man did so at once without hesitation. There could be no question of seeing or hearing at $1\frac{1}{2}$ to 2 miles' distance. The Saharan did not look at the stars. Whenever asked, he said: 'The camp is over there,' and one could get nothing else out of him.

"A trial made with a chambi, a Saharan Algerian who was traversing this plain for the first time, gave the same result."—Translation made for *The Literary Digest*.

TAKING TIME BY THE FORELOCK.

Proverbs in our day are generally despised, or at best received with non-committal toleration. To use one of these very proverbs, the lessons which are embodied in these homely old sayings "go in at one ear and out at the other." But nevertheless about all the wisdom of the world is boiled down in just such condensed popular saws, and no doubt we would live better lives if we paid more attention to this "tabloid philosophy," as the modern phrase would term it.

"A stitch in time saves nine." Why, in this plain Anglo-Saxon statement of six words is epitomized a whole system of economics, whether applied to personal or family conditions or to the finances of a big corporation or a nation. Sociologists, political economists, and a whole host of other "ists" are racking their poor brains to find out what's the matter with us in this country, but if we may be allowed modestly to tender our diagnosis of the case we will submit that a very large share of the trouble is due to ignorance and neglect of this simple wisdom, that "a stitch in time saves nine." We have a country which is a veritable horn of plenty in the matter of resources; wages here are the highest in the world, luxuries are so common and cheap that our workmen can and do live better than kings lived a few generations ago. Yet everyone complains that he can't live on his income, there is little contentment, and in the midst of plenty we are as a whole a discontented and misanthropic people.

Of course, it's no one single thing that's the matter with us, and it's no one single remedy that will set us right. But there is no doubt that we need to get down closer to first principles. We want more of the stitch-in-time principle applied at every point. Many men will not wear a darned sock (and we mean it in no profane sense); as soon as a hole appears they buy new. If this way of doing things was confined to socks it wouldn't matter much, but it dominates the whole scheme of living—and what wonder that so many find it hard to make ends meet.

The temptation is to let little holes and leaks go. There is a bad shingle on your roof; by sticking a piece

of tin under it you head off trouble at once, whereas by letting it go the trouble increases, the leak becomes serious, and the neglect may mean a ceiling replastered. Going back to the darning and mending question, if people would take pains to repair the little gaps when they were little, there would seldom be any big ones to contend with. The home owner who neglects to paint his house when it needs it, on the ground that he can't afford the expense, is paying nine prices where he needed to pay but one; the fact is he can't afford not to paint the house, for it's the neglect that costs.

The same idea fits in everywhere. The gardener who swears an eternal vendetta against weeds and will not let one show its head in his patch avoids the bulk of the drudgery of gardening. The orchardist who sprays his trees before the pests get a foothold discounts his troubles for cash by about a thousand per cent. The house-mother who brings business methods to bear on domestic problems and is forehanded instead of always behind finds legitimate satisfaction instead of hopeless despair in housework. The parents who see that their boys and girls are started right and that they have no chance to get started wrong are rewarded for their early efforts by children who prove a blessing instead of a curse to them.

Where is there a condition to which this philosophy of the stitch in time will not bring help and solace? We want more sock-ology and less sociology applied to our everyday problems.—The Pathfinder.

WHAT A REAL FARMER CAN DO.

A northern man who has traveled through the eastern central part of South Carolina will not be surprised at a description of one of the ancient farms of that district as it is first given in a bulletin of the Agricultural Department at Washington. He can see the poor corn that yields from five to eight bushels to the acre, the inferior cotton, the gullies and swamp holes, the brush, the tumble-down tenements, the border of pine woods. There are many such farms in the older cultivated regions of the South, and they have a most depressing effect upon the beholder.

But note the change that has been wrought in this very piece of land. After nearly eighty years of continuous cultivation of a sort which closed with the operations of divers thriftless tenants a real farmer appeared upon the scene. He had ideas, practical knowledge of his business, energy, a decent pride in appearances, the determination to succeed and to live well amid pleasant surroundings. The reforms he introduced were the rotation of crops, deep plowing, proper drainage, fertilization, the planting of cotton and grain on the parcels of land that were best suited to them. It would be useless to go into particulars that would have little significance except for other practical farmers. We emphasize only the two important factors of intelligence and industry, and turn to the results.

The total cost of production in 1908 on sixty-six acres of arable land was \$2,855.04. That looks like a large sum of money to add to the capital account after several years of hard work on improvements, but the total receipts were \$6,557.75 and the net value of the crops produced was \$3,702.71, while the net proceeds from the farm came to \$3,862.71. Speaking of the independence of the farmer, of which we hear so much, this shows that our real farmer has secured the real thing. But we have no doubt that in his neighborhood there are still many farms which bear a striking resemblance to his farm in its old state of gen-

eral dilapidation, and there are others in divers parts of the country.

The city man who is thinking of returning to the soil should give due attention to the lesson. He may succeed with cotton, corn, wheat or oranges if he has the qualities of the real farmer. He may pay a very high price for a profitless experience if, after he returns, he is not alert and industrious, intensely interested in and wholly devoted to the new work.—Chicago Record-Herald.

PRODUCING POSSIBILITIES OF OUR FARM LANDS.

From the standpoint of the most reliable and recent investigations and information, our land, handled in accordance with certain natural laws that determine its proper utilization, will not only furnish food and clothing for an immensely greater population for ages, but will supply fuel and light and power when coal and petroleum shall have been exhausted. But we must look to better methods of soil usage, for the alternative of bringing under cultivation unused and abandoned lands and lands reclaimable from arid or swampy conditions, although adding a vast total to our cultivable fields, will not always suffice to meet the growing demand. Already many sections of congested population are calling upon outside sources for food and many of the large cities at times actually suffer from vegetable famine. Such shortages are due to more or less local and abnormal conditions, but might become general and permanent unless wise foresight should make provision for the feeding of our rapidly increasing population.

The producing possibility of our cultivable lands becomes almost inconceivable to the mind when we consider that only a small proportion of the land nominally in farms is actually under cultivation and that our acreage yields are ridiculously low in comparison with those of highly developed agricultural countries like Germany, France, and England, notwithstanding that our soils are naturally as productive.

At the average rate of twenty bushels of wheat per acre (which is much less than the average yield of either Germany or England), the State of Illinois, with a few Indiana counties thrown in for good measure, cultivated exclusively to wheat would produce annually more of this product than does the entire country. If Ohio and Iowa's 76,784 square miles of improved land (Census, 1900), with a 17,658-square-mile-strip of Kansas, should be planted in corn, there would be harvested, with an acreage yield of fifty bushels, 3,022,144,000 bushels, an amount practically equal to the total 1906 corn crop of the United States, Canada, and Mexico.

With the 10,615,644 acres of Georgia's improved land producing a bale of cotton per acre, the yield would amount to nearly as much as the total annual cotton crop of the country; and yet a large part of the 15,776,413 acres of so-called "unimproved farm land" in Georgia can be made to produce as well as the best land in the State, with still a balance of 11,191,943 acres of unclassified land, of which a portion only is irreclaimable to agriculture.—From "Making Better Use of Our Soils," by Hugh Hammond Bennett, in the American Review of Reviews for September.

What He Said.

"Botsford never has much to say."

"Why, I thought he talked a great deal?"

"I said he never has much to say."

BIG ANCIENT ARMIES.

THERE is doubtless a very general impression that in the matter of big armies Russia, Germany, Austria, France, and England have under their colors the biggest bodies of fighting men that the world has ever known. This is a mistake, as may be readily seen when a comparison of the strength of ancient and modern armies is made.

The standing army of the Russian Empire in time of peace consists of 1,036,000 men, while its war strength is 76,564 officers and 4,627,000 men.

While the war strength of Germany is estimated at 70,015 officers and 5,334,094 men, it maintains a standing army of only 594,088 officers and men.

France, with a war strength of 4,695,760 officers and men, maintains a peace army of 613,117 officers and men.

The armies of other nations in time of peace are as follows: Japan, 348,300; Austro-Hungary, 303,660; Great Britain, 270,128; Italy 260,454; Turkey, 217,960.

In the United States the enlisted strength of the regular army is limited by law to 100,000, but this at the present time amounts to only 60,380, to which is to be added a provisional force of about 5,116 officers and men in the Philippines and Porto Rico. Besides these, however, we have an organized militia of 117,144.

So much for the armed strength of modern nations. Now let us compare with these some of the armies of antiquity.

The city of Thebes had a hundred gates, and could send out at each gate 10,000 fighting men and 200 chariots—in all, 1,000,000 men and 2,000 chariots.

The army of Terah, King of Ethiopia, consisted of 1,000,000 men and 300 chariots of war.

Sesostris, King of Egypt, led against his enemies 600,000 men, 24,000 cavalry, and 27 scythe-armed chariots. 1491 B. C.

Hamilcar went from Carthage and landed near Palermo. He had a fleet of 2,000 ships and 3,000 small vessels, and a land force of 300,000 men. At the battle in which he was defeated 150,000 were slain.

A Roman fleet led by Regulus against Carthage consisted of 330 vessels with 140,000 men. The Carthaginian fleet numbered 350 vessels, with 150,000 men.

At the battle of Cannæ there were of the Romans, including allies, 80,000 foot and 6,000 horse; of the Carthaginians, 40,000 foot and 10,000 horse. Of these 70,000 were slain in all and 10,000 taken prisoners—more than half slain.

Hannibal, during his campaign in Italy and Spain, plundered 400 towns and destroyed 300,000 men.

Ninus, the Assyrian King, about 2200 B. C., led against the Bactrians his army consisting of 1,700,000 foot soldiers, 200,000 horse, and 16,000 chariots armed with scythes.

Italy, a little before Hannibal's time, was able to send into the field nearly 1,000,000 men.

A short time after the taking of Babylon the forces of Cyrus consisted of 600,000 foot, 120,000 horse, and 2,000 chariots armed with scythes.

An army of Cambyses, 50,000 strong, was buried in the desert sands of Africa by a south wind.

When Xerxes arrived at Thermopylæ, his land and sea forces amounted to 2,641,610, exclusive of servants, eunuchs, women, sutlers, etc., in all numbering 5,283,220. So say Herodotus, Plutarch, and Isocrates.

The army of Artaxerxes, before the battle of Cunaxa, amounted to about 1,200,000.

Ten thousand horse and 100,000 foot fell on the fatal field of Issus.

The forces of Darius at Arbela numbered more than 1,000,000. The Persians lost 90,000 men in this battle; Alexander about 500 men. So says Diodorus. Other authorities say the Persians in this battle lost 300,000; the Greeks 1,200.

The army of Tamerlane is said to have amounted to 1,600,000, and that of his antagonist, Bajaret, 1,400,000.—*The Scrap Book* (August 1906).

Returning from school the other afternoon little Edith proudly informed her mother that she had learned to "punctuate."

"Well, dear," said mama, "and how is it done?"

"You see, mama," explained Edith, "when you write 'Scat,' you put a hatpin after it, and when you ask a question then you put down a button hook."

Disillusioned.—They were in the thick of their first quarrel.

"I thought your tastes were simple," said the husband. "I didn't expect to find you such a high flier."

"Yes, you did," she answered; "you knew all about my being a high flier, as you call it, but you thought I'd be dirigible!"—*Chicago Tribune*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

FOR SALE—An eight room house. Closets, Cement Cellar, Cistern, Well, Cement Walks, beautiful shade trees, including Evergreens. Barn 18x24—12 foot frame. Other necessary buildings. Three 25 ft. lots facing the S. W. Corner of McPherson, Brethren College Campus.—Address, J. C. Coover, McPherson, Kans., College Hill.

WANTED—1,000 Sisters to send for sample of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Ill.

FOR SALE OR TRADE—I have filed on 80 acres in Eden, Valley, Wyo., which I will relinquish for some one cheap. It don't suit me to see after it. Write me.—D. Hostetler, Chambersburg, Pa.

FOLLOWING we give the Eleventh Report of the Bureau of Agriculture, Labor and Industry of the State of Montana for the year ending Nov. 30, 1908. One of the most substantial Irrigation projects in the State of Montana is located near Big Timber in Sweet Grass County, which will be settled in the very near future by the Church of the Brethren and their friends.

"The Big Timber project consists of 65,000 acres of land near the city of that name in Sweet Grass County. This was also one of the selections under the old commission and there were \$132,000 worth of bonds issued against the project. These bonds have been surrendered and destroyed. Under a new contract 28,500 acres of land have been reclaimed and will soon be placed on the market at \$50.00 an acre. The holdings are on the Yellowstone side of the watershed between that river and the Musselshell River. Eighteen thousand acres are first-class irrigable land suitable for intensive farming. The soil is in places a sandy loam, but mostly a deep fertile clay loam and generally underlaid with a clay-gravel subsoil. The water used for irrigating is absolutely free from alkali, and there is no alkali in the soil except in a few low spots. The lands lie from four to twenty miles from the city of Big Timber, and the same distance from the Northern Pacific Railroad. The climate is good and all kinds of crops mature to perfection in this locality.

"The water supply comes mainly from Sweet Grass-Creek and Government measurements show that there is an abundant and never failing run-off for every acre in the project. The company also owns a large canal and water rights from Big Timber Creek which will be used on lands adjacent to that stream, besides two large and

convenient reservoirs on Otter Creek with a surveyed capacity of 31,000 acre feet of water. Fifty teams and one hundred and twenty-five men have been employed during the past summer on the north side of the river, and a two-mile tunnel is being driven from both ends on the south side. Expenditures for the season will aggregate \$200,000.

"Members of the State Board and others who have visited the site report the work as having been exceptionally well done, the soil deep and fertile and remarkably adapted for easy and thorough irrigation.

"As in all other Carey projects this land and water system will eventually pass into the ownership and management of those who settle upon and pay for it without any further expense than the initial price asked, \$50.00 an acre. This may be paid in installments so that it will be possible to make the land actually pay for itself, aside from the small first payment.

"The proximity of this project to the sugar factory at Billings—81 miles—makes it entirely practicable to raise sugar beets there for that market.

"It is confidently predicted that land under this ditch will meet with ready sale and rapid settlement and that a prosperous community will result."

PRACTICAL HELPS FOR RALLY DAY

NEW CELLULOID BOOKMARK

With the words "Rally Day" lithographed on one side of the bookmark; and with a reproduction of the Conquest and United States flags. These souvenirs may be given to members of the school as a constant reminder of the recipient's duties to and

Actual Size

privileges in the school. Many will use them in the Bible in connection with the daily readings and the study of the lesson. Each bookmark has a double silk cord and tassel. Price, 4 cents each; 40 cents a dozen, or \$3.00 a 100, postpaid.

NEW CELLULOID RALLY DAY BUTTON IN COLORS

1

2

3

Price of either numbers 1, 2 or 3, 20 cents a dozen; or \$1.50 a 100, postpaid.

RALLY DAY INVITATION IN WIRELESS TELEGRAM FORM

Contains a short, crisp, businesslike message, prepared in such a manner as to secure the presence of every teacher or officer, and pupil in addition to the parents and visitors. TELEGRAM FORMS, price, 40 cents a 100, postpaid. SPECIAL TELEGRAM FORM ENVELOPES. Price, 40 cents a 100, postpaid.

NEW CELLULOID FLAG PINS

These pins may be used to stimulate attendance on Rally Day. Distribute them in quantities to all members of the school who will promise to give one to each friend who agrees to attend the Rally Day services, wearing the pins. Organize all those who undertake to give out the pins into two divisions; then see which division succeeds in bringing out the largest number. Let one division use the Conquest flag pins, and the other the United States flag pins.

Price, 30 cents a dozen, or \$2.00 a 100, postpaid.

NEW ILLUSTRATED RALLY DAY INVITATION POST CARDS

For the use of Superintendents and Teachers
Designed to help increasing the attendance

to be sent previous to Rally Day to the members of every class or department, including the CRADLE ROLL AND HOME DEPARTMENT, and especially to those who have been irregular in attendance. Space is provided for filling in the date of Rally Day, and for the signature of the superintendent of any of the various departments, or of the teacher.

ORDER BY FORM AND LETTER.

FORM A. **Post Card**, with the reproduction of the Rally Day bookmark, in colors, containing a printed invitation; but without the name of Teacher or Superintendent, so that either could sign this card.

FORM B. **Post Card**, with the reproduction of Rally Day bookmark in colors. Without any printed matter whatever, so that you can have your own invitation printed on this form.

FORM C. **Plain Card**, same size as forms A and B, but not in Post Card Form. For distribution in the school or by messenger service. With the reproduction of the Rally Day bookmark in colors; containing the printed invitation; but without the

printed name of teacher or superintendent, so that either could sign this card.

FORM D. **Post Card**, Printed in colors, with an original design of an American boy Announcing Rally Day through the megaphone. The wording is brief and to the point; a space is left for the signature of the teacher or superintendent. This would be an excellent card to send to every member of the school, particularly to the Primary, Junior and Intermediate departments.

Price of either Form A, B, C or D, 60 cents a 100; \$2.75 for 500; or \$5.00 a 1,000, postpaid.

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

**Buckeye Pure Home Made
APPLE BUTTER**

Is pronounced by hundreds of our customers, the best they ever ate. It is the product of apples, apple cider and granulated sugar; very appetizing and wholesome. Our Motto: Highest class of goods and a square deal guaranteed to all. Write for circular and special prices.

C. J. MILLER & CO., Smithville, Ohio.

WHITE BOOK By C. D. Meigs. Deals with Teachers' Meeting; (a) Its Vital Importance; (b) Two Plans for Starting it; (c) Five Gilt-Edged Rules for Governing it; (d) A Program for Conducting it. Price, 5 cents.

BRETHREN PUB. HOUSE, Elgin, Ill.

What School?

We can help you decide. Send for catalogue of Elizabethtown College to D. C. Reber, Acting Pres., Elizabethtown, Pa.

CAP GOODS

Our business has almost doubled itself during the last year. We are sending goods by mail to thousands of permanent, satisfied customers throughout the United States. The reason is simple.

Our Goods are Reliable, Our Variety is Large. Our Prices are Low.

All orders filled promptly, post-paid. Satisfaction guaranteed or your money refunded. Send us a sample order and be convinced. Write us for a booklet of unsolicited testimonials and new line of samples, which will be furnished free. Send at once to

B. E. ARNOLD, Elgin, Ill.

CLASS COLLECTION ENVELOPE.

A tough manilla envelope, on which may be recorded the amount of class offering for entire year, with totals for each quarter. Price, each, 2 cents. Price, per dozen, 15 cents.

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

Teacher's Class Book.

A neat folder with blanks for one year. Can be carried in Bible. Very complete yet simple and compact. Price, per dozen, 35 cents.

BRETHREN PUB. HOUSE, Elgin, Ill.

NEFF'S CORNER

I left my business in Clovis in charge of a good foreman recently and went on a tour of investigation. Friends advised that I seek a winter climate better suited to my health. Besides I wanted to find some cheap land in a good climate and another suitable location to establish a missionary colony. There is not a Brethren mission in all the Republic of Mexico, but I have found a good place to start one near Culiacan, the capital of Sinaloa, about 35 miles from the Pacific Coast, a little north of the Tropic of Cancer in the same latitude with Key West, Florida. Here you can buy land with perpetual water right for irrigation, a good rich loam soil about 30 feet deep, for \$25.00 per acre, one fourth down and balance in one, two and three years at 6 per cent interest. You can buy tracts as small as ten acres, which would require a down payment of but \$62.50, and I believe it can be developed at little expense to where it will be worth \$500.00 per acre in three years. I bought 130 acres and had some reserved adjoining mine for a Brethren colony. The location is especially desirable, fronting on the railroad where a station and postoffice are promised as soon as we are ready for them. I want a number of you to buy adjoining me. I expect to locate there in November and everyone who can go with me at that time should write me at once. Literature giving full information sent on request.

REVISED EDITION OF

Ropp's New Commercial Calculator

And Short Cut Arithmetic

THE STANDARD FOR STORE, FARM, BANK OR FACTORY

Pocket Edition.

Greatly improved, enlarged and thoroughly revised.
Contains an entirely new system of unique Tables,
Short Cuts and Up-to-date Methods.

Unquestionably the most complete and comprehensive
Calculator ever published.

Has more than twice the matter, scope and capacity
of Ropp's former editions, of which

Nearly 1,500,000 Copies have been Sold.

The Answer to Your Problem as Quickly as a Watch
Shows the time.

It also explains and simplifies the principles of Arith-
metic, Mechanics and Mensuration.

It will make the study and use of Figures easy and
interesting to both young and old.

It will enable every progressive mind to become an
expert, sure and rapid calculator.

It will prove a boon to all whose education in arith-
metic has been limited or neglected.

48 Cuts Illustrate the Elements of Mechanics and
Mensuration.

It defines about 70 points in "Commercial Law"
which every man and woman should know.

It is especially designed for farmers, mechanics,
business and professional men.

OLIVE BRANCH OF PEACE

AND GOOD WILL TO MEN

Elders S. F. Sanger and D. Hays

An interesting history of what the Brethren and Mennonites endured
during the Civil War period because of their Anti-war principles.

"Upon the whole, the object in publishing this little volume especially
as it relates to the Civil War is threefold: 'First, to give a true and
faithful record of the sufferings and experiences of these Christian People.

"Second, to testify to God's goodness in protecting them.

"Third, to strengthen the faith of Christians who may yet be re-
quired to suffer persecution for the sake of Christ and his Gospel of good
will to men.'"

One of our agents reports: "I took 12 orders for the book in one
hour. It sells on its own merit." **Ask for terms to agents.**

Bound in cloth. Two hundred and thirty-two pages. Back and side
title stamped in gold. Illustrated. Do not fail to order a copy.

Price, postpaid,75 cents

BRETHREN PUBLISHING HOUSE, Elgin, Illinois

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

Bowbells, N. Dak., R. R. 1.

J. A. Weaver.

Ho! for Canada

It is not the purpose of the CO-OPERATIVE COLONIZATION COMPANY to slacken interest in its Colony at EMPIRE, California. This colony is now well under way; colonists are moving in and are well pleased and the work is moving along satisfactorily. But as the policy of this company is,—“CHURCH EXTENSION BY COLONIZATION,” steps are being taken to locate a colony in the Northwest.

After considering the various sections offered for settlement, the Directors at a recent meeting decided to locate

Colony Number Two Near Portage la Prairie, Manitoba, Canada

This location was selected for a number of reasons and considerations:

1. Its situation in the heart of the great wheat Belt of Manitoba.
2. Its rich, alluvial productive soil.
3. Its nearness to good markets,—only 56 miles from Winnipeg.
4. Its good transportation,—four trunk lines intersect at Portage la Prairie.
5. Its favorable climatic conditions, modified by its proximity to Lake Manitoba.
6. The Low price of land, when quality and location is considered. These lands are now ready for settlement, are low in price and will soon be taken.

Join our Colony Number Two, secure a good farm in a prosperous section with good, near-by markets, excellent transportation facilities, where School and Church privileges are assured, and among people with whom you are acquainted. For fuller information, dates of Land Seekers' Excursions, etc., address:

Rare Ranch Bargain

IN ORDER TO CENTER OUR EFFORTS UPON THE DEVELOPMENT OF OUR TOWN OF MIAMI AND IRRIGATED LANDS IN MAIN PORTION OF MIAMI VALLEY, WE HAVE DECIDED TO OFFER FOR SALE OUR FAMOUS OLD RANCH HEADQUARTERS AWAY UNDER THE CURRENT PRICE OF SUCH LANDS IN THIS COUNTRY.

The ranch contains about 750 acres of fine, deep, rich agricultural land—forty acres reservoir water right from Farmers' Development Company mammoth irrigation reservoir, 20 acres alfalfa and natural hay land, about 100 acres in all under cultivation; natural hay land watered from floods and by underflow. A large portion of the balance could be placed under irrigation, but is capable of producing as good crops as any lands in the southwest through the natural rainfall. Entire tract fenced with substantial wire fences; crossed by three streams, one of which is the Rayado River. Abundance of fine water all over the tract for domestic purposes and for stock water. An ideal fancy sheep, cattle, mule or horse ranch.

Good well, large cistern, three substantial residences, large commissary house, two good stables, other out buildings and corrals.

Remember this land is a part of the famous MIAMI VALLEY, which is supplied with first-class church and school privileges, ideal climate, beautiful natural surroundings, the finest of people—in short the ranch is situated in the midst of an ideal home land.

\$11,000.00 FROM QUICK PURCHASER WILL TAKE ENTIRE TRACT WITH ALL IMPROVEMENTS, ONE-HALF CASH, BALANCE TO SUIT PURCHASER.

CATCH SPECIAL EXCURSION TO SPRINGER, NEW MEXICO, SEPTEMBER 21ST OR OCTOBER 5TH, VIA ATCHISON, TOPEKA & SANTA FE RWY.—\$30.00 FROM CHICAGO, \$25.00 FROM KANSAS CITY, \$11.65 FROM DENVER.

Told at Twilight;

Or Bible Stories
That Never Grow
Old

By Elizabeth D. Rosenberger.

This book is written for boys and girls in such an attractive and interesting manner that they will ask you to read and reread it again to them. The author, Sister Elizabeth D. Rosenberger, has represented Aunt Dorothy as gathering the little children around her in the evenings and telling these old stories in such a way that it is bound to create a desire for more Bible knowledge.

The book is beautifully illustrated. 151 pages.

Our Price,25 cents

(Postage extra, 5 cents.)

Paul the Herald of the Cross

By J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. A splendid sidelight to the Sunday-school lessons for 1909.

It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One

cannot read the book without feeling a desire to help in spreading the Gospel.

Our Price,30 cents

(Postage extra, 6 cents.)

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

Read What Prof. Holden of Ames Agricultural College, Ames, Iowa, Has to Say:

"You may say for me that southern Idaho is THE IDEAL PLACE FOR THE YOUNG MAN who is looking to make a start in life. Every acre of irrigable land in this section is worth, in yield or income, three times as much as the best land in Illinois and Iowa. I am for Iowa, but if a man is to move, southern Idaho is the place to go, and for the young man, full of wonderful opportunities.

"The diversity of crops appealed to me as strongly as anything I saw. The irrigation farmer for instance, is not dependent upon any one crop. He doesn't have to wait until the end of the season to get his money because there is something seasonable and saleable at all times during the year. He raises fruit, wheat, alfalfa, oats, vegetables, hogs, cattle, sheep, in fact everything grown in the temperate zone.

"One man told me that he raised 18 bushels of clover seed on one acre of ground during the past year, and I found that the clover seed crop runs 8 to 15 bushels per acre."

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

No. 39.

MY FIRST DAY AS TEACHER

J. G. ROYER

It was at the Spring Creek schoolhouse, in Buffalo Valley, Union County, Pa., on the eleventh day of January, 1854, that I first entered the schoolroom as teacher. In doing so I found forty-two pairs of eyes looking at me, while I had but one pair to return the look of the forty-two. There were present, also, three directors and a Mr. Orwig in whose family I was to have my home while I was teaching at Spring Creek. You would not be surprised to have me tell you that the scene was an embarrassing one to a country boy not yet sixteen. Ten days before I was attending the country school in my home district about four miles across the valley from Spring Creek, not dreaming of teaching school. My attempting to do so came about in the following manner:

To one side of the valley, and partly on the mountain side, there was a school district in which lived a Mr. John Snyder whose son Emanuel was known to be in advance of the other boys of the district in arithmetic. Mr. Snyder and his relatives—who made up nearly half of the district—conceived the idea that it would be but right to keep the public money in their own district. And as Emanuel was ahead in ciphering, and the money would come very handy to the Snyder family, the father suggested to his neighbor relatives that if they would let him and his son have the school, he would go there and keep order and teach the beginners, and Emanuel should instruct the boys in ciphering. A meeting was called and after some discussion and deliberation, John Snyder and his son were elected master and teacher of the Spring Creek school for a term of four months at \$17.00 per month of twenty-four days each.

School opened about the 10th of December, and things went fairly well for a few weeks; but a number of the larger boys found that they could make things unpleasant for Emanuel, and it was not long until they were after him, determined to “tree” him, as they called it, in ciphering. They were not long in

accomplishing their purpose. This led to a second meeting of the patrons, which resulted in requesting Mr. Snyder and son to stop at the close of the first month.

The day following, Mr. Mench, president of the board of directors, came over and spent the afternoon visiting our school. At recess he told our teacher the result of their meeting the night before and asked if he had some one in his school that could teach for them the remaining part of the term. I presume our teacher must have named me, for I was asked to remain when the school was dismissed. After an informal greeting Mr. Mench said: “I have come to get you to teach our school three months.” I replied that I did not think I could do that. “Your teacher thinks you can,” said Mr. Mench, “and I think so too, and we want you to come.” The teacher then made a little speech in which he also urged me to go. After further urging by both of them and hesitation on my part, Mr. Mench suggested that I go to “Dick” Lincoln, two miles up the valley, next morning, be examined, and report the result to him the day following. This I agreed to do and started to go home.

That evening there was considerable discussion in our home. My father feared I should not be able to manage those big boys, and he was quite sure the Snyders and their friends would all be against me. Concerning the Snyder faction he was not mistaken. He thought, too, I would not be likely to get a certificate. My older brothers were decidedly opposed to the undertaking. They based their objections on my lack of years and boyish appearance. My mother believed I would succeed, and was in favor of letting me try the examination to see how I would come out. So next morning I started to find Mr. Lincoln, who, though a graduate of Harvard, was also a practical farmer, quite prominent throughout the valley. For years he had examined and licensed the teachers of that part of the valley. He was not a county official,

and there was no money consideration connected with his examinations. It was before the time of county examiners. The people of that part of the valley looked to Mr. Lincoln to examine their teachers because he was qualified to do it, and because he took a deep interest in their schools.

On arriving at his house I found him reading a newspaper. I told him what I came for, and he asked me where I meant to teach. I told him, and related the experience the Snyders were having, and how Mr. Mench wanted me to come and finish the unexpired part of the term.

After giving me a scrutinizing look, his first question was, "Do you think you can manage those big boys over there?" I answered, "I think I can." He then handed me his paper and requested me to read for him. After reading a paragraph from each of several articles, he placed on the table a copy book in which he had each applicant for examination give a specimen of his handwriting. He requested me to write on the line next to the specimen last given. It was, "Harrisburg is the capitol of Pennsylvania—

Jas. Weirich."

Knowing Mr. Weirich to be an old teacher I felt safe in copying him and I wrote the same words, spelling "capital," "tol," as Mr. Weirich had done. Mr. Lincoln looked at my writing, then kindly pointed out my mistake in spelling, and said, "My boy, you would not have made that mistake if you had not copied Mr. Weirich. You knew better. Never follow another, right or wrong, because he is older than yourself." Again he asked, "Do you think you can manage those big boys?" Again I said, "I believe I can."

He picked up his pen and wrote out a certificate, dated Jan. 4, 1854, certifying that I was qualified to teach the Spring Creek school. Thus began and ended my first examination.

I thanked Mr. Lincoln for the certificate, put it into my pocket, and went away a happy boy, confident that I would be able to line up the Spring Creek boys. I tell you, my friends, it is a wonderful inspiration to a boy like I then was to receive a paper from a graduate of Harvard, certifying that he is qualified to teach school. It was such to me, I assure you.

Next day I reported to my friend Mr. Mench. After looking at the certificate he said, "The Snyders will close on the 10th, and you will be on hand to begin on the 11th. The directors will meet with you and help you start." He also suggested that I call upon a Mr. Orwig who lived near the schoolhouse and engage board. I did so, and found Mr. Orwig willing to give me a home from Monday till Friday for \$5 a month. After Mr. Orwig and I had agreed upon terms for my staying in his home, and I was about to leave, his good wife in a kind and motherly way said, "And do you think you can manage the big boys and girls?

There are a good many of them." The good woman was not mistaken as to the number, for I learned later on, that fully one-third of the pupils were older than their teacher. Her question seemed to be a leading one, yes, *the* leading one in my case. It was the question with my father; Mr. Lincoln put it at the beginning and at the close of his examination; and my good friend, Mrs. Orwig, repeated it. Indeed, as I look back now, I do not wonder that it was the leading question.

On Wednesday morning, January 11, I made my way to Spring Creek. As already stated, I was greeted by forty-two pupils, three directors and my host Mr. Orwig. All eyes were upon me, expecting me to lead off. I shall never forget how much I wished just then, the directors would go home that I might be alone with the school. Presently Mr. Mench got up and went to the door by the side of which was tacked against the wall a large paper containing seventeen rules written in bold round hand. He read the rules to the school, then turning to me, said, "We want you to read these rules to the school each day before you dismiss, both noon and evening, and hold all the boys and girls strictly to them." Then saying to me, "Now, stand up and be a man," they bade me good morning, and went away.

I was alone with the school with all eyes upon me, waiting for something to happen. As for myself, I could not think of what should happen first. My beginning as a teacher was before normal training and books on "How to teach" were common; and all I ever knew about first things done by my teachers, seemed to have left me forever. I could not think of what should be done first. In a moment or two, like a flash, it came to me that the first thing my teachers did was to go from pupil to pupil and register their names. With paper and pencil in hand I started for the upper tier of seats where the big boys and girls were seated. I put my paper on a desk by a tall young man and asked for his name. "Manuel Snyder," spoke he out loud enough to be heard all over the room. With hand as steady as I could just then command, I proceeded to write the name, spelling it as he pronounced it, "Manuel." Before I had finished he spoke out as loud as before, "That's not the way to spell my name." "Oh, yes, Emanuel," said I, as I corrected my mistake. I need not tell you that it was humiliating to the boy teacher to receive his first lesson from yesterday's teacher in that manner. I examined my pencil point a moment, picked up my paper, went to my desk, got my knife and began whittling the point of my pencil. In a few moments I called from my desk for the name of the boy next to Emanuel, and then the next, thus heading off opportunity for further criticism on the part of the big boys at that time.

The enrollment completed, I proceeded to assign

work and hear them "say their lessons," as it was then and there called. Next above the abcdarians, I had a large class in Cobb's Speller. Then came a class in the New Testament, followed by a class in Porter's Rhetorical Reader. One of the girls of about twenty-three had the life of Washington from which she read to me four times a day; and another read Daniel Webster's speeches to me. In those days classes had to have four lessons a day. Patrons expected it—demanded it. I remember of hearing of one teacher whose school had grown very small. Figuring on the basis of four lessons a day, he gave his few pupils eight lessons a day, and attempted to collect pay for two days. Most of the big boys did not read at all. They seemingly cared little for anything outside of writing and ciphering—"practicing figures." There was no classification in arithmetic. Each one for himself pushed to get through the book.

Days, weeks, months, came and went. On the 11th of April, eleven days before I was sixteen I closed my first term of school, and a week later entered school for the summer as a student. The three months' teaching or rather "school-keeping," proved a wakening up to me. I remained in school all summer; taught four months the next winter, and was in school two ("quarters") terms again in the summer. This was kept up six years, after which the teaching term ranged from six to eleven months a year.

Such may be said to be the story of my first day as a teacher—the beginning of a teaching career which closed at Mt. Morris, Ill., May 31, 1904.

Space forbids the noting of lessons I should be glad to give the junior readers of this paper. Suffice it to say that Mr. Mench, my own dear mother, and Mr. Lincoln were helpful, not only in bringing me to the first day as a teacher, but during my first six years they were inspirers of faith in myself and my work. I would not give much for a boy or a girl that can not be waked up and inspired to believe in God, in himself, and in his work.

KEEPING THE "OLD MAN" ON THE FARM.

D. Z. ANGLE.

HARDLY an agricultural paper comes from the press but what it contains an article or some reference as to the best means to "Keep the Boy on the Farm," or how to secure and retain competent farm hands. Subjects they are, too, that are always timely and of interest to farmers. But did you ever see our subject as above stated heading an article? Possible you have, but it isn't so commonly written that way. But it occurs to us that if we could keep the old men on the farm, then their example would serve better than their precepts in keeping the boys on the farm. Boys, you know, are so liable to follow in the footsteps of their

fathers, and if town seems to be the best place for the father, the son argues that he might do better there too. Of course, there are many instances where old men, and boys, too, are justified in leaving the farm, whereby the one secures the more contentment in a more suitable and congenial environment, and the youth may better prepare for and pursue the calling to which he is best adapted. We often observe elderly farmers who own farms, make sale of their farms or sometimes just the accumulated personal property, then buy or build a home in town or city and leave the farm to strangers or to one of the sons.

And sometimes this is for the best, but often for the worse. If a man of small or no income, he soon consumes the savings of years made on the farm, or if he finds employment the work may not last or soon grows distasteful, as a settled daily task often does, then he will hunt another job, possibly with a move thrown in so as to be near his new work or, disgusted with town and its hurries, and countless expenses and demands upon purse and peace of mind, he decides to go to the farm again and buys a new outfit at an added expense above the tools and goods which he had sold, much of which would have proved just as serviceable as the new goods. A few men we have observed like that, who typified the "rolling stone" to perfection, and the moss they gathered was a mighty poor stand.

Some of the real old men who move to town, so their son or son-in-law will have lots of room to farm the place, you may observe on fine days standing around in the streets, or some friendly shopman's store with their hands in their pockets, apparently not knowing what to do with themselves, and their interest in life gone or at a standstill. Had they stayed on the farm amid the scenes of their early trials and triumphs, then they still might keep up interest in life by feeding and watching the pigs, calves, and colts grow. Why not lengthen and enjoy their declining years in the home of a dutiful son or daughter, or if that is not agreeable, and we know many times it is not, could not the old folks as well build another house on the farm as one in town? For on the farm they will find greater peace, quietness and contentment, among the flowers, in the fields, or shady woodland, than in the city with its smoke-laden air, with its bustle and noise and its sin-laden people, where idleness is so liable to breed mischief, and where society is so often so much worse than solitude.

Mt. Vernon, Ill. * * *

WORDS OF GEORGE WASHINGTON.

"My first wish is to see this plague to mankind (war) banished from the earth, and the sons and daughters of this world employed in more pleasing and innocent amusements than in *preparing implements and exercising them for the destruction of mankind.*"

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXXV.—In India, the Strangest Country.

I LANDED in India from a steamer,—landed at the extreme southern point, and began at once to ride my wheel over the bad roads. The heavy rains had washed away the bridges and most of the roads and with the blistering sun beating its fierce wrath upon me, I found travel overland intolerable. No man could have endured it, alone. So, inasmuch as I was now going north and out of the path of my "around the world," which was eastward, I could use the trains and still not impair my bicycle trip.

On the way to Madras I stopped at various cities, studying the queerest of peoples, and the poorest I had seen. Natives stood in their doors or peeped out from the edges, or ran away from me as I rode along on my wheel.

North of Madras I visited the great Telugu Baptist mission field, famous the world around for its wonderful work. Dr. Clough was the chief of the missionaries here, and gave me great pleasure in meeting him. He is one of the few real missionaries, just as Henry Ward Beecher was one of the few real preachers. I found the missionaries here, as elsewhere, worthy of the greatest of appreciation by us at home, but there were a few, only two or three, over the whole country, that seemed to need a little more of the honor of common manhood. One of these had gone to seed. The other had dry rot at the heart. A third, well, he was probably all right. And it may be that the others were all right. It might have been myself that was at fault. For who of us

would live in a country long and keep our normal qualities, where the sun is a curse, where twenty minutes of pure sunshine at noon will kill the average American, where to cross the street bareheaded, on a cloudy day, is to suffer evil consequences and possibly death? All honor to God's messengers of mercy to this dark land! I think I would like the work, and I would go there and work if I thought that God wanted me to do so, but I hope I may have so much work here at home as to take me to India only as a sight-seeing,

lazy tourist, for of all climates I have endured, this one is the most intolerable. You can't think to yourself in the coldest evening, much less think out loud through the heat of the day. Life is so enervating. Every puff of wind pulsates with death. Microbes as deadly as the plague bacillus fill every drink of water.

While stopping here for a few days, a native man walked in from the jungle ten miles away, to be married. He chose

Marriage Ceremony Witnessed by the Writer in India.

his wife after he arrived. Well, he had known of her, slightly, for she went to school in the Baptist college. So when he came into town, with headdress all so pure and clean and white, sixty yards more or less, and white coat and broad sash and six yards of skirt flowing to his ankles, he, together with a big umbrella which he had bought all for the purpose of the marriage, called at the school and asked for his dear Matilda. Though a girl of about eighteen, she looked sixty-five, and was skinny and angular. He was a handsome Hindoo, with black moustache and broad face, and will

make her a splendid husband, for the people here know him very well. Both of them are Christians, have been immersed and therefore baptized, and so that will help to make them well-mated. The girl, proud as they all are in India for jewelry, wore bracelets, fingerlets, anklets, necklets, earlets and noselets. The noselet hung just over her lips and is irremovable, so that when he kisses her, he must *lift up the "latch,"* as the photograph taken by me will show.

Behind them, as a background, were gathered the children and the older girls and matrons of the mission schools at Ongole. The little girl in the center, on the ground between the couple, is picking her nose. The only difference between this child and us is that while she picks her nose when the picture is taken, we pick our nose when we think no one is looking.

That evening, after the wedding ceremony, the new husband took his new wife along back with him into the jungle, afoot, to live there, the Christian life, so far as he had been taught it, by the Baptist people, among his own kind, where he will meet with temptations to fall away from the faith that we know nothing of in our homes.

He will return home to teach the very opposite of what he has been taught by his fathers. These are some of the things he will find being taught by his people all around him:

A wife must eat only after her husband has eaten.

She must never look another man in the face.

That it is a mark of respect for a woman to turn her back to a man.

No matter how debauched and cruel towards her or her children, she must always love and reverence her husband.

She must not study or sing or play games. Only girls living the lives of prostitutes may do that.

Hindoo never kiss, not even a son or mother. Cousins, after long absence, may pull each other by the chin.

In some provinces, if the teeth are cleansed on Tuesday, the sinner so doing will surely go to hell.

When washing the mouth, to spit the water out on the right side is to incur the dreadful penalty of going to hell.

Every Hindoo must bathe at least once each day.

No Brahmin under eighteen years of age should look in the mirror.

In some parts of India fuel is very scarce. Here the women with big pans go about the roads and fields and gather up the droppings from cows. This is then kneaded with straw and other like material into flat cakes about eight inches in diameter, when they are laid out upon the hot, dry ground and left to bake very hard. Then they are piled up and used as needed just as other people use cobs or cord-wood.

At first thought the idea of burning this material seems crude and utterly distasteful. But cow dung in

India is sacred. It is used to purify nearly every house and temple. It is spread all over the floor, and plastered in the doorway, and shaped into steps in front of the door. When this is all done, the housewife believes that she is ready to receive guests. It is exactly the same as if an American woman had scrubbed her floors and porches and sidewalks, or dusted them until they were spotlessly clean. These people put so much faith in the purify-

This Woman Is Preparing the Fuel from Cow Dung.

ing sacredness of this material that when an American or other foreigner or caste than their own enters the house, the women must immediately, on the departure of such stranger, go out and get fresh paint of the same kind and daub it all around over such parts of the house where the intruder walked or laid his hands or sat down. Like everything else that seems strange to a novice, these women are skillful in their use of this offal, and when the foreign visitor once becomes used to the slight odor remaining after a fresh treatment has been thoroughly dried, and has learned how healthy it helps to keep the inmates of the home that would otherwise be overrun by vermin and microbes, he comes to look upon the process as really sensible and partaking of a real spirit of refinement.

A home in India is a sacred place. Chalk marks and characters are written over the threshold and over these chalk marks no one but those belonging to the same caste are ever expected to enter. Each morning as I walked or rode along through the villages I would see the women sweeping out and cleaning up, none of

them considering the job complete until the doorstep had been chalked in white or other colors. Some of these chalkings were very artistic and pleasing to look at, and together with the queer odors of the cooking, smoking and dirty living, combine to make a picture of real oriental life.

ANOTHER AMERICAN PROBLEM

O. H. KIMMEL

In Two Parts. Part Two.

Now the Japanese did not come into the West and get the general ideas of our civilization, and then return home and try to evolutionize a new "yellow" civilization. Not at all. Their own civilization was as good as they wanted, only they desired to add to it the best essentials and arts that centuries of study and experiment had given to the white people of the western world. Hence, when Japan wanted to begin schooling her sons she learned the arts of schooling in America and Europe, and bought our books and apparatus as models, took them home, and from them translated the contents into her own language and had textbooks strictly up to date with the best in the western world. She also manufactured her school apparatus after the models bought in the West, and fitted her schools with the latest and best. When she wanted to manufacture shoes, she came to America, and bought a few of the latest machines, and went home and made her own shoe-making machines. She did the same with plows, with reapers, with all kinds of latest machinery, with guns and ammunition, and with all the improved machinery known to us. Her people were skilful in making these things, because many of them had learned the art of making them in Europe and America. They organized and disciplined an army which was equipped with the latest fighting equipment of the West. They did the same with a navy, so when Russia was ready to fight her, she fought a Mongolian people fully equipped with the arts of the western world, and who had the confidence in their government worked to the key that they were willing to fight to the death that the Emperor might win. As a result, great Russia, the nation of greatest resources in all the world, was soon bowed at the feet of little Japan, suing for peace.

While this war was in progress, the Japanese were busily engaged, of course, in the pursuits of war, but not so busily engaged in this that they could not plan for the future. The representatives of the United States in Japan during this strife with Russia were told that the Japanese government was planning to

return its men from the field at the conclusion of the war and put them to building and manning factories, to building and manning merchant ships, and go into the world seeking market for Japanese-made goods.

Whether they have done this we shall see. An electrical supply manufacturer in an eastern city said recently: "A few years ago an agent of the Japanese government came into my storeroom and bought a few of the finest electrical light fixtures that I manufacture." Within a short time after that event the man noticed that his sales on these special articles were materially decreasing. Inquiry showed that on the market was the very same pattern and model of his fixtures for retail trade at less than half the price that he could make them. Looking farther into the matter he discovered that the fixtures were being made in Japan and sent to the markets of the United States, and that they were made from the original models that the agent of the Japanese government had bought at his store.

An American brush manufacturer sold some brushes to some Japanese in the same way. His trade soon became less and less. On investigation it was learned that the Japanese had begun to extensively supply the demand of the American trade in just the kind of brushes he manufactured. The manufacturer complained that he would have to go out of business. Further investigations followed, and it developed that the clothes brushes used in the vestibules at the national Congress rooms were made in Japan.

An American in Japan was offered a Fairbanks scale of certain quality at fifty per cent of what it costs the factory in this country. Though the name "Fairbanks" was stamped on the beam, and to all appearances it was a perfect Fairbanks scale, investigation showed that it was purely of Japanese manufacture. A typewriter, the exact duplicate of any American \$100 model with the American name stamped on it, may be bought for fifteen dollars. A bicycle like our best machines of American manufacture may be bought for five or six dollars, and they are knocking at our doors with American school textbooks of Jap-

anese manufacture asking to sell them at a good profit at eleven cents a copy.

Japan is doing this now, and the "Portland Peace Conference" is still fresh in our minds. What will she be doing within a few decades? Also, it is being heralded around over the world that China is waking up and that already this great nation that has been slumbering for thousands of years is coming into our ports and selling iron ore that has been dug and smelted in the interior of China, sent thousands of miles to the coast by river, then reloaded and sent away around the world and sold in an American harbor for a dollar a ton less than the cost of production in America, and realizing China a handsome profit. If these nations continue in this trend as they have started, and they engage their countless millions of subjects in this class of labor and trade, we can easily see why the present Congress could see difficulties ahead which would make the future tariff reformers trouble galore.

But, one asks, how can Japan and China do this? How can they manufacture goods so much cheaper than we can in America?

This is easily answered. In the first place Japan pays her laborers only about two dollars a month for their work. A common laborer will work for two cents a day, while the best of skilled labor receives only five or six cents a day. In the second place, Japan recognizes no patent. In our country, many of our machines are not only patented as a whole, but many of the parts are patented, so that the expense of building is considerably more than it otherwise would be. Japan does not look to her people for the originals in the machinery she uses, therefore her citizens are not encouraged by patent rights. So the only cost to the manufacture of these machines in Japan is the bare cost of material and labor. This explains why any machine can be produced in that country for from one-fifth to one-third of the cost of production in this country. Then again the country subsidizes its merchant marine. It also lends money to those of its citizens who desire to build factories, and permits them to pay the money back by the installment plan on the easiest of terms. With this kind of support and encouragement, and with all the precautions of the government that have been put into effect it is plainly seen that the Japanese are given every opportunity and encouragement to excel.

The government of Japan is one of the best organized and most effectual business organizations known to the world. Because of this it has almost unlimited credit, and is able to borrow money at any time that it desires to do so. With this in its favor, its borrowing power largely takes the place of its lack of national resources. And it seems that the government has, under its present wise management, come to realize its true

great powers, and that its developments are truly marvelous. When we think of what it has accomplished within such a short period of time, of what her development has been, I am sure that with us, in comparison, the "ingenuity of the Yankee" will sink into nothingness, for this people are, after only a few short years, with the appropriated arts of the "Yankee" knocking at the doors of the world's commerce and rapidly gaining admission, while we are only looking on, and doing little to prevent it. We stand in our amazement and cry "Yellow Peril," but as the echo of the cry dies out, other subsidized cargoes of their goods are landed at our shores, and they are disposing of them in our markets. The cry will not be effective. The nation is called upon to act, and to act wisely. She must meet the question that is new to her. She must readjust her tariff laws as the occasion demands, and she must do other things that will be necessary to meet this new competition and to meet it fairly. It is not wise to stand still and cry "Yellow Peril" for the yellow race has as undisputed a right to its share of the trade of the world as has the white race. We cannot meet the question in that way, and we should not.

Congress has, in the late session, inaugurated the beginning of a campaign to meet this question by making it legal for the chief executive to have a Congressional Commission whose duty shall be to recommend tariff schedules and tariff changes to the national Congress. It will, however, be necessary for Congress to do other things. The subsidized merchant marine will be necessary to reestablish American commerce on the oceans. The rivers and harbors will have to be deepened, and the great towns along the inland arteries of commerce must be directly exposed to ocean trade.

When this has been done the nation will stand in a favorable light to compete with any nation of the earth for trade. And as we are no longer a consuming nation only, it will be necessary for us to go into the markets of the world with our goods, more and more as the years pass. While we will not be able to meet those nations in price, still we have an advantage that they can never possess. We manufacture a superior article, we manufacture the original and not an infringement, which fact will always retain for us a prestige that those nations cannot attain, so if the time comes when we can go out into the markets directly under our own flag, and in our own merchant ships, then we can meet this competition successfully. At home we will be able to maintain the American standard of wage by being alert to the tariff changes that will be necessary to maintain this wage.

So it is essential that we realize now that the old things have passed away and that new ones greater in their scope have been ushered in to take their places. We cannot live longer under the traditional old policies

and maintain our standard in the world. The new decade in the history of the world is upon us. Tomorrow the great ocean of commerce will not be the Atlantic, but the Pacific. And on the dawn of tomorrow, imagine the United States, with its great Panama Canal, and its almost continuous stretch of Pacific coast from the Panama Canal to the last of the Aleutian Islands—around two sides of this great ocean—I say imagine the United States under these conditions as she is today, without a merchant marine. Then who shall seize the trade of that ocean? The United States controls the American side of the ocean, and Japan the Oriental side. America cannot compete without the support given her merchant men that the Japanese government gives to hers. No nation is able to compete for the ocean transportation trade without the support of the government, so it will be necessary for our nation to give this support.

This condition has come upon us and upon the world so suddenly that old methods of delay and slumber will have to give way to action in order to meet the condition. It is since the death of the late martyr President, Wm. McKinley, that Japanese statesmen have told American statesmen that they felt the stigma of having their labors restricted in America, and that soon they would invade this country, and other countries, not only with laborers who would work cheaper than the American, but that they would make the goods that our laborers make and sell it in our markets at a price that would net them a fair profit from the Japanese wage scale standpoint, and in that way would be able to be independent of America or any nation that is unfriendly to Japanese labor. That they would go into the markets with the goods simply as a business in friendly competition, and ask their share of the world's trade. This statement was given out less than a dozen years ago, and now they are in the markets, and are figuring strongly in competition.

This is the problem that the American people must meet. This is the problem that has made the tariff question a greater question than it has ever before been, and it is the problem that will take the question out of politics. It is the problem that will help bring the extreme protectionist and the extreme "free trader" together. It is the problem that will minimize the powers of the "interests" over our national legislature, and bring the representatives back to their work for which they are chosen,—the interests of the people at large.

That the present Congress did not grapple so extensively with this greater phase of the question is a certainty, yet it has come to the realization that in the future it must grapple with it. It has given power to the commission which will go to work on this and all other problems that this perplexing question will bring forth. It is needless to speak of party rule or power

in connection with this problem because, if the party that is now in the saddle fails to look after the interests of the people, it will be wrested from its throne by those who gave it power, and the people will be represented by those who will look after their welfare without regard for party affiliation.

This is a great problem, and it is far reaching. It means that the American standard of manufacture and wage must be maintained, that the American earner must be taken care of, and that the American home must remain secure. It is a problem of trade and commerce which is thrust upon us in the transcendence of affairs, when the balance of trade is slipping from the Atlantic to the Pacific, where we, because of our location, geographically, hold a great key to the situation. It is the question that the awakening of the "Little Men of the Orient" has brought to us by their sudden awakening. The situation is new and must be met from a new premise. It presents difficulties that must be met from the new base of view which must attract the attention and unprejudiced consideration of our thinking representatives in Congress for many a day. In the attempt at its solution we must not underestimate the "yellow race" nor the "Jap," for an underestimation of them will mean disaster. It means a true apprehension of the facts and a brave stand for the interests of the nation. It means that the National Congress must not "cater" to special interests nor waver in any of its functions and that it must act with zeal and willingness and promptness. It means that this nation must either remain supreme in its traditional stand for the American standard or it must sink in the new sea of perplexities that the new questions of the world are heaping upon us.

THE BEAUTIFUL.

W. ARTHUR CABLE.

Lift your heads, ye earthborn creatures!
 Let your gaze observant be!
 Cast alert your glance about you,
 That rare beauties you may see!
 Hark you now! Give ear intently!
 Heed some grand, soul-thrilling sound!
 List, as soft, and sweet, and low,
 Gentle tones in air abound!

Now perceive the richly laden
 Breezes from yon nature knoll
 Waft its sweet aroma o'er you,
 Permeate your passive soul.

Cleansed is your heart from rudeness;
 Pure and happy is your mind,
 As your soul drinks in the richness
 Of God's clear, absolvent wine.

Turn your gaze with me to eastward
 As the night fast wanes away,
 And the blind, enshrouding darkness
 Fast veers into light of day;
 As a glorious, golden pavement

Swells across the eastern sky,
And the sun, his great disc blazing,
Mounts his chariot up on high.
Or again, while shades of evening
Hover 'round at his behest,
Note the purple veil close round the
Sanctuary of his rest;
The soft, hazy blue that fills the
Depth of distance with its bloom,
And the flush that creeps o'er mountain,
Feebly struggling to illume.

Our beings are transported
By a magic, artful hand,
And we stroll in Nature's garden
Of Utopia for man:
The lovely earth is vested
In a robe of gorgeous green;
O'er stump, and rock, and footlog,
With woodbines twined between,
Creep mosses soft and varied,
While tendrils to them cling;
As, stretching o'er, great, giant
Boughs a sure protection fling.
Osiris turns his glaring eye
Full on the foliage deep,
Which, quaking under constant gloat,
His gleams in shadows peep.
The carol of a tinkling brook
Gives music soft and clear;
The sky's serene, eternal blue
Tells us that God is near;
His breath plays gently on a cheek,
It soothes a fevered brain,
It sounds forth on the faint heart's strings
A dulcet, warbling strain.

"The heavens declare the glory of God,
And the earth his handiwork showeth."

From the source of all creation,
By a Maker's will divine,
Towering high above all forms else,
Man was fashioned superfine;
As a sage of fair creation
By divine intent is he,
To him worthy talents given,
Many will requirements be.

We behold a noble figure
As he gallantly responds,
With cavalier-like tread advances,
Semblance of a fairy's wand;
Through the windows of his spirit
Gleams a light of high resolve;
In the hand-grasp that next greets you,
Fervency of mind involve.

Lo! A modest female figure
Now appears,—a lady fair;
Graceful is her every movement,
Dignity her manners bear;
Eyes reveal pure, wholesome living,
Features delicate and fine,
And the noble, heaving bosom,
Halos precious her enshrine.

Each is perfectly conversant
With the lore of every age:
With the beauty of the Grecian
Art, the scientific sage,

With religious reformations,
With the world's choicest and best
Literary erudition,
Of our present era blest
By our great inventive genius;
And the vast untrodden ground
Beckons temptingly to searchers
After truth and wisdom sound.

Yet the true, decorous models
Yield a better, grander part
Than all learning can accomplish,
Or all culture can impart:
For the music of their souls peals
Forth in accents pure and true,
Its strains are sweet and joyous,
And melodious its tunes;
It peals forth to the needy
A tune of speedy aid,
It mans the weak with vigor,
And strengthens the dismayed;
The entrancing spell and magic
Of the charm cast by the strain,
Changes many a jealous onslaught
To a pure and chaste refrain.

Once your hands are cleansed from vileness,
Once your feet on true paths urged,
Once your tongue is freed from venom,
Once your heart from sin is purged,—

Lift your heads. Ye earth-born creatures!
Let your gaze observant be,
As your spirit leaps within you,
And a purer world you see,
Clothed in a celestial beauty
Pure and spotless, undefiled,
Lily-white, with all intactness,
Fitly genial and mild.
Whispers back a small and still voice
To your richly feasting soul—
"Seest thou the chaste Creator
In the things thou dost extol?"

Yea, his visage forms a halo
Round the hushed and quiet spot
Where we steal to muse a moment
On the grandness of our lot;
From the grass's silken finish,
From the dainty, modest flower,
Peeps and peers an Eye of magic,
Is dispatched a Kingly Power.

On the freshness of the breezes,
And the rippling of the brooks,
Comes a whisper and a quiver,
Luring one to tranquil nooks.

From the depths of a meek spirit
Beams he forth serene and bright,
Reveals matchless love and favor,
Leads from darkness into Light.

Grandeur than all gorgeous service
Here below, more beauteous far,
Are the tidings wafted to us
On the breezes from afar:

"In the beauty of the lilies
Christ was born across the sea,
With a glory in his bosom,
That transfigures you and me."

NATURE STUDIES

SEPTEMBER'S LATER GIFTS.

M. E. S. CHARLES.

NATURE, the greatest of all painters, holds back her masterpiece until the last. Throughout the summer we have seen one beautiful flower after another until it requires something really extraordinary to attract our attention, and once more we see a most gorgeous display. An American autumn landscape with its goldenrod and asters is one of the wonders of the world.

If the goldenrod were a rare foreign plant, it would quickly become a popular flower. But it is not one whit less beautiful because it is common. Go out in the fields and pick a spray, examine it carefully, and then ask yourself if you know any garden plant so truly beautiful as this wonderful flower of gold. This plant makes a pretty screen for hiding unsightly objects. I am not usually in favor of uprooting our wild flowers, but as we have some eighty-five or more species of goldenrod, and as the plants fairly carpet the earth in autumn, the few bunches taken for hedges will never be missed.

There is greater variety in the one hundred and fifty species of wild asters than there is in the goldenrods. Our native asters are distinctively flowers of autumn. They do not begin blooming until mid-September, and, as late as December 1, can often be found in some protected nook, one of the last wild flowers of the dying year. The asters vary in color from a pure white to a deep blue, while one of the tallest species is a deep purple, but none are red or yellow. Our sunflowers and goldenrods furnish sufficient of the latter color; while the scarlet leaves of the maple, black gum and dogwood, together with many of our wild fruits, paint amply red the autumn landscape. The more common sorts of asters line the roadsides, fill the fence rows and flourish in the open woods. The tall purple aster varies in color, some specimens being a clear pink. The small white one with its full center of bright yellow stamens, is the most common in this part of the country. The still smaller and more delicate blue aster nestles in the hedgerows or blooms in the shadow of the open woods. The asters, too, we may pick or transplant without fear of extinction.

But there are two autumn flowers which we should carefully guard from being plucked out of existence.

These are the fringed and closed gentians. So very beautiful are these flowers that the temptation to pick them is natural enough; but when we learn that they are rapidly becoming rare, we who love the flowers should take the chance to prove our love not only by staying our own hands, but by persuading others to do the same.

Poets love the gentians, but they differ as to the color of the flowers. Bryant says:

"Blue, blue, as if the sky let fall
A flower from its cerulean wall."

And another says:

"There came a purple creature
Which ravished all the hill."

These two poets were writing of the fringed gentian. The color, to me, seems to be that of a very blue sky. And I have never found it growing anywhere except in wet meadows and swamps. It is perhaps the one flower that seems to be too beautiful for its surroundings. Its deep fringes, from which it takes its name, look as if they might have been made with a pair of sharp scissors.

The closed or bottle gentian also grows in moist soil. It is of a wonderful deep blue color, and as its name implies, it is closed at the end, suggesting a bud which is about to open rather than a flower in full bloom. It is amusing to watch a bumblebee when he goes to suck the nectar from a closed gentian. No other insect but he seems strong enough to break in: he alights on a flower, works away with his tongue until he forces an opening at the point where the five lobes of the flower overlap each other, and then in goes his head and most of his body. But he isn't foolish enough to go quite inside; he seems to know that if he did the valve would close on him and he would be a prisoner. When he has secured the nectar he backs out, assisted by his hind legs, which were left on the outside perhaps for this very purpose.

In the same wet meadows where we find the gentians we are apt to come across the grass-of-Parnassus, with its creamy, green-veined flowers perched on top of a tall, slender stem, which is clasped by a single little, heart-shaped leaf. Here, too, we may find the last orchid of the year, the lady's-tresses, with their little white flowers growing around the stem in a

spiral. These plants, however, are not confined to wet places, but may be found growing on hillsides far from water. The curious turtle-head will often be found as a companion to the gentians and grass-of-Parnassus. This plant is aptly named. When a bee is forcing his way into a flower the lips of the latter move up and down, and the insect looks as if it were being chewed up.

Of course the grandeur of the autumn flowers can only be appreciated by daylight, but still it is most interesting to go out and see them all on a moonlight night. Go out into the fields, where the crickets are chirping in the grass, and see the goldenrod with the dew upon it. And note the purple asters, their broad heads covered with glistening spiders' webs. Go also to the open woods when the moonlight falls on the delicate blue asters and upon the pale evening primroses, whose flowers attract the fairy-like pink moths you may see hovering about them. You may get your feet wet, but you will see beauty which exists only for those who go out when most people are in bed. Surely the reward is worth the price you pay.

PRINCIPLES OF AGRICULTURE.

JOHN H. NOWLAN.

Chapter VI. Seeds—Vitality and Purity.

IN planting any crop great care should be exercised in the selection of seed. It makes no difference whether you grow your own seeds or purchase them of a dealer, you should keep two things in view—purity and vitality.

Seed should be pure. Often we find barley mixed with oats, cheat or rye with wheat, and red rice with rice; to say nothing about the weed seeds, as ragweed in oats, and buckhorn or dodder in clover.

While some of these impurities make but little if any difference in the market price, on the other hand others are a source of great loss. If the dealer purchases such seeds at all it will be at such a price as will enable him to remove the impurities and still not increase the cost of pure seed.

Though the seed may be pure it may lack the power to grow. The only way to learn this is by testing.

Vitality is usually expressed in per cents. If eighty seeds in one hundred sprout the vitality is said to be eighty per cent.

Many things will affect the vitality of seeds. The stage of ripeness, dampness or dryness of the place where kept, heat and cold, and the age of the seeds all affect the vitality.

In most cases the power to germinate diminishes with age, and in the case of cultivated plants the term of life is usually short. Parsnips are said to be practically dead in one year, while radishes may live five years and cucumbers ten or more.

The seeds of some trees will not germinate after they once become dry, while some others, if sealed and kept from the air, preserve their vitality almost indefinitely. I have read that peas that were buried with a mummy for 3,000 years grew when planted. Generally the period of germination lengthens with age.

A farmer can readily test samples of the seeds he wishes to plant, and in the case of corn he can test each ear, and reject any that show signs of weakness.

The best place to select seed is in the field while the crop is growing. A typical plant may be kept in view and those selected that nearest fill the requirements. For example, suppose we wish to select corn.

Choose strains suited to the locality. Continued growing of the same strain on the same or similar land does not cause the seed to deteriorate, but actually improves it if proper care is taken. Like animals seeds must be acclimated.

Characteristics of plants are transmitted just as surely as those of animals. Seed should therefore be selected from standing stalks in order that the desired characteristics may be fixed.

The stalk should have a good root system, thick base, be free from suckers, taper toward the top, and not too tall. It should be free from disease and the ear attached by an ear stalk not too long. The ear should be cylindrical with the tip completely filled and the rows of kernels should extend in regular rows over the butt, leaving a deep impression when the shank is removed. The kernels should be long and wedge-shaped. These will fit on the cob without loss of space. The germ should be large, smooth, and unshrunk. If the cob be large the ear may not dry readily.

If the ears are selected only from stalks bearing two ears this may become a fixed habit and the yield of the field be much increased.

The seed thus chosen may be planted in a small plat by themselves. Select seed for your entire field from this plat next year, and save the very best for your breeding plat and so continue from year to year.

In almost every neighborhood there is at least one man who is noted for the production of a better grade of crops than the average and his grain is in demand for seed. Make up your mind to be that man.

Watch carefully for weed seeds. Not only are our common weeds often present in great numbers, in the seed we sow, but in the case of imported seeds, we may introduce a new noxious weed. Some of these weed seeds are so like the seeds among which they are found that they are very difficult to detect.

Farmers' Bulletins.

THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

WE urge a wide reading of the article, "Keeping the 'Old Man' on the Farm," which appears in this issue. It contains a thought that we dare not pass by when we are considering the important question of keeping the boys and girls on the farm. If the farm is the best place to rear boys and girls and to spend the active years of one's life, what is to hinder it from giving the greatest happiness and contentment to the old people whose interests are bound up in it?

✽

ON the first page appears the second article on the reminiscences of a veteran schoolteacher. This author's fifty years of experience in the schoolroom have only served to keep fresh in his memory the experiences of the first day spent as a teacher, and he has given us a very interesting account of it. We hope to give our readers at least one more of these articles on early experiences in schoolteaching; we would be glad to have several, as there are to be found in them not only glimpses of the conditions of other times, but inspiring lessons in courage and perseverance.

✽

ACCORDING to previous plans, President Taft visited Chicago Sept. 16 and began in that city his tour through the West during which he has engagements to make at least fifty-four speeches. The cartoonists have been making a good deal of this speech-making because of the difficulty the speaker may have in explaining some features of the tariff bill satisfactorily. However, if the visit to Chicago is in any way a forecaster of the remainder of the tour, it is not likely that any one will have a chance to enjoy the anticipated "fun." The Taft smile and the optimism it represents may be able to dissipate all the unpleasant things that shrewd diplomacy cannot avoid. The enthusiastic meeting in Chicago seems to promise a continuous ovation from the crowds and well-accepted speeches

from the President. Even if the people do not agree with all that is said, at least their patriotism will lead them to make the President glad that he came among them.

✽ ✽ ✽

"THE SCULPTURED FIGURES OF SOCIETY."

THE following quoted paragraphs appeared under the above heading in the *Cosmopolitan* of June, 1907. They were handed to us by a friend of the INGLENOOK who knows that we desire material of this kind for our readers,—something that will lead them to think and act along right lines, and to estimate things at their true value:

"Over the doorway of one of New York's skyscraping office-buildings four great sculptured figures are posed in crouching attitudes. With bowed heads, tense features, and muscles strained like whipcords they seem to carry on their broad shoulders the terrific weight of twenty or more stories of masonry. Theirs is really only a pose, the pretense of the strenuous. They are really supporting no weight; they were put in after the building was completed; they could be removed without affecting its safety in the slightest. They have no more real responsibility than a wandering fly, tarrying a moment on the flagpole on the roof.

"There are thousands of these sculptured figures in the world today—men whose pretense is measured in tons and whose performance is counted in ounces. It is the colossal effort to seem rather than to be, the heroic never-ending attempt to appear important.

"There are men who always seek to impress you with the idea that they are terrifically busy; if they receive three letters in a week they assure you they are 'deluged' with correspondence; their social engagements are 'positively tiresome'; prominent men of the day they refer to by their first names to show how close is their association with the great. These men are constantly polishing their halos, hypnotizing themselves into believing in their own importance. They assume the airs of an automobile life on a bicycle income.

"Another type of the sculptured figure is the man who poses as an intellectual Atlas holding up the firmament of thought. All the great problems of life that have baffled the sages for years are as luminant to him as an electric light sign on a dark street. He has read, perhaps, partially through one volume of Spencer, Darwin, or Huxley, and talks elaborately, with a heavy, orotund voice of finality, on evolution. Every weak spot in religion is known to him, and where he cannot find a leak he makes one. Though he has never accomplished anything in life, he feels absolutely sure that he could run this mighty government of ours and bring justice in on schedule time on every issue.

"The man who talks as if the whole responsibility

of a great business rests on him and who keeps people waiting in his outer office while he idly turns over the pages of the morning paper and performs similar petty artifices to intensify his importance is not the real brains of the business. If he were he would have no time for parade. The real inspiration is hidden away in some quiet office, known to but few, and saying little but doing much.

"True importance is always simple. The large duties, cares, and responsibilities of the men who do great things give them natural dignity and ease. They have the simple grace of the burden-bearers of India, who carry heavy loads on their heads and in the carrying learn how to carry them erect with fearless step. There is in them no trace of the pose of the strenuous. Men of real importance think too much of their work to think much of themselves. Their great interest, enthusiasm, and absorption in their world of effort eclipse all pettiness. They are 'living their life, not playing a part. They are burning incense at the shrine of a great purpose, not to their own vanity. They ever have poise—not pose."

The reader will call to mind persons with whom he has come in contact who exactly fill the descriptions given above. In some cases the posing is not so exaggerated, or the poser condescends to do a part of the real work, but in almost every line of endeavor,—in church, in business, in science,—this character is found. He is a person of only average ability with the exception that his faculty for posing or pretending is abnormally developed. No work is worth doing if there is not an audience present that can be deeply impressed with the importance of the worker.

Are we merely posing, or are we so lost in our work that we never give a thought to what the world may say or think of it or of us?

THE WEARING OF THE DEAD.

THE corpses of birds, or the parts that tell the tale of their slaughter, on women's headgear should be repellant to all normal and healthy minds. The suggestion of death for the purpose of adornment is as uncivilized as the display of scalps by the people who originally occupied this country. The ostrich feather and the plume de coq can be obtained without injury to the birds, or at least without slaughter for the purpose of robbing them of their plumage. But the sacrifice of animal life in response to an insatiate demand does not stop at the hats. According to the latest announcement it extends to the hat pins. An Illinois metallic reproduction company has started the enterprise of metallizing horned toads for this purpose, after first chloroforming them. The experiment is being made with 2,000, and if it is successful will probably be extended to many thousands, perhaps to millions. It relieves the prospect somewhat, perhaps, to know that

a horned toad is not a toad at all but a lizard of the iguanidae family, and of less benefit than the honest, harmless and industrious little reptile whose name it borrows. The genuine toad is of hardly less value to the horticulturist than the insect-eating bird. But even dead lizards or any other dead things that represent the restless exploitation of fashion show the demoralization that has overtaken its standards.—*Boston Transcript*.

TWO VIEWS.

Ti'ed ob de cabin wah de chiluns play,
Sick ob seein' nuffin all de liblong day,
Nuffin' 'cept de co'n-fiel' whah you' come an' go
In the blazin' sunshine, hoein' ob de row.
Weary ob de mock bird callin' frum de tree,
Longin' fer a suppin dat yo' nevah see;
Weary ob de ol' mule, weary ob de plow,
Wonderin' why de Lord made poo' folks anyhow—
Sick ob daily drudgin' wishin' fer to roam
Hyar an' dar, anywhah, anywhah but home.
Tinkin' ob de wide worl', longin' ebery day,
Plannin' an' a-schemin' fer to git away—
Watchin' ob de ol' sun snailin' fru de sky,
Nuffin seems to please yo' while de days go by.
Jes' a life ob longin' fer de busy whirl!
Out ob de stagnation, out into de worl'
Whah de folks am happy all de liblong day,
Den de longin' takes yo' an' yo' breaks away.

* * * * *

Out into de great worl'—Whut a worl' we see!
No one keers fer no one, dat am whut it be—
Nuffin' 'cept his own self does de great worl' know,
Dat am how he's acted since de long ago.
"Do de great worl' lub yo'?" Doan yo' tink it, chile;
Dis hyar worl' am busy, busy all de while;
Dat am why I'm longin', wishin' ebery day,
Longin' fer de cabin whah de chiluns play,
Longin' fer de mock bird callin' frum de tree,
Wishin' fer a suppin dat I nevah see—
Longin' fer de ol' mule, longin' fer de plow,
Wonderin' why the Lord made wanderers anyhow—
Ti'ed ob de great worl', longin' fer to roam
Hyar an' dar, anywhah, anywhah toward home.

THE HOME WORLD

THE MAN IN OVERALLS

HATTIE PRESTON RIDER

MRS. CURTIS got up, laying her sewing in a white heap in the nearest chair, as there came a vigorous rap at the side door. A man in rough working clothes stood on the step. He touched his cap, though a trifle awkwardly, as she bade him good afternoon.

"May I use you 'phone, please, lady?" he inquired, briskly.

"Certainly," Mrs. Curtis answered, in the pleasant tone that always makes a stranger feel like an old friend. She stepped aside without an instant's hesitation to let him pass, indicating the location of the instrument in the next room. The man did his errand, some questions and orders addressed to the office of his employers, and concerning his work on a near-by building in process of erection. Then he left, after hearty acknowledgment of the favor done him; and Mrs. Curtis went back to her sewing and her friend.

"Do you let entire strangers into your house like that?" queried the latter in astonishment. "Why, he may be a burglar or a footpad or a cutthroat! You never even saw him before, did you?"

Mrs. Curtis laughed.

"Footpads are an outgrowth," she corrected. "What a funny idea! I never thought of being afraid. Besides, burglars and cutthroats do not wear the badge he did."

"Badge?" echoed the visitor; "I did not see anything of that sort on him, and I looked him over pretty thoroughly, through the open door. What was it like?"

Mrs. Curtis laughed again.

"If you ever would observe below the surface, Nettie Chase," she said, "you would save your friends a great deal of explaining. Why, reliability was written all over that man's clothing, to say nothing of his face. He had not one badge, really, but a score of them. In the first place, light-fingered people do not go around dressed up in jumper and overalls stained with lime or machine-oil. Neither do they have a memorandum book and stubby pencil sticking out of

their breast pocket, or a streak of grime decorating nose and cheek. But, my dear unreasoning woman, there is something even more dependable than dress, in judging the honesty of a stranger; it is the *personal atmosphere of self-respect*, of being about some legitimate business, a sort of *aura*, as the students of psychology would say. The tramp and the sneak-thief do not carry it; they are loth even to look you in the face. The workingman's glance is as convincing of his honest purpose as is the dog-eared memorandum or the stubby pencil he carries."

"Lots of cheats that come to the door seem nice and honest though," Mrs. Chase demurred. "A real pleasant-looking man stopped at my house once, trying to sell some patent medicine, and the next week he was arrested for burglary over in Hancock. Dozens of women identified him. I'm sure he had a businesslike way, as far as that goes."

"No doubt," Mrs. Curtis answered, quickly, "and there is just the point. He was *putting on* the businesslike air, for a purpose, trying to *make* you believe in him, and to convince you that you wished to buy what in truth you did not care for. It was a purely external and artificial atmosphere, not an *aura* at all. An honest man brings wares or service that you really do want, and so he does not need to 'talk you blind,' as some people say. Of course there are a great many honest agents, and it is perfectly proper that they should go about the country disposing of their wares. Yet I should be very unwilling to let a smooth-tongued, well-dressed stranger into my house on such a pretext as using my telephone. I think it would be infinitely wiser to refer him to the nearest public instrument. For the man we trust, whose word we take and on whose sincerity we rely, say what we will, there is no one like the plain, honest, everyday worker in shop, store, office, or on the farm. The jumper and overalls, the soiled or inkstained fingers, do not fit in with schemes of fraud and dishonesty; none of us need fear to trust their owners."

And she was right. The man who works, looks one squarely in the face. He is not afraid to have his business or his errand investigated, and his appearance proclaims that willingness. He knows that the respect of the whole world is his by right, a king who possesses his crown unchallenged by nature or God, since he has *earned it*.

In like manner, we all display our characters in our look and bearing. Did you ever watch a child asking some information among a crowd of strangers? He chooses almost unerringly the man or woman whom the granting of a favor does not "bother." A good-natured person is as easy to select from a miscellaneous company as a ripe strawberry from a box of green gooseberries.

Likewise, there is many a self-righteous hypocrite who tells his white fibs and then, after the fashion of the silly ostrich which fancies itself safe from danger when its head is hidden in the sand, shuts sanctimonious eyes and so imagines that all mankind see him as he wishes to be seen. But he deceives only himself. After all, the world takes us for just about our par value. If we are frauds, we are very sure to be found out sooner or later; if we are *worth something* to the world, we are equally certain to become known to that same world and respected as such. The man who is trustworthy may safely count upon *being trusted*.

WHERE'S MOTHER?

Bursting in from school or play,
This is what the children say;
Trooping, crowding, big or small,
On the threshold, in the hall,
Joining in the constant cry,
Ever as the days go by—
"Where's mother?"

From the weary bed of pain
This same question comes again:
From the boy with sparkling eyes,
Bearing home his earliest prize:
From the bronzed and bearded son
Perils past and honors won—
"Where's mother?"

Mother with untiring hands
At the post of duty stands:
Patient, seeking not her own,
Anxious for the good alone
Of the children as they cry,
Ever as the days go by—
"Where's mother?"

—Selected.

A GENTLE HINT TO HUSBANDS.

AN intelligent woman recently remarked in our presence that the situation of men and women is very different; that a man finds his life in business, out in the world, where he comes in touch with a thousand things that interest him; that a woman must find her

life in the home, busying herself about making the home good and sweet, seeing that the meals are wholesome and inviting, seeing that the children are sweet and tidy when papa comes home. "Now," said this woman, "suppose the husband never says a word to the wife indicating his appreciation of what she does to make his home good and sweet and restful? She has invested her all in that one enterprise, and has—lost it! How can she be other than an unhappy woman?"

It is more than worth while to consider this sentiment. No man has a right to marry a woman and then crucify her upon a cross of indifference to the needs of her nature. It is the first duty of every good woman to make a home for her husband and children, to make it sweet as she can, to make it a refuge from a rough and often heartless world, into which her husband can come and be at rest. The husband is often worn and weary and buffeted, has been severely tried, maybe has been misjudged, has been jostled, and at times even hustled by the outside world. Happy for him if he knows that when he gets home he will there find love and confidence and rest. If he so finds his home, he will recover there from all the shocks that the rough world has given him, and will go out again on the morrow to face his tasks with new strength and with a new courage in his heart. If he finds it otherwise, if complaining and whimpering meet him at the door, if fussing and growling among the children or between the mother and the children or between himself and the mother be his portion, he will be a Samson shorn of his strength, a spiritless and a hopeless man amid the tasks of his life; his life must be for him one long tempestuous voyage, with no sheltering haven anywhere. It will be no wonder if he fails in all the higher ends of life; it will be no wonder if he goes wrong in life, goes to pieces.

But suppose a man comes home and settles down somewhere, with no recognition of the efforts of his wife to make a sweet home? She has made it as tidy as she could; she has the children looking as sweet as she can; she has a nice evening meal, as good as their circumstances will allow; and has put her life into her home that day. She also is weary, has been vexed in many petty ways; but she makes no complaint; she meets her husband with a smile and a welcome; he shows no sign of appreciation for her efforts, utters no word of cheer. What will the like of this do for the life of a woman? And how much of a man is that husband, who, having vowed at the altar of God to love and cherish his wife, will now crush out of her heart all of its sweetness and light and doom her to a living tomb?

It were well for both husbands and wives to remember that neither can be independent of the other. They are married; they are one, not in mere theory and

assertion of the Scriptures; but they are, as a matter of fact and verity, two lives merged into one life; and they cannot make it otherwise, even by being divorced. So it is for the most part. Therefore they ought not to try to be independent of one another. Seeing that they will ever be thrown back upon one another for their happiness and for all that is highest in the life of each, let them learn to lean upon each other, to look to one another for support and confidence and strength. Let them be heart-to-heart friends; many a husband and wife are not friends, many who get on peacefully and without jars. But let them be friends. Friends trust one another, lean upon one another, confide in one another, love and support one another.—*The Western Methodist.*

TRAINING CHILDREN TO REFINEMENT.

I CANNOT insist too strongly upon the necessity of refinement in all dealings with the child. Even refined mothers and good nurses are too prone to disregard the personal reserve which is usually strong in the children of educated parents. This feeling, on the contrary, should be carefully cherished, and trained to control the expression and gestures of the little child. I am far, however, from wishing to make it prudish; we need not lead it to think the beauty of its little body something disgraceful, because it is the custom in civilized communities to wear clothes; but it is right for the adults surrounding it, and for the little one itself, that it should be trained in all ways of personal decorum and perfect modesty.

The same refined watchfulness should be exercised over the child's eating. When it begins to take food, it should be taught to wait patiently for its bread and milk to get cool; it should expect it by slow mouthfuls, and pause between them. All eagerness and greediness should be checked by the mother, who sees that the little one has the food proper for it, nicely prepared, while gentle words present pleasant images to its mind. The best lesson in manners is to banish all nursery meals as soon as possible. As soon as the child can sit up to the table of its parents in its high chair, it should take its food with them, become accustomed to see delicacies it is not to have, or even ask for, and behave with the refined quietness and reserve of those about it. It is true, the mother will be more taxed by the presence of her child at meals, for she cannot relax her watchfulness while it is very young. I have seen mothers, at table with their children, attending to everything but them, and the little ones behaving in consequence more like a set of young puppies than children of decent parents. The mother has to contrive to carry on many threads of life together, but the consequent strain will be repaid in this direction by the good manners of her children.—*From Early Training of Children.*

GENERAL ANTIDOTE.

THE following prescription is recommended as a general antidote for poisons. It can be put up by any druggist. A saturated solution of sulphate of iron, two ounces; calcined magnesia, two ounces; washed animal charcoal, one ounce. Keep the iron in one bottle and the magnesia and charcoal in another. When used, add the contents of the two bottles to a pint of water, shake thoroughly and take from three to six tablespoonfuls.

The chemical antidote for an alkali is an acid. Vinegar is always at hand. Give two or three tablespoonfuls in half a glass of water, or the juice of two or three lemons may be used. Then give three or four tablespoonfuls of olive oil and a large draft of milk. Do not give emetics in these cases. Acid poisons are to be combated with alkalies. Give a tablespoonful of cooking soda in a glass of milk or water, or give a teaspoonful of soft soap, or shave up hard soap and give it, or give whitewash, chalk, moist ashes in water, tooth powder. Give white of egg and plenty of milk. Carboic acid is a very dangerous poison. Try to arouse vomiting. Give white of egg, magnesia and water or milk. Give strong tea. Keep the patient warm.

In cases of arsenic poisoning give large quantities of milk, white of egg, limewater or oil. In cases of corrosive sublimate give strong tea followed by eggs and milk.

Children may chew matches and so become poisoned. Limewater, powdered charcoal or magnesia may be given. Vomiting should be secured; sulphate of copper is the best emetic. Turpentine is also an antidote.

Opium, laudanum, morphine, paregoric, must be combated by prompt emetics. Give strong coffee. Watch the breathing; if it falls below ten breaths a minute rouse the patient by slapping the spine. If breathing fails employ artificial respiration.

In all cases of poisoning the first requisite is that the attendants shall be cool and collected, the next thing is promptness of action. A moment spent in collecting the thoughts and deciding upon the best method of procedure may save time in the end.—*Farm and Home.*

USES OF SALT.

THE number of things besides seasoning for which common salt can be used is astonishing.

Salt and water make a good gargle for a sore throat and an emetic in cases of poisoning.

It is a "mordant" for many colors, especially black, and should be used in washing black dress goods, stockings, etc., to keep from fading.

There is no better skin stimulant than a brisk rubbing with salt and water.

Wet salt applied to a bee sting will quickly give relief.

Soap, starch and salt, should be rubbed into spots of mildew on cloth, which can then be restored by placing in the sun for an hour or two.

Salt is a splendid polisher for brass; mixed with vinegar it is a fine polish for mica stove windows; with lemon or cream of tartar it will remove rust from iron or steel.

It aids other solvents, such as benzine, ammonia, or alcohol, in removing grease spots, and gives a brilliant white light if a little is dissolved in the kerosene.—*D. H., in the Home.*

ROAST CHICKEN A LA COWBOY.

OF course you must have the chicken—a fat yellow-legged pullet is best; dress carefully, dust the inside with salt, pepper and flour, adding a thin slice of sweet bacon. Treat the outside in the same manner, putting a slice of bacon under each wing and across the breast, tie the wings down, wrap the whole fowl in a napkin made of flour-sack muslin very tightly and tie well.

Now dash in into a bucket of cold water, wrap another towel around it, dipping it in the same manner. Wrap again in many thicknesses of newspaper, wetting thoroughly each time.

Rake the coals of your camp-fire aside (dusting over cold ashes to prevent live coals from touching the fowl), put the chicken in, covering first with a shower of cold ashes, then piling on hot embers and live coals, precisely as you have roasted eggs in the ashes when a child.

Leave it undisturbed about an hour, then remove the coals carefully, take out the charred paper, have your dish ready, and from the inner napkin deftly turn upon it the most appetizing baked chicken that was ever seen, browned to the queen's taste, dripping with gravy, and of delicious flavor.

Try this recipe when you go camping and you will find out that the cowboy is possessed of culinary lore, which proves that he can handle domestic science with the same ease and grace that he does the lariat or the bronco.—*The Delineator for October.*

The Children's Corner

FOR THE MOTHER.

THE sun beat warm against the outside of the little house, and almost persuaded the bird swinging in his cage that it was spring, instead of autumn. At least, he broke into so cheerful a song that Berta looked up from her knitting, and Karl from the little ship he was fitting with sails. The two children had been working silently, an upturned tub serving the one for a seat, and the other for a carpenter's bench, but now Berta

held up the long stocking that had busied her and viewed it approvingly.

"I am nearly done," she said.

"So am I," answered Karl.

Berta bestowed a careless glance upon the carefully-made, prettily-rigged little vessel, and then looked back at her knitting.

"But mine is real work, useful work, to help our mother," she remarked, "and that toy is only play."

"Maybe—maybe not," replied Karl briefly. Berta's self-satisfaction was exasperating; she need not be so sure that no one but herself thought of helping the mother, or that no plans but her own were of any use. When the father had gone away to the far country across the sea the children had talked it over together—that while he was making a new home for them, they must help to earn bread in the old one. Berta was doing her best, but Karl thought, with a sigh, it was easier for big girls to find work than for little boys. When he had tried two or three times and failed, Berta seemed to think he had forgotten.

"The stockings will bring money," said Berta. "I shall sell them at the store, and then I shall have something to give mother." She rolled up her work and went indoors and never once noticed how skillfully the little boat had been made, nor how patiently the boyish fingers had toiled at it; she only wondered how Karl could be content to idle over such things.

The stockings were finished and sold the next day, but even with the price, burning as a delightful secret in her pocket, Berta did not at once tell her mother; she was waiting for Karl to come home. So it was evening, and they all were together around the little table, when she drew forth her tiny hoard.

"I earned, with the knitting, for you, mother."

Karl's eyes were shining, his hand was in his pocket; he, too, had a delightful secret, and in a moment a second pile of coins lay beside Berta's.

"I sold the little ship," exclaimed Karl. "One day when I was in the small shop down by the water, where so many things are kept for the sailors, I heard a little boy asking for such a boat. It made me think, and I made one and took it there. The man said he did not have calls enough for such things to buy it, but he told me of a toy shop where he thought they might want it. They did, and I am to make more for them—as many more as I can make this winter."

The glad mother praised both her children, but Berta's eyes were thoughtful, for that little boat, of which she had been so scornful, had brought more than the stockings. But she was an honest young soul, and when she next wrote one of her painstaking letters to her father, she put under the head of the things she was learning, "Not to be too sure my work is more important than other people's work."—*The Morning Star.*

THE QUIET HOUR

THE CLAY AND THE POTTER.

D. L. FORNEY.

We are the clay, and thou our potter.—Isa. 64: 8.

IN the orient the picture of the clay and the potter is a common one. His methods of work in preparation of his materials and the forming and finishing of his work are suggestive of some excellent lessons. The clay when dug from the ground is not in condition to be used in its natural state. It is hard and unyielding. It is moistened and then the potter, or some of his family, tramp and work it for long hours till it is thoroughly mixed and tempered. After it is of proper consistency the potter places a lump of it on the potter's wheel which resembles an ordinary wheel lying on the ground. With his hand he begins to press and shape a portion of the lump on his wheel as it revolves until his trained and experienced hand brings forth a vessel of the shape and size desired. The next is the drying process. After some days of drying it is then placed in the kiln to be hardened or burned. But the better class of vessels is not ready for use until they undergo the polishing process.

All these various steps require the time, the patience and skill of the master workman to bring forth a vessel of honor and beauty.

How like the clay are we in the hands of the Master Workman, our heavenly Father. In our crude state we cannot be used, we must be softened and tempered. Though hard and unyielding our natures may be when we are placed in the mortar bed, if we are willing to be humbled, tramped under foot, willing to submit ourselves under the mighty hand of God then in due time he will exalt us. Afflictions, trials and disappointments may be necessary. But these light afflictions which are for a moment may work for us "a far more exceeding and eternal weight of glory." After this we are ready for the shaping process. God's hand is able and he knows how we may best serve his purpose. He is willing to make of us a vessel of honor if we yield ourselves to him. It may be hard to say, "Thy will be done," but only when his will is ours can we attain the highest end he has for us.

The drying process is a time of waiting that may be necessary to our greater usefulness. Moses, Joseph, Christ, all had the years of waiting. Then the hardening by the heat or fire, the furnace of affliction if need

be to bring out the best in our natures. Without this we would be weak and fragile, able to endure but little. But after we pass the test of fire we are able to stand all he may require of us. Then that we may appear beautiful, burnishing and polishing is necessary.

How beautiful the Christian in old age! As the coin after leaving the mint is polished by being shaken together with many others, so also the Christian. Then he becomes a vessel meet for the Master's use.

Reedley, Cal.

THE POSSESSION OF HAPPINESS.

WE think that if we possessed great wealth we would get happiness; but "a man's life consisteth not in the abundance of the things he possesseth." Ecclesiastes, the preacher, has a good deal to say on that subject. We think by travel to find it, but return as disappointed as King Arthur's knights from their quest of the Holy Grail. Jesus and his Galilean band and St. Francis of Assisi show how men may be happy on little. Burns sang with a true note:

"It's no in titles nor in rank;
It's no in wealth like Lon'on bank,
To purchase peace and rest.
It's no in makin' muckle mair;
It's no in books, it's no in lear,
To make us truly blest.

"If happiness hae not her seat
And center in the breast,
We may be wise, or rich, or great,
But never can be blest.

"Nae treasures, nor pleasures,
Could make us happy lang;
The heart ay's the part ay
That makes us right or wrang."

It is those things that belong exclusively to nobody, and are for everybody, that hold the secret of joy: to be alive—to see, hear, feel, smell, taste—to use the mind—to be human and know one's self a child of God; to cultivate manliness and womanliness, to have a steady and limitless flow of sympathy; to rejoice in one's youth, to be the ruler and not the slave of one's powers, to realize individuality, personality, to experience the delight of struggle, the bittersweet in suffering, the heroic mind in persecution, the victory in death—these will bring truest joy.

To love nature and commune with her in healthy

outdoor life; to breathe the air, to have an appreciative eye for the glory of sun, moon, flying clouds, mountain, sea, flower, and forest; to look out into space and up into the midnight sky; to exercise in all simple, healthful recreations—these will furnish the real satisfactions.

To have the love light of home, to meet about the table, to engage in cheerful talk; to know the love of father and mother, wife, children, brothers, and sisters; to possess true friends and give friendship, to mingle in elevating and pure society, to have companionship with the best—these will foster abiding enjoyments.

To revel in thought, to sit pensively in memory, to converse on high themes, to wander through choicest literature, to listen to poetry and music, to gaze on painting or marble—these have in them sweetest delights.

To give one's self to his daily labor, to serve the needy, to glow with pride because of citizenship in a great country, to be moved by a mighty past and go forward with a mightier present and future—these will constitute the loftiest pleasures.

To be a sincere Christian and have the benediction of a pure life; to be in touch with the spirits of all the good; to hear the Master say, "My joy give I unto you"; to be conscious of redemption, to thrill at the spreading of God's kingdom, the salvation of humanity, and the glorious prospect of a regenerated earth; to be sensitive to the powers of the age to come—the uplifting thoughts of eternity and immortality—these contain the secret of a noble rapture.

"Sing to thyself, O heart, my heart!

Through light and shade as the days go on,

'What though the glory of dawn depart?

Stars arise with the waning sun.'

"Sing to thyself, as the bird on the bough

Rocks, and is trustful with perfect faith,

'There's much of blessing and sweetness now,

And the future is his—as his message saith.'

—From "The Hereafter and Heaven."

"WENT AND TOLD JESUS."

"AND his disciples came and took up the body (of John the Baptist) and buried it, and went and told Jesus." Then the disciples of John went and told Jesus. What the Master said to them, we do not know. There are many sacred conferences between Christ and his own over which the Bible narrative gently, but inexorably draws the veil; and surely this was one of them, when John's bereaved disciples turned to the Master for comfort. Perhaps it was in this hour that their former jealousy died, and they passed through the gate of sorrow into deep communion with the compassionate Christ.

It was the wisest thing they ever did, when they went to tell Jesus. He is always waiting to hear. The

sacred trysting-place with Christ is always open to the heart that seeks him, and each one of us may go beyond the veil, into the peace of his presence. The old promise of the Psalms still holds true: "Thou shalt hide them in the secret of thy presence."

How many heavy hearts in the Bible went to tell Jesus all their woe? And not a one did he ever turn away empty. This is the secret of all strength, of all consolation—the meeting-place with Christ. Go to him alone, for "the one thing needful" is "Jesus only." Go to him often, for the one thing you need constantly is Jesus always. Oh, weary and heavy-laden, turn to him for rest. Whatever it may be that is breaking your heart, go and tell Jesus, and in the communion with the Savior you will receive strength beyond the telling.

If I could, I would not utter

What he says when thus we meet.

—Unknown.

DOES DEATH END ALL?

AN old man sat on his veranda one autumn evening with the son of a former schoolmate. The visitor was a flippant young fellow, and talked much of his doubts about religion. The old man did not argue with him. "It isn't worth while, Robert," he said; "you are only repeating what other men have suggested to you. You have not begun to think or feel for yourself."

Robert was insistent, and finally asserted that the doctrine of a future life was all a dream. "Death is death," he said. "When the breath goes out of the body, the soul comes to an end."

His aged host led him into his library, and showed him a portrait on the wall—a noble, saintly face. "Do you see her?" he said. "Can you guess what she was from her face—how high her intellect, how tender her nature, how near to God? I was her son. She was—and as I have never married, she always will be—the only woman in the world to me. Well, she is dead. And you say there is nothing of her left in the world—nothing? Why look here, Bob do you see that bush in the yard? A common weed with coarse leaves and colorless flowers, of no special use or beauty. But that weed grows in every country. It grew centuries ago; it grew before the flood. It is the same now as it was then. It has come down through the countless ages, seed after seed, the same flower, the same thorns, unaltered. And if God," he said, rising in his earnestness, "if God has kept that little weed unaltered since the beginning of time, shall he extinguish the soul of my mother—the souls of all mothers—full of his love and truth, made of his likeness, who have done his work in the world? Shall the poor matter in its meanest type last, and the soul, which represents his intelligence and his spirit, come to an end?"—*Youth's Companion*.

ECHOES FROM EVERYWHERE

According to the scholastic census there are 949,006 children in Texas between the ages of 7 and 17 years. The negro scholastic population is 192,236.

By order of Postmaster General Hitchcock the fee for registration of mail will be raised on November 1 from 8 to 10 cents. The maximum indemnity for loss of registered article will be increased from \$25 to \$50.

The assessed value of the property of saloons and eating houses in the entire State of Illinois is only \$281,479. In Cook County, including Chicago, it is only \$18,586. This includes bar fixtures, liquors, glassware, food, tables, chairs, etc. Buildings, of course, are taxed as real estate.

Having passed the American medical examination 47 Chinese students have sailed for the United States in charge of Tong Kai Son, a graduate of Yale. They are sent under the arrangement that part of the Boxer indemnity that was returned by America was to be expended in education.

Orville Wright, flying in his aeroplane at Berlin Sept. 17, in the presence of the empress, Princess Louise, Prince Adelbert and Prince August and a large party from the court, broke the record for high flying. He attained a height of 233 meters (765 feet). The best previous record for height, 155 meters, was made by Hubert Latham.

Percolating through even unto the affairs of the Chicago street railway employes, the era of good feeling which came to town with President W. H. Taft, Sept. 16, was followed by the announcement that the vote of the street railway employes last week was overwhelmingly in favor of accepting the new scale proposed by International President Mahon and Presidents Mitten and Roach.

Through investigations made by a federal statistician it was discovered that a law passed in Missouri in 1891 gave the schools 60 per cent of the ad valorem tax from saloons. The law, which has never been enforced, requires all saloon men to pay an ad valorem tax each six months on the value of liquors sold. It is estimated the public schools have lost over \$3,000,000 by non-enforcement of the law.

During the early part of September two breweries, the largest in Alabama, located at Mobile, were raided. In one were found and seized 60 casks of bottled beer and 100 dozen bottles of beer in boxes. In the other three immense vats of lager were seized. The goods seized are valued at \$6,000. Besides the brewery raids liquors worth \$5,000 were seized in blind tigers. One house had a carload of liquors. The two leading hotels, to avoid seizure, shipped their stocks of wines and liquors to Pensacola, Fla.

Mount Robson, the highest peak on Canadian soil, has at last been ascended. Rev. Geo. Kinney of Victoria, B. C., reports that he has succeeded in reaching the summit, which is 14,000 feet above sea-level. Hundreds of unsuccessful attempts have been made to scale this peak.

According to reports from Sebastopol, the health of the Czar of Russia is very bad. The emperor and empress intend to remain some time in the south. They will make a long sojourn in the vicinity of Malta. An imperial cruise in the Mediterranean is also spoken of. Their majesties are traveling incognito, and will probably visit Italy. During his sojourn in the south the emperor will inspect the Black Sea fleet.

The conversion of Greece into a republic is one of the possibilities of the ultimatum sent to the military league and the army Sept. 14 by King George, stating that he would resign unless the crown prince was restored to his army command. The king declares that he has already secured pledges that the powers will not permit a member from any other European royal family to assume the throne in the event that he abdicates, and as he will not permit any of his children to succeed him his abdication would force the establishment of a republic for which Greeks are admittedly unprepared.

Prices of butter are advancing and dealers expect the market to go much higher. For some time past butter has been shipped to Omaha, where it is being stored. Compared with a year ago prices are materially higher. The same money that bought five pounds last September now purchases only four pounds. A man who buys great quantities of butter says he expects to see the price of creamery quoted at 40 cents a pound. He says: "The only reason I know of is that associated dairying interests have gobbled up most of the output and are storing what isn't needed for immediate use in big warehouses at Omaha. It practically is impossible to buy butter except from these interests, and they are in a position to control the situation."

With aeroplanists turning their attention to speed now more than to anything else, French aviators expect the "mile-a-minute" record to be made within a short time. The flight Sept. 13, of Santos Dumont, from St. Cyr to Buc, more than five miles, at the rate of nearly 56 miles an hour, has proved, according to the French experts, that the machine capable of flying at the rate of a mile a minute is already invented, and all that is needed is some daring aviator to have good luck in the use of his machine and for some motor to work well, and this speed, or even better, will be attained. The machine used by Santos Dumont the "Demoiselle," is but a trifle larger than Glenn Curtiss' "Golden Flyer," and in its record-breaking flight, it carried 260 pounds, including the aviator and surface weights.

What was evidently intended to be a stinging rebuke to the New Orleans Taft reception committee which asked permission to use foreign vessels during the reception to President Taft and delegates to the waterways convention, was received in a letter from the secretary of commerce and labor. It says in part: "I am reluctant to believe that at our principal Gulf ports American shipping has so dwindled that to enable the President of the United States and a relatively small body of representative Americans to spend a few hours in America's greatest river with a view to its improvement, they must make the trip under a foreign flag."

Thirteen State capitals are now "dry." The last of these to join the swelling ranks was Charleston, W. Va., whose council decided on June 7, by a vote of twenty-four to fourteen, to rout liquor and thereby sounded the death-knell of fifty saloons. A short time before that, Lincoln, Nebr., decided by popular vote to oust liquor. Concord, N. H., and Montpelier, Vt., are "dry." The other "dry" capitals are the seats of government in the States having State-wide prohibition, namely: Augusta, Me.; Topeka, Kans.; Bismarck, N. D.; Atlanta, Ga.; Jackson, Miss.; Nashville, Tenn.; Raleigh, N. C.; Montgomery, Ala.; Oklahoma City, Okla.

The terrific autumnal hurricanes which have recently overswept eastern Mexico caused untold damage and loss of life. A tidal wave inundated the coast for 200 miles south of the Rio Grande, and sent a wall of water as much as 10 feet high up the rivers and 50 to 80 miles inland. These waves, in addition to the deluges of rain, destroyed, according to government reports, over 50 towns and drowned over 4,000 people. Tens of thousands of others are left without homes or crops and are living on roots or relief supplies sent in from the United States and elsewhere. The damage was most severe at Monterey, where the Santa Catarina River wreaked awful havoc.

Headed by four of the most prominent members of the New York Yacht club, a combination of yacht clubs is forming to fight the new tariff laws which impose a duty of 45 per cent on foreign-built yachts. Roy K. Raney, W. K. Vanderbilt, Jr., W. S. Kilmer and L. V. Harkness are the four most active opponents of the law and each owns an English-built steam yacht. Francis O. Allen, head of the law department of the custom house, said he would be able to prove the unconstitutionality of the measure, in that it is a direct violation of a treaty made with England in 1815 to cover that very point, and that if necessary the matter would be taken into the courts.

A report has just been made to the parliament of the state of Queensland, Australia, showing that the fight against the rabbit pest in that State has cost the government already \$6,000,000. It was about fifty years ago that a man living in Australia imported a pair of rabbits with the idea of breeding them for hunting and food purposes. Up to that time the rabbit was unknown in that part of the world, but from that single pair a progeny amounting to countless millions has resulted, so that the whole country is overrun with them. In some sections the plague has become so serious that the human inhabitants have resigned in favor of the rabbits. Thousands of settlers have been ruined by these little pests, who eat up every sprig of vegetation. The government has a prize offer of \$25,000 out for any plan that will exterminate them, but though some of the greatest scientists in the world have submitted schemes the prize for a successful one has never been awarded.

Eugene W. Chafin, Prohibition candidate for President in 1908, in a speech delivered last week in Chicago, predicted that saloons would be driven from that city in two years. The enemy, he declared, is on the run now, and a vote on license next spring would greatly frighten the liquor men.

In an opinion delivered to Gov. Hadley of Missouri, at his request, Attorney General E. W. Major passed upon the disputed points in the new law taxing brewers and wholesale liquor dealers. The attorney general declares that the power of the legislature to impose license tax upon the manufacture and sale of liquor is a well-settled proposition. As the maximum tax under the new law is \$1,000, a big revenue is expected, if the State officials demand its enforcement in accordance with the attorney general's ruling.

England's pride, stirred to its depths, by the North Pole being won by Americans, has taken material form, and within a few hours from the time Capt. Robert Scott, the discoverer, announced that he would find the South Pole, if \$200,000 be subscribed to equip the expedition, the money was forthcoming. It is said Capt. Scott will start in July with two supply bases, one at MacMurdo sound and the other, if possible, in King Edward VIII land. He will attempt to reach the pole by using ponies, motor sledges and dogs. Lieut. Shackelton, who holds the record of being the nearest to the South Pole, will not accompany him on this expedition, but other explorers will go.

The annual conference of the German Socialist party opened its business sessions at Leipsic, Sept. 13, Paul Singer, a member of the reichstag, presiding. Four hundred delegates were present in the big hall surrounded by flags and revolutionary mottoes. The representatives of the reception committee gave favorable accounts of the movements in Germany for the past year. The number of Socialist deputies in the reichstag has been increased to 44 in a total of 397. The report also showed that in each of the State legislatures throughout Germany there were many Socialist delegates. In this way the Socialists declare their representation in the imperial and State legislatures is sufficient to make the voice of these Socialists heard in the councils of the nation. There are in town and district councils, 1,791 Socialists. The entire party in Germany numbers 633,309 paying members, of whom 62,259 are women. The average contributions of these members is 2 cents a week. The Socialist daily paper in Berlin, the Vorwaerb, has a circulation of 15,000 and makes money. There are several successful publishing houses, comic papers and weekly papers published by the party. The deliberations of the council lasted for one week.

Engineer Green, who is placing dynamite under the cribs which supported the old bridge of the Chicago and Northwestern railway, at Clinton, Iowa, recently wrecked, has discovered that myriads of worms attached themselves to the timbers far below the low water line, and had eaten into the wood. The worm is half an inch long and white. Specimens have been sent to the company's offices in Chicago and probably will go to the university there for examination. It is believed by Engineer Frank Bainbridge, in charge of the construction company's new bridge across the Mississippi, that the discovery will attract national attention and may revolutionize the method of under-water construction, as no worm of the kind was ever before known to exist in fresh water.

Among the Magazines

WHAT THE PUBLIC SCHOOLS NEED.

Theodore Dreiser, editor of *The Delineator*, asked fifty superintendents of public schools in various parts of the United States to write on the topic "Improvements I Would Make in the Public Schools." Here are some of the answers that he received:

For every new subject introduced, some subject now taught should be curtailed or omitted.

Supt. Martindale of Detroit.

A manual-training shop is a much-needed adjunct to the truant school as a means of developing the power of concentration, which is so evidently lacking in habitual truants.

Supt. Cole of Albany.

I believe that the coöperation of the manufacturers of our city can be secured in the establishment of industrial schools.

Supt. Warriner of Saginaw.

I believe the system of free lectures to be one of the most important and far-reaching socializing forces that the Board of Education could possibly foster.

Supt. Brumbaugh of Philadelphia.

I am urging each principal to plan some evening program that would attract a large attendance of parents, and on that occasion have the law read, etc.

Supt. Emerson of Buffalo.

I am convinced that a profitable and practical work can be found for a well-organized Mothers' Club in every city, village or country school in Texas.

Supt. Horn of Houston.

The medical profession could find no better field for usefulness than by giving public lectures in various parts of the city to parents and teachers, on the health of children and how it may be preserved.

Supt. Whitford of St. Joseph.

Personally, I think that some provision should be made that boys of proper physique and age be permitted to work in vacation.

Supt. Foos of Reading.

The maximum number possible without serious loss in efficiency is different in different schools, but appears to vary from sixteen to eighteen.

Supt. Brooks of Boston.

Sound business policy would require—that substantial increase of accommodations for the elementary schools should be made each successive year, with the growth of the city.

Supt. Kendall of Indianapolis.

It would be far better to pay the fare for conveying children to certain schools than to maintain some small schools at an enormous expense.

Supt. Greenwood of Kansas City.

In my judgment it would be far more beneficial to add one year to the compulsory day-school law. Compulsory evening attendance should not then be required.

Supt. Benedict of Utica.

Out-of-door games properly supervised afford one of the cheapest and best means for education.

Supt. Poland of Newark.

I wish to suggest that school sweeping never be done dry—that a germicidal preparation be used.

Supt. Beede of New Haven.

1.—Equipment of all school yards with play apparatus.

2.—Open all yards after school under efficient supervision.

3.—Provide in each large district, grounds properly equipped and supervised, where children can play those great group games to which all youth naturally tend as they approach adolescence.

Supt. Elson of Cleveland.

A teacher's salary should constitute a living wage. In the case of a teacher a living wage ought to be understood to mean a salary sufficient to enable the teacher to live in respectable society and to take advantage of reasonable means of culture and recreation. On this ground I recommend that as soon as money is available the salaries of women principals be equalized with those of men.

Supt. Maxwell of New York.

THE POSTOFFICE DEFICIT.

Postmaster General Hitchcock and President Taft have recently held a conference for the purpose of deciding on ways and means of overcoming the postal deficit. This deficit last year was \$20,000,000, the largest in the history of the department. In two years it has amounted to \$36,000,000. The increase of the 1908-09 deficit over that of 1907-8 is attributed by the Postmaster General, if he is correctly reported in the Washington dispatches, "in part to the extensions of the service, to the business depression during the first part of the fiscal year and to cumbersome and expensive methods of handling the mail and conducting the affairs of other departments of the work." We are informed, however, that the administration is going to the bottom of the matter and as evidence of its good faith the announcement is made that 40 experts are even now at work in Washington on the postoffice department records. These experts are giving their attention to the registry division, "which has been showing a growing deficit year after year." Next, a similar inquiry will be made into the business of the money order department, which also shows a deficit, and finally the rural free delivery system is to be investigated.

These explanations almost tempt one to laugh outright. While it is quite possible that the experts will be able to suggest methods of curtailing expenses in certain divisions of the department, it is safe to assume that the investigation will not extend to the VITAL DEFECTS in the American postal system. We are not informed that there is to be an inquiry into the possibility of the government entirely wiping out the postal deficit by raising the 4-lb. limit that is now placed by law on packages that

will be carried through the mails. We are not informed that there is to be any investigation of the unbusiness-like methods employed in contracting with railroads for carrying mail. We are not informed that there is to be an inquiry that is at all likely to result in even one vital reform. Instead, we are informed that there is a possibility of an increase of 2 cents being made in the charge for registering letters and other registerable mail and that steps will probably be taken to place the money order division "on a self-supporting basis."

If the government really wishes to wipe out postal deficits, it can do so. The way has been pointed out by hundreds of American newspapers and numerous magazines. With us of *The Daily*, who have made the post-office department a subject of careful study during the past several years, there has never been any doubt as to what methods of a reform nature should be pursued. The money that the express companies are now getting, through robbery of the people, would be sufficient in itself to wipe out the present deficit and the money that is wrongfully going to the railroads, who are paid for hauling vastly more mail than is handled in this country, would be sufficient, if diverted and added to parcels post revenue, to give the government a handsome profit on its postoffice business. If the pending investigation is being sincerely made why is there such criminal neglect of these salient features of the business?—*Woman's National Daily*.

WOMAN AND THE BALLOT.

Woman suffrage in the United States is not so much a question of "if" as of "when." When the women want the ballot badly enough to demand it with any approach to unanimity the voting population will grant it to them. President Taft says that when that time does come he hopes they will get it. But they will not be worthy of it until they shall have fought for it, determinedly but peacefully.

The probability is that woman suffrage will come in this country more gradually but in a better way than in England. There is no likelihood of a resort here to the tempestuous methods of the suffragettes. One State at a time will grant the ballot to its female citizens after they shall have convinced the male electorate that they are in deadly earnest. Some States—mostly those of the South—will be slow to act.

Women should not ask for the ballot out of mere gayety of heart. Those among them who are opposed to woman suffrage are the ones who have considered most seriously its advantages. If it confers privileges it also imposes responsibilities. Almost every additional right that woman gains from man involves some sacrifice by her. When she shall become the industrial and political equal of man he will not deal with her in quite the same chivalrous spirit that he does now.

So, before the women of a State formulate a demand for the ballot they ought to discuss the pros and cons thoroughly among themselves and weigh the losses against the gains. When they shall have made up their minds that they will be better off with the ballot than without it persistent agitation will give it to them. But when will the women of Illinois, for instance, come to that conclusion?—*Chicago Tribune*.

THE SCHOOL "FRATS" IN DENVER.

Denver is the latest city in which the high school fraternities have been defying the school authorities. On

the opening day of school 100 members of fraternities and sororities chose to be suspended rather than give up their membership in the societies. Some of them have gone back to school in the hope that legal proceedings will compel the school board to cease "interference" with them. Enough of the others will stay outside to furnish exhibits of "victims of tyranny" for use in the trial of the cases.

Such a demonstration of revolt as this gives merely one further proof that the "kid frats" are vicious through and through. The children show thus in wholesale way that they regard their fraternities as more important than their education. This is the culminating proof coming on top of other proof that they regard their fraternities as more important than scholarship, than any social privileges the schools offer or even than common decency between child and child.

Whether the Denver school board wins its lawsuit or not will depend on the State laws as interpreted by the Supreme Court. If it does not win it should at once urge the legislature to give it full powers to control the situation. As much may be said of other cities. Indeed, the time has come when it would be well if every State Legislature at once put complete powers in the hands of the school boards for the extermination of all of these "frats." The quicker the pests are forced to disappear the better it will be, because so much the less energy will be wasted in the long run that ought to be devoted to better things. —*Chicago Record-Herald*.

EDUCATION.

EDUCATION in literature is not so reliable a means of support as a good mechanical trade, for while the products of the mechanical trades are always in demand, those of the intellect are variable and often poorly paid. The mind should be cultivated, and the moral faculties developed, but with these advantages there should be a well-developed body and physical powers trained to do well some one thing. A man with nothing but his intellectual resources finds himself severely handicapped in this utilitarian age, but if he have a good handicraft to fall back on, he is doubly equipped for the battle of life. It is well to keep the boys and girls in school, but mere book learning is never education in its broad sense. The eye, the ear, the hand, the foot must all be educated, if one would have the best success in life. If every boy and girl knew some one trade by which they could support themselves if necessary, the temptation to sacrifice the moral character to secure favor would be greatly lessened. Not the least of Paul's qualifications to preach the Gospel was his ability to make tents; in this knowledge and skill he was independent of the people among whom he found himself, and this independence gave moral strength, which is always a source of spiritual power with others. In America everything else is an outgrowth of the three productive activities—trade, manufactures and agriculture; there is no limit to the development of any one of these; the learned professions can enlarge only as fast as these three primary activities have use for them. As this truth is recognized, in-

dustrial schools are being established more and more, and in nearly all institutions of learning in these days, some show is given to the teaching of the manual arts.—*The Commoner*.

WHAT IS A BOY WORTH?

DURING a county local option campaign in Ohio for the prohibition of the liquor traffic an incident occurred that created a good deal of amusement and at the same time taught a valuable lesson. At a temperance meeting a speaker was comparing the worth of a boy with money, because so many people in the county were afraid that the banishing of the saloon would injure business and increase the taxes.

After the speaker had dilated on the peril coming to the boys through the open saloon and the liquor traffic in general he declared that the boys were worth a great deal more than business or any money value whatever. In order to make his argument all the more forcible by means of a concrete example, he stepped forward to the front seat, and laid his hand on the head of a bright lad, saying: "What, for example, is this boy worth?"

There was a moment of impressive silence, while the speaker looked earnestly over his audience. Then a mischievous lad some distance away called out: "He's worth ten cents!"

For a moment there was an uproar of merriment. The laugh was on the speaker. It was a question how he should recover his poise and save his argument on the value of a boy from utter defeat. You know how that is—in a promiscuous crowd the fellow who gets off the laugh on his opponent almost always has the best of the contest, whether the argument is on his side or not. The temperance orator had to save the day in some way, for, after all, the truth was on his side. So, after the laughter had subsided, he took advantage of the situation in this way:

"Yes, that is just the way a good many people look upon this matter. They put a high money value on a horse, or a cow, or sheep, or even a hog, but when they come to estimating the value of a boy, think he is worth about ten cents!"

That was a pretty apt reply, and many in the audience caught the point and applauded loudly.

However, another thing happened to save the day for the temperance cause. As the speaker ended the foregoing sentence a man on the other side of the room rose, and spoke as follows: "Mr. Speaker, the boy you have been referring to is *my* boy, and I want to say before this whole audience that there isn't enough money in the county or the State to buy him."

Then a storm of applause that almost "raised the roof" broke from the delighted auditors, who appreciated the noble way in which the true worth of a boy had been vindicated. It is a good thing to be as quick-

witted in the cause of truth as other people are in the cause of error.—*Selected*.

•

Between Whiles

More Howwible.

"I was weading an—aw—account of a woman being gored to death by a beastly cow, doncher-know," remarked young Dudleigh. "Weally, I cawn't imagine a more howwible affair, can you, Miss Caustique?"

"No, Mr. Dudleigh," replied Miss Caustique, with a mighty yawn, "unless it is being bored to death by a calf."

A country minister in the course of his dining out on the circuit came to a house where a roast chicken was served for dinner. He had previously encountered a series of rib corned beef dinners and the chicken looked good to him.

"Well," he facetiously remarked, "here's where that chicken enters the ministry."

"Hope it does better there than in lay-work," rejoined the small boy of the family.—*Boston Record*.

The Appreciative Husband.

"I declare," complained Mrs. Duzzit, "I certainly shall have to punish the children."

"What have they been up to now?" asked Mr. Duzzit.

"They have simply upset my sewing room. Nothing is where it should be. Needles, spools of thread, scissors, darning balls, and everything have been poked away into the most unexpected corners. I had to search all afternoon to find a card of buttons. It is perfectly exasperating."

"My dear, the children didn't do that. I did it."

"You? What possessed you?"

"I thought I was doing you a kindness. After you straightened up the papers and books in my desk so beautifully, I thought it was no more than right that I should return the compliment by putting your sewing room in similar shape."—*Life*.

WANT AND EXCHANGE

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

WANTED—1,000 Sisters to send for sample of Bonnet Braids and Cap Goods. Satisfaction Guaranteed.—J. P. Holsinger, Mt. Morris, Ill.

WANTED—Partner to take \$1,000 interest in and manage large dairy farm in Michigan. Also 80 acres wild land for sale \$10 per acre. J. L. Garrison, 361 E. 69th St., Chicago, Ill.

FOLLOWING we give the Eleventh Report of the Bureau of Agriculture, Labor and Industry of the State of Montana for the year ending Nov. 30, 1908. One of the most substantial Irrigation projects in the State of Montana is located near Big Timber in Sweet Grass County, which will be settled in the very near future by the Church of the Brethren and their friends.

"The Big Timber project consists of 65,000 acres of land near the city of that name in Sweet Grass County. This was also one of the selections under the old commission and there were \$132,000 worth of bonds issued against the project. These bonds have been surrendered and destroyed. Under a new contract 28,500 acres of land have been reclaimed and will soon be placed on the market at \$50.00 an acre. The holdings are on the Yellowstone side of the watershed between that river and the Musselshell River. Eighteen thousand acres are first-class irrigable land suitable for intensive farming. The soil is in places a sandy loam, but mostly a deep fertile clay loam and generally underlaid with a clay-gravel subsoil. The water used for irrigating is absolutely free from alkali, and there is no alkali in the soil except in a few low spots. The lands lie from four to twenty miles from the city of Big Timber, and the same distance from the Northern Pacific Railroad. The climate is good and all kinds of crops mature to perfection in this locality.

"The water supply comes mainly from Sweet Grass Creek and Government measurements show that there is an abundant and never failing run-off for every acre in the project. The company also owns a large canal and water rights from Big Timber Creek which will be used on lands adjacent to that stream, besides two large and

convenient reservoirs on Otter Creek with a surveyed capacity of 31,000 acre feet of water. Fifty teams and one hundred and twenty-five men have been employed during the past summer on the north side of the river, and a two-mile tunnel is being driven from both ends on the south side. Expenditures for the season will aggregate \$200,000.

"Members of the State Board and others who have visited the site report the work as having been exceptionally well done, the soil deep and fertile and remarkably adapted for easy and thorough irrigation.

"As in all other Carey projects this land and water system will eventually pass into the ownership and management of those who settle upon and pay for it without any further expense than the initial price asked, \$50.00 an acre. This may be paid in installments so that it will be possible to make the land actually pay for itself, aside from the small first payment.

"The proximity of this project to the sugar factory at Billings—81 miles—makes it entirely practicable to raise sugar beets there for that market.

"It is confidently predicted that land under this ditch will meet with ready sale and rapid settlement and that a prosperous community will result."

Full Particulars May be Obtained

Big Timber, Montana**

CLASS COLLECTION ENVELOPE.

A tough manilla envelope, on which may be recorded the amount of class offering for entire year, with totals for each quarter. Price, each, 2 cents. Price, per dozen, 15 cents.

BRETHREN PUBLISHING HOUSE
Elgin, Illinois

Sunflower Stories and Lullabies

By Olive A. Smith.

A collection of stories and verses for young folks. Miss Smith is a writer of considerable ability, contributing to several young people's papers regularly.

The poems and stories found in this volume are among her very choicest productions.

In remembrance of her home in Kansas, the Sunflower State, she has called the collection "Sunflower Stories and Lullabies."

The book contains many such stories as "Mabel's Diamond," "The Story of a Bird," "A Real Boy," "An Adopted Family," "The Class in Number Seven," and "Sammy." Interspersed throughout are a large number of such poems as "In Chipmunk Town," "The Moon Baby King," "The Wise Crow," "The Meadow Preacher," and "The Bye-Bye Boat." One hundred pages of the most delightful

reading. The book is printed from large clear type, on a good quality of paper. The frontispiece is reproduced from a painting by David Emmert. Handsomely and substantially bound, artistic side title, profusely illustrated.

Sunday Half Hours with Great Preachers

by

Rev. Jesse Lyman Hurlbut, D. D.

How would you like to have fifty-two of the greatest preachers of the world for the past 1,700 years come before you one at a time for fifty-two consecutive Sundays—every Sunday for a full year—and each one preach to you the eloquent sermon which made him famous for all time? The possessor of "Sunday Half Hours with Great Preachers" will have conferred upon him, in the nearest possible manner, this inestimable privilege and benefit. Dr. Hurlbut has selected the fifty-

two most famous preachers of the world, both from the Catholic and the leading Protestant churches throughout the world from the days of St. Augustine and Chrysostom, who lived three hundred and fifty years after Christ, down to, and including John Bunyan, John Wesley, Whitefield, Henry Ward Beecher, William Ellery Channing, and other greatest preachers of the world. It contains 681 large pages, bound in elegant cloth.

AN OPORTUNITY.

There is a great field for Mission work in the Southwest generally and in New and Old Mexico particularly, and here is an opportunity for you to help in raising the necessary funds without one cent of financial sacrifice upon your part. I have an arrangement whereby half of all money sent me for weekly newspapers or monthly magazines will be turned into this fund for a Mission to the Mexicos. Send me subscriptions to any weekly or monthly periodical published in the United States at publisher's price and the subscriptions will be promptly forwarded to the publishers and half the amount of your remittance placed into this fund for forwarding Gospel work in the great Southwest. We have a sister missionary at work now in Clovis and also need funds for pushing our mission in Old Mexico. You and your neighbors will soon be renewing your subscriptions to periodicals you take every year. By sending these subscriptions to me you are at no additional expense, but you are rendering material aid to a noble cause. Tell your friends. They will be glad to join you in this.

Address

JAMES M. NEFF,
Clovis, New Mexico.

Buckeye Pure Home Made APPLE BUTTER

Is pronounced by hundreds of our customers, the best they ever ate. It is the product of apples, apple cider and granulated sugar; very appetizing and wholesome. Our Motto: Highest class of goods and a square deal guaranteed to all. Write for circular and special prices.

Real Art Mottoes

These "Real Art" cards are by far the finest specimens of lithography we have ever offered. The stock has but recently been imported from Germany, hence the line is entirely new. They are lithographed on heavy glazed stock, size 16x20 inches and represent the best in modern art. The subjects consist of bouquets and vases of Roses and other flowers. Suitable for the home, office, school room or Sunday school.

We can furnish "Real Art" mottoes in Eight designs and Fourteen texts as follows:

50. The Lord Is Thy Keeper.
51. He Careth for You.
52. In Me Is Thine Help.
53. Shew Piety at Home.
54. Lead Me in Thy Truth.
55. I Will Never Leave Thee.
56. Looking Unto Jesus.
57. Ye belong to Christ.
58. God is a Refuge for Us.
59. Seek and Ye Shall Find.
60. God is Our Refuge and Strength.
61. The Lord Bless Thee and Keep Thee.
62. Thou Wilt Shew Me the Path of Life.
63. Who daily Loadeth Us With Benefits.

The illustrations presented herewith can give but the faintest idea of the beauty and quality of the "Real Art" line. These same subjects have sold in art stores the country over for 35 to 50 cents each. We are pleased to announce a price so low as to place the best mottoes within the reach of every one.

LITERARY ACTIVITY OF THE BRETHREN IN THE EIGHTEENTH CENTURY

Prof. John S. Flory, Ph D.

Every one who has read this book is ready to speak a word of commendation.

"I have read with much interest Prof. Flory's book, 'Literary Activity of the Brethren in the Eighteenth Century.' It is, no doubt, one of the very best contributions to our historical literature that has yet appeared. The style is transparent and pleasing. The most striking feature of the book is the scholarly conservatism which characterizes every state-

ment. Some of our writers have been disposed to jump at conclusions. This is not true of Prof. Flory. He always gives his readers the benefit of the doubt. The book is just what one would expect of its author, —A Great Book."—P. B. Fitzwater, Principal of Bible Dept., Manchester College.

"I wish to express my appreciation of 'Literary Activity of the Brethren in the Eighteenth Century,' by Prof. John S. Flory, Ph. D. I consider it a very valuable contribution to our church literature. The author is to be congratulated for the thorough treatment of his subject. His style is easy and attractive. It is a readable book and ought to find its way into many homes."—Prof. T. T. Myers, Juniata College, Huntingdon, Pa.

Life and Sermons of Elder James Quinter

We have just completed the second book and are filling orders every day. We feel certain that several of our customers neglected to place an order in advance, and have printed a few hundred copies besides those needed to fill the advance orders.

The work should prove helpful to thousands of our readers who know little of Bro. Quinter. In his day he was one of the most scholarly and devout men among us, and it will do the younger generation of members good to learn more of his life and experiences. His sermons will prove especially interesting.

The book contains 426 pages, large, clear print, on excellent book paper. The frontispiece is a splendid likeness of Elder Quinter and adds much to the appearance and value of the publication. The introduction is written by Eld. H. B. Brumbaugh. Besides the interesting sketch of Bro. Quinter's life and labors there is a full account of the funeral services and numerous tributes of respect from his coworkers.

Part Two contains some forty of Brother Quinter's choicest sermons, delivered here and there throughout the Brotherhood.

The binding is an artistic cloth, on which back and side titles are stamped in white foil.

If you are interested, order today.

ALBERTA

We have recently secured a tract of land for a Colony in Southern Alberta. This land is situated near Calgary. Read what J. A. Weaver thinks of the proposition:

Redcliffe Realty Co., Ltd.,
Minneapolis, Minn.

Gentlemen:

I am writing you the following letter which you may show to anyone who is interested in purchasing land in Southern Alberta, Canada, hoping that it may influence them in making their selection.

I was one of a party of Brethren who recently investigated a tract of land, situated northeast of Calgary, Alberta, Canada, which your company has set aside as the location for a colony of our people. I can truly say I was pleased with the selection.

We found these lands to be slightly rolling and the soil very productive. It is a deep, rich, black loam with a fine subsoil. I talked with farmers who lived near and they all reported that their wheat last year averaged 41 bu. per acre of No. 1 hard which weighed 61 lbs. and 62 lbs. per bu. Oats went from 80 to 100 bu. per acre, weighing from 40 to 43 lbs., and other crops yielded accordingly.

These lands are well located and are only about 25 miles from the city of Calgary, a growing city of over 25,000 people and destined to become a great railroad center in the near future, thus making a fine market close at hand. A number of railroads are being built, some of them this summer; one runs directly through these lands and others will be near, so that the railroad facilities will be the very best. There are settlers on all sides of these lands. They have a telephone system and other modern conveniences close at their doors. Water, generally, is good and can be reached at a depth of from 20 to 100 feet.

Another thing, these lands are mostly all under irrigation. This makes crops a sure thing each year. The farmer need not worry about crop failures because of dry summers, for he can make it rain when he most needs it. Some of the lands are non-irrigable. One can purchase either kind, or both, if he desires. I have traveled through California and Idaho and have seen the wonderful crops raised by irrigation and I can freely urge all to try and

secure some of these rich lands, for still more wonderful crops will be produced here if the land is irrigated.

The Irrigation System of the Canadian Pacific Ry. Co. is equally as good, and even better in some ways, than those I have inspected in the States. The water rental, 50 cents per acre, charged each year, is at a fixed price and cannot be changed or altered. At this price, the company agrees to maintain and keep in repair all ditches and put water on each tract purchased. One need not be afraid that this water rental will be raised in price in later years.

We are well pleased with our purchases, especially, because of the fine location and possibilities of home advantages, and we do not hesitate to urge others to join our settlement. Soon we will have a large congregation and Sunday school with all church privileges. The company has agreed to set aside 30,000 acres of these fine, rich lands exclusively for our people to settle upon and we, who have looked over these lands, feel very grateful to the company for treating us so kindly.

The climatic conditions here cannot be excelled. The winters are mild with no blizzards or snowdrifts to make them as unpleasant as those of some other parts of the North. There is some snow at times but the Chinook winds quickly melt all of it. Often it is quite warm and summer-like during the winter months; at times the thermometer runs down below zero, sometimes as low as 40 degrees below, but only for a few days at that. While there on March 4th, I saw farmers disking their ground so you see that the winters are often quite short. Almost all kinds of garden stuff do well here and will do even better under irrigation.

I will close by urging interested parties to come at once and purchase a nice, rich farm in a fine location in this colony. Do not delay. Those who wait get left in these days of big immigration. For further information, write me, enclosing stamp.

Yours very truly,

J. A. WEAVER

SINALOA, "The California of Mexico"

Banana Field and Sugar Cane, Redo Ranch, Culiacan, Sinaloa, Mexico.

History

From Sinaloa, Mexico, in the year 1542, sailed Juan Rodriguez Cabrillo, landing on the California coast and exploring the regions where Los Angeles now stands. Two hundred thirty-nine years later, out of Sinaloa also came the eleven families who formed the first settlement of California, and founded, near where Los Angeles now stands, the "Sinaloa of the United States." This colony survived for two years only and with their entire number left the desolate sage plains of Southern California and returned to "Sinaloa, The California of Mexico." The whole world knows what colonization and progress has done for the great empire of California of the United States, and now "The Sinaloa Colonization Company" purposes to assist the young men of our day to cause history to repeat itself, and to reclaim, from its centuries of isolation, the parent country, "Sinaloa, the California of Mexico."

Location

The State of Sinaloa is situated on the western coast of the Republic of Mexico, in the same longitude as El Paso, Texas, and Denver, Colorado, and in the same latitude as Florida, and borders on the beautiful Vermillion Sea—the Gulf of California. It has a coast line of 400 miles, and Culiacan, the capital, lies, by rail, 500 miles southeast of Nogales on the United States border, and closer to Chicago than either San Francisco or Portland.

Physical Features

Sinaloa is from 350 to 400 miles long and has an average width of about 80 miles. Naturally it is divided into lowlands, about forty miles wide, and comparatively level, into rolling foothills about forty

miles in width, and the highlands, with an altitude from a few hundred to a few thousand feet. In the first there are fine agricultural lands, in the second, agricultural, grazing and timber lands, and, in the third, rich mining, timber, and grazing lands.

General Characteristics

Except in the highlands, occasionally, there are positively no frosts. No earthquake tremor was ever registered by the seismograph, North of Guadalajara or south of Nogales. There is a deep rich soil of granitic character. In all the wars and rumors of wars of Mexico, Sinaloa has never had a part, as it is surrounded by mountains on the North, East and South, and the Ocean on the West, and, therefore, is, and has always been, a peaceful little empire within itself, knowing little of, and caring little for the outside world. The coming of the railroads has put new life into the people of the State, and a new era has dawned. There are no strong winds, at any time of the year, but nearly always a gentle breeze, and there is scarcely a night in the eight months outside of the rainy season when blankets are not very comfortable. During the four months of rainy season it is warmer but the thermometer does not register so high as in the Imperial valley of California, nor is the humidity so great as at Chicago or New York. The rainy season is between the planting and the harvest, hence the crops get the benefit of the rains. The Japanese current does much to effect a perfect climate. Pests and vermin, so common to this latitude, are, therefore, seldom found.

Water

There is an abundance of good water. The State is well supplied with a number of good rivers, and

Redo Sugar Factory, Culiacan, Sinaloa, Mexico.

good wells. Irrigation by gravity canals and by the pumping system are both practicable and feasible and comparatively inexpensive. This land is all susceptible of irrigation. The main ditch is constructed and ready for water, and laterals to carry it onto each tract purchased will be constructed when necessary. Remember that a *Free* water right goes with the title to the land, and that the annual charge for water is so low (50c per acre foot per annum) as to be scarcely worthy of consideration. Farming can be begun immediately after taking possession of land. No alkali is found in the State. The soil is from 10 to 40 feet deep, and, being of granitic formation, is not susceptible to wash. This, with the abundance of good water easily obtained, will change the State to a thriving community of fine haciendas, ranches and farms. Artesian water has been found in Sonora to the North, and in Tepic to the South. It has never been drilled for here and, in all probability, would be found if sought for.

Products

Sinaloa is a tropical State without the disagreeable characteristics of a tropical country. The absence of frosts and the constant season of sunshine make the cultivation of the tropical fruits successful. General farming is possible throughout the entire year. Among the most important crops are the following:

Corn, beans, cotton, cow-peas, broomcorn, wheat, buckwheat, barley, rye, alfalfa, rice, clover, Bermuda grass, Kaffir corn, milo-maize, oats, sugar-cane, tobacco, apples, limes, bananas, pineapples, melons, blackberries, dates, figs, grapes, cauliflower, cabbage, peas, garbanza (yellow chick peas), cucumbers, egg plant, celery, ginger, peanuts, horseradish, kale, pumpkins, leek, lettuce, mangoes, mulberries, oranges, peaches, plums, pomegranates, olives, strawberries, asparagus, beets, artichokes, mustard, cress, onions, parsley, parsnips, rutabagas, radishes, sweet potatoes, squash, spinach, tomatoes, turnips, indigo, coffee, dye woods, and sisal fibre (known as the "Millionaire-Maker of Mexico"), from which ropes and binder twine are made. There is an abundance of wild game, fish, oysters, shrimp, etc. Great deposits of cement rock and var-

ious sorts of clay, employed in the manufacture of vitrified earthenware, may be found in the State by those who are interested in that industry.

Health

Sinaloa has quarantined against the United States much more frequently than the States have quarantined against it, as records will show. Contagious diseases are very rare, and diphtheria, asthma, pneumonia and the like, are practically unknown.

Timber

Sinaloa is not heavily timbered, but along the coast there are some good maple, willow, *Lignum vitae*, ebony and mahogany. In the hills and mountains are to be found sycamore, cypress, spruce, pine, madrona, elm, walnut, cedar and oak, all similar to the species found in the United States. Such a thing as a forest fire is absolutely unknown in the State. It is practically impossible. One can hardly burn a brush pile until the brush has been piled for a time in the sun and dried out.

Live Stock

For years to come the raising of live stock will be a very profitable industry as no attention has been paid to it, and the time has now come when there will have to be a better and larger grade of horses used than there has been heretofore. Prices are better than in the United States, and it will be a long period of years before the supply will exceed the demand. This applies to cattle raising also.

Minerals

Sinaloa is conceded to be one of the richest in minerals of the Mexican states. The advent of the great railroad systems means a revolution of the present mining operations. Gold, silver, copper, lead, zinc, antimony, coal and china clays are found in several localities. Practically all the mining engineers of the State of California are more or less acquainted with the mineral conditions in Sinaloa and are prepared to answer any interested inquirer on these points.

Fiber Plant, Colonia, Culiacan.

Transportation

The Southern Pacific of Mexico has a trunk line from Benson, Arizona, to Culiacan, the capital of the State of Sinaloa and is fast pushing southward toward Guadalajara. This system means much to the State, as it places the cities of Sinaloa within a comparatively few hours of Los Angeles and San Francisco, and fewer to Kansas City.

The Kansas City, Mexico & Orient R'y has its own line operating from Topolobampo east to the eastern border of the State of Sinaloa, and are working as fast as possible to connect with the other end of the system at the U. S. border, which will bring Sinaloa 500 miles nearer than California to the great markets of the United States.

The Sinaloa & Durango Railway connects Culiacan, the capital of the State, with the port of Altata and furnishes an outlet to the coast, and the many and varied products of the soil in the vicinity of Culiacan are transported to the steamship lines which carry them to the outside markets. The Pacific Coast Steamship Company. The Pacific Mail Steamship Company, and The Naviera Steamship Co., serving

Dates, Bananas, Oranges, Tay's Ranch, Sinaloa.

the harbors of Altata, Topolobampo and Mazatlan, furnish a gateway to the world. The Mexican Government is spending \$10,000,000 in harbor work at Mazatlan, and has a similar project in contemplation at the harbor of Topolobampo.

The Colony

We have set aside several thousand acres, less than a dozen miles from the State capital, alongside the great Culiacan river, known as the Culiacan Colony, where we purpose to offer to colonists from the United States an unparalleled offer as to soil, water rights, transportation, fuel, *perfect titles*, and a healthful climate, the most reasonable terms, and lowest prices, combined, to be found in the Republic of Mexico. If you are at all interested in the development of *one of the best propositions in the world*, write to us for particulars not mentioned in this brief survey of the fundamental facts, and such information will be fully and cheerfully given. Write to us TODAY.

THE SINALOA COLONIZATION COMPANY,
418 Bee Building,
Omaha, Nebraska.

[Mention Inglenook when writing.]

Cocoanut Trees, Altata, Sinaloa, Mexico.

A Wonderful Success

Church Extension by Colonization

Ten years ago there were no churches of the Brethren in Southern Idaho. Now there are seven organized churches with a number of Mission points where churches will be organized in the near future.

Read What Prof. Holden of Ames Agri- cultural College, Ames, Iowa, Has to Say:

"You may say for me that southern Idaho is THE IDEAL PLACE FOR THE YOUNG MAN who is looking to make a start in life. Every acre of irrigable land in this section is worth, in yield or income, three times as much as the best land in Illinois and Iowa. I am for Iowa, but if a man is to move, southern Idaho is the place to go, and for the young man, full of wonderful opportunities.

"The diversity of crops appealed to me as strongly as anything I saw. The irrigation farmer for instance, is not dependent upon any one crop. He doesn't have to wait until the end of the season to get his money because there is something seasonable and saleable at all times during the year. He raises fruit, wheat, alfalfa, oats, vegetables, hogs, cattle, sheep, in fact everything grown in the temperate zone.

"One man told me that he raised 18 bushels of clover seed on one acre of ground during the past year, and I found that the clover seed crop runs 8 to 15 bushels per acre."

Land is advancing rapidly in price. Still there are fine opportunities to buy unimproved land at reasonable prices. More land will be placed on the market under the Carey Act in a year or less. This land is in the Snake River Country and the finest in Idaho.

No. 40.

THE STARS AND BARS

JOHN W. WAYLAND

IN the INGLENOOK for July 13 is the third number in an interesting series of "Impressions," contributed by the editor, and written out of her experiences and observations on her recent trip to the Annual Meeting of the Church of the Brethren. From Harrisonburg, Va., where the meeting was held, she went to the national capital, where she saw much of which all Americans should be proud, as well as a few things that deserved her good-natured criticism. Her observations in Virginia on Memorial Day were just a little disturbing to her; and it is upon this point that I am writing now, with her kind permission.

In keeping alive the memory of their dead, the people of Virginia and other Southern States make profuse use of Confederate flags—the "Stars and Bars"; and it was the sight of these flags, the banners of a "lost cause," that was strange to her eyes, and that very naturally caused her to wonder whether they were employed merely as memorials of things passed away, or whether they expressed a thought traitorous to the beloved Union, whose blessings we all enjoy. It occurred to me that others of our friends beyond the Alleghanies and the Ohio might like to know how we of Virginia look upon the situation; and so I asked leave to speak.

If any one expects now a sectional or partisan exhibition of feeling, an attack upon Lincoln or a defence of Lee, I beg to forestall his disappointment. Lee and the cause for which he stood need no defence, when they are understood; Lincoln did a great man's great work, and all intelligent patriots must acknowledge it; if the whole country in 1861 could have submitted their differences to Lincoln and Lee as arbiters, there would have been no secession in the South, no disruption of the Union; and today there would be no slavery in the land, and no memorial day would be needed for thousands slain in bloody war.

In April, 1874, L. Q. C. Lamar delivered in the halls of Congress his masterful eulogy on Charles Sumner. Sumner was of Massachusetts, and ten years earlier

had been hated, I imagine, almost as widely in the South as John Brown. Lamar was of Mississippi, and had taken a prominent part in the struggle and the sufferings of that cause that many called accursed. In 1874 children remembered Chancellorsville and Gettysburg, and reconstruction was not yet over. These facts give the orator's words a glorious meaning, and I quote the final paragraph. They are the words of Lamar, but they might have been spoken with equal sincerity by any great man on either side, and they have ever since expressed the sentiment of all true patriots on both sides:

"Would that the spirit of the illustrious dead whom we lament today could speak from the grave to both parties to this deplorable discord, in tones which should reach each and every heart throughout this broad territory: 'My countrymen! **Know** one another, and you will love one another.'"

This is my text in this paper. It expresses in a word all that we need for the clearing up of many clouds and the curing of many pains. Better acquaintance is what we need now; and better acquaintance from 1840 to 1860 might have prevented 1860 to 1865. It is in the hope that a small contribution may be made to better acquaintance that this paper is submitted. My subject, "The Stars and Bars," is only incidental; the great text is fundamental.

It is my deliberate opinion, based upon considerable study and observation, that hardly ever at this time are the Stars and Bars used with any malign intent toward the Union or the national government. There are a few people in the South today—there have always been some such in all parts of the country—who still think it would have been better if the secession movement of 1860-1861 had succeeded. Some give as reasons for this view that two federations of States would be better than one; others, that if secession had succeeded, a more perfect union could have been established by the two powers uniting upon equal terms afterward. A few persons still wish that the Confed-

eracy had lived, not because of any rational scheme of statecraft, but because they themselves suffered for it and their loved ones died for it. But altogether, those who regret that the Union was maintained are today comparatively few, and they are becoming fewer every year. If a great crisis were to arise in which the life of the nation were in peril, there would be a great multitude rallying about Old Glory; and so far as valor and loyalty are concerned, those countless thousands would know no South, no North, no East or West.

I could name some men who held prominent positions in the civil and military service of the Confederacy who have since declared that they were glad the cause failed. Why? Not because they ever ceased to believe that they once contended for rights and principles, but because they loved the Union. They loved the Union in 1861; they love it today; and they rejoice in its strength and glorious opportunities. They also see now that if the Confederacy had succeeded, the almost inevitable result by this time would be not a more perfect union, not two great unions, but an indefinite number of petty confederacies, struggling with one another, and lying a helpless prey before the first great invader.

Nullification and secession had raised its head in practically every section of the land prior to 1860; and the success of the Confederacy would have established a precedent that other sections would have followed. As it was, when the test was made, the precedent was firmly established against secession, and no serious attempt has been made since to accomplish it. In the great sacrifice of '61 to '65, the sins of earlier transgressors were consumed and forgotten; and at the same time the mightiest champion of secession was slain.

The statement above, that men who fought against the Union at the same time loved it, may sound strange; but I am certain that it was true in many instances. It is no stranger than the fact that friends and brothers were arrayed against one another in the opposing armies. Such are the tragedies of war. In all great national movements there are conflicting sentiments that often rend men's souls; and it was so in the case before us. To illustrate great things by small, suppose that ten men form a company for certain benevolent and beneficent tasks; all agree in desiring the ends aimed at, and soon come to love the work. In time, however, four of the men feel that their personal rights are being infringed, and after protracted efforts at adjustment they conclude that adjustment is impossible. Then, with heavy hearts, they decide to withdraw from the common enterprise. It is a sad step, because they love the work and desire its blessings, and yet they feel that they must sacrifice either their allegiance to it or their own personal rights.

This, I think, is a fair illustration of the conflicting emotions that tried many souls in our land a half century ago.

Not only individuals, but States as well, experienced such an internal struggle. Virginia, for example, was one of the last States to pass an ordinance of secession, and she did so only when it became apparent that she would be compelled to fight on one side or the other. Virginia loved the Union, of which she was a part. She had been one of the leaders in forming it, and she had given more to it than any other State. No wonder, therefore, that Virginia and thousands of her sons entered the struggle with bleeding hearts; for they loved the Union; they loved only liberty, or what seemed to them liberty, more.

Slavery, of course, was at the bottom of the difficulty. It was the starting-point for sectional differences, because it had interrupted mutual acquaintance and prevented mutual understanding and sympathy. This difference grew wider and wider, and suspicion grew continually stronger. For it was a difference of feeling and sympathy, rather than a difference of interests and principles, that led to secession and war, as well as to the blunders of reconstruction. If those words of Lamar, "My countrymen! *know* one another, and you will *love* one another," could have been the motto of all loyal Americans from 1820 to 1860, and could have been a living conviction in each heart, the saddest pages of our history would not be those dealing with the years from 1860 to 1870.

If the men of the North had known the men of the South, they would have known that the greatest southern leaders were opposed to slavery, and were laboring to get rid of it as soon as possible. They would not have called the Southerners so many hard names, and the latter, on their side, would not have felt constrained, in a spirit of wrath and defiance, to manufacture cudgels to defend slavery. If the men of the South had known the men of the North, they would have known that the greatest northern leaders were attacking an antiquated and paralyzing form of social organization, and not individuals, property, or political rights. They would not have called the Northerners so many hard names, and the latter, in angry zeal, would not have resorted to such hasty and radical measures. Mutual acquaintance and sympathy would have solved the problem in good time; but those virtues were lacking. Mutual acquaintance and sympathy now can and must and will make the nation more a Union than it ever was. "My countrymen! *know* one another, and you will *love* one another."

I have thus attempted, at some length, to justify and explain my proposition that the present-day use of Confederate flags in the South does not indicate any considerable degree of hostility either to the Union or to the national government. It may now be in place

to point out some of the reasons why these flags are still employed.

This may be almost an unnecessary task, since some reasons have been indicated already, and others may readily be found.

In the first place, I should say that they are preserved as a matter of history. The men of '61 to '65 made a good deal of history on both sides, and the world is going to preserve it. It is hardly fitting that the successive generations of our own people should cast it away. It cannot be cast away, though every old flag and every new flag, though every old gray coat and every old blue coat should be given to moth and fire. A fact of history, be it great enough, will live forever. I am told that a certain great man's name, placed with others upon a massive structure erected near Washington City while he was Secretary of War, was cut off afterward because he fell into disfavor with the government he had served. How foolish and childish! As if destroying a record would annihilate a fact. I should regard it as a distinct loss to historical material and historical sentiment, as well as to historical study and the historical spirit, if every Confederate flag and every representation of one, in cloth and on paper, were destroyed. We cannot destroy facts, but we can destroy the things that help us to understand and appreciate them.

In the second place, there are all over this land of ours, North, South, East, and West, thousands of graves in which were buried tens of thousands of hearts: hearts of strong men slain in battle or starved in prison; hearts of mothers; hearts of widows; hearts of orphans; hearts of virgins, pure as snow; all these hearts, whether literally or figuratively, were buried in soldiers' graves:

"Under the roses the Blue,
Under the lilies the Gray."

Beside these graves those come and kneel sometimes whose hearts are buried there. They bring flowers, because flowers speak of peace; they bring what is left of themselves, because they have nothing to withhold; and they bring the old flags of red, white, and blue, whether starred and striped or starred and barred, because the lifeblood of the dead fell upon them.

It may be merely a sentiment, it may be only a superstition; we may have borrowed the habit from the red men of the forest and prairie, who place beside the dead hero the things he used in life; but it seems fitting that upon the soldier's grave should be placed the flag he bore. Whether the cause was just or whether war is ever to be justified, is altogether another question: The women that plant a flag on graves do so because they love the dead and honor them, and because the dead loved the flag.

"Stoop, angels, hither from the skies!
There is no holier spot or ground
Than where defeated valor lies,
By mourning beauty crowned."

Finally, although most of the flags used for purposes of decoration are cheap and recent products, a few are not, but are the actual flags under which deeds of valor were performed and history was made. In such instances each particular flag has a unique and lasting interest, and could be used with enthusiasm by any loyal American a few years hence; "when the mists have rolled away," and when the brave men of all sections will be recognized as fellow-countrymen.

A few days ago there died in Baltimore a woman who was in the city of Columbia, S. C., when Sherman's army entered it in 1865. As the city was burning and the inhabitants were fleeing for safety a Confederate officer handed her the flag under which the city had made its last stand, asking her to save it if she could. She draped it about her as an underskirt, and thus carried it through the Federal lines; and it now is kept at the State house at Annapolis, Md., as a precious possession. In a hundred years from now it would be given a place and kept as a treasured relic in any State house of the nation. This flag, like many others, has a history, and its destruction would be a national loss. And yet its colors are laid in stars and bars.

Does the use of Confederate flags on memorial days and in reunions of old soldiers hurt national patriotism? I think not, for the stars and bars are always entwined with the stars and stripes, and the hearts of the thinning gray lines in Blue and Gray are linked together also. A few months ago an old Federal general was given an honored place and hearing on the platform of a Confederate reunion here in Virginia; and since then, in the far South, dozens of old men in faded gray, half blinded by dust and tears, rushed out of the line of procession to shake the hand of the son of General Grant. The men who fought together got acquainted and understood one another years ago; and we, the sons and daughters, the grandsons and granddaughters, of those men, as we know one another better will love one another more.

I should like to repeat, in closing this paper, that I am writing this by the special courtesy of the editor, and with no intention, whatever, of being controversial. I also wish it clearly understood that I am not criticising in any degree the editorial article referred to at the beginning. The remarks in that article merely gave me the ideas that I have tried to develop here, and suggested to me that a discussion of the matter alluded to, by a Virginian, might be of interest to the readers of the INGLENOOK.

University, Va.

AROUND THE WORLD WITHOUT A CENT

HENRY M. SPICKLER

Chapter LXXVI. The Brethren Missions.

THE man-eating tiger in India is a frightful foe to natives and tourists. During the season of my travels here fourteen hundred and six people were carried away and devoured by these ferocious beasts. Night after night a tiger had visited a jungle village and carried away one of its inhabitants. The railroad company, knowing the terror that such a beast incites in natives, offered a big reward to the brave hunters who would capture the man-eater.

Three bold English hunters, armed with Winchester and knives, accepted the offer and were carried by the railroad to the jungle village. Here the car was side-tracked and used as a house by day and as a fort at night. The men therefore slept during the day and with cocked rifles leveled out of the wide-open windows of the English-model cars waited for the tiger from the inside.

Two of the men watched on the jungle side of the car. The rifle of the other guarded the people as they slept in their shapeless shacks.

The second day had come, but no tiger. The natives gathered around the car and began to circulate the report that the tiger had gone. No one had seen it go. No one knew where it had gone. But it had *gone*. And when a thing is *gone*, why,—it's *gone*! But when night came the watch was kept as usual.

The stars came out and flooded the jungle with

ghostly glimmering of light. The full moon rose shimmering over the coast of Malabar. The natives as usual were sleeping behind barred doors. At ten o'clock all was well. At twelve the tiger had not come. The men had been drinking some of the spirits they had carried with them, to keep off the fever, they said, and half believing the tiger had gone away, they allowed themselves to fill up on bad whiskey until they were now about half full. But they were trying to keep the watch as usual.

Bed.

At one o'clock, one of the men on the jungle side of the car said he thought he saw the tiger looking out from some rice bushes, and he got down from the car, saying that as the tiger would not come to him, he, like Mahomet, would go to it. After an hour or so he returned from his dare-devil jaunt.

In the meantime, the man on the village side had fallen asleep with drink and weariness. The two men therefore

decided that the tiger had certainly gone away,—that it was foolish to watch for something that would never show up. They wouldn't give up the watch exactly, but would take turns at watching and sleeping. This game of now you sleep and I watch, and then I *watch* and you sleep, was kept up until some time between three and four o'clock, when all three men were sound asleep in their drunken snooze.

And when they slept the tiger came. He sprang through the open window of the car, seized one of the

men and was off with him, cocked rifle and all, the fellow screaming for his companions and struggling for his life,—*just as the moon sank behind the cocoanut palms!*

That was the night, the hour, the second, when the tiger walked right into their muzzle. All those men needed to do was to pull the trusty trigger of their forty-eight calibre rifles, and there, at the wheels of their car, the spotted terror would have spat out his lifeblood.

That day their names would have been telegraphed all over the land. Their names would have been in all the papers. They would have been worshiped as heroes. Children would have stopped on their way to school to admire their brave defenders. Receptions at court and obeisance in the streets awaited their victorious return. The loveliest women of the Empire would have been their partners at banquets.

But instead of killing the tiger they throw one of their own number into his jaws and increase the peril.

That day when the train carried the car containing the two men back to their city, the idling natives jeered them as they passed through their villages, and the men meditated the death of a suicide,—the coward's last act.

Through something like seventy-five miles of this jungle country I had been riding on my wheel, stopping at various places not on the map for my meals and sleeping out in tents or at the railway stations or in dak bungalows, drinking as I went along, of the same kind of water used by the natives, and preparing for a long and dangerous illness that was soon to overtake me from my terrible exposures. Through the day I rode and nearly fell from my wheel from sunstroke, without an umbrella as is necessary here, and then at night chilling from the fall of the temperature. Though I knew nothing of the poisons I was eating and drinking into my system in both water and food, or of the peculiarly disastrous effects of the sun upon a stranger here, I began to feel the effects of depression in my vitality and hints of an oncoming fever.

At last, learning too of the danger from tigers and cobras that filled the country, I took the train for the mission fields in the vicinity of the Brethren. On Sunday I took dinner with some kind missionaries by the name of Ward, who were doing a good work apparently on a new field. Then I called at Brother and Sister Eby's who were the first of the Brethren up from Bombay. With both of these I had gone to school at the Mount, and it seemed so queer to sit down to their table off in India, in the very jungle, and eat of the peculiar food prepared in a peculiar way, and also to eat of the same kind of food prepared in exactly the same kind of way as we prepare it here. But when night came. I'll never forget that night. The rats would hardly allow me to sleep. They were running

all about me, and above me. I couldn't have seen any of them, possibly, if I had used a light, but still they were there, many of them, and all night long. Now as I had already learned that rats carry the awful disease of the Bubonic plague, and as the plague was raging over the country just then, I just thought that these rats were pouring Bubonic plague all over my bed and me all night long. I had prayed for protection during the

Hut in Bulsar Where Mr. Spickler Talked with the Native Man and Woman. Eliza B. Miller in Chair.

night, and I know now that I had it, all night long, but you could hardly make me believe it at the time. I think it was too bad that the people in our country allowed these earnest and sincere and hardworking souls to suffer like this during the first years of their work there. They should have been more ably supported. Their house was so cheap, so poor, though immeasurably better than the average native's hut. Perhaps I did them good when I came, for it seemed a taste of paradise to meet with schoolmates in such a strange country.

Then I went to Bulsar. Ah, Bulsar! That place will always be on my map!

Wilbur B. Stover! Why, he used to be an Amphitryon, and he it was who always sung for us, with three

others, and he it was who kept the ball rolling in the Literary Society:

"Up the stairs, around the bend,
Pressing toward the eastern end,
Where they chant the happy name, 'Amphictyon!'
"Tis the same united band
That has furnished for our land
Men who manage well the mighty ship of state;
And before you leave the hall
We will bid to one and all
An old-fashioned 'Come again!' and fond 'Good night.'"

And when W. B. greeted me upon my arrival I saw not the naked Hindus thronging us. I saw Mount Morris in his eyes. I saw W. B. with springing step, flying quietly, but *flying*, up the steps in Old Sandstone, or to the society hall in the east end, and then in the new hall, but still the east,—the sun-rising side of the universe. I saw him coming to me, and I knew what he wanted. Some one on the program had failed to appear. He wanted me to give a recitation or debate or write a story. Well there was never anyone more eager to do that, and so, just as soon as I saw him here at Bulsar I was ready to write a whole book and speak a whole volume and argue *ad infinitum*.

Just as W. B. took me in at the Mount, so he took me in here! And I soon found that he was the "whole thing" in the town. His house was the magnetic pole of the Bulsar world.

Emmert Stover, W. B. and Mary's little son, rides a velocipede, and he with his machine and I with mine, went out together around the town. It was hard work for him to keep up, but as I had so much more to see than he had to see, I used all the spare time in rubbering at the dirty children and flirting with the sweet-faced girls, most of whom were dressed on both sides, but a few of whom, like lumber, were dressed only on one side. It was very dusty and so we two kicked up a big dust around there.

Several nights I slept on the bed in the picture and in the room entered by the door, and one morning, early, W. B. awoke us to show me the Southern Cross, which although I had already seen while in the Indian Ocean from the ship's deck, was well worth looking at again in this part of the earth. The constellations forming this cross are in the south, and hang low in the heavens, the stars forming it being at such an angle of position as to give the cross it seems to form a romantic and natural slant of say twenty degrees. My bed was rather hard and narrow and short, but it was free from vermin and I knew it was free from disease. It was much better than the sleep I had in a town farther south where there were no Europeans at all. In that town, I shudder as I tell it, I dared to go out into the wilds of the woods to visit a cave temple with some natives. I had been half afraid to start with these men,—three of them,—for fear they might

be leading me off into a lonely spot, as they did do, in order to murder and rob me. And when I got to the underground temple, it took unusual daring to follow those unknown men down into the darkness. But I wish to think of them that they were all right and meant me no harm, for I am alive now after it all, and am telling about the little hard bed whose picture I show in this letter. Few missionaries, if any, have as good beds as the readers of the INGLENOOK enjoy every night in the year. They must often sleep on the hard ground where scorpions and cobras and tigers are known to be.

One day W. B. took me to the house of one of his friends, a picture of which I send with the letter. Miss Eliza B. Miller, also an old—I mean *young*—student at the Mount, brought sunshine into this house, even though it had no dormer windows or side windows. She was to this humble straw-hut what a faithful pastor is to a humble member of his church. Often she came here to tell the gospel story.

I went to the door myself and sat down here in the cool of the evening, and talked with both the man and his wife. I was able to talk to them without danger because these missionaries before me had gone to them with the story of the Christ. In other villages where I found no mission station, the people in homes like this one here, ran away when I approached, the children going wild and flying before my oncoming wheel like wild animals,—running from me because I was different from them, and therefore as they thought, and as a good many Christian people still think of people who are different,—an enemy.

POETRY: WHAT IT IS.

RICHARD BRAUNSTEIN.

THE question which agitated Pope and Dryden equally with Coleridge and Wordsworth still seems to go unanswered. What is poetry? In a lyric like the "Ode to a Nightingale" there is evident to the philosophic reader that metaphysical inquiry concerning the "to be or not to be" which his eye is in search of; for the emotional reader there is sentiment and passion—more refined than he may be accustomed to in prose romances—but still warm and luxurious; for the religious reader there is abundant yearning after the life that is not, and the ethically inclined may discover the honesty of purpose and high morality of tone which are the objects of his inquiry. But if we attempt to define the charm of this poem, which has been called the most exquisite production of English lyrical verse, do we look at it from either of these sides? Do we feel the impress of its philosophic more than its emotional element? Is the ethical the thing which makes it forever a joy? Have we got from it nothing but

religious inspiration, the longing for a better existence beyond the "world unseen"? Evidently there is something else than these which constitutes the pleasure and benefit of reading such a song. It is the beauty, the summing up of all the constituents; the pervading atmosphere formed of *nature*, *art* and *thought* which make it a poem; and it is the intensity of these three which makes it a *great* poem. Poetry, then, would seem to be an expression of the beautiful poetically—that is in rhythm—with no thought of the moral or philosophical or emotional; because if any one of those elements, where all are equally represented, predominates over the other, the work produced ceases to be poetry, and becomes an expression of philosophic or moral, or some other truth. "Infinite symbolism be-

longs to all nature," says George Eliot, and if the poet recreates something beautiful out of the abounding life of nature he performs at the same time the office of moral, philosophic and emotional teacher. His part in the great scheme is the seizure of new beauty, interpretable in song, out of the ever-thronging images of truth which nature presents to his eye. Miracles are not the infractions of law,—they are not combinations of its material, and these, having been the medium of interpretation from the earliest times, the poet continues to perform and exhibit them, only with the clearer exposition with which the verse avails him.

He must be a seer but his seeing is concerned with the mystery of beauty, which is his only avenue of approach to the infinite.

THE COMET

T. H. FERNALD

THE comets are by far the most fascinating class of bodies in the study of astronomy. The suddenness with which they flame out in the sky, the large dimensions of their fiery train, the swiftness of their flight, the strange and mysterious forms they take, their suddenness of departure—all seem to defy the laws, and parfake of the marvelous.

The dictionaries tell us that they "are luminous heavenly bodies, which in general, consist of a nucleus or 'head,' with, or less frequently, without, a 'tail,' the whole moving in the heavens, first toward, then around, and finally away from, the sun, like a planet at one part of its elliptical orbit."

Thompson has written:

"So from the dread immensity of space
Returning with accelerated course,
The rushing comet to the sun descends."

The term comet really means a hairy body, consisting generally of three parts: the *nucleus*, a bright point in the center of the *head*; the *coma* (hair), the cloud-like mass surrounding the nucleus; and the *tail*, a luminous train which extends generally in the direction of the sun. Some, however, have no tails, and others have many. Comets appear in all parts of the heavens, and move in every conceivable direction.

When first seen the comet is a mere speck of light upon the dark background of the heavens, but increases in brightness as it nears the sun, and the tail comes to view. It is brightest near perihelion, and gradually fades away as it came, and at last is lost to view even to the telescope.

In every age the comet has excited great attention,

and has inspired superstitious terror in the general public. They have been considered as

"Threatening the world with famine, plague, and war;
To princes, death; to kingdoms, many curses;
To all estates, inevitable losses;
To herdsman, rot; to ploughmen, hapless season;
To sailors, storms; to cities, civil treason."

Milton in his "Paradise Lost" expresses the fear of the people in these words:

"On the other side,
Incensed with indignation, Satan stood
Unterrified; and like a comet burn'd,
That fires the length of Ophiuchus huge
In the Arctic skies, and from his horrid hair
Shakes pestilence and war."

Josephus tells of one of the omens foretelling the destruction of Jerusalem, as a "star resembling a sword which stood over the city, and a comet which continued a whole year."

From these ideas has science had to feel its way forward. Aristotle thought that the comet was an "igneous vapor not higher than our own atmosphere." Seneca taught that they were a kind of a planet. In 1668 one astronomer ascertained that the orbit of a comet was concave and not a straight line, as had been held previous to that date. In 1681, another believed them to move in parabolas. In 1704 Sir Isaac Newton proved that comets obeyed the laws of gravity, and held their orbits to be elliptical.

At the present time knowledge and opinions in regard to comets have advanced greatly, and we find the following as the result of study and observation.

According to Mr. Hind, more than six hundred comets have been noted, but at present it is believed

that about 17,500,000 exist in connection with the solar system.

In 1832 Sir John Herschel "saw a group of stars, of the sixteenth magnitude only," almost in the center of the Biela comet. "When such a body might be expected to exercise gravitation its influence is too small to be perceptible."

Comets are now divided into two very distinct classes as to their orbits: First, those whose orbits are so long that they are usually regarded as parabolas (cone-shaped); the second, those whose orbits and periods are both short. Of this last class about twelve or fifteen are known. The first class seem to come to us from outside space; while the other, which are supposed to have originally been a part of the first, seem to have their direction changed so as to produce their present short elliptical orbits, being acted upon by some planet. Prof. Schiaparelli, of Milan, in 1866, discovered that the orbit of the Tuttle comet, which was the third which appeared in 1862, was nearly "identical with that of the August meteors, and Temple's comet, the first of 1866, with that of the November meteor system." Prof. P. G. Tait, consequently, published the view that the sudden development of the tails of the comets, many million miles in length, and the occurrence of comets with many tails, and also the fact that there is no definite relation of direction between a comet's tail and its solar radius vector, may be accounted for on the supposition "that a comet is a cloud of small masses, such as stones are fragments of meteoric iron, shining by reflected light alone, except where these masses strike against each other, or on other matter circulating around the sun, and thus produce luminous gases along with considerable modification of their relative motion." We are told that the differences of motion of the meteoric fragments relatively to the earth, present appearances similar to those of a flock of sea-birds flying in one plane and only seem as one long line when the plane passes approximately through the spectator's eye." The so-called envelopes that surround them are also compared to the "curling wreath of tobacco smoke emitted from a pipe." William Huggins, Esq., examined the bright comet, which was visible June 24, 1881, with a spectroscope, and assuming that this one was composed of similar matter as other comets, decided that part of the light is "reflected sunlight, and part original light, and further that carbon is present in cometary matter."

The four largest and best-known comets are:

The Biela's comet which was named from M. Biela, an Austrian officer, who discovered it at Prague, February 27 or 28, 1862. This comet appeared about every six and one-half years. It made its appearance in September, 1832, in 1839, and in 1845; but between December, 1845, and January, 1846, it separated into

two comets, which went off in company, but returned in 1852 together, since which time they have never been seen. It has been discovered that when toward the end of November the earth intersects the path of a double comet, there is generally a meteoric display. This was seen on November 30, 1867, and again on November 27, 1872. This comet is sometimes called Gambart's comet.

Donati's comet, which was named for its discoverer, Dr. Donati, of Florence, was seen June 2, 1858, and appears about every 2,000 years.

Encke's comet, which was discovered by Johann Franz Encke, director of the Berlin Observatory, in 1819, bears the name of its discoverer. This comet he proved to be the one seen by Mechain and Messier in 1786, and Herschel in 1795, and Pons in 1805, and which also appeared in 1822, 1828, and after at intervals of about 3.29 years, or 1,210 days, and appeared on August 20, 1881.

Halley's comet which we are told is to appear during the latter part of 1909 and beginning of 1910, was named after the celebrated Edmund Halley, who was English Astronomer Royal, from 1720 to 1741-42. This comet has a periodic time of about twenty-five years, and is the first comet whose periodic time has been ascertained. It is the same as appeared in 1531, 1607, 1759, and 1835, and is sometimes called Apian's comet. It is by some supposed to be the "Star of Bethlehem." It will be visible to the naked eye in October "about midway between the Pleiades and Hyades on the west, and Castor and Pollux in Gemini on the east, or about seven degrees to the right, or west, of the bright star Alhena in Gemini." It has been observed at intervals of seventy-five years since the fifteenth century, and records show that it probably appeared many centuries earlier. Its last appearance was in 1835, when its tail was about twenty degrees in length, and its nucleus like the red star Antares. It will increase in brightness during the remainder of 1909, and continue well into 1910.

While it may be possible for a comet to collide with the earth, such cases, must necessarily, be rare. Babinet calculated that it might occur once in 15,000,000 years, and should such an event take place, the particles composing the comet are so very small, no serious result could possibly occur, and all we should see would be a splendid shower of shooting stars.

VAST ETHEREAL OCEAN OF INFINITE SPACE.

G. WILFORD ROBINSON.

O INFINITE space! When was sounded the anthem of thy existence? Born in the past forever and alive to a never-ending eternity! How shall we speak of thy extent—how extol thy beauty and grandeur? Where is thy top or bottom? Shall man, a pigmy isolated in space on a tiny globe, whirling in infinite

void, attempt to measure thy vast celestial immensity? As well might an ant attempt to drink the ocean! Yea, the visible universe, with its hundred millions of suns, represents an infinitesimal part of thy eternal void!

Millions of ages with thee are but seconds of the eternal clock! The age of man's creation is but a moment to thy past eternity! Millions of worlds may live and die and their long career will have endured but the "space of a morning" in thy eternal duration! O deep immensity, where comets the volume of a sun can steer their course and not molest the millions of shining worlds which inhabit thee!

Let us rush with the velocity of light through this space. In a few seconds we reach the moon. We do not stop. In about eight minutes we reach the sun—that great orb so far away that if we could reach out our arm and touch it, and burn the tips of our fingers, it would take one hundred sixty-seven years for the sensation to reach our brain. But let us continue our flight. Here is Mars. Here is Jupiter. But let us fly! We continue our flight until we are past Neptune, the last known world. But on we fly! At 186,000 miles per second in four years we reach the nearest star. If a terrible explosion occurred in this star, and if the sound could traverse the void which separates us, it would take more than 3,000,000 of years for it to reach us. But let us hasten. For a thousand years we pass innumerable distant worlds. Another ten thousand, another hundred thousand years without slackening we behold worlds in ever-yawning space. We are going 11,000,000 miles per minute and have sailed for 120,000 years yet we are only among the stars which compose the Milky Way. And there are stars five hundred times more remote! What an overwhelming idea! It is too vast even for comprehension. We go on and on until we have sailed for 1,000,000 years. Are we at the confines of space? No! Yonder in the distance new stars light up. We press on to reach them. Another million of years and yet more stars. What! Never an end? Nothing to stop us? Forever space? Where then, are we? We are only at the vestibule of infinite void!

Though we fall, fall for ages, fall forever, fall through eternity, never, never would we reach the bottom! We look this way, and that way; that way and this way, and see nothing but a yawning abyss of infinite space.

O philosophers, scientists, and thinkers of all ages! How dare you speak? Be dumb before the "vast ethereal ocean of infinite space"!

MY PLATFORM.

DURING the coming year I shall try to adhere to these rules of self-conduct in the schoolroom:

1. Each morning I shall make an honest effort to

find Joy and take her with me. If, as has happened and may again, she eludes my patient search, I shall keep the secret of my failure, so that the children may never guess.

2. I shall throw wide open the portals of my soul, with the children, in the morning prayer and allow the Divine Spirit to enter and leave an inspiration for the day.

3. I shall try to keep firmly in mind that the chief end of education is *not* reading, writing, and arithmetic—but that it *is* the preparation for a worthy life among the living, and that the greatest aim of all is the formation of a noble character.

4. I shall make the children feel that there is a place for them in my heart—if they care to take it; and shall strive daily, hourly, to win and hold my place in theirs.

5. When I find the stress oppressive, or the struggle for a calm control too great, I shall quietly close the door upon my class, and, taking myself well in hand, "have it out" alone—just as I would with any other irritable or refractory pupil.

6. I shall cultivate assiduously the "muscular smile" so that the mental state may follow; and shall keep on hand a stock of pleasant subjects, either memories or anticipations, that may tide over the unpleasant phases of a school day.

7. Above all, I shall keep fast hold of these two facts: I am here for the sole purpose of "giving myself" to the children—for their sakes, not for mine—for what joy and hope and help I can bring, not for what ease of pleasure or comfort I can take; also, that the more I bring the more I take away—the greater portion of myself I give, the richer do I become—the stronger in helpfulness, the more beautiful in character, and the more blessed in living.—*Bertha Schoen.*

THE TOBACCO HANDICAP.

I WROTE to the clerk of the school board of each high school town and city of this State [Minn.], asking two questions.

1st. If you were now electing a superintendent, would a candidate's use of tobacco tend to discredit him with the board?

2d. Would it be a conclusive objection to him?

I have received one hundred and twenty-three replies. Eighty, or nearly two out of three, answer yes to both questions: it would tend to discredit him with the board and it would be a conclusive objection to him. Only 18, about one-seventh, answer no to both questions. The rest answer yes to the first and no to the second, or—in the case of three or four—are non-committal.—*J. H. McBroom.*

"The best lesson of life we ever learn is that one which teaches us our limited capacity."

PRINCIPLES OF AGRICULTURE.

JOHN H. NOWLAN.

Chapter VII. Fruits.

THE apple, as previously stated, does not come true to seed. If you want good fruit you must resort to other means. Raise some seedling apple trees of any variety—crab apples are as good as any. Then onto these you can graft or bud any variety you want. Directions for grafting were given in the INGLENOOK of Dec. 18, 1906, and for budding in March 24, 1908, so they need not be repeated here.

Whatever the method of propagation employed, you will have need to watch the growth of the tree. In transplanting the tree make a large, roomy hole, spread the roots out carefully, and pack the earth firmly around them. In windy localities lean the tree toward the direction of the prevailing wind.

Prune your tree during the period of its growth instead of waiting till it is large. A branch can be removed when small and no injury be done to the tree, while if a large one be cut off, decay may set in and ruin the tree.

You can train a tree to the shape that suits your taste with but little time or labor. If the terminal buds be cut out, the growth of the tree is forced into the side buds causing the tree to spread, while removing the side buds causes it to grow upward and make a cone-shaped tree.

The time for pruning depends upon the condition of the tree. One saying is, "Prune when the knife is sharp." Another says there are only fifty-two days in the year in which you should not prune. (Sundays.) However, winter pruning induces the development of leaf buds, while summer pruning favors the production of flower buds and hastens fruitage.

In no case leave a long stump. The wood can not grow over it before decay sets in, hence the tree will be weakened and perhaps ruined.

Sometimes a tree planted in rich soil continues to grow new wood and fails to set fruit buds. In that case a thorough root pruning checks the sap flow and causes fruit buds to form.

Gardens and Vegetables.

To be successful in the production of vegetables several things are necessary.

First, the land should be made and kept rich. Suc-

cess depends on getting vegetables to market ahead of the main crop, and as land suitably located for gardening is costly the greatest returns must be had from the smallest area.

Second, this land must be cultivated carefully and economically. The gardener must crowd his land and allow no fertility to go to waste. To do this he must cultivate thoroughly and in proper time.

Third, he should grow perfect vegetables. To do this he must have a knowledge of plant diseases and insect pests. This necessitates a knowledge of poisons and methods of applying them.

Producing goods is one thing, but disposing of them is another. To do so to the best advantage they must be put up in attractive shape. No one will buy wilted, dirty, or ill-shaped vegetables when he can get good ones at the same price. The writer knows from experience that it pays to take the time and trouble to do this, as he has known the appearance of the vegetables to determine which party was called upon to supply the merchant.

Be honest. Be sure that those on the top are no better than those in any other part of the box or basket. Put your card on it if you can, then live up to your reputation.

In some places hothouses are erected and kept at a uniform temperature by means of artificial heat. These are expensive to erect and maintain, but any gardener can and should have one or more hotbeds. You can get a bulletin telling how to make hotbeds by applying to the Department of Agriculture, or any gardener can give you the information.

The time of making the bed should be eight or ten weeks before the tender plants can be set out in the open air. When the thermometer stands at eighty-five degrees in the morning sow the seed. Tomato plants, egg plants, cabbage plants, and other vegetables that cannot endure exposure should be started in this way.

To do the best, you need one or more cold frames. They are made and cared for the same as hotbeds, except that you do not use the layer of manure beneath. Put the plants in it when a few inches high and gradually accustom them to the open air.

When to sow the seed is also a question of importance. Peas, parsnips, beets, and radishes may be

planted while the ground is quite cold and still do well, while corn, beans, squashes, and the like will decay if planted before the ground is warm.

The depth of planting is also an important factor. Peas may be planted six inches deep and do well, while other seeds would not get above the ground. A good rule for small seeds is to cover them three times the thickness of the seed. If the soil is dry firm well after planting by stepping on the row with the foot, but never tread the soil if it be damp.

Study the market you intend to supply and plant accordingly. Some of the more important market crops are asparagus, beans, cabbage, celery, cucumbers, cantaloupes, egg plants, onions, peas, tomatoes, and watermelons. If you think of growing any of the above send for free bulletins treating on the plants you wish.

If you are gardening for the home consumption only, see that the spot selected is near the house, so that the vegetables may be accessible on short notice. If for the market its proximity to the house is not important, as the crop will be loaded into wagons and a drive of a few rods extra is of no consequence.

Flowers.

Aside from the food and money value there is another use for plants—that is their use as beautifiers. In the mad race for gain we are apt to forget the beautiful. That which will cause us to feel better is apt to make us *do* better, and anything that will inspire noble thoughts is a benefit.

Raise flowers to beautify your home. Use them as borders, near steps, or against foundations. Thus they will hide the unsightly architecture.

If you raise them for the sake of the flowers to pluck and decorate your rooms why not utilize your back yard? Recently I saw a picture that impressed me forcibly. The title was "Shall your little one pluck flowers, or rattle tin cans in your back yard?"

Plants may be grown from seeds, bulbs, or cuttings. The latter is an interesting operation for the lover of flowers. Such plants as will root from cuttings may be stuck in a pan of wet sand placed in a sunny window and kept moist. In a few weeks such as have rooted may be transferred to pots.

Bulbs are the lower ends of leaves tightly wrapped and enclosing the bud of the embryo flower stalk. The disk at the base from which the roots project is the shortened stem of the plant. Between the base of the leaf and the flower stalk is a bud, just as there is a bud at the base of each leaf on a tree, only those in the bud often remain dormant.

Gardeners cut away the disk at the base of the hyacinth, thus exposing the buds, and then bury the bulbs in sand. The buds will then grow and make other bulbs. Some plants, as the potato onion, will make bulbs without this cutting.

Gladiolas and some other plants look like bulbs but are not—they are corms. They may be cut into pieces and planted like potatoes.

Many others can be raised from the seed.

Consult any reliable seed catalog, or send for free bulletin of Annual Flowering Plants.

GENTIAN.

TOWARDS the end of September, before the severe frosts have come with their cruel, killing blight, and when all the wayside flowers are heavy with their seed, a lovely, sky-tinted flower, exquisite in form and rich in color, "bluer than the bluest sky," rises serene and beautiful from its moist, shady bank to smile a hope into our saddening hearts. Its name is the fringed gentian, and if we are fortunate enough to have some brought in, or, better still, to see them growing, we shall have a rare treat.

When we have looked into its "sweet and quiet eye," we shall surely wish to get acquainted with its relations—the closed gentian and the five flowered gentian; and so we shall ask the children to hunt for the hiding place, and go with them to the favored spot to study this interesting family.

The fringed gentian grows on a round, smooth stem, about two feet high. This stem bears the single, large, blue flower at its summit. The corolla has four spreading, daintily fringed lobes. The calyx is four-cleft with tapering points. There are four stamens, and one pistil with two stigmas. The lance-shaped leaves grow opposite. It is biennial; sometimes it lasts as late as October, but a severe frost blights it.

The closed gentian also has a smooth, erect stem about two feet high. The stem bears a cluster of flowers of a darker blue than the fringed gentian. There are also flowers in the axils of the leaves. The corolla is closed tight and folded like a fan—perhaps to protect the treasures inside from Jack Frost's cold bites. It never opens, but always looks like a bud, and it has not the graceful, fragile look of the fringed gentian. Its sharp-pointed leaves are almost oval in shape and they turn brown as they grow old.

The five-flowered gentian is rarer than the closed gentian, and its flowers are small. It grows in the woods on a slender, branching stem, which bears five pale blue, bell-shaped flowers in a cluster at the top. It has four or five stamens and one pistil. The calyx

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE

ELGIN, ILLINOIS

Subscription Price, One Dollar per Annum, in Advance

The Inglenook stands for material and spiritual progress. Its purpose is to safeguard home life by supplanting and counteracting bad literature. To carry out this purpose a strong effort is made to develop the latent talent of the constituency.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Watch the label on your paper. It gives the date of the expiration of your subscription. Renew promptly.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

It is our opinion that the modest, unassuming Wright brothers who are bent on doing the world a real service and not on gaining notoriety, are grateful to the North Pole explorers for filling the public's eye so completely at this time. It leaves them free to go on with their work unhindered by admiring people who would have them forever parading before the public. Some people aspire to do great deeds in order that they may be called great, while others do great deeds in order that the deeds may add to man's happiness and betterment. In a good many cases it is not hard to determine "which is which."

IN the death of E. H. Harriman, Sept. 9, the railroad world has lost one of its greatest leaders. Mr. Harriman was especially successful in organizing the various systems which came under his control, thereby increasing the roads' efficiency and value. He is a convincing example of the man who succeeds because he bends every energy toward success in a particular line. He made the chief aim of his life the accumulation of money—largely through railroad manipulation—and he realized his ambition, as his hundreds of millions of dollars testify. We who have other, and let us hope nobler, ambitions will do well to use the same zeal and energy in bringing them to pass. The right kind of effort will work as well in one thing as another.

PRESIDENT TAFT has already found out that the way of the President of the United States is not an easy one. The fact that the way in this particular instance has been somewhat marked out, instead of making things easier for the traveler, has brought about complications that offer almost no end to the difficulties he must meet. While two people may fully agree that a certain work should be done, it is scarcely probable that they will employ the same means to accomplish

it. If a man cannot choose the method by which he is to do his work, or if he cannot do it in the way that seems best to him, he should not be measured altogether by its outcome. We may not always get the best results when each executive manages affairs within his sphere entirely according to his own judgment, but we shall at least be fair in allowing him that privilege and we shall know more of his real powers.

WHILE the newspapers were waiting for Dr. Cook and Commander Peary to arrive on American soil, when the quarrel of their friends could be carried on with greater interest and excitement, their representatives improved the enforced waiting by looking as closely as possible into the love affair of the Duke of the Abruzzi. The Italian nobleman has returned from his mountain-climbing trip, where he broke all records in scaling Himalayan peaks, and if the newspaper correspondents do not now succeed in marrying him off to the American girl they have picked out for him, they will have to be put down as the poorest sort of matchmakers. For the most part we may be thankful that we do not belong to the worldly great whose personal affairs, even of the most sacred character, are tossed about here and there for the public's pleasure, and yet if the above much-talked of marriage is consummated it will be a great temptation to many to try the fortunes of the great.

EXEMPLARY PHYSICIANS.

If the physicians who belong to the Chicago Homeopathic Medical Society live out the principles urged upon them by the president of the society, Dr. H. S. Aurand, the people of Chicago will not only receive careful, conscientious care while they are sick but at all times they will have in their physician the inspiration of a noble, upright life. Dr. Aurand believes that doctors should set examples of right living before their patients. This, of course, would bar the use of tobacco or harmful drinks in any form.

But he would go farther than personal habits that are a discredit to any one, he would have the physician give his time wholly to his profession and not "mix up in the speculative world and act as agents in business transactions for their patients."

In addition to this he "deplored the tendency to exact fancy fees, claiming that it was not ideal for the physician to base his charges on the benefits derived or on the wealth of patients." The individual physician would gain much by living up to these principles and the gain to the profession would be incalculable. People have a right to look to their physician for an example of right habits, and if there is added to this a clean, conscientious life, we would have not only many less weak and sickly bodies but very many less moral wrecks.

A FEW QUESTIONS.

A NUMBER of our readers are schoolteachers, a number are preparing to be teachers, or are thinking of that as their future profession, and a still greater number are interested, from one standpoint or another in the teacher's work. For these reasons we are publishing the following which appeared in the September number of the *Interstate Schoolman*:

You are about to begin, perhaps have begun your work as teacher for the school year of 1909-10. It may perhaps be the first time you have tried to teach. Whether it is, or is not, it will not hurt you to consider a few plain questions. It will do you good to try to frame honest answers to these questions.

1. Why have you engaged in the work of teaching? Is it because necessity compels you to earn money in some way? Is it because you have concluded that you can get more money by teaching than you could get at some other occupation? Is it because you are not physically strong enough to do some other sort of work? Or is it because you think you will like the work, and can make a success of it?

2. How full and complete is your preparation? Is it full enough—just full enough—in your judgment, that you can get along by leaning hard on the textbook? Are you afraid of nothing beyond the twisted sentences in grammar and the hard problems in arithmetic? Do you have a notion that daily preparation means simply to know what is found in the textbook? Or do you understand that adequate preparation includes as its chief element the best possible presentation of each lesson?

3. Of course you propose to have a quiet, orderly school; but why? Because noise and confusion would annoy you? Because you need to hold and want to hold your job? Because you desire to work up a reputation as one who CAN manage and govern? Or is it because you think it a part of the business of the school to train to habits of quiet industry and disposition toward self-government?

4. What does the word "teacher" mean to you? Does it mean a person whose business it is to hear lessons while keeping some sort of order? Does it mean one who can pass the necessary examination, get a certificate, and secure a school? Does it mean a person who manages a machine six hours a day, allaying probable friction? Or does it mean one who makes it his aim to lead boys and girls to desire and live toward strong intellectual, physical, and moral manhood and womanhood?

Very likely the preceding four questions are as many as you will care to consider at present; but here are a few others that you may consider at your leisure:

5. If you inflict some punishment, what will be its purpose?

6. How far do you propose to give instruction in good morals?

8. How much—or how little—do you know about children?

9. If your knowledge of children is insufficient, how do you propose to find out more about them?

10. To what extent do you realize the tremendous responsibility that rests upon every man or woman who assumes to be a teacher?

CHARACTER GROWS.

MANY people seem to forget that character grows; that it is not something to put on, ready made, with womanhood or manhood; but day by day, here a little and there a little, grows with the growth and strengthens with the strength until good, or bad, it becomes almost a coat of mail. Look at a man of business—prompt, reliable, conscientious, yet clear-headed and energetic. When do you suppose he developed all these admirable qualities? When he was a boy? Let us see the way in which a boy gets up in the morning, works, plays, studies, and we will tell you just what kind of a man he will make. The boy who neglects his duties, be they ever so small, and then excuses himself by saying, "I didn't think," will never be a reliable man. And the boy who finds pleasure in the suffering of weaker things will never be a noble, generous, kindly man—a gentleman.—*Exchange*.

GENTIAN.

(Continued from Page 971.)

is small and five-cleft. The lance-shaped leaves clasp the stem.

The Legend of the Gentian.

Once the Queen of the Fairies was caught in a shower. She ran to a Gentian and asked for shelter. "Who are you, that you disturb me so late at night?" asked the Gentian. "I am the Queen of the Fairies, and I only ask for shelter," said the little stranger. "Go and ask my sister over there to take you in, and leave me to sleep," said the cross Gentian. The poor Fairy Queen turned sadly away, but a sweet voice called to her, "Poor little lady, come in and I will shelter you till morning."

Looking around she found that it was another Gentian that called to her, so she gladly accepted the invitation. At early dawn the Fairy Queen rose and said to the friendly Gentian: "I am the Queen of the Fairies, and I can repay you for your kindness. You and your children shall hereafter have the power to open your pretty fringed eyes to the sunlight, but your selfish sister's shall remain forever closed."—*School Education*.

THE HOME WORLD

SPECTACLE WEARING AMONG THE YOUNG

DR. O. H. YEREMAN

IN the two previous articles (March 30 and July 26), we discussed the eye as a busy organ, and glasses as they are worn by elderly persons; but the use of glasses among young people is so common that we can not pass it by without consideration.

I have been asked hundreds of times, why it is that at present there are so many more children and young persons wearing glasses than there used to be years ago. The reasons for this are easily understood. We are living in a strenuous age for eyesight. Never before have the eyes been used for close work to the extent they are today. There were not half so many magazines, newspapers, and books coming into your home twenty-five years ago as there are today. This means more work for the eyes. Today we have many more schools, more scholars, and longer courses, with necessarily a larger per cent of eyestrain. Then, again, a great deal of our daily toil is being done by artificial light. Visit the large factories, plants, department stores, or any of the modern sky-scrapers, and see in what a large per cent of the rooms artificial lights are used. This has its effect upon the eyes of the many who have to labor in such places. Finally, visual defects are transmitted from parent to child, like any other physical characteristic; so that if you are nearsighted, your children are very liable to suffer from the same visual defect.

Two other important factors should also be recognized: viz., that the increasing nervousness of the present generation makes us feel the tension on the strained nerve and tired muscle of the eye, while the less civilized races of the world would not notice them at all. While in India I found many persons having visual errors, which did not trouble them so far as headache and blurring of print is concerned; but these same people do not feel pain so keenly as we do, neither is their joy so full as ours. This would make

it seem that the greater the civilization the greater the degree of nervousness; and the greater the nervousness, the more keenly the effects of eyestrain are felt. The other factor is that the doctors have learned to recognize and attribute these symptoms to the eye. Many a person who had been doped with all sorts of tablets for the headache has found the wearing of a pair of glasses to give him absolute comfort and freedom from the ever-recurring headaches. Hence the persons who formerly suffered from blinding headaches, considering them incurable, are now found among the army of spectacle wearers.

Among the young we must recognize two distinct phases of the usage of glasses; first for the improvement of vision, and second for the relief of eyestrain. Among the first are persons who have high degrees of nearsightedness or farsightedness; who need to wear glasses in order to see objects about them distinctly, to recognize faces, and to be able to go about and perform their duties. The second class are composed of those whose vision seems apparently normal but who, after reading awhile, suffer from headache, blurring of the print, drowsiness, nervousness, redness of eyes, and the various manifestations of eyestrain. The wearing of glasses does not improve the vision of these persons, and for this cause they are often unjustly accused of wearing them for style, but glasses relieve all of the above annoying symptoms and are a boon to these taunted sufferers.

The three principal visual defects requiring the use of glasses for distant vision are myopia or "nearsightedness," hypermetropia or "farsightedness," and astigmatism.

Myopia is an elongation of the antero-posterior diameter of the eyeball, which causes parallel rays to come to a focus before reaching the retina, or back part of the eye. Fig. 1. To overcome this, the myopic

person holds objects close to the eye, so as to make its rays reach the eye as divergent and thus meet on the retina. Fig 2.

Heredity is often responsible for myopia, and it tends to increase from generation to generation. Prolonged use of the eyes at near objects, such as engraving, watchmaking, fine sewing, reading, etc., causes a tension on the covering membranes of the eye, which

Fig. 1. Myopic Eye. Parallel Rays Meet Before Reaching the Retina.

finally leads to their stretching and the elongation of the eyeball. This error is usually found among the educated and literary classes. It is most prevalent among the Germans who are called the nation of myopics. The curls of the German type, and the great similarity of many of the letters of their alphabet is probably the cause of the great prevalence of myopia among them. Reading with insufficient light, small print, long lines, and narrow spaces between the lines are also among the causes of this trouble.

Not able to see distinctly, the person afflicted with myopia soon loses interest in society, becomes reticent, and to while away his time resorts to reading. This only aggravates matters as the worn-out muscles and nerves are forced to greater strain, which results in an increase of the myopia.

This visual error tends to increase with more or less rapidity. In high degrees of myopia there is danger of the rupture of the various important linings of the eye, resulting in blindness. Paralysis and death of

Fig. 2. Lens Contracted and Made More Convex by Ciliary, Bringing Rays to Focus on Retina.

the optic nerve, cataract, hemorrhages and other serious diseases are liable to develop in a myopic eye because of its weakness due to the strain upon it.

Although myopia can not be cured, glasses can be employed for its correction and various measures adopted to curtail its further development. As the trouble generally develops in early life, while the eyeball is plastic, preventive measures should be employed among the children. Only large objects should be given them for playthings, large type should be used in printing their schoolbooks, and the lighting and seating of the schoolroom should be scientifically ar-

ranged. At the first sign of myopia a competent oculist should be consulted, who will make a careful examination of the interior of the eye and prescribe not only the proper glasses, but also such measures as will prevent its increase as much as possible. The eyes should not be employed long at close work. Frequent interruptions in work or reading are advisable. Outdoor life and outdoor work are most advantageous.

Seeing that parallel rays meet before reaching the retina of a myopic eye, Fig. 1, it is necessary to employ concave spherical glasses to disperse the rays and make them reach the eye as divergent. This will cause them to focus on the retina. Fig. 3. Such eyes should be carefully examined by an oculist at least once a year, so as to discover any new development or increase in the course of the anomaly, and if possible check it.

Hypermetropia, which in commoner terms is known as "farsightedness," is the condition where the eyeball is shorter than normal, and parallel rays of light passing into it reach the retina before coming to a focus. Fig. 4. At birth the human eye is hypermetropic, but as the child grows, the eyeball continues to

Fig. 3. A Concave Lens Disperses the Rays and Makes Them Come to a Focus on the Retina.

develop until it becomes normal in length, and may even go on until it becomes myopic. Therefore a hypermetropic eye is an undeveloped eye.

In the normal eye parallel rays come to a focus on the retina without any effort of the ciliary muscle, Fig. 5. But since these rays will not come to a focus in the hypermetropic eye, Fig. 4, the ciliary muscle goes to work and pushes in the ends of the lens, so it becomes thicker in the center and bends these parallel rays more than before and brings them to a focus on the retina. This gives clear vision, but at the expense of the ciliary muscle, for this muscle is supposed to work only when we look at close objects. So that in the hypermetropic eye the ciliary muscle is made to work all the time. It is on duty while you read, while you work, play, ride—as long as the eye is used this muscle has to work. Now, if the hypermetropia is slight in amount and the eyes are used mostly for distant objects, no inconvenience may be suffered. But as soon as the individual gives his eyes continuous close work, such as going to school, steady sewing, etc., the ciliary muscle begins to fail and pain in the temples and over the brow, headache, drowsiness and similar symptoms are the signs it uses in informing us of this fact. If unheeded, these symptoms continue, the strain increases, and serious diseases of the eye are liable to be provoked.

Although slight degrees of hypermetropia are overcome by the ciliary muscle and do not impair vision to any appreciable extent, higher degrees limit it very materially. I remember a patient in Illinois whose vision was so much decreased, that when walking on the street without his glasses, he mistook a hitching

Fig. 4. Hypermetropic Eye. Being Too Short. Parallel Rays Do Not Meet When They Reach the Retina.

post for a lady, and bowing, tipped his hat. Incidents of this sort were very common with him when he ventured out without his glasses.

The treatment of hypermetropia consists in wearing the convex spherical lens which will bring parallel rays to a focus on the retina without the aid of the ciliary muscle, Fig. 6. Since these persons are accustomed to using their ciliary muscles for distant vision, it is frequently necessary to dilate the pupils, which prevents the ciliary muscle from coming to the assistance of the eye. In this way an accurate test can be made, and the proper glasses prescribed which give complete relief from the annoying symptoms of eyestrain.

The third condition is astigmatism, which is really a form of the two foregoing. In hypermetropia and myopia the error is found in all the meridians of the visual field, while in astigmatism it is limited to certain angles. Thus we may find an eye to be hypermetropic in the horizontal meridian, and normal in all the other meridians. In another case we may find myopia in the

Fig. 5. Normal Eye. Parallel Rays Come to a Focus on the Retina Without the Help of the Ciliary Muscle.

perpendicular, and no error in the other angles. Again we may have hypermetropia in one meridian and myopia in the opposite meridian of the same eye. Or both meridians may be hypermetropic, but one of a higher degree than the other. This condition is due to an asymmetry of the cornea or crystalline lens of the eye.

Besides the general symptoms of eyestrain which it produces, astigmatism is distinguished by the individual tilting his head to one side, being nervous, irritable and discontented. There is often twitching of the muscles of the eye and face; in fact it is the cause of many cases of Saint Vitus' dance, vertigo and epilepsy. Often the slightest amount of astigmatism will produce the most troublesome train of symptoms.

A few months ago one of our ministers from Kansas brought to me his daughter who was suffering from twitching of the muscles of the face and general nervousness, as he termed it. His physician had advised him to get her eyes tested. A local optician who calls himself a doctor, had given the girl a pair of concave myopic lenses to wear. This aggravated the nervous symptoms instead of relieving them. The patient was taken back to this optician several times, but as he could not relieve her, she was brought to me. A very careful examination revealed that she was suffering from hypermetropic astigmatism, and a convex cylinder was prescribed which completely corrected the error of refraction and the annoying nervous symptoms which it was producing. This is very much like the man who took his watch to the blacksmith for repairs. He discovered that it is best to go to a watchmaker.

For the correction of astigmatism special cylindrical

Fig. 6. Convex Lens Bending Parallel Rays and Bringing Them to a Focus on the Retina of a Hypermetropic Eye.

lenses are ground, so as to rectify the meridian at fault, and not interfere with the action of the other meridians which are normal. In using such glasses care should be exercised to have them securely adjusted, as the least change of their position, forward, backward or from side to side will cause blurring of vision.

417 Portsmouth Bldg., Kansas City, Kans.

A STUDY IN CORN BREAD.

SINCE bread is the staff of life it is important that it be a strong, dependable staff, and the better the meal used the more dependable it is. Then, of course, the bread should be properly mixed and properly baked.

In the quality of meal used in the making of corn bread the farmer has much the advantage of the city man who buys his meal from a grocer. The corn out of which meal is made by the roller mill and sold in grocery stores is shelled by machinery, and of course a great amount of care in the selection of the ears can not be exercised; therefore, the corn is not so free from damaged grains as when shelled by hand. Corn for making meal should be carefully selected, and only good, sound ears used. All faulty, rotten grains on the small ends and elsewhere should be shelled off.

After the corn is shelled it should be run through a fanning mill, then ground, not too fine, on a slow-moving mill, preferably a water mill. The coarser the meal the more of the corn taste there will be, and the sweeter the flavor. It is noticeable that fresh grits have more

of the nutty, "corny" taste than finely ground meal. Then the corn should be ground in small quantities, just enough to last a week or two, and the meal kept in a closed cask, as nearly air-tight as possible. Meal made by a rolled mill and sacked up in a store for five or six months, subject to atmospheric changes, is not so good as when fresh from an old-fashioned grist mill.

When corn bread is well made, out of good meal, it is more nutritious than wheat bread, and more suitable for a winter diet, because more heating. And it is better for the farmer and his boys, who stay much in the open air, than for the town dweller who spends most of his time in the store or office.

To make old-fashioned "egg bread," as the farmer's wife calls it, take from three to six cupfuls of fresh cornmeal, according to the size of the family, and sift it through a coarse sifter into the bread tray. Add salt, soda and cream of tartar or pure baking powder, using more soda if the milk to be used is sour, and more baking powder if it is sweet. Just the exact quantity of soda will have to be determined by experiment, as some brands are stronger than others, but better use too little than too much. If you use six cupfuls of meal and expect to use sour milk, I should say use a level teaspoonful of soda and one heaping teaspoonful of baking powder; but if you use sweet milk put in a scant level teaspoonful of soda and two heaping teaspoonfuls of baking powder. Never use sugar in corn bread.

Stir the salt, soda and baking powder well into the meal, then pour in a half-teacupful of melted butter (if somewhat strong it does not matter), or melted lard, or clean, clear bacon grease. Stir this into the meal thoroughly, in order to allow it to strike into the grains of meal before the dough is flooded with milk. Then break in it at least one egg for each cupful of meal, and stir several minutes. Now add barely enough warm sweet or sour milk to moisten the meal—not enough to wash out and dissipate the flavor of the eggs and butter or grease—and stir it thoroughly for five or six minutes. The more air bubbles you stir into it the better the dough will rise. It will be very thick, but smooth, and of a pale-gold color.

Now reduce it to the proper consistency with more warm milk, stirring it slightly, and spoon the batter into hissing-hot, buttered muffin-tins, and put them on the top rack of a very hot oven. The intense heat should quickly sear over the surface, confining the moisture inside, which will make the dough rise all the better. After a minute or so set the pan on the bottom of the oven, and let it stay until the muffins are a light golden brown. The coarser the meal the longer and slower the muffins should cook, after they have first been seared over by the intense heat.—*Farm Journal*.

DIFFERENT KINDS OF BOYS.

I SAW a small boy stealing a ride on the back of a street car, says a writer in an exchange. "Not much harm in that?" Well, it is cheating.

One boy I have seen I would not recommend for any position whatever. He is bright and energetic, he has winning manners, but he is dishonest.

What does he do? He cheats in little, mean ways—and thinks it's smart. He writes a note on the corner of a newspaper, and mails it at newspaper rates; he holds his railway ticket in such a way that when the conductor punches it, the boy gets three rides where he should have but two, and then boasts of "getting the better" of the railway; he borrowed a pencil when he entered an office on trial, and the pencil went away in his pocket. He has no *keen sense* of honor; he has lost his self-respect, and, worse still, he does not know it.

"John," said a lady in the office where John was employed, "don't you live near the corner of Fifth Street and West Avenue?"

"Yes," he said.

"Then will you take this parcel around there on your way home?"

John did not dare to say "No," but he grumbled out after the lady had turned away, "There's no money in working overtime." He never knew that one listener might have recommended him for a better position, nor that his surly remarks lost him the chance.

"Across the lake? Take you over for one cent. Just as cheap as the bridge."

"No, thank you. I want to go down to the pavilion."

"Take you down there for five cents."

"All right! That's cheaper than walking," and I stepped into the boat, leaned back at my ease on the cushioned seat, and watched the young oarsman. He couldn't have been more than twelve years old. He had a frank, clear face, and he managed the oars as if used to them.

The camera in my hand gave the clue for opening conversation, and I soon learned that he owned one, and could use it, too. But he had discovered that "it cost a great deal to keep up a camera," and being fond of music he had agreed to a proposal by his mother to change it for a mandolin.

"Can you swim?" I asked.

"Oh, yes! Mother wouldn't let me out with the boat if I couldn't."

Our ride was all too short for the talk with the active young American who had an eye for business, who believed in his mother, and whose mother trusted him.—*Selected*.

THE QUIET HOUR

GOD NEVER FORSAKES US.

JOHN S. FERNALD.

"WHATSOEVER ye shall ask the Father in my name he will give it you." These words, spoken by our Savior in his last meeting with his disciples before his crucifixion, and recorded for us in John 16:23, are the key-stone which supports the whole structure of our faith. Resting on this never-failing promise we may search the Scriptures and there find many passages, chapters, and even whole books that show us that God never forsakes those who put their trust in him. Though we may murmur at his dealings with us, and at times almost be led to believe that he has forsaken us, we may turn to his Word and there find hope, even in the darkest hour.

The twenty-second and twenty-third Psalms, taken together, show how David was troubled and cast down, and how his faith led him to victory, for which he gave God the praise. Prophetically we find, in the same chapters, the greater trials and suffering and the correspondingly greater victory of our Redeemer, Christ. In our own small sphere we may also apply the same lessons, and whatever trials or afflictions may come upon us we may rest secure in the faith that all things work together for good to them that love God.—Rom. 8:28.

The Bible, from Genesis to Revelation, abounds in examples, prophecies and promises of God's overruling of the trials, temptations and other ills of life to the good of his followers. Joseph was sold as a slave in a hostile country, but was made the instrument, in God's hands, of bringing the needed help to his people. The children of Israel endured the most galling kind of slavery in Egypt, but were led through the Red Sea and through years of trial and hardship in the wilderness into the Promised Land. Job suffered long and grievously, but his faith led him to victory. Daniel and his coworkers braved the lions and the tortures of the fiery furnace, but God upheld them. Jonah rebelled against God and was taught by trials the lessons he needed. David gives us, in the Psalms, many illustrations of his trials, temptations, trespasses and afflictions, his murmurings and backslidings, but all are coupled with the most trustful prayers for God's help and followed by hymns of thanksgiving and praise for the deliverance and blessings which resulted. The

writings of Solomon and the prophets are pervaded with the thought that God never forsakes those who trust him.

Among the many passages containing this comforting thought we find the idea best expressed, perhaps, in Isaiah 54:7, 8: "For a small moment have I forsaken thee; but with great mercies will I gather thee. In a little wrath I hid my face from thee for a moment, but with everlasting kindness will I have mercy on thee, saith the Lord thy Redeemer."
